(*b*) **The Occupation Qualification,** which applies to both county and borough constituencies, entitles a person to be registered, if he is the occupier of land or tenements of the clear yearly value of £10, provided that he has occupied it for the whole of the twelve months preceding the 15th July of the year of registration. No one can be registered with the occupation qualification unless the rates have been paid on the property. In the case of boroughs if the occupier is not a resident in the property (be it chambers, office, shop or warehouse) in respect of which he claims the occupation qualification, it is necessary for him to have resided, during the half year preceding the said 15th July, within seven miles, or in the case of the city of London, within 25 miles, of the boundaries of the borough.

(*c*) **The residential qualification,** which applies to both county and borough constituencies, enables the inhabitant occupier of a dwelling house or of any part of a house occupied as a separate dwelling (e.g. a flat) to be registered, provided the rates have been paid and he has resided in the property for the whole of the twelve months preceding the 15th July of the year of registration. If the person who occupies the dwelling, does so by virtue of any office, service, or employment, and his employer does not reside therein, then he and not the employer is entitled to the franchise even though the rates, rent and taxes are paid by the employer. But the fact that the servant has thus the occupation qualification does not exclude his master from claiming some other qualification, e.g., the freehold qualification, in respect of the same property.

(*d*) **The lodger's qualification** enables lodgers who have claimed the lodger's franchise and occupied lodgings in the same house for the said twelve months, of the clear yearly value (unfurnished) of £10, to be registered. The lodgings need not have been let unfurnished; but if let furnished the unfurnished value alone is taken into consideration by the revising barrister.

N.B.—Lodgers, unlike ordinary electors, have to renew their claims every year.

2. THE REGISTER. It is the duty of the Overseers to prepare lists of the electors in their constituencies. The lists, as prepared by the overseers, are posted up on church doors on the 1st August every year. If a qualified voter finds his name omitted from the list he should send in particulars of his claim, before the 20th August, to the overseers. All political parties in the constituencies have agents and other officials who are always ready and willing to assist qualified voters of their party with information necessary for making their claims. The statutory form of claim consists of four columns, thus:—

Name of Claimant at full length, the surname being first.	Place of Abode.	Nature of Qualification.	Description of Qualifying Property.
Brown, John	Rose Cottage, Milton	Residential. Have resided at present address since 1 Aug., 1904, and paid all rates	* *

* * As the qualification in this case is a residential one this division would be left blank; but if it were a property qualification, the nature of the property would have to be given. (See *Property Qualification* above).

Any qualified voter may object to the inclusion of a person on the list of voters, and should send in his objection before the 20th August. The persons who usually make the objections are the parliamentary agents of the rival parties. On the 25th August the Overseers publish lists of claimants and objectors. Between the 8th September and the 12th October a Revising Barrister, who must be of not less than seven years' standing at the bar, holds a court and decides on the validity of the claims and objections. The lists so revised are then sent to the Clerk of the County Council or Town Clerk (as the case may be) and are printed and form the official register of electors.

3. THE CANDIDATES. There are a great number of cases in which persons are disqualified from being candidates for election. The following list includes the principal persons disqualified:—

(1) Women. (2) Infants (persons under twenty-one years of age). (3) Lunatics and idiots. (4) Aliens who have not become naturalised British subjects. (5) Peers of the Realm; but such Irish peers as are not representative peers may be elected as members of the House of Commons, but only for constituencies outside Ireland. (6) Clergy of the churches of England, Scotland, and Rome. (7) The holders of offices under the Crown, which have been created since 1705, are generally disqualified. (8) Bankrupts, until five years after their discharge, unless the bankruptcy is annulled within six months, or unless it was due entirely to misfortune, and not aggravated by misconduct. (9) Returning officers for the elections at which they officiate. (10) Convicted felons, until they have served their sentences, or received a free pardon. (11) Judges of the High Court and County Court Judges. (12) Persons convicted of "corrupt practices," for ever with regard to the constituency at which these practices took place, and for seven years with regard to other constituencies.

Candidates must be nominated in writing (except in University Elections), and their nomination papers must be subscribed by ten registered electors of the constituency, two of whom must respectively act as proposer and seconder.

4. THE WRITS FOR ELECTION. Before a general election can be held the King issues a proclamation ordering the Lord Chancellor to cause writs to be issued to the sheriffs of the counties and to the returning officers of the boroughs. The writs command these officials to hold an election in their respective districts for the purpose of choosing members to serve in Parliament. In the case of a by-election the writ is issued by the Speaker of the House of Commons to the Sheriff or returning officer of the district.

5. THE ELECTION. The nomination papers must be delivered, during the time appointed for the election, to the Returning Officer by the candidate himself or his proposer or seconder. If at the expiration of one hour after the time appointed for the election no more candidates stand nominated than there are vacancies to be filled, the Returning Officer declares the nominated candidate elected. But if there are more candidates than vacancies, the Returning Officer adjourns the election. He then gives public notice of the day on which the poll will be taken, and of the candidates for election.

Constituencies, especially county constituencies, are large, and were only one place of polling fixed for each constituency, it would be impossible for the bulk of the electors to record their votes. Consequently constituencies are sub-divided into polling districts, and each polling district has one or more polling stations or polling booths allotted to it. The polling stations are opened at 8 a.m. and closed at 8 p.m. on the day of election.

At each polling station there is a presiding officer, whose duty it is to preserve order, he is appointed by the Returning Officer and assisted by polling clerks. Each candidate may be represented at each polling station by one personation agent appointed by his election agent. The principal duty of the polling agent is to watch the electors so as to see that no one votes more than once, and that no one personates another elector.

At the close of the poll the ballot boxes are sealed by the presiding officer, and also by the candidates' agents if they wish it. As soon as possible after the poll, the Returning Officer makes arrangements for the counting. Each candidate may appoint an agent to attend the counting; the candidates themselves may also be present at the counting. Ballot papers which are not properly filled up are rejected. Questions as to the validity of any voting paper are decided by the Returning Officer; but his decision may be reversed on the hearing of an election petition. When the votes have been counted, the Returning Officer publicly declares the result of the election and the number of votes each candidate has received.

6. METHOD OF VOTING AT THE POLL. At University elections, the voting may take place by "show of hands," unless a poll is demanded; but in all other cases of contested parliamentary elections the voting is by ballot, and regulated by the provisions of the Ballot Act, 1872. Before the day of polling, the Returning Officer gives public notice of the situation of the various polling stations, and setting forth the description of the voters who may vote at each station. No one, except a policeman on duty, may vote in any other than the station allotted to him.

The voter goes to his station and receives a ballot paper showing the names and description of the candidates. Each ballot paper has a number printed on the back, and has attached a counterfoil with the same number printed on the face. The ballot paper is marked at the time of voting with an official mark on both sides, and the counterfoil is officially marked with the registered number of the voter. Having received his ballot paper the voter proceeds to one of the compartments of the polling station, where he can mark it unseen. With the pencil provided in the compartment he places a cross on the right-hand side opposite the name of the candidate for whom he votes. He must then fold up the ballot paper and in the presence of the presiding officer put it in the ballot box, and forthwith quit the polling station.

If the voter inadvertently spoils a ballot paper, he can return it to the officer, who will, if satisfied of such inadvertence, give him another paper. If the voter votes for more candidates than he is entitled to vote for, or if he places any mark on the paper by which he may be afterwards identified, his ballot paper will be void.

DISPUTING THE RESULT OF THE ELECTION.

1. ELECTION PETITIONS. The House of Commons has the right of deciding whether or not the persons elected as members are legally disqualified from sitting or voting, and of declaring the seat vacant if it decides that the elected person is disqualified. The only other way in which an election can be questioned is by Petition. The law governing election petitions now depends on the Parliamentary Elections Act, 1868, and its amending Acts, and on the Parliamentary Election Petition Rules. The trial of election petitions takes place before two judges of the King's Bench Division of the High Court of Justice. The following are some of the principal grounds on which an election petition may be founded, though such a petition may be presented in every case where the matters

alleged would be sufficient, if proved, to void the election:—

(1) The commission of "corrupt practices" by a candidate or his agents. (2) The commission of "illegal practices" by the same persons. (3) The disqualification of a candidate. (4) The fact that the person declared elected did not in reality receive the majority of valid votes.

Where the result of an election is that one of the candidates is returned by a very small majority, a petition is frequently made asking for a recount or a scrutiny. In a recount the ballot papers are merely counted again, but in the case of a scrutiny the ballot papers are examined, the secrecy of the ballot disappears, and it is possible to object to a vote on the ground that the elector though on the register was yet not qualified to vote.

2. PARTIES TO THE PETITION. The petition may be presented either by a candidate at the disputed election, or by any person who voted or who had a right to vote at the election. The person who presents the petition is called the Petitioner, and the person against whom it is presented is the Respondent. Generally the respondent is the person whose election is disputed, but in certain cases the Returning Officer may be made a respondent if he has been guilty of wilful misconduct in the discharge of his duties. If the petitioner in a petition dies, any person who might have been a petitioner may apply to the Court, within a month of the death, to be substituted as a petitioner. Again, if before the trial of the petition the respondent dies, or if he does not intend to oppose the petition, notice of the fact must be given in the place where the election took place, and any one else who would have been qualified to be a petitioner may apply to the Court for permission to oppose the petition.

3. PRESENTATION OF THE PETITION. The petition must generally be presented within twenty-one days after the return of the person whose election is disputed; but if the petition is based on the payment by the respondent or his agents, of some reward in furtherance of some corrupt practice, which reward has been paid since the election, then the petition may be presented within twenty-eight days of the payment. The presentation of the petition is made by leaving it at the office of the Master of the King's Bench Division, who is nominated for the purpose. The petition must state the right of the petitioner to petition, and must be divided into numbered paragraphs, stating the grounds of the petition, and it must conclude with a prayer asking for the election to be declared void, or for such other relief as the petitioner may think himself entitled to. All the petitioners must sign the petition. The petitioner must give security for the respondent's costs.

4. TRIAL OF THE PETITION. Before the actual trial of the petition, the preliminary applications, called "interlocutory applications," are generally heard by a judge, who may allow a petition to be amended in form, but he will not allow fresh charges to be introduced into it. The judge may order the petitioner to give particulars of the allegations he has made. If the only allegation is a miscount, the judge may order a re-count to take place before the trial. An election petition once presented cannot be withdrawn without the consent of the two election judges. The trial takes place before the two election judges of the King's Bench Division, and it is generally held in the constituency in which the disputed election has taken place. At the conclusion of the trial, the judges deliver judgment and decide whether or not the election is void, or whether the respondent or any other person has been duly elected. If the respondent has been charged with corrupt or illegal practices, the judges must report to the Speaker of the House of Commons their finding as to whether such practices have been proved and, if so, whether they have taken place with the knowledge of the candidate, and whether the corrupt practices have been extensive or not. The report, together with the evidence on which it is based, is subsequently laid before the Attorney General with a view to his instituting a prosecution against the guilty parties, should he think the evidence sufficient to warrant a successful prosecution.

5. CORRUPT AND ILLEGAL PRACTICES. What constitutes the difference between such practices, and what punishments they render an offender liable to, are fully stated in the chapter on Local Elections. (Refer to "Corrupt Practices" in *Index*).

THE HOUSE OF LORDS.

CONSTITUTIONAL ASPECT. The position occupied by the House of Lords in our constitution has never been more admirably summarised than by the great Lord Lyndhurst in a debate in the House of Lords in 1858.

> "Our legislature is a species of progressive machine; it consists of three independent powers; and if each power adhere rigidly to its own opinion the machinery of legislation would on many occasions come to a standstill; it is by mutual forbearance and concession that the machine practically works out the great objects of the constitution. . . . . And with respect to the particular position and duty of the House of Lords, it is part of our duty to originate legislation; but it is also a most important part of our duty to check the inconsiderate, rash, hasty and undigested legislation of the other House; to give time for consideration; and for consulting and perhaps modifying the opinions of the constituencies; but I never understood, nor could such a principle be acted upon, that we were to make a firm, determined, and persevering stand against the opinion of the other House of Parliament, when that opinion is backed by the opinion of the people."

When the Lords reject a Bill of great national importance which has been passed by the Commons, it is usual for the Prime Minister to advise the Crown to dissolve parliament. If after the general election the new House of Commons is still in favour of passing the Bill, it is customary for the Lords to withdraw their opposition; but if they refuse to do this the Prime Minister can always advise the King to create a sufficient number of new peers to secure a majority in the Lords.

COMPOSITION. The House of Lords, or the Upper House of Parliament, consists of the Lords Spiritual and Temporal, two of the three Estates of the Realm.

> The expression "three estates of the realm" is sometimes erroneously applied to the King, the Lords, and the Commons: and the Press, a very potent factor in modern political life, is not infrequently styled "the fourth estate."

The number of peers who sit in the House of Lords is not fixed. At present there are about six hundred. Hereditary peerages are continually becoming extinct through the death without heirs of the holders. But this continual and gradual decrease in their number is more than made up again by the creation of new peers. As these new peers generally consist of successful politicians, diplomatists, soldiers, lawyers, bankers, brewers, manufacturers, landowners, and merchants, the Upper House is gradually becoming more and more democratic in tone and feeling and less liable to resist the strongly expressed opinions of the Lower House.

SPIRITUAL PEERS. The Church of England is the Established Church, and as such is represented in the House of Lords by certain of its bishops. The spiritual peers, consisting of the Archbishops of Canterbury and York, and twenty-four English Bishops, are not hereditary peers and their wives are not peeresses. By the Bishoprics Act, 1878, it is provided that the number of Lords spiritual sitting and voting as Lords in parliament is not to be increased by the foundation of any new bishopric. Of the twenty-six seats in the House of Lords assigned to spiritual peers, five are always held by the two archbishops and the bishops of London, Durham and Winchester. The remaining twenty-one seats are given according to seniority, that is, to those who have longest held the appointment of bishop to an English see. Formerly certain Irish bishops had the right of sitting in the House of Lords, but now the right is limited to the "diocesan bishops" (not suffragan bishops) of England and Wales, exclusive of the bishop of Sodor and Man. When a bishop resigns his see he ceases to be a spiritual peer.

In ordinary matters spiritual peers vote as do the temporal peers; but unlike temporal peers they would not be tried by their peers, if charged with any crime, but in the ordinary courts.

TEMPORAL PEERS.

1. HEREDITARY PEERS. All English dukes, marquises, earls, viscounts and barons who have attained their majority are entitled to be summoned to the House of Lords They may not sit as members of the House of Commons, or even take part in parliamentary elections.

Many members of the House of Commons are styled "Lord"; but these are either Irish Peers who have not been summoned to the Upper House, or else they are the sons of English Peers, frequently bearing as courtesy titles the secondary titles of their parents. Thus the son of the late Marquess of Salisbury before becoming himself a peer sat in the Commons as Viscount Cranborne, this being one of his father's titles.

It need hardly be said that peeresses, even peeresses in their own right, are never members of the House of Lords. Members of both Houses of Parliament on taking their seats in every parliament are required to take the *oath of allegiance*, which is in the following form:—

"I, , do swear that I will be faithful and bear true allegiance to His Majesty King Edward, his heirs and successors, according to law, so help me God."

In the House of Lords it is made and subscribed by every member at the table in the middle of the House. If any member of the House of Peers sits or votes as a peer during any debate without having made and subscribed the appointed oath he is liable to a penalty of £500 for each offence, under the Parliamentary Oaths Act, 1866.

2. IRISH PEERS. By the Act of Union with Ireland, 1800, twenty-eight of the Lords Temporal of Ireland, elected for life by the Peers of Ireland, is the number appointed to represent Ireland in the House of Lords. Any Irish peer may be elected a member of the House of Commons unless previously elected and summoned to sit in the Upper House. The Act of Union also provides for a gradual reduction in the number of Irish peerages by enacting that only one new one is to be created for every three that become vacant, until the total number has been reduced to one hundred; after which the total is to be kept at about that number.

The Irish Lords of Parliament have the same privileges as the Lords of Great Britain; save that, whether among the twenty-eight or not, they take precedence after peers of like rank in Great Britain whose peerages date from a time prior to the union. But Irish peerages created after the union have rank and precedency with peerages of the United Kingdom according to the dates of their creation.

3. SCOTTISH PEERS. Those Scottish peers who are elected by their fellow peers to serve parliament in the House of Lords are not like the Irish peers elected for life; but only for the space of one parliament; though they may be, and generally are, re-elected. The Act of Union between England and Scotland, 1706, provides that the latter country is to be represented in the House of Lords by sixteen representative Scottish peers. Scottish peers have precedence after English peers of the same rank, but before British peers created subsequently to the union. It is not the practice to create new Scottish peerages. Scotsmen who are now raised to the peerage are granted peerages of Great Britain. Unlike Irish peers, Scottish peers, not elected to serve among the representative peers of the House of Lords, have no right to sit as members of the Lower House.

4. LIFE PEERS. We have already noticed the spiritual peers and the elected Scottish and Irish peers. A further step in the direction of Life Peerages was made by the Appellate Jurisdiction Acts, 1876 and 1887. The House of Lords in addition to being a legislative body has also judicial functions. Besides trying peers who commit serious crimes, it is the ultimate court of appeal from judgments of the courts of England, Scotland and Ireland. The Lord Chancellor always, the Lord Chief Justice of England generally, and sometimes other great lawyers, are created hereditary peers of the realm; but in order to still further strengthen the legal and judicial element in the Upper House the Appellate Jurisdiction Acts enable the Crown to appoint persons who have held high judicial office as Lords of Appeal in Ordinary with life peerages and the rank of Barons. The children of these life peers are entitled to the courtesy appellation of "the Honourable."

OFFICERS OF THE HOUSE.

1. THE LORD CHANCELLOR. The position of Speaker or Prolocutor of the House of Lords is held by the Lord Chancellor. It is not essential by law that he should be a peer, but it has become the established custom for him on attaining the position of "Lord High Chancellor of Great Britain" to be created a peer, usually a baron, but sometimes viscount or earl. In the absence of the Lord Chancellor, the peer occupying the position of Chairman of Committees usually acts as his deputy in the office of Speaker, though not in his other functions. The Lord Chancellor whilst acting as Speaker sits on the *Woolsack*, an ottoman couch stuffed with wool to represent the commodity which was at one time England's staple export. Technically the woolsack is not now regarded as being within the House, perhaps because the Lord Chancellor is not by law bound to be a peer; so that when a peer does not desire to vote on any question he stands behind the woolsack, on the question being put, and then he is regarded as not present at the time. The Lord Chancellor being now always a peer, he can address the House as such. If he wishes to do so, he advances three steps forward into the House.

Apparently the Woolsack was at one time in the middle of the Parliament Chamber, for by the Statute 31 Henry VIII., c. 10, it is provided that the Lord Chancellor and other great officers of state, if under the degree of baron, should "sitt and be placed at the uppermost parte of the sakkes in the middes of the saide Parliament Chamber."

Besides being Speaker of the House of Lords, the Lord Chancellor is custodian of the Great Seal which may never leave the realm. So that whilst in office he cannot, without infringing the constitution, take a holiday abroad. He is also the keeper of the King's Conscience, and so must be a member of the Established Church. He has besides many judicial and other functions. (Refer to "Lord Chancellor" in *Index*.)

2. BLACK ROD. An office which most people who read the newspapers are familiar with is that of the "Gentleman Usher of the Black Rod." He is an officer of the House of Lords and also of the Order of the Garter, and is appointed by the Crown, the office usually being conferred on some retired naval or military officer. The black rod from which he derives his title is a black staff surmounted with a golden lion, which he carries as a symbol of office. One of his principal duties is that of carrying communications between the Lords and the Commons. Thus when the King opens Parliament, Black Rod is sent to summon the Commons to attend at the bar of the House of Lords to hear the King's Speech.

3. OTHER OFFICERS. In the service of the House of Lords is a large staff of clerks, messengers, doorkeepers, etc., who take records and minutes of the proceedings to be published in the Journals of the House, and who fulfil many other important and necessary functions.

Among these officials may be mentioned the Yeoman Usher of the Black Rod, who assists the gentleman usher mentioned above; the Sergeant-at-Arms who has to guard the approaches to the House, and arrest any person when so ordered by the House; also the Deputy Sergeant-at-Arms, the Clerk of the Parliaments, the Reading Clerk, the Clerk of Public Bills, the Clerk for Standing Orders, Examiners for Standing orders, the Clerk of the Journals, the Principal Clerk and Taxing Officer of the Judicial Department, the Principal Clerk for Private Bills, and the Librarian of the House.

DIFFERENCES OF PROCEDURE IN THE TWO HOUSES. It may be interesting to mark certain differ-

ences in the mode of procedure in the two Houses, each House, of course, making its own rules:—

(1) When a peer speaks in debate he does not address his remarks to the Lord Chancellor, but to the peers collectively, beginning with the words "My Lords," and referring to the House in the course of his speech as "Your Lordships," whereas the Commons always address the Chair, as it is termed, and begin with the words "Mr. Speaker."

(2) The Upper House may transact business when only three members are present, nor is it necessary that the Lord Chancellor should be one of them. In the Lower House no business may be done when less than forty members are present should one of the members call the attention of the Speaker to the fact. In other words, three members in one House constitute a quorum, and in the other House, forty.

(3) Again, when the question is put to the House, the peers reply "Content," or "Not Content," whereas the Commons reply "Aye." or "No."

(4) Peers who strongly object to the resolution carried by the majority are entitled to enter their *protest* in the Journals of the House; not so the Commons. The Lords also formerly allowed voting by *proxy*, an absent peer being able to authorise another to vote for him, but this objectionable practice has been discontinued since 1868.

(5) In 1882 the Commons introduced the "Closure" (see under *House of Commons*), but the Lords have not found it necessary to adopt this method of bringing a debate to a close.

THE HOUSE OF COMMONS.

CONSTITUTIONAL ASPECT. Of the three portions of our Sovereign Parliament, the so-called Lower House is undoubtedly constitutionally the most important. The Commons alone have the right to originate bills imposing taxation on the country and to vote supplies of money. The Lords have no right to modify a money bill, and the legal right to reject one is practically obsolete. It is now established beyond question that the Commons have the exclusive right to the management of the national finance. Moreover, the Commons are an elected body, and since the electors are drawn from practically every class of the community, the political opinions of the House of Commons fairly represent, as a rule, the opinions of the majority of the nation. In fact it may be said that the representatives of the people in the House of Commons rule the country subject to the power of the Crown and the House of Lords to check hasty and ill-considered action.

COMPOSITION. The House of Commons consists of 670 members. The number representing each division of the United Kingdom is shown in the following table:—

Countries.	County Members.	Borough Members.	University Members.	Total.
England .	234	226	5	465
Wales . .	19	11	—	30
Scotland .	39	31	2	72
Ireland . .	85	16	2	103

Whereas in England and Wales there are nearly 70,000 people to one member, and in Scotland 65,000, in Ireland there are only 43,000. Thus in proportion to population, Ireland has considerably more members than any of the other portions of the United Kingdom. This is due to the fact that the Act of Union with Ireland provided for at least one hundred Irish members of the House of Commons, no one anticipating at the time that the population of Ireland would decrease.

PRIVILEGES OF MEMBERS. Ordinary members of parliament receive no remuneration from the State for their services. This would render it impossible for poor though able men to enter parliament were it not for the fact that the Labour Representation Committee, various Trade Unions and other societies frequently provide members with a small salary.

The greatest privilege perhaps a member of parliament possesses is that of freedom of speech. He may not, of course, offend against the standing rules and orders of the House; thus, his remarks must be relevant to the matter in question before the House, he must not make personal charges against any member, and he must not make use of treasonable, seditious, or "unparliamentary" expressions. The privilege of freedom of speech enjoyed by members of parliament means that no member can be held responsible in a court of law for any statement, whether true or untrue, libellous or otherwise, which he may have made in the course of a debate in the House. Another privilege is that of freedom from arrest on civil process during the sittings and for forty days preceding and succeeding each session, though, as a rule, the House will not interfere if a member is committed to prison for contempt of court. Members are not privileged from arrest for crime.

THE OATH. The first duty of members after the election of their Speaker is to take the oath of allegiance. Members who object to be sworn, either on the ground that they have no religious belief, or that the taking of an oath is contrary to their religious belief, may make a solemn affirmation instead. The form of affirmation being similar to the oath, save that the words "so help me God" are omitted, and the words "solemnly, sincerely, and truly declare and affirm" are substituted for the word "swear." Moreover, members desiring to be sworn with uplifted hand in the Scottish manner instead of kissing the New Testament, are permitted to do so. By the Parliamentary Oaths Act, 1866, if any member of the House of Commons votes or sits during any debate, after the Speaker has been chosen, without having made and subscribed the oath of allegiance, he is liable to a penalty of £500 for every offence, and in addition he forfeits his seat.

THE MACE. Students of English history will remember that during the Commonwealth Cromwell, in expelling the Rump of the Long Parliament in 1653, pointed to the Mace in use at that date and said, "Take away that bauble." The mace is a symbol of authority and when the Speaker leaves or enters the House, it is borne before him by the Sergeant-at-Arms. Prior to the election of a Speaker it is placed under the table, a position which it also occupies when the House goes into Committee. But whilst the House is sitting with the Speaker in the chair, the mace lies on the table.

SEATING OF MEMBERS. The first bench on the right hand side of the Speaker's chair is called the "Treasury Bench," and is occupied by members of the ministry; the front bench on the opposite side being usually occupied by the leading members of the opposition, and especially by those among them who have held high office. Behind the Treasury Bench the supporters of the Government range themselves, and on the opposite sides members of the opposite parties. Members have a great difficulty in securing seats on account of the inadequate accommodation of the Chamber. Whilst there are 670 members, each entitled to a seat, there are only 306 seats on the floor and 124 in the side galleries, from which, however, no member may address the House. According to the Standing Orders of the House, no member's name may be affixed to any seat in the House before the hour of prayers (which are read each day immediately after the entry of the Speaker), but any member having thus secured a seat is entitled to retain it until the rising of the House.

ATTENDANCE OF MEMBERS. By ancient statutes which are still unrepealed, members are bound to attend the House on all occasions when it is sitting. If a member of a committee on an opposed private bill absents himself without leave (which is usually granted on the ground of illness, domestic bereavement, etc.), he is reported to the House. Attendance on public business though not enforced by the House, is not left entirely to each member's own

discretion and convenience. Each party appoints one or more of its number to look after the attendance of its professed supporters. It is the duty of the "Whip," as one of these officers is styled, to remind members of the occasions when their attendance is particularly required in the interests of their party, to admonish those who are frequently absent, and to arrange for "pairs."

When a member of either party desires to be absent from a division he, or the party whips, seek out a member of an opposing party who also desires to be absent. The two agree that neither will attend, and are said to be *paired*; the balance of the parties remaining as before.

THE CHILTERN HUNDREDS. No provision is made in our constitutional system for a member of parliament to resign his seat. But as a member who accepts office under the Crown is required to present himself to his constituents for re-election before he is entitled to resume his seat in parliament, an easy way of legally vacating his seat has been devised. There is an office known as the "Stewardship of the Chiltern Hundreds" to which neither duties nor emoluments are attached. When therefore a member, whether on account of age, infirmity, or other reason, is desirous of resigning his membership of the House of Commons, it is usual for him to apply for this post. The application is always granted. He ceases to be a member of parliament, and as he does not offer himself for re-election the seat is declared vacant and a new member elected. Shortly afterwards he resigns his stewardship, so that any other member may apply for it. Thus in fact, though not in theory, it is quite easy for a member to resign his seat.

SITTINGS OF THE HOUSE. The House arranges its own sittings and can always alter the arrangement. The hours and times for the sittings of the House are contained in the Standing Orders, and it is always within the competency of a minister of the crown (though apparently not of a private member) to move amendments to the Standing Orders. By the Standing Orders passed in 1906, the House meets at 2.45 P.M. on Mondays, Tuesdays, Wednesdays and Thursdays. The old dinner interval was abolished, and 11.30 P.M. fixed as the time for the adjournment of the business of ordinary sittings. The hour for terminating *opposed* business is 11 o'clock. On Fridays the House meets at noon for private business and continues to sit until 5.30 P.M. unless previously adjourned; but after the business under consideration at 5 P.M. has been disposed of no further opposed business may be taken. When the hour for terminating a sitting has arrived, if the Speaker be in the chair, he declares that the proceedings stand adjourned; and if the House be in committee, the chairman leaves the chair and reports to the House. If on account of the importance of the business under discussion it is desired to "suspend the eleven o'clock rule," it is usual for a minister of the crown at the commencement of public business to bring forward a motion, which is decided without amendment or debate, to the effect that the proceedings on certain specified business, if under discussion at eleven o'clock, be not interrupted then, but continue until the House, at its pleasure, adjourns.

THE BALLOT FOR PRIVATE BILLS. On the opening of a parliamentary session there is always a large number of members who wish to introduce *bills*. Not very much of the time of parliament is devoted to these private members' bills, so that unless such a bill is introduced early in the session it has but a small chance of becoming law. The priority of private members' bills over each other is determined in the first instance by ballot.

QUESTIONS. Members desiring to ask questions of members of the Government must give written notice of their intention to do so to the clerk at the table. If the member desires an oral answer to his question he must mark it with an asterisk, otherwise the answer will be only printed. Questions are taken on Mondays, Tuesdays, Wednesdays, and Thursdays after private business has been disposed of, and as a general rule between 3 and 3.45. The Speaker calls successively upon each member who has put his name down on the question paper. There are many rules regarding the questions that may be put. Chief among them is the rule that the questioner must make himself personally responsible for the accuracy of any statement contained in the question.

THE CLOSURE. Debates are sometimes carried on to an inordinate length, chiefly owing to the fact that certain members, generally representing a minority, make unnecessary speeches with the deliberate intention of hampering the business of the house in the hope of preventing the passing of the bill in its present form. To check this abuse, an expedient known as the "closure" was adopted in 1882. It gave power to the Speaker or Chairman of committees, when it appeared that "the evident sense of the House" was in favour of an immediate division, forthwith to put the question of closing the debate. In 1887 power was given to any member, private or official, to move the closure, leaving, however, to the Speaker or Chairman's discretion the question of putting or not putting the motion from the chair. At the same time it was enacted that a bare majority should suffice to carry the closure, if it was found that not less than 100 members voted in support of the motion. On the closure being carried, the question in debate was ordered to be forthwith put. This is done in the manner following:—

The Speaker having risen recites the original motion and the proposed amendment, and then, according to an established formula, he continues, "The question I have to put is that the words to be left out stand part of the question," or "that those words be there inserted." The Speaker adds, "As many as are of that opinion say 'Aye.'" Immediately a certain number of members shout "Aye." The Speaker then says "As many as are of the contrary opinion say 'No,'" which is accordingly done. The Speaker, judging from the volume of sound says, "I think the Ayes have it," or "I think the Noes have it," as the case may be. If challenged this announcement is followed by a "Division," that is, by the members separating into two parties to record their votes in favour of "Aye" or "No."

DIVISIONS. When a division is to take place, the Speaker says "Clear the lobby." The Clerk at the table immediately turns a two-minute sand-glass and the division bells are set ringing, as a signal to members in the library and other parts of the House. After the lapse of two minutes, as measured by the sand-glass, the Speaker again puts the question, and, if again challenged, names the tellers, two for the "Ayes" and two for the "Noes." The members then divide into two parties, the "Ayes" going into one lobby and the "Noes" into the other. In each lobby are three clerks to record on printed lists of names, arranged alphabetically, the votes as the members pass their desks. To return to the House the "Ayes" and "Noes" must pass through different doorways, at which respectively stand the tellers, who count aloud as each member passes by. The tellers then give in their numbers to the assistant-clerk at the table, who hands the paper on which he has written the result to the chief teller of the side that has won. The numbers are then announced, first by the teller, and then by the Speaker (or Chairman of Committees). If the votes on a division are equal the Speaker (or Chairman) has a casting-vote.

QUORUM. A quorum of the Upper House, as already stated, consists of three members only, but in the Lower House of forty. Consequently, no business can be commenced in the House of Commons until forty members at least are present, and no business can be continued when a less number is present should any member draw the attention of the Speaker or Chairman to the fact.

Shortly before the time for beginning business, prayers are read by the Speaker's Chaplain, the Speaker occupying meanwhile the Clerk's place at the table. Nor does he take the chair until forty members are present. To secure a quorum as soon as possible no member is permitted to leave the chamber until the required number is present "to make a House." If by a certain hour, named in the Standing Orders, less than forty are present, the Speaker declares that there is "No House," and the House stands adjourned until the next day. This is, of course, a rare occurrence. As soon as forty are present the Speaker

takes the chair and business begins. Having begun, it may continue although nearly all withdraw and leave the member speaking to address empty benches. But if a member should call the attention of the Speaker to the scanty attendance, business is suspended, the sand-glass is turned, the doors thrown open and the bells set ringing. When the sand has run out, the Speaker rises and counts those present. If forty, including the Speaker, are present business is resumed; if not, he leaves the chair and the House adjourns until the next day appointed for a sitting.

STRANGERS. Persons other than members are allowed to be present during the sitting of the House if furnished with an order signed by a member. A few visitors are permitted to sit under the galleries behind the bar. Most, however, are seated in the galleries, one of which is reserved for the press, another for the peers and another for ambassadors and other distinguished persons. There is also a "Ladies' Gallery" with a brass "grille" in front to serve as a screen. But at any time a member who objects to the presence of strangers may say that he spies strangers in the galleries. Whereupon a division is taken and if the motion is carried, the galleries are cleared.

OFFICERS OF THE HOUSE.

1. THE SPEAKER. The debates and most of the proceedings of the House of Commons are presided over by a Speaker. He is a member of parliament, and is chosen on the assembling of a new parliament. When the last Speaker does not seek re-election, it is usual to elect some member of the party in power at the time, special care being taken to select one who is courteous and fair, and at the same time firm and dignified, and thoroughly conversant with all the rules and usages of the House. If, however, an ex-Speaker is still available it is usual for him to be re-elected even though his political opponents are in power. The Speaker receives a salary of £5,000 per annum under an Act of 1834. He is also provided with a residence attached to the House of Commons. Moreover on state occasions he has an escort of Life Guards, and is generally preceded by the Sergeant-at-Arms bearing the mace. One of his most important duties is to see that debates are conducted in an orderly manner. He is, therefore, empowered to determine the order in which members desirous of addressing the House shall speak, to check irrelevancy, and to call members to order who use unparliamentary language or in any other way transgress the rules of the House. He may order any member whose conduct is disorderly to withdraw from the House; or if he deems such punishment inadequate he may "name" the offending member, that is, call upon the House to pass judgment on his conduct. Members of parliament whilst speaking address their remarks to the Speaker, and not, as in the Lords, to the House generally.

> When a member speaks of another member he may not refer to him by name. If the member referred to is a Privy Councillor, he is mentioned as "the right honourable the member for ———," or "the right honourable the Chancellor of the Exchequer," or other Minister as the case may be. If he be a lawyer he is referred to as "the honourable and learned member for ———," or if a soldier as "the honourable and gallant member for ———." Whereas if he has no office or distinctive profession he will be "the honourable member for ———."

The Speaker's duties are too manifold to be dealt with in detail here; but it should be mentioned that whenever a seat in the Commons falls vacant it is the Speaker who issues the writ for a new election. In the Speaker are symbolically embodied all the rights, duties and privileges of the House of Commons.

2. THE CHAIRMAN OF COMMITTEES. When the House goes into Committee of supply for the first time after a General Election, it elects a Chairman in much the same manner as the Speaker is elected. He is called the "Chairman of Committees," and it is his duty to preside when the House sits in committee. He is also authorised to act as Deputy-Speaker in the Speaker's absence. As remuneration he receives a salary of £2,500 per annum. At the commencement of every session the Speaker nominates a panel of about five members, any of whom the Chairman of Committees can call upon to act as his deputy. The Deputy-Chairman may also in the absence of both the Speaker and the Chairman of Committees act as Deputy-Speaker.

3. THE SERGEANT-AT-ARMS. This official is appointed by the Crown by letters patent under the great seal. When parliament is not sitting he is in attendance on the King; but during a session it is his duty to attend on the Speaker, and to act generally in the service of the House of Commons. On the Speaker's order he takes disorderly members into custody; sees that the doors are opened to let members in for a division and closed again during the division; and bears the mace before the Speaker on occasions of state.

4. THE CLERK OF THE HOUSE. This is a very important official, who attends the sittings whilst the Speaker is in the chair. On the first day of a new parliament he receives from the clerk of the Crown Office a book containing the names of the members returned. The oaths or affirmations of allegiance made by the members are administered by the clerk. He also turns the sand-glass when the house "divides." He is assisted in his duties by two Clerks Assistant, appointed by the Crown on the recommendation of the Speaker. The salaries of the officers of the House are regulated by commissioners acting under the House of Commons (Offices) Act, 1812. These commissioners consist of the Speaker, the Secretaries of State, the Chancellor of the Exchequer, and the Attorney and Solicitor Generals. At present the salary of the clerk of the House is £2,000 per annum.

5. OTHER OFFICERS. As in the case of the House of Lords so in the House of Commons there are many other officials of varying rank.

> These include the Principal Clerk of Committees, the Clerk of the Journals, the Principal Clerk of the Public Bill Office, the Principal Clerk of the Private Bill Office, the Librarian, the Deputy Sergeant-at-Arms, the Assistant Sergeant, the Chaplain, and the Counsel to the Speaker. There are also several clerks, messengers, doorkeepers, constables and other necessary functionaries.

LEGISLATION.

It must be borne in mind that in the making of the laws, the three great elements constituting Parliament—the King, the Lords, and the Commons—must all concur. Before a measure receives the assent of the three constituent elements of Parliament, it is called a Bill, and after having received the assent of all three, it becomes an Act of Parliament, and forms a part of the law of the land.

In describing the process by which bills become Acts of Parliament, it will be well to distinguish between the three great classes of bills, viz., Public Bills, Private Bills, and Money Bills. A *Public Bill* may be described as a bill which affects the King's subjects generally, a bill the object of which is to further the interests of the nation at large, or to alter or to modify the general law of the land, familiar examples of which would be the Married Women's Property Acts, the Workmen's Compensation Act, before these measures became law. A *Private Bill*, on the other hand, affects the interest of an individual or a group of individuals only; or the people living in a particular locality, the best examples of which are bills promoted by municipalities for town improvements, railway bills, and the like. A *Money Bill* is a bill the object of which is to provide money for the public services, or a bill authorising the levying of taxes, and the like.

Each of these different classes of bills is characterised by peculiar differences in the manner in which it is introduced into Parliament, and the stages through which it must pass before it becomes an Act of Parliament. It may be stated that any bill, save a Money Bill, may originate in either House, and that each House may amend bills passed by the other with this exception, that the Lords cannot amend a Money Bill, all that the Upper House can do is to accept

or to reject it. Every bill must be read and passed three times by each House before it can receive the royal assent.

PUBLIC BILLS.

1. INTRODUCTION AND FIRST READING. In the House of Commons, a member desiring to introduce a public measure must bring in a motion for leave to introduce the bill. On such leave being granted, the House orders that the bill be prepared and brought in by the mover and any other members named by him. The introducer of the bill then advances to the bar of the House, and on the Speaker calling him by name, he replies, "a bill, Sir." The Speaker then commands him to bring it up. The bill is then brought to the table and delivered to the Clerk of the House, who reads out the title of the bill. Two questions are now put to the House, viz., that the bill "be now read a first time," and that it be printed. These are carried without discussion, as the first reading is a purely formal affair, and an order is then made by the House that the bill be read a second time on an appointed day.

2. THE SECOND READING. This is the crucial stage in the progress of the Bill, and includes three distinct steps. (1) Debate on the principles of the bill; (2) The Committee Stage; (3) The Report Stage.

(*a*) **Debate.** On the arrival of the appointed day, a motion is put that the bill "be now read a second time." The putting of this motion is the signal for discussion, and it is now that the principles and the scope of the bill, without going into its details, are criticised. Opponents of the measure have several courses open to them—one being to move that the bill "be read a second time that day six months," for of course, it will generally happen that the Parliamentary session will have ended before the expiration of that period, and the bill will therefore be shelved, and its advocates will have to begin all over again in the next session. Another course is to move resolutions altering the character of the bill.

(*b*) **Committee Stage.** Should the motion for the second reading be carried, the bill is then sent to be discussed in detail by a committee of the whole House. A resolution is put and carried "that the House resolves itself into a Committee of the whole House." The Speaker then puts to the House "that I do leave the Chair," and on the House assenting, the Chairman of Committee then presides. The bill is then discussed, clause by clause, line by line, and sometimes word by word. Each amendment must be put and carried by a separate division. When the sitting for the day is over, the Speaker resumes the chair, and the Chairman reports to the House that progress has been made with the bill, and asks permission for the Committee to sit again. The House then orders that the Committee shall resume the discussion on an appointed day. Amendments must be within the scope of the bill, for if not relevant to the main object of the bill they cannot be dealt with by the Committee unless the Committee has been empowered to do so by express *instructions* from the House. New clauses cannot be added in Committee, until the discussion on the existing clauses is ended, that is, until the "Report Stage" has been reached.

(*c*) **Report Stage.** When the bill has gone through the Committee, and has been discussed and amended, the Chairman makes his report to that effect to the House. An order is then made by the House that on a day named, the bill as amended shall be considered. This is the Report Stage in the progress of a bill. The Speaker takes the chair to hear the report of the Chairman. Further amendments may now be made and new clauses added, or the bill may in whole or in part be sent back again to the Committee.

3. THE THIRD READING. When the amended bill has been considered by the House, a motion is then put and carried that the bill be read a third time. Of course any member is at liberty to oppose the third reading, but it is not usual to do so. The crucial time in the passing of a bill being on the motion for the second reading, and during its treatment while in Committee. On the third reading being carried, an order is made that the Clerk of the House "carry the bill to the Lords and desire their concurrence." The bill is endorsed with the Norman-French words *soit baillé aux seigneurs*—"let it be delivered to the Lords."

4. PROCEDURE IN THE HOUSE OF LORDS. When the bill is sent to the Lords it is read a first time. If then during the next twelve days no notice is given of the second reading, it is dropped for the Session. If, however, a motion is put for the second reading, the bill goes through the same procedure as in the Lower House. If the Lords agree to the bill substantially as it left the Commons, a message to that effect is sent to the Commons, but the bill is not returned. If, however, material amendments have been made by the Lords, the bill, after the third reading, is sent to the Commons with a message that the Lords agree to the bill with the amendments to which they desire the concurrence of the Commons. The bill is endorsed with the words *a ceste bille avesque des amendemens les seigneurs sont assentus*—"to this bill with amendments the Lords have agreed."

If the Commons agree to the Lords' amendments, the bill is endorsed with the words *à ces amendemens les Communes sont assentus*—"to these amendments the Commons have agreed." Should the Commons reject the amendments, the bill is returned to the Lords with a message that the Commons cannot accept the amendments. Usually certain amendments are accepted and others rejected, the bill passing from one House to the other until a final agreement is reached.

5. DIFFERENCES BETWEEN THE LORDS AND THE COMMONS. When the two Houses cannot agree as to the amendments to a bill, the dispute may be settled by a conference between the two Houses. Should the two Houses fail to come to an agreement and the bill is a measure of great national importance, the usual plan is for the Prime Minister to advise the King to dissolve Parliament. If the new elections show a decided majority in the House of Commons in favour of the bill, the Lords withdraw their opposition.

6. THE ROYAL ASSENT. When the bill passes both Houses, it is then ready to receive the royal assent. The King gives his assent in person when he is able to be present in the House of Lords at the prorogation of Parliament; when he is unable to be present, the royal assent is given by a commission of Peers appointed for that purpose.

In the case of public bills, the royal assent is given in the words *le roy le veult*—"the King wills it." Should the King refuse his assent, he does so in the words *le roy s'avisera*—"the King will consider it." The Crown has, however, not exercised its right of veto since 1708.

The royal assent in money bills is given in the words *le roy remercie ses bons sujets, accepte leur benevolence et ainsi le veult*—"the King thanks his good subjects, accepts their aid, and thus wills it."

Private bills are assented to in the words *soit fait comme il est desire*—"let it be done as is desired."

MONEY BILLS.

A money bill must go through precisely the same stages as an ordinary bill. But there are some differences between the procedure in the passing of a money bill and that of an ordinary bill. In the first place, a money bill must originate in the House of Commons, and after it has passed that House, the Lords cannot amend it, all that the Upper House can do is to accept it or reject it. As a matter of fact, the Lords never reject a money bill. Again, by the rules of the House of Commons, a private member cannot introduce a bill having for its object the levying of taxes or the appropriation of the revenue. Such bills can only be introduced on the recommendation of the Crown and by a responsible minister.

PRIVATE BILLS.

In dealing with private bills, Parliament exercises judicial as well as legislative powers, for an inquiry is made into the merits of the bill, and witnesses are heard

for and against the measure. The procedure, so far as regards English and Irish private bills, is as follows:—

1. PROCEDURE. (*a*) On or before December 21st, a petition on behalf of the bill must be deposited in the Private Bill Office, together with a copy of the bill, and such documents as may be necessary to explain the scope and the character of the bill. At this time, too, any memorial against the bill must be presented.

(*b*) On January 18th, the petition and the memorials are considered by two Examiners, one of whom is appointed by the House of Lords, the other by the Speaker. If no one appears in support of the petition, the measure falls through. The parliamentary agent engaged to see the bill through proves that the Standing Orders have been complied with, and witnesses may be heard, to show that the Standing Orders have not been complied with. When the hearing is finished, the petition is returned by the Examiners to the Private Bill Office.

(*c*) Should the report of the Examiners be favourable, the bill is read a first time, and referred back to the Bill Office to be examined. Within ten days of the first reading, any member of the public who wishes to oppose it must deposit a petition against the bill in the Private Bill Office. A first reading, according to the "Standing Orders" of the House, cannot take place after Whitsuntide, except [The *Standing Orders* are the rules and regulations laid down by each House prescribing in what manner its business shall be conducted] in the case of London County Council Bills for borrowing money.

(*d*) On the second reading, the general principle and the scope and the merits of the bill are discussed. If the second reading be carried, the bill is sent to a committee consisting of a number of the members of the House. But before the bill goes to the Committee, the bill is examined by the Chairman of Ways and Means on behalf of the Commons, and by the Chairman of Committees acting for the House of Lords. These two may introduce amendments within the scope of the bill.

(*e*) In Committee, the bill is discussed in detail; witnesses are heard for and against the bill; and counsel are employed on both sides, who examine and cross-examine the witnesses. The members of the Committee take a very active part in hearing and examining the witnesses, and inquire very closely into the merits and the demerits of the bill, and the needs which the bill is intended to supply. The whole business is semi-judicial. Before the bill is discussed in detail, the preamble must be proved. If the committee reject on the ground that the preamble has not been proved, the measure drops through.

(*f*) After the bill is discussed and amended in Committee it is reported to the House, and its next stages are exactly similar to those of public bills. No private bill can pass through two stages on the same day without special leave of the House.

2. SCOTCH PRIVATE BILLS. With a view to save the expense of summoning witnesses to London, a special procedure has been adopted since 1899 in regard to private bills which relate wholly to Scotland. Briefly the procedure is as follows. A draft order is deposited in the Private Bill Office, with the Clerks of Parliament, and with the Treasury. The Chairman of Committees and the Chairman of Ways and Means examine the draft order, and if they report to the Secretary for Scotland that the draft order does not apply wholly to Scotland, the measure falls to the ground. Should the report be favourable, the Secretary for Scotland directs certain Commissioners to make an inquiry.

The inquiry must be held in Scotland, and as far as convenient in the locality affected by the bill. At this inquiry evidence is taken for and against the proposed measure. At the end of the inquiry, the Commissioners report that the order petitioned for should be granted with whatever modifications may be necessary, or may report that it should be refused.

Thereupon the Secretary for Scotland issues a Provisional Order, which must be confirmed by Parliament, and therefore a bill for that purpose must be introduced. Such bill will be taken to have passed through all its stages, up to and including the Committee stage, and shall be deemed to be ready for its third reading. Having passed its third reading, it is then sent to the other House.

The Commissioners who hold the inquiry may be members of Parliament, in which case they form what is called a parliamentary panel, or they may be persons who do not sit in either House, when they are said to form an extra-parliamentary panel.

3. COST OF A PRIVATE BILL. The expense of promoting a private bill is very considerable, often running into many thousands of pounds. The fees exacted by each House may amount to several hundreds, and in addition there is the expense of local inquiries, the fees payable to counsel, the remuneration of witnesses, the cost of preparing plans, and the like, and last, but not least, the expense of reporting and printing the proceedings taking place day by day while the bill is in committee.

COMMITTEES.

1. A COMMITTEE OF THE WHOLE HOUSE is simply that all the members of the House sit as a committee, presided over not by the Speaker but by a Chairman. When the House is in Committee, the Speaker acts and votes like an ordinary member. When a public bill is in committee, the committee is a committee of the whole House. Other examples are the "Committee of Supply," which decides what amount of money shall be granted to the Crown, and for what purposes; "the Committee of Ways and Means," which determines in what way such money shall be raised, and by means of what taxes.

2. SELECT COMMITTEES. A select committee consists of a number of members appointed by the House to hear evidence on some given subject, and to make a report thereon, for the guidance and information of the House. An example of such a committee is one appointed by the House to hear evidence for and against a private bill.

3. STANDING COMMITTEES. These are appointed not for a special occasion, but to act throughout the session, in regard to all matters within the scope of their authority, e.g. the committee on standing orders, the general committee on railway and canal bills, and the committee on police and sanitary bills.

THE EXECUTIVE GOVERNMENT.

PARTY GOVERNMENT. Inasmuch as union gives strength, and opinions are only changed into laws when backed by strong and earnest majorities, it has ever been the practice of the various individuals who constitute the two Houses of Parliament to organise themselves into parties for the purpose of making their opinions effective. There are generally a few members who sometimes hold aloof from their party and prefer to express their opinions unfettered by any considerations of party interest or party policy. There are, in like manner, many groups formed of members who attach special importance to a change of the law in reference to some particular subject in which they are all keenly interested; but as no such change can be effected without the concurrence of the majority, the tendency is for these smaller groups to attach themselves to one of the two leading parties in the House. From the larger of these two parties the executive government is formed, the duty of criticising their policy and administrative acts falling to the smaller party, known as the "opposition."

THE PRIVY COUNCIL. The history of our constitution is the history of a gradual change from a royal to a parliamentary executive. The sovereign in carrying out the executive functions of government was wont to be guided by the advice of certain privy councillors chosen by himself. Privy councillors are still appointed by the sovereign, and may be removed by him at will, though such removals are exceedingly rare. On being nominated

they take the oath of office, binding themselves among other things "to keep the king's counsel secret." Membership is a coveted distinction, every Privy Councillor being entitled to be addressed as "Right Honourable." The principal officer is the Lord President of the Council, who is always a member of the cabinet.

It is now understood that only those members attend a meeting of council who are specially summoned. On ordinary occasions only the ministers, the chief officers of the Household, and the Primate are summoned; but on certain extraordinary occasions the whole council is invited to attend. Immediately on the decease of the Sovereign, the Privy Council assembles and proclaims his successor. The members then take the oath of office, under the new Sovereign, who forthwith holds a meeting of his council, before whom he makes declaration of his purpose to govern according to the laws and subscribes the oath to that effect. Thus King Edward in his address to his Privy Council on the morning following the Queen's death made this solemn promise:—

> "I need hardly say that my constant endeavour will be always to walk in her footsteps. In undertaking the heavy load which now devolves upon me, I am fully determined to be a Constitutional Sovereign in the strictest sense of the word, and as long as there is breath in my body to work for the good and amelioration of my people."

Meetings of council are held when required where the King happens to be, six councillors at least, with one of the clerks of council, constituting a meeting. The attendance of the King is optional.

It not infrequently happens that it is impracticable or undesirable for an Act of Parliament to contain complete details of the mode of carrying out the principles which the Act annunciates. Indeed in framing Acts it is often impossible to anticipate hitches which may occur when it is sought to put them into operation. The custom has, therefore, arisen of statutes being passed which contain provisions enabling the Privy Council, His Majesty's Judges, the Local Government Board, the Board of Trade, or other bodies, to frame rules for the efficient carrying out of such statutes. The Privy Council promulgates such rules by means of "Orders in Council." Moreover, a Judicial Committee of the Privy Council has power to hear and determine appeals from Indian, Colonial and Ecclesiastical Courts. (Refer to "Privy Council" in *Index*).

CABINET AND PREMIER. The Cabinet is a body composed of the heads of the chief executive departments, who are jointly responsible for the government of the country. In former times the Privy Council were the advisers of the Crown, but becoming too unwieldy for ordinary purposes, a small informal body of advisers grew up within it. Thus the Cabinet—which as we know it dates from the Revolution, 1688—has grown out of the Privy Council, but it has never been legally recognised either at Common Law or by Act of Parliament. The number of its members is not fixed, but has recently been nineteen.

The chief of the Cabinet and the head of the Parliamentary Executive is called the *Prime Minister* or *Premier*. The name has been in common use for over a century, but it has only recently been legally recognised. On 2nd December, 1905, the King issued a warrant under his royal sign manual, in the exercise of his royal prerogative, declaring that thereafter the Prime Minister should have place and precedence next after the Archbishop of York.

When a ministry resigns, the sovereign calls upon some other statesman, usually the leader of the opposing party, to form another administration. If he succeeds in the attempt, he becomes of course the Prime Minister, and usually takes the office of First Lord of the Treasury, besides being the leader of the House to which he belongs. The Prime Minister presides at meetings of the Cabinet, and it is his function to direct the general policy of the Government, and to exercise a general supervision over its several departments. While each member of the Cabinet administers his own department independently of his colleagues, he is expected to consult the Prime Minister on all matters of moment, especially in relation to Foreign Affairs. It is the duty of the Prime Minister, in like manner, to keep the sovereign well informed on all important matters of state, and after a meeting of the Cabinet to send him a *résumé* of their deliberations, thus giving the sovereign an opportunity of expressing his views on any question whilst leaving himself free to act according to the decision of the Cabinet. And this is right for the responsibility is his and theirs.

Though the responsibility of the Premier is great, so also is his privilege of patronage. He not only selects those who shall form the ministry under his guidance and determines which of them shall be admitted to the Cabinet, but it is upon his advice that, as vacancies occur, archbishops, bishops, deans, and the highest judges are appointed. It is upon his recommendation the sovereign confers honours and dignities, such as peerages, baronetcies, and orders of knighthood. It is he who really appoints to such high places as the vice-royalty of India, Colonial Governorships, and Ambassadorships.

Meetings of the Cabinet are usually held once or twice a week when parliament is in session, and at other times when its members are summoned to attend. Though the King may preside at a meeting of the Privy Council, it would be unconstitutional for him to be present at a meeting of the Cabinet. He has, however, as previously stated, the right to be at once informed of what has passed thereat, and to express his own opinion on the result of their deliberations. With this exception what passes in the Cabinet is kept strictly secret, not even an official record or minute being ever taken.

THE MINISTRY. Formerly the king appointed his own ministers and dismissed a minister when he chose. This claim on the part of the sovereign was not wholly abandoned until late in the 18th century. His Majesty's ministers are now always appointed on the advice of the Premier, and consist of some forty or more persons, rather less than half of whom form the Cabinet. The ministry is drawn from the predominant party in parliament, the majority being chosen from the House of Commons. If the Secretary of State for any of the great departments, e.g., the Department for Foreign Affairs, is a member of the House of Lords, it is usual for the department to be represented in the House of Commons by the corresponding Under-Secretary, whose duty it is to answer questions respecting the policy of the Department.

RESPONSIBILITIES OF MINISTERS. The irresponsibility of the sovereign and the responsibility of his ministers are two of the chief principles of the British constitution. If charged with an unconstitutional act the king's ministers cannot plead his command, they cannot shelter themselves behind his throne. They cannot even accept a paid office under the Crown without submitting themselves, if a member of the House of Commons, to re-election. The ministry usually stands or falls together, so that when parliament passes a vote of censure on the act of any minister, the whole body generally accepts it as a vote of censure on itself, and resigns. But in addition to this collective responsibility there is also, on the part of each minister, an individual responsibility that might possibly entail most serious consequences.

Each minister of the Crown is individually legally responsible for the advice which he gives to the sovereign, and on which the sovereign acts. The Royal Will and Pleasure is usually expressed either by Orders in Council, i.e., with the advice of Privy Councillors present on the occasion at which the order is issued as notified in the London Gazette; or by Warrant under the Royal Sign Manual, i.e. a Warrant issued by His Majesty and signed, or sealed by certain of his ministers; or by Proclamations, etc., issued under the Great Seal, a seal held by the Lord Chancellor. It is thus not difficult to ascertain what ministers are mainly responsible for any particular act of the sovereign. The method by which evil advice to a sovereign is most severely punished is by *Impeachment*, against which it is not possible for an offending minister

to plead that he has been pardoned by the Crown. The last instance of impeachment was that of Henry Dundas, Lord Melville, in 1806.

MINISTERIAL OFFICES AND SALARIES.

OFFICE.	SALARY.
	£
First Lord of the Treasury (Office usually held by the Premier)	5,000
Lord High Chancellor of Great Britain.. ..	10,000
Lord President of the Privy Council	2,000
Lord Privy Seal (whose duties as such are nominal)	2,000
Chancellor of the Exchequer	5,000
Secretary of State for	
(1) The Home Department	5,000
(2) Foreign Affairs	5,000
(3) The Colonies	5,000
(4) War	5,000
(5) India	5,000
First Lord of the Admiralty	4,500
Chief Secretary to the Lord-Lieutenant of Ireland	4,425
The Secretary for Scotland	2,000
Lord Chancellor of Ireland	8,000
Chancellor of the Duchy of Lancaster ..	2,000
President of	
(1) The Board of Trade	2,000
(2) The Local Government Board ..	2,000
(3) The Board of Agriculture and Fisheries	2,000
(4) The Board of Education	2,000
Postmaster General	2,500
Usually all of the above, with one or two exceptions, form the Cabinet.	
Lord Lieutenant of Ireland	20,000
First Commissioner of Works	2,000
The Secretary to the Treasury	2,000
Financial Secretary to the Treasury	2,000
Three Junior Lords of the Treasury, each ..	1,000
Paymaster General (an honorary title) ..	nil
Civil Lord of the Admiralty	1,000
Parliamentary Under-Secretary for	
(1) The Home Department	1,500
(2) Foreign Affairs	1,500
(3) The Colonies	1,500
(4) War	1,500
(5) India	1,500
Financial Secretary to War Office	1,500
Financial Secretary to Admiralty	2,000
Parliamentary Secretary to	
(1) Board of Trade	1,200
(2) Local Government Board	1,200
(3) Board of Education	1,200
Vice-President of Board of Agriculture, Ireland	1,350
Attorney-General (England)	7,000
Solicitor-General (England)	6,000
Lord Advocate (Scotland)	5,000
Solicitor-General (Scotland)	2,000
Attorney-General (Ireland)	5,000
Solicitor-General (Ireland)	2,000

PENSIONS TO EX-MINISTERS. They are intended only for those ex-ministers whose income is comparatively small, and are limited to those who apply for them. Pensions are divided into three classes according to the office formerly held, the salary received, and the length of service rendered. No new pension is granted in any class while four pensions of that class are still running. The following table shows the amount of the several pensions and the conditions on which they are granted:—

Class of Pension.	Minimum Salary of highest office previously held.	Minimum time of service.	Maximum pension granted.
1	£1500	4 years	£2000
2	£2000	6 years	£1200
3	£1200	10 years	£800

GREAT DEPARTMENTS OF STATE.

There are many functions of executive government which Parliament would not have the time or the capacity to manage properly. These are carried out by great Departments of State, having as their junior officials persons not in parliament, whose appointments are usually permanent; whilst parliamentary control and supervision is gained by a system which requires the chief officials to be Ministers of the Crown in parliament, and therefore bound to change with each new Government.

THE TREASURY.

1. COMPOSITION. This office was at one time presided over by a Lord High Treasurer; but this individual no longer exists, his duties being discharged by a board of Commissioners consisting of the First Lord of the Treasury (usually the Prime Minister), the Chancellor of the Exchequer and three Junior Lords of the Treasury. But the three members of parliament who have most to do in respect of the work of the department are the Chancellor of the Exchequer, the Secretary to the Treasury and the Financial Secretary to the Treasury. The last of these usually has charge of the Civil Service estimates. As every one knows it is the Chancellor of the Exchequer who annually presents the Budget. In addition to these there is a large number of permanent officials under a Permanent Secretary. Though not strictly members of the Treasury Department, the Comptroller and Auditor General and Assistant Comptroller and Auditor may be conveniently mentioned here. These are officials appointed for life by the Crown, but they may be removed upon an address of both Houses of Parliament, and they may not themselves be members of either House.

2. THE ESTIMATES. Shortly after parliament has assembled every year, the Secretary of State for War, the First Lord of the Admiralty, and other heads of departments present to parliament estimates of the expenditure of their respective departments for the ensuing year. When the estimates have been laid before the House in committee, the Chancellor of the Exchequer brings forward his budget; that is to say, he informs the House as to how the money required by the estimates is to be raised. These proposals are then embodied in Acts of Parliament and passed in the usual way.

The Acts usually consist of—

(1) **The Consolidated Fund Acts** which enable the Treasury to issue sums out of the Consolidated Fund for the service of the year, and to borrow money by the issue of Treasury Bills.

(2) **The Finance Act** which provides for general taxation.

(3) **The Appropriation Act** which provides for the appropriation of sums voted for supply purposes.

3. THE REVENUE. The revenue of the country is mainly collected by three great departments—the Post Office, the Customs, and the Inland Revenue. The money so collected is paid into the Consolidated Fund at the Banks of England and Ireland. It can only be paid out again under the authority of one of the above-named annual Acts of Parliament, or by some permanent Act, as the Civil List Act, 1901, and the National Debt and Local Loans Act, 1887. The usual method of procedure for withdrawing money from the bank is for the Lords of the Treasury to apply to the Comptroller and Auditor General for a credit on the Exchequer account at the banks. If the Comptroller is satisfied that the credit is authorised under an Act of Parliament, he allows the bank to pay over the sums required.

THE FOREIGN OFFICE.

1. COMPOSITION. The Department which manages our relations with Foreign Countries is presided over by the Secretary of State for Foreign Affairs. He is a Minister of the Crown and as such is responsible to parliament. The permanent officials are headed by a permanent Under-

Secretary. The permanent staff of this department is more carefully selected than that of most of the other departments of State. The examinations are not entirely open, candidates for most of the positions being required to secure nominations from the Secretary of State. The principal work of the Foreign Office lies in the preparation of treaties and in negotiation with the diplomatic representatives of foreign powers. The right of making treaties is a prerogative of the Crown; but in practice they are made by the Secretary of State for Foreign Affairs, assisted by the permanent Under-Secretary, and frequently also by our diplomatic representative in the country concerned. Of course the Foreign Secretary does not commit the country to any important course of action without having first submitted his proposals to, and gained the sanction of, the Sovereign and the Cabinet.

2. THE DIPLOMATIC SERVICE. The Foreign Office is represented abroad by the Diplomatic and Consular services. The officers of the Diplomatic service consist of Ambassadors, Ministers, Secretaries and Attachés. Ambassadors reside in Embassies, Ministers in Legations. England has Embassies only in the following countries: Austria, France, Germany, Italy, Japan, Russia, Spain, Turkey and the United States. It is a peculiarity of embassies and legations that they are regarded in International Law as actual portions of the country they represent, and are with their officials outside the jurisdiction of the courts of the country in which they are situate. In the Diplomatic Service the range of salaries is very wide. Ambassadors may receive as much as £9,000 per annum, whilst Attachés receive nothing at all.

3. THE CONSULAR SERVICE. This service also represents the Foreign Office abroad, but in a different way. Its mission is commercial rather than political, though in many countries the Consular Officers have diplomatic functions. There are three main branches of the service: the service for the far East (China and Siam), that for the near East (Turkey, Persia, the Levant and Morocco), and the general consular service. In the first two the officials enter as Student Interpreters. They pass examinations in languages, law, and other subjects, and then study the languages of the country where they will be employed. Having gained proficiency they rise through the successive grades of consular assistant, vice-consul, consul, and consul-general. In many imperfectly civilised countries (like China) British subjects have extra-territorial rights, being tried for offences by their own consuls, and not by native courts. In the general consular service the duties of the officials are mainly commercial. They collect trade statistics and make trade reports. Formerly, the officials were nominated, but now they enter by examination. The salary of Student Interpreters is about £200, that of Vice-Consuls varies from £300 to £450, but many of the latter receive no salary, taking their remuneration in fees. Consuls receive from £600 to £1,000, and Consuls-General about £1,200.

THE WAR OFFICE.

1. THE ARMY COUNCIL. For years the War Office has been in a state of chaos. Almost every new Secretary of State for War has thought fit to launch forth new schemes entirely subverting the whole systems of organisation inaugurated by his predecessors. At present the affairs of the army are administered by an Army Council framed on lines similar to the Board of Admiralty. At the head is the Secretary of State for War, who is responsible to His Majesty and Parliament for all the business of the Army Council. Under him and responsible to him are—

(1) **The Chief of the General Staff** whose principal duties are in connection with the preparation of plans for mobilisation, the control of the Intelligence Department, and generally with such work as is usually undertaken by a general staff—the brains of an army.

(2) **The Adjutant-General,** the second military member of the Council, who looks after the recruiting and the maintenance of discipline in the service.

(3) **The Quarter-Master-General** who controls the supplies and organises the transport service of the army.

(4) **The Master-General of Ordnance** who looks after the armament of the Army and supervises fortifications, military defences and powder magazines.

There is also a civil member of the Council. He is usually the Parliamentary Under-Secretary, and is responsible to the Secretary of State for the non-effective votes and for so much of the other business of the Army Council as may be assigned to him. The audit of accounts and financial arrangements are managed by the Financial Secretary, a member of parliament; whilst the clerical and general work of the War Office is controlled by a permanent secretary who is also responsible to the Secretary of State.

2. LEGALITY OF A STANDING ARMY. The Bill of Rights, 1689, that great charter of constitutional liberties, declared "that the raising or keeping a standing army within the kingdom in time of peace, unless it be with the consent of parliament, is against law." Ever since the Bill of Rights became law the legality of the standing army has depended on the passing of an annual Act of Parliament. This Act is known as the Mutiny Act, because it was enacted for the securing of discipline and the prevention of desertion by empowering military officers to deal with cases of mutiny or desertion according to martial law. The first Mutiny Act, 1689, was passed for six months only, and since then for a year and no longer. Should parliament, therefore, in any year fail to renew it, the continued existence of the army would be illegal, as also the exercise of all military authority. (For the legality of billeting troops, and the charges that may be made therefor refer to "Billeting Troops" in *Index*.)

THE ADMIRALTY.

1. ADMIRALTY BOARD AND COMMISSIONERS. Originally the affairs of the Admiralty and the control of our naval forces were vested in a high officer of State known as the Lord High Admiral. The office does not now exist; its duties being fulfilled by certain commissioners. Of these the chief is the First Lord of the Admiralty, a member of parliament, but not necessarily a peer. He in fact occupies much the same position as a Secretary of State, and has a seat in the Cabinet. There are also four Naval Lords and a Civil Lord. The senior Naval Lord is the First Lord's chief adviser on questions of naval policy, and especially with regard to the strategic grouping of our fleets. The second Naval Lord looks after the recruiting and personnel of the navy. The third Naval Lord, also called the Comptroller of the Navy, has duties in connection with the construction and armament of the service; whilst the Junior Naval Lord manages the pay and provisioning departments. The Civil Lord, a member of the government, acts as a sort of parliamentary under-secretary for naval affairs.

The Board of Admiralty consists of the above six commissioners assisted by a Financial Secretary and by a Permanent Secretary. The first of these is a member of parliament and of the ministry, and so changes with each government, but he has whilst in office the benefit of the assistance of a permanent official known as the accountant general.

2. IMPERIAL DEFENCE. We have seen by what means parliament exercises its right to control both the land and marine forces of the empire; but for purposes of efficient attack and defence some system of co-ordination of naval and military policy is necessary. This is obtained by the existence of an "Imperial Defence Committee," presided over by the Prime Minister. It is the duty of the Committee to obtain and collate information relating to the defence of the Empire, to discuss the best means of keeping in readiness for war so as to strike promptly and effectively on its outbreak, and to keep records of its deliberations for the use of the Cabinet of the day and its successors. The Committee is purely advisory, having no executive function whatever.

THE HOME OFFICE.

1. COMPOSITION. At the head of this great department is the Home Secretary. Under him are a parlia-

mentary and a permanent under-secretary, and two permanent assistant under-secretaries, one of whom is a barrister and acts as a sort of legal adviser to the Home Secretary. The department also comprises a number of clerks of various grades, besides a whole army of inspectors of factories, prisons, etc.

2. THE HOME SECRETARY. His functions are too multifarious to be mentioned in detail. But speaking broadly they relate especially to (*a*) Communications between the king and his subjects; (*b*) The administration of the prison system in England and Wales; (*c*) The maintenance of public order in the country; (*d*) The application of the law relating to the conditions of industrial and social life.

(*a*) Through the Home Secretary the Sovereign exercises his royal prerogative to reprieve or pardon criminals and persons unjustly convicted, and through him addresses and petitions are presented to the throne and answers given.

(*b*) The Home Secretary supervises the control and management of prisons, reformatories, and industrial schools; he issues licences or "tickets of leave" to well-behaved convicts under the Penal Servitude Acts, by which they are conditionally released before the expiration of their sentences; he has the custody of all criminal lunatics; and to him falls the duty of carrying out the law relating to the extradition of criminal fugitives to and from the United Kingdom, and to the expulsion of criminal aliens.

(*c*) As the Home Secretary is the minister to whom parliament looks for the maintenance of public order, he has under his direct control the Metropolitan Police Force, and he possesses extensive powers respecting the control and management of the police forces throughout the kingdom.

(*d*) The Home Secretary has also been given power by parliament to frame rules and to enforce, by the employment of inspectors and otherwise, the due execution of many Acts of Parliament, especially those relating to the protection of health and life in dangerous industries whether in mines, quarries, factories, or workshops; also those relating to the employment of women and children, and to the care of children who have been taken out of the custody of their parents under the Prevention of Cruelty to Children Act. Moreover, many of the bye-laws issued by Local Authorities, under Acts of Parliament, can only come into force on being confirmed by the Home Secretary.

THE COLONIAL OFFICE.

1. COMPOSITION. Ever since the Crimean War this has been a separate department presided over by a Secretary of State assisted by a permanent and a parliamentary under-secretary. There are also four assistant under-secretaries and a number of clerks and other officials. The Colonial Office through its Secretary of State, exercises on behalf of His Majesty the rights of the Sovereign over all the dominions of the Crown except the United Kingdom, the Isle of Man, the Channel Islands and the Indian Empire.

2. COLONIAL GOVERNMENT. Different Colonies are governed in different ways; all are under the Crown, but they are not all subject to the control of the British Parliament.

Sir William Anson in his *Law and Custom of the Constitution* groups the systems of government for different colonies into four great classes.

(1) *Colonies with no legislature.* For these the Crown legislates by means of Orders in Council, usually countersigned by the Secretary of State, the executive powers being vested in a governor appointed by the Crown on the advice of the ministry. Gibraltar is perhaps the best known instance of this class of colony.

(2) *Colonies with a nominated legislature.* In each of these there is a governor and executive and legislative councils, all the members of which are nominated either by the Crown or by the governor. The best known instance of this class are the Straits Settlements of Singapore, Penang and Malacca.

(3) *Colonies with an elected legislature and a nominated executive.* Even in these colonies, of which the Bahamas are an instance, a portion of the legislature is nominated by the Crown.

(4) *Colonies with responsible government.* In these the Crown is represented by a governor, who is assisted by two chambers generally called the Legislative Council, and the Legislative Assembly. The assembly is wholly elected by the colonists, whilst the members of the legislative council are in some colonies elected, and in others appointed by the governor on the advice of the executive council, a body nominated not by the Crown but by himself. To this class of colonies belong Canada, Newfoundland, Australia, New Zealand, Cape Colony and Natal.

THE INDIA OFFICE.

1. THE HOME CONTROL. By the Government of India Act, 1858, the Indian territories then in the possession or subject to the sway of the East India Company, were vested in the Sovereign. The Act provides for the appointment of a Secretary of State and under-secretaries to be paid out of the revenues of India. The Secretary of State is assisted in advising the Crown by a Council of twelve members, none of whom may sit or vote in parliament. But some measure of parliamentary control is gained by the fact that the Secretary of State, the president of this council, is always a member of parliament and of the ministry. The major part of the council is chosen from among persons who have spent at least ten years in India, and so have some acquaintance and sympathy with local opinions and feelings. Each member of the Council is elected for ten years and receives a yearly salary of £1,200, paid out of the revenues of India.

2. FUNCTIONS OF THE COUNCIL. The Secretary of State acts as president of the Council, and though not strictly a member, he has a vote at its meetings which are held at least once a week at the India Office, Whitehall. The Council under the direction of the Secretary of State conducts the business transacted in the United Kingdom in relation to the government of the Indian Empire; but every order or communication intended to be sent to India must be signed by the Secretary of State and, unless a secret or urgent despatch, must be open to the perusal of the members of the Council, who may record their opinions with respect thereto in a minute book kept specially for that purpose. If the Secretary of State acts contrary to the expressed opinions of the majority he must record his reasons for so doing. The expenditure of the revenues of India are subject to the control of the Secretary of State in Council.

3. LOCAL ADMINISTRATION. In India itself the Crown is represented by a Viceroy, or Governor-General, who is appointed by the sovereign, usually for a term of five years. The Viceroy is assisted in his executive and legislative duties by a council consisting of an extraordinary member (the commander-in-chief of the forces in India) and about six ordinary members appointed partly by the Crown and partly by the Secretary of State in Council. But where legislation is contemplated the Viceroy has power to nominate from ten to sixteen additional members under the Indian Council Acts, 1861 and 1892. Some of these additional members are always chosen from among the natives of India.

The Presidencies of Bombay and Madras are in charge of Governors who are appointed by the Crown and have legislative and administrative councils of their own. But the Lieutenant-Governors of the other provinces and territories of India are appointed by the Viceroy, subject to the approval of the Crown.

LESSER DEPARTMENTS OF STATE.

In the last chapter we dealt with the seven great permanent departments, which carry out under, parliamentary control, the administrative functions of government. There are besides a number of smaller ones framed on similar lines, some of which we propose to deal with here.

BOARD OF TRADE.

1. COMPOSITION. At the head of this department is the President of the Board of Trade, a member of the Government who is now usually included in the Cabinet. He is assisted in parliament by a parliamentary secretary, and in his departmental duties by a permanent secretary. The permanent establishment is divided into various sections: the Commercial Labour and Statistical Department under a Comptroller-General; the Companies Department under a Comptroller; the Bankruptcy Department under an Inspector-General; and four departments (the Railway, the Marine, the Harbour, and the Finance and General) under Assistant Secretaries. Under these officers there is a large staff of clerks and other minor officials as in all the other departments of State.

2. FUNCTIONS. We can only state the various functions of these numerous departments in a general way:

(1) **The Commercial Labour and Statistical Department** has the duty of preparing and issuing returns, reports and statistics dealing with the trade of the country, and with the condition of the labour market.

(2) **The Companies Department** controls and supervises the liquidators of companies being wound up by order of the court, and has various other duties under the Companies Acts.

(3) **The Bankruptcy Department** appoints and controls official receivers and fulfils duties under the Bankruptcy Acts.

(4) **The Railway Department** exercises considerable control over railways and tramways, especially in seeing that the Companies concerned take the utmost precautions to ensure the safety of their passengers. Indeed when serious accidents occur the Board of Trade holds inquiries as to their cause. Moreover, the bye-laws of such Companies and the schedules of rates for the carriage of merchandise must be approved by the Board.

(5) **The Marine Department** discharges many duties under the Merchant Shipping Act, 1894, an act with 748 sections and many schedules. Some of the principal of these duties are the surveying, measurement and marking of British ships before they are registered, the granting of certificates of competency to masters, mates and engineers, the granting of licences for the supply of seamen, the approving of forms of agreement between masters and crew, the administration of the effects of deceased seamen, etc.

(6) **The Harbour Department** sees that harbours and rivers are kept in a navigable condition. It controls receivers of wrecks, and supervises Trinity House and other pilotage authorities.

(7) **The Finance and General Department** deals with the finances of the Board of Trade and with all the work of the Board not allotted to other departments. Thus it supervises the Patent Office.

LOCAL GOVERNMENT BOARD.

1. COMPOSITION. This Board was established by the Local Government Board Act, 1871, for the purpose of concentrating into one department the supervision of the laws relating to Public Health, the Relief of the Poor, and Local Government. The Board consists of a President, who is a member of the ministry and, as ex-officio members, the Lord President of the Council, all the principal Secretaries of State, the Lord Privy Seal, and the Chancellor of the Exchequer. It should be noted that the duties of the *ex-officio* members on this and the other great Government Boards are for the most part merely nominal and carry no remuneration. In each case it is on the President of the Board on whom falls the bulk of the work and the responsibility to parliament. The President is assisted in his executive duties by a parliamentary and a permanent secretary, and a staff of secretaries, assistant secretaries, inspectors, auditors, clerks, messengers, etc., as in the other departments of State.

2. FUNCTIONS OF THE BOARD. The Act of 1871 transferred to the Local Government Board

(1) The powers and duties formerly exercised by the Home Secretary under the Acts relating to Registration of Births, Deaths and Marriages; Public Health, Drainage, Sanitary Matters, Baths, Wash-houses; Public Improvements, Artizans' and Labourers' Dwellings, and Local Taxation returns.

(2) The powers and duties formerly exercised by the Privy Council under the Vaccination and other Acts dealing with the prevention of disease.

The Board is, in fact, the central department for Poor Law, Public Health, and other Local Government matters. It supervises urban rural and district councils in the carrying out of their duties under the Public Health and Local Government Acts. Thus it hears and determines appeals relating to the summary recovery of private improvement expenses by Local Authorities, and exercises a certain amount of control over the auditing of accounts and financial transactions of such authorities. Its auditors have the power, which they not infrequently exercise, of surcharging against individual members of local authorities items of expenditure which ought not legally to have been incurred. The Board, however, may grant remission of such disallowances on appeal. The power of the Local Government Board over Boards of Guardians is so complete that there is very little indeed that they may do without its authority. Over the other authorities its power is not so complete, but County Councils, Borough Councils, as well as the authorities of urban and rural districts have all to get the sanction of the Board to their proposals to borrow money and to the bye-laws they propose to issue. (Refer to "Local Government Board" in *Index*.)

BOARD OF AGRICULTURE AND FISHERIES.

1. COMPOSITION. An Act passed in 1889 established the Board of Agriculture, and by an Act passed in 1893 the powers of the Board were enlarged so as to include the control of the Fisheries, which previously were under the supervision of the Board of Trade. The Board consists of a President, who is a member of the ministry, and certain ex-officio members, including the Lord President of the Council, the First Lord of the Treasury, all the principal Secretaries of State, the Chancellor of the Exchequer, the Chancellor of the Duchy of Lancaster, and the Secretary for Scotland. The permanent staff is under a secretary assisted by assistant-secretaries, clerks, inspectors, etc.

2. FUNCTIONS. These may be thus summarised:—

(1) To prevent the introduction or spread of disease among certain animals. For this purpose it is empowered to make regulations for the importation of animals from abroad, for the slaughtering, if need be, of animals attacked by infectious disease, for the muzzling of dogs, and the destruction of such as show symptoms of rabies, &c.

(2) To collect and distribute information relating to Agriculture, Horticulture and Forestry; to promote instruction and training in these subjects by distributing the Government Grant at their disposal among such schools and colleges as give an efficient agricultural education; to administer the Sale of Food and Drugs Acts so far as they concern agricultural produce; and to collect and publish agricultural statistics, such as the average prices of British corn under the Corn Returns Act, 1882.

(3) To supervise the redemption of tithe rent charge, the enclosure of common land, the enfranchisement of copyhold land, and, in brief, to administer any Act under which the Land Commissioners formerly had powers and duties.

(4) To administer the Acts relating to sea, freshwater, and salmon fisheries in regard to England and Wales.

(5) To supervise the Ordnance Survey of the United Kingdom, which is placed under the charge of a Director-General.

BOARD OF EDUCATION.

1. COMPOSITION. This Board was established by the Board of Education Act, 1899, and consists of a President, the Lord President of the Council, the principal Secretaries of State, the First Commissioner of the Treasury, and the Chancellor of the Exchequer. The President is nominally appointed by the Crown to hold office during His Majesty's pleasure; but this really means that he is a member of the ministry, chosen like other ministers by the Premier, and going out of office on a change of government. He is, of course, a member of one or other of the Houses of Parliament, and has the assistance of a Parlia-

mentary Secretary. There is also a permanent secretary in charge of the permanent staff of clerks, examiners, inspectors, &c., with three assistant secretaries dealing respectively with elementary, secondary, and technological education. The Board is assisted in its duties by a Consultation Committee consisting of eighteen members, who may be considered well qualified to represent the views of the universities and other bodies interested in education.

2. FUNCTIONS. The Board takes the place of the old Education Department, Whitehall, and of the Department of Science and Art, South Kensington, and its duty is to administer in England and Wales the law as to Education contained in many Acts, commencing with the Act of 1870. (Refer to "Education Law" in *Index*). Moreover, the Crown has power, by Order in Council, to transfer to the Board of Education any of the powers of the Charity Commissioners or of the Board of Agriculture and Fisheries in matters relating to education. One of the Board's most important duties is to exercise control over local Education authorities generally, hearing and determining appeals and settling disputes; for instance, in regard to the necessity or otherwise of new public elementary schools. It has also to co-ordinate the several schools and institutions engaged in education so as to prevent their work from overlapping and themselves from injuriously competing with each other. It frames and issues codes, laying down the conditions on which government grants are made; commissions inspectors to visit the schools in receipt of public money to see that these conditions are fulfilled; requires the local authorities to submit all plans of new school buildings for its approval; supports in large measure colleges for the training of teachers, and regulates the employment of pupil-teachers; and performs among its other duties that of administering the Teachers' Superannuation Fund.

BOARD OF WORKS.

This Department is presided over by the *First Commissioner of Works*, who forms one of the ministry and sometimes one of the Cabinet. He has control over public works and buildings of which the expenses are defrayed from the public purse. He has also the management of certain national parks and gardens, such as Richmond Park, Phœnix Park, Holyrood Park, and Hampton Court Gardens.

REVENUE DEPARTMENT.

1. CUSTOMS. The Board of Customs consists of a Chairman, Deputy Chairman, and one Commissioner. It collects the duties prescribed each year in the Finance Act on the imports and exports of the United Kingdom, and pays the proceeds to the Exchequer Account in the Bank of England. (Refer to "Customs" in *Index*).

2. INLAND REVENUE. The Board of Inland Revenue is composed of a Chairman, Deputy Chairman, and two Commissioners. Its offices are at Somerset House, London. The revenue it collects is derived from four sources—death duties, income and property tax, stamp duties, and excise duties and licences. (Refer to "Inland Revenue" in *Index*).

3. POST OFFICE. This is an important source of income, the postal and telegraph services bringing in a net income of over five millions. The chief official is styled the *Postmaster General*, a member of the government, and frequently a Cabinet minister. (Refer to "Post Office" in *Index*).

Besides these great revenue departments we may mention two others from which the King and Prince of Wales derive a substantial part of their personal income.

(1) *The Duchy of Lancaster.* The Crown lands in the Duchy of Lancaster have for centuries been "held separately from all other hereditaments." The proceeds, which amounted in 1904 to £110,000 and which are wholly exempt from parliamentary control, are paid into the king's privy purse, and are additional to the sum allowed in the Civil List. The office of *Chancellor of the Duchy* is, nevertheless, a political appointment, usually falling to a statesman of high standing and carrying with it a seat in the cabinet.

(2) *The Duchy of Cornwall.* The chief officer is called the *Lord Warden of the Stannaries*, and his duty is to superintend the management of the estates in the interests of the Duke of Cornwall (Prince of Wales) to whom the net profits are paid. These in 1904 amounted to £77,000.

ADMINISTRATORS OF THE LAW.

In the chapter on *Legislation* we have been informed how laws are made, and in that on the *Law Courts* will be found information as to the various courts of law, the methods of procedure in them, and the ways of enforcing the judgments given by them. We will, therefore, deal here only with the officials who are appointed to administer the laws of the land.

THE LORD CHANCELLOR. This official is the highest judicial officer in the kingdom, and has precedency above all temporal lords. Owing to his ecclesiastical patronage he may not be a Roman Catholic, but this disability does not apply to the Irish Lord Chancellor. The appointment is made by the King delivering the Great Seal into his custody. It is not essential that he should be a peer, though he is the prolocutor or speaker of the House of Lords. He is always a member of the cabinet and a privy councillor, and vacates his position when the ministry go out of office. He advises the Crown as to the appointment of all judges (except the Lord Chief Justice, who is nominated by the Prime Minister) and himself appoints Justices of the Peace for the whole of the kingdom. He presides at all the meetings of the House of Lords when it sits to hear appeals. He appoints all County Court Judges (except those in the Duchy of Lancaster), exercises much other judicial patronage, is ex-officio a member of the Court of Appeal; and after his retirement has the right to sit as one of its members. His remuneration is £10,000 a year, £6,000 of which he receives as a Lord of Appeal in Ordinary, and £4,000 as Speaker of the House of Lords. On a change of government he still sits as a Law Lord and retains, as such, his salary of £6,000, but when he retires altogether his pension is £5,000. (Refer to "Lord Chancellor" in *Index*).

THE LORD CHIEF JUSTICE OF ENGLAND. When the Queen's Bench, the Common Pleas and the Exchequer Divisions were consolidated in 1881 into one division, now called the King's Bench Division of the High Court of Justice, the offices of Lord Chief Justice of the Common Pleas and Lord Chief Baron of the Exchequer were abolished and the Lord Chief Justice of the Queen's Bench became the Lord Chief Justice of England. He is appointed by the Crown by letters patent, and receives a salary of £8,000 per annum. In the absence of the Lord Chancellor he acts as president of the High Court of Justice. He must, unless prevented by illness, be one of the five or more judges of the Court of Crown Cases Reserved, the court which hears appeals on questions of law arising at criminal trials. He generally presides at the Divisional Court of the King's Bench Division on the hearing of appeals from Petty and Quarter Sessions and from County Courts. Under the Judicature Act, 1875, he is an ex-officio judge of the Court of Appeal, but except when one of the ordinary judges is absent he does not often sit in that Court. Nearly all writs are tested in the name of the Lord chancellor, when that office is vacant they are tested in the name of the Lord Chief Justice.

THE MASTER OF THE ROLLS. This official who ranks next after the Lord Chief Justice in the table of precedence was formerly a judge of the High Court. By the Judicature Act, 1881, he is made an ex-officio judge of the Court of Appeal, and in practice he nearly always presides in that court. He receives a salary of £6,000 per annum. Formerly the Master of the Rolls held sole jurisdiction over the register of patents, but much of this has been taken away by the Judicature Act, 1873. He still, however, as Keeper of the Records, has certain powers of

amending clerical errors in specifications filed at the patent office. He also has many powers over solicitors practising in England and Wales. The Master of the Rolls is so called because he is Keeper of Public Records, which were formerly written on rolls of parchment. In early times the rolls were in the custody of the Chancellor, but owing to the rapid growth of that official's jurisdiction a separate office was created in the reign of Edward II.

THE ATTORNEY-GENERAL. The principal law officer of the Crown is the Attorney-General. He is a member of the government but is not in the cabinet. His salary as a member of the government is £7,000 per annum, but he receives fees for actual litigious work done amounting roughly to another £6,000. His duties are manifold. He is the principal legal adviser to the ministry of which he is himself a member, and being a member of parliament he is expected to defend in the House the legality of the government's actions. He also is a necessary party in all legal actions where the Crown or its royal prerogatives are in question. By certain Acts of Parliament criminal proceedings cannot be taken against a person unless the fiat or sanction of the attorney-general has been first obtained. This is especially the case where the injured party would otherwise have two courses of procedure open to him, one criminal and the other civil. Thus fraudulent misappropriation by a trustee is both a civil wrong and a criminal offence. The attorney-general's fiat is necessary before criminal proceedings can be brought against a fraudulent trustee. The Attorney-General has, moreover, the power to stay and put an end to criminal proceedings by entering what is called a *nolle prosequi*. Thus a few years ago a man was tried for murder; the jury disagreed. He was tried again at the next assizes and the new jury also failed to agree. He would have had to be tried again had not the attorney-general entered a *nolle prosequi*. Whereupon he was discharged though not acquitted.

THE SOLICITOR-GENERAL. He also is a law officer of the Crown, a member of parliament and of the ministry, and not in the cabinet. He is not, however, a solicitor. Both he and the attorney-general are always chosen from among barristers of very high standing, and almost always from among the number of King's Counsel. The office is regarded as a stepping stone to that of attorney-general, and thence to the post of Lord Chancellor. His salary is £6,000 per annum, but with the addition of fees for litigious work it is brought up to about £10,000. He acts as the Attorney-General's assistant and takes his place whenever the latter is unable to be present.

LORDS OF APPEAL IN ORDINARY. The House of Lords is the highest court of appeal in the land. It hears appeals from His Majesty's Court of Appeal in England and from various courts in Scotland and Ireland. Moreover, the Judicial Committee of the Privy Council is the final court of appeal from the ecclesiastical courts of England and from the supreme courts of the Colonies. There are always a certain number of high judicial personages, as the Lord Chancellor and ex-Lord Chancellors with peerages in the House of Lords, but in order to strengthen the legal element the Appellate Jurisdiction Acts, 1876 and 1887, provide for the appointment of four Lords of Appeal in Ordinary with life peerages and the rank of Baron to aid the House of Lords (and the Judicial Committee when they are privy councillors) in the hearing of appeals. They receive salaries of £6,000 per annum each, and must at the time of appointment either have held for not less than two years some high judicial office or else have been in practice as a barrister in England or an advocate in Scotland for not less than fifteen years.

LORD JUSTICES. The Court of Appeal which hears appeals from the High Court and from which appeals lie to the House of Lords, usually sits in two courts of three judges in each. The Lord Chancellor and the Lord Chief Justice are ex-officio judges in this court, but seldom sit. In practice the six judges who sit in the court to hear appeals are the Master of the Rolls and five Lord Justices, each of whom receives a salary of £6,000 per annum, and must either have been a judge of the High Court for at least one year or been in practice as a barrister for not less than fifteen years.

JUDGES OF THE HIGH COURT. The Chancery Division of the High Court of Justice is nominally presided over by the Lord Chancellor, but the actual work of the division is performed by six *puisne* judges. (All those judges of the High Court who have no distinctive title are called *puisne* judges, Fr. *puisné* "junior.") In the King's Bench Division there are the Lord Chief Justice and fourteen puisne judges, and in the Probate, Divorce and Admiralty Division there are the President of that division and one puisne. The President of the Probate, Divorce and Admiralty Division and the puisne judges of the various divisions each receive a salary of £5,000, and the King's Bench Judges who go on Circuit receive in addition handsome travelling allowances. Puisne judges of the High Court must be barristers with not less than ten years' experience at the bar. They are addressed as "My Lord," and are styled "Mr. Justice ———." On appointment they always receive the honour of knighthood, but this is for the purpose of conferring a measure of precedence on their wives, they themselves rank higher than knights.

We may here mention an official known as the Judge's Marshal. He is usually some young relative of a judge who accompanies him on Circuit and acts as a sort of private secretary for which he receives his travelling expenses and two guineas a day whilst the judge is on circuit.

COUNTY COURT JUDGES. These are appointed from among barristers of not less than seven years' standing. Where the district of their County Court is situate within the royal Duchy of Lancaster they are appointed by the Chancellor of the Duchy, but elsewhere they are appointed by the Lord Chancellor. The same judge may be appointed to two different County Courts. Neither County Court judges, High Court judges, or judges of the Court of Appeal are allowed to sit as members of parliament. County Court judges receive a salary of £1,500 per annum, and an allowance for travelling expenses. They are addressed as "Your Honour," and styled "His Honour Judge ———." In the case of his illness, or unavoidable absence, a County Court judge may appoint as his deputy a barrister of not less than seven years' standing.

THE RECORDER AND THE COMMON SERGEANT OF LONDON. The Recorder of London is the judge at one of the courts situate at the Old Bailey, and known as the Central Criminal Court. It is the Recorder who delivers the charge to the Grand Jury at the Old Bailey sessions, which are held monthly. He receives a salary of £4,000 per annum, and is elected by the Aldermen of the City of London; but he cannot exercise his judicial functions until confirmed in his appointment by the Crown. Under him as a Judicial Officer of the City of London and also a judge of the Central Criminal Court is the Common Sergeant who was formerly appointed by the Court of Common Council, but is now, by virtue of the Local Government Act, 1888, appointed by the Crown. The Common Sergeant receives a salary of £2,500 a year.

RECORDERS OF BOROUGHS. The County Quarter Sessions are presided over by a chairman and County Justices, the Chairman being elected by the Justices. But in boroughs the sole judge at the Quarter Sessions is a Recorder, a barrister of at least five years' standing appointed by the Crown. By the Municipal Corporations Act, 1882, he receives such a salary (not exceeding the amount which the borough council has, by its petition for a court of its own, declared itself prepared to pay) as the Home Secretary may direct; but the salary may be increased by a resolution of the council approved by the Secretary of State. In some boroughs the Recorder receives nothing, whilst in others he receives a handsome sum for the few days' work in the year required of him.

BANKRUPTCY OFFICERS. Since 1883 the Bankruptcy Court has formed part of the High Court of Justice, though certain County Courts still retain jurisdiction in bankruptcy. The judge of the High Court who deals particularly with bankruptcy cases is one of the *puisnes* of the King's Bench Division, nominated for the purpose

by the Lord Chancellor. Under him are five REGISTRARS, who are empowered to hear bankruptcy petitions, to make receiving orders, and to do many things in connection therewith, thus relieving the Judge of a considerable amount of work. There is also an OFFICIAL RECEIVER appointed by the Board of Trade in each bankruptcy division of the county, whose duty it is, *inter alia*, to investigate the conduct of debtors and to report to the Court, stating whether there are circumstances which would justify the Court in refusing, suspending, or qualifying an order for a debtor's discharge.

JUSTICES OF THE PEACE. By far the larger amount of the work in connection with charges of crime is done by Justices of the Peace, familiarly known as magistrates. For over five hundred years they have received the sovereign's commission to keep the peace in their several areas. There is a separate commission of the Peace for each county, and for many boroughs. The position is one of honour. "The whole Christian world," said Lord Coke, "hath not the like office as justice of the peace, if duly executed." They are of two kinds, County Justices and Borough Justices, and are appointed by the Lord Chancellor on behalf of the Crown. The Chairman of a County Council or of an Urban or Rural District Council is by virtue of his office a County Justice (women, of course, are disqualified). So, too, in Boroughs the Mayor is *ex-officio* a Justice of the Peace both during his year of office and the succeeding year. The Recorder of a borough is also an *ex-officio* Borough Justice. The old property qualification for a county justice is no longer required. (See under "Justices of the Peace Act," p. 563.) Under the Summary Jurisdiction Acts the work of these local magistrates has become very heavy. The office is terminated by the death of the sovereign, by a special writ, or by the issue of a new commission. A justice of the peace also vacates his office on being made high sheriff of the county, but only during the period in which he serves as high sheriff.

STIPENDIARY MAGISTRATES. If a borough council so desire they may, under the provisions of 45 & 46 Vict., c. 51, s. 161, petition the King, through the Home Secretary, for the appointment of a Stipendiary Magistrate. If the petition is granted, a barrister of at least seven years' standing is appointed, who becomes by virtue of his office a justice of the borough. The stipendiary magistrate may do alone all acts which are authorised to be done by two justices of the peace. The paid magistrates in London number twenty-five, and they are known as METROPOLITAN MAGISTRATES. The appointments are made by the Crown. In the Metropolis there are daily sittings at fourteen police courts, excepting only Sunday, Christmas Day, Good Friday, or any day appointed as a public fast or thanksgiving.

OFFICERS OF THE CHURCH.

The constitutional aspect of the Established Church of England is described in the chapter on Church Law, to which reference should also be made for an account of church property, ecclesiastical jurisdiction, the position of the clergy and churchwardens, etc. The church only recognises three orders of clergy, namely, bishops, priests, and deacons. There are, however, among the clergy varying degrees of dignity or office, and it is of the holders of such dignities that we would speak here. (For the mode of addressing these different grades refer to *Social Guide*).

ARCHBISHOPS. England is divided into two provinces for ecclesiastical purposes, each of which has an Archbishop as its spiritual head. Of these the principal is the Archbishop of Canterbury who ranks as the first subject of His Majesty, and is placed in the table of precedency next to Ambassadors and before the Lord Chancellor. He is styled the Metropolitan and Primate of all England, and has the right of placing the crown on the sovereign's head at his coronation. The Archbishop of the province of York ranks in the table of precedency immediately after the Lord Chancellor and before the Prime Minister. At coronations it is his privilege to crown the Queen Consort. Each Archbishop has the jurisdiction of a bishop in his own diocese, and a measure of supervision and control over the bishops of the other dioceses in his province. The two archbishops together with the bishops of London, Durham and Winchester are always entitled by virtue of their office to be spiritual peers of the House of Lords, whereas the other diocesan bishops have to wait for that honour until entitled by seniority (see "Spiritual Peers" under *House of Lords*.) Archbishops and bishops sign themselves by writing their Christian names (or the initial thereof) followed by the ancient name of their see. Thus Dr. Randall Davidson, Archbishop of Canterbury, signs himself Randall Cantuar, and Dr. William Maclagan, Archbishop of York, signs himself Willelm Ebor (see "Episcopal Signatures" in *Social Guide*).

BISHOPS. The province of Canterbury is divided into the diocese of Canterbury with an Archbishop, who receives £15,000 per annum, and twenty-six dioceses with Bishops:—

London (£10,000), Winchester (£6,500), Bangor (£4,200), Bath and Wells (£5,000), Birmingham (£3,500), Bristol (£3,000), Chichester (£1,200), Ely (£5,500), Exeter (£4,200), Glou0ester (£4,300), Hereford (£4,200), Lichfield (£4,200), Lincoln (£4,500), Llandaff (£4,200), Norwich (£4,500), Oxford (£5,000), Peterborough (£4,500), Rochester (£3,100), St. Albans (£3,200), St. Asaph (£4,200), St. Davids (£4,500), Salisbury (£5,000), Southwark (£3,000), Southwell (£3,500), Truro (£3,000), and Worcester (£1,200).

The province of York comprises the diocese of York with its Archbishop (£10,000), and nine other dioceses or bishoprics:—

Durham (£7,000), Carlisle (£4,500), Chester (£4,200), Liverpool (£4,200), Manchester (£4,200), Newcastle (£3,500), Ripon (£4,200), Wakefield (£3,000) and Sodor and Man (£1,450 net).

Besides the above diocesan bishops there are in the Established Church in England a number of other bishops who are either suffragan or coadjutor bishops.

SUFFRAGAN BISHOPS are appointed for certain towns mentioned in a statute of the reign of Henry VIII. (26 Hen. VIII., c. 14), and for such other towns as the sovereign may direct by means of an order in Council under the Suffragans Nomination Act, 1888 The duty of a suffragan bishop is to relieve his diocesan of a certain portion of his work, especially in visiting the clergy and their parishes, and in taking a large share of the Confirmations held each year in certain selected churches of the diocese. Suffragans are permitted by the Statute of Henry VIII. to hold two benefices each "for the better meyntenaunce of his dignitie."

A BISHOP COADJUTOR is an additional bishop appointed under the Bishops Resignation Act, 1869, when any Archbishop or bishop becomes incapacitated by reason of permanent mental infirmity from the due performance of his episcopal duties. He obtains upon consecration the spiritualities of the see and the patronage of the bishop, but usually a third of the temporalities of the see is taken as a pension for the late bishop.

DEANS. Next in rank to the Bishop comes the Dean. He is the head of the chapter attached to the cathedrals of every diocese except the newer ones of Birmingham, Liverpool, Newcastle, Southwell and Wakefield. The Dean and Chapter form the governing body of the cathedral of the diocese. They are charged with the duty of maintaining the fabric in good repair and the proper rendering of divine service therein. They are nominally entitled on the decease or retirement of the bishop of the diocese to elect a successor. But practically they are bound to elect the person named in the letters missive which accompany the *congé d'élire* or licence to elect. By the Ecclesiastical Commissioners Act, 1840, every Dean of a cathedral must remain in residence for at least eight months in the year. No one is eligible for the office of Dean until he has been six years in priest's orders.

CANONS. By the Ecclesiastical Commissioners Act, 1840, all the members of the chapter, except the dean, in every cathedral and collegiate church in England and in

the cathedral churches of St. Davids and Llandaff are styled Canons, whereas formerly in some cathedrals they were styled prebendaries, and in others canons. The term of residence to be kept by a canon of a chapter is at least three months in the year. The act further gives bishops the power to confer an honorary canonry on leading clergymen. The *Honorary Canons* are entitled to stalls and take precedence in the cathedral churches next after the canons. In some cathedrals these non-residentiary canons are still called prebendaries. The title of *Minor Canon* is given to the clerical members of a cathedral choir whose special duty is to officiate at Mattins and Evensong. They are appointed by the Chapter, and generally owe their appointment to a good voice and the power of using it effectively.

ARCHDEACONS. They are appointed by their respective bishops and are required to have been at least six years in holy orders. Their functions are indicated in the designation of these dignitaries as *oculi Episcopi*, "the eyes of the bishop." It is their duty to inspect the churches and glebe houses, and to hold annual visitations of the clergy and churchwardens. It is their privilege to present candidates to the bishop for ordination after having duly examined them, and to induct the clergy into the temporalities of their benefices. They are *ex-officio* members of Convocation. There are from two to four archdeaconries in each diocese.

RURAL DEANS. The Ecclesiastical Commissioners Act, 1836, gave power to the Crown to issue Orders in Council providing that every parish should be within a rural deanery, and every such deanery within an archdeaconry, and that no archdeaconry should extend beyond the limits of one diocese. It will thus be seen that the country is divided into ecclesiastical provinces, the provinces into dioceses, the dioceses into archdeaconries, the archdeaconries into rural deaneries, and the rural deaneries into parishes. At the head of these deaneries is the rural dean who formerly was a dignitary of considerable importance, but who now is chiefly concerned in assisting the archdeacon in inspecting and reporting on the clergy under his charge. He is appointed, as a rule, by the bishop or the archdeacon, but in some cases by the suffrages of the clergy of the rural deanery. He is frequently requested by the bishop to convene the clergy of his rural deanery to discuss certain questions on which the bishop desires to learn the opinions of his clergy.

RECTORS. By the New Parishes Act, 1856, upon every resettlement of endowments, whenever the whole of the ecclesiastical dues, consisting of any prædial or rectorial tithe arising within the limits of any parish or district, shall become payable to the incumbent, such incumbent shall thereupon become the rector. Generally speaking the title rector is given to the incumbent of parishes where the tithes have not been impropriated, that is, handed over to certain laymen, who are called, in consequence, lay rectors (Refer to "Tithes" in *Index*.)

VICARS. The term vicar (Latin *vicarius*) simply means a deputy, and was first applied to the clerical deputies appointed by lay rectors to conduct the services in the parish churches on their behalf; but the term is now used in a larger sense to include all incumbents who are not rectors.

CURATES. Originally the term applied to all clerks in Holy Orders who had a cure of souls; but now the word is generally employed to designate the clerks in Holy Orders, whether priests or deacons, who assist a rector or vicar in carrying out his duties in his church and parish.

It is interesting to note that in French a *curé* is equivalent to a vicar, and a *vicaire* to a curate. The French terms are more strictly accurate than our own, inasmuch as the *curé* holds the cure of souls, and the *vicaire* (Latin, vicarius) is his assistant.

Generally when the incumbent in charge of a parish is maintained, not by rectorial or vicarial tithes, but by an annual stipend, he is styled a *perpetual curate*.

PART II.

LOCAL GOVERNMENT.

INTRODUCTION.

We propose in this second part of our "Legal Guide" to deal with the laws affecting Local Government, in the hope that our exposition may be of service to all who take an intelligent interest in the wise administration of those laws. Good laws are valueless unless well administered. Whether the administration of the laws in any locality is good or bad depends on the kind of men who have been elected for the management of its affairs. It behoves every citizen to do his best to secure the election of wise and honest men. It is, therefore, his duty to ascertain the character and fitness of the men who offer themselves for election, and to make a point of recording his vote on the day of election. This is obviously the least that a good citizen is bound to do in the interests of the community in which he dwells. But it is hoped that an increasing number of citizens, not satisfied with taking this minimum share of duty in local matters, will be glad to gain such information respecting the laws bearing on local government as will enable them to form a just opinion of the way affairs in their locality are administered, and to exercise a salutary influence in effecting necessary reforms. It is also hoped that the exposition here offered will be useful to those who have been elected to any such office as Borough or County Councillor, helping them to discharge their duties with a clear knowledge of their rights and responsibilities.

By local government is meant the administration of those matters which directly concern the inhabitants of a particular place, and which do not directly concern the nation as a whole, however greatly they may indirectly affect the interests of the nation at large. Such matters include sanitation, police, relief of the poor, lighting, maintenance and control of the highways, erection of free libraries, and many other local concerns. For the better administration of these affairs, the country is divided into areas, each of which is governed by an elective body with powers and duties well defined.

The largest administrative area is the County, the interests of which are supervised by the County Council. The County itself is divided into Rural Districts and Urban Districts, governed by District Councils. The Rural Districts are again sub-divided into Parishes, the interests of which are attended to by the Parish Council or the Parish Meeting. The Urban Districts are divided into parishes, but not for the purpose of each having a separate Council or Meeting. Further, in both Rural and Urban Districts the parishes are grouped together into Unions, each of which is for poor-law purposes governed by a Board of Guardians, though it must be remembered that in the Rural Districts the members of the Rural District Council are also the members of the Board of Guardians for that district. From this it will be seen that our system of local government has for its unit the Parish; from the

grouping of the Parishes comes the Districts and the Unions, and the County is built up of the Districts, Rural and Urban.

The County Council has certain powers of controlling and supervising the work of the smaller bodies, the District and the Parish Councils. The District Council has somewhat similar powers of supervising the work of the Parish Councils and Parish Meetings.

There are, however, certain Urban Districts which are exempt wholly or in part from the jurisdiction of the County Councils. These are known as boroughs, which in ancient times received a charter of incorporation, or at the present day have been granted a charter of incorporation under the Municipal Corporations Acts. Some of these boroughs are known as County Boroughs, and are wholly independent of the county in which they are situated, and are uncontrolled by the County Councils. This class of boroughs was created by the Local Government Act of 1888. The other boroughs may be described as Non-County Boroughs, and are not entirely free from County Council control, particularly in the matter of the maintenance of Highways, Education, and the payments of the salaries of Sanitary Officials.

The City of London is wholly unlike any other Municipal Corporation, not only as regards its form of government, but also in regard to the rights and duties of its Corporation. The Metropolitan Boroughs created in 1899, while they resemble other municipalities in their form of government, have somewhat different powers and occupy a different position from the provincial boroughs, notably in regard to their relation to the County Council and their position in matters of rating.

These different local bodies exercise considerable powers within the limits authorised by law, but in the exercise of their different powers they are strictly controlled by the Central Government acting through its great Departments —the Treasury, the Home Office, the Board of Trade, the Board of Agriculture, the Board of Education, and lastly and chiefly the Local Government Board. Their powers, and the manner in which these powers are exercised, are defined by Acts of Parliament, or by Orders in Council issued in virtue of Acts of Parliament. The various local bodies often feel that they have cause to resent the interference of the central authorities, but there is one important matter in which the latter might have exercised their authority with advantage. They might have checked the zeal of local authorities when it involved the raising of excessive loans for local undertakings, which in the case of the municipalities have grown to some hundreds of millions, and which are still increasing, threatening at no distant date to ruin the unfortunate ratepayers.

LOCAL AUTHORITIES.

In the following pages, the different local authorities will be described in the following order :—

1. Parish Councils and Parish Meetings.
2. District Councils—Urban and Rural.
3. Boards of Guardians.
4. County Councils.
5. Municipal Government.
   - (*a*) County Boroughs, and Counties of Cities and Counties of Towns.
   - (*b*) Non-County Boroughs.
   - (*c*) Metropolitan Boroughs.
   - (*d*) City of London.

PARISH COUNCILS AND PARISH MEETINGS.

Originally the ecclesiastical parish and the civil parish were one and the same thing—but at the present day there are in England and Wales nearly 15,000 civil parishes and 14,000 ecclesiastical parishes, and in only one-third of these do the civil and ecclesiastical boundaries coincide. The ecclesiastical parish was the district to which one parish priest ministered, the district which paid tithes and other church dues to the same person. The civil parish may be defined as a place for which a separate poor-rate is or can be made, or for which a separate overseer is or can be appointed.

Down to 1894 the duties of the Vestry—that is, "the ratepayers of the Parish in vestry assembled"—consisted in working and carrying out the provisions of certain "Adoptive Acts," such as the Public Libraries Acts, and in all Urban Parishes (other than Metropolitan parishes) the vestry still retains these powers; but in all rural parishes these powers have been transferred to the Parish Council or the Parish Meeting, which exist only in rural parishes. A rural parish is a parish which on March 5th, 1894, was in a rural sanitary district. It is any place which is not within an urban district, and for which a separate poor-rate can be made, or a separate overseer appointed.

The Local Government Act, 1894, provides that every rural parish shall have a Parish Meeting, and that such rural parishes as have a population of 300 or upwards shall have a Parish Council.

THE PARISH MEETING. This body must meet at least once a year on some day between the 1st of March and the 1st of April, both days inclusive. This meeting elects the Parish Council, if there be one, and in that case the meeting will be held on a day fixed by the Local Government Board. Where there is no Parish Council, the Parish Meeting must take place twice a year. The business must not begin before six o'clock in the evening. All questions are decided by a majority of the meeting, unless a poll of all the parochial electors is demanded.

The Parish Meeting may adopt certain permissive Acts, e.g. Acts for providing the parish with baths, wash-houses, burial grounds, free libraries, recreation grounds, and for lighting the parish. Where there is no Parish Council, it has certain of the powers of that Council. It may levy a rate not exceeding sixpence in the pound for all purposes, inclusive of the rate required for carrying out the adoptive Acts.

PARISH COUNCILS. Every parish with a population of 300 or more has a Parish Council, and every parish of more than 100 but less than 300 may have one if the Parish Meeting so resolve. The County Council may establish a Parish Council in a parish with a population of less than 100, but only with the consent of the Parish Meeting.

(1) **Composition.** A Parish Council consists of a chairman and not less than five councillors or more than fifteen, fixed from time to time by the County Council. Any parochial elector, man or woman, or any person resident for a year in or within three miles of the parish, is qualified to be a Parish Councillor. The councillors hold office for three years. The election takes place at the Parish Meeting. A poll of the voters can be granted by the chairman, or it may be demanded by not less than five electors present at the meeting, or by one-third of those present, whichever number is the least. The voting then takes place by ballot.

(2) **Powers.** The Parish Council may adopt the permissive Acts with the consent of the Parish Meeting. It appoints the overseers and the assistant overseers. All parish property, except church property or ecclesiastical charities, vests in the Parish Council. It may make and manage allotments, and may petition the County Council to make an order authorising the hiring or purchasing of lands for that purpose. It deals with local sanitary matters, and protects public rights of way. It may, with the consent both of the County Council and the Local Government Board, borrow money up to one half of the rateable value of the parish. The Parish Council cannot, without the consent of the Parish Meeting, levy a rate exceeding threepence in the pound. In no case can it levy a rate exceeding sixpence in the pound, exclusive of rates required for carrying out the adoptive Acts.

The Parish Council and the Parish Meeting have a right to meet in public elementary schools; but they may not meet in public houses, unless no other suitable place can be found. The Parish Accounts must be made up to the end of March in each year, and are audited by the Local Government Board Auditor.

DISTRICT COUNCILS.

A county district may be either urban or rural. As constituted by the Local Government Act of 1894, an Urban District may be roughly defined as an area which has not yet got a population large enough to enable it to obtain a charter and become a Municipal Corporation. All other districts may be classed as rural districts.

(1) **Composition.** No person can be an Urban District Councillor unless he or she be a parochial elector of some parish within the district, or has resided in the district for the twelve months preceding the election. But a rural district councillor may be either a parochial elector in some parish within the union which is often larger than the district. Women are eligible—but aliens, infants, bankrupts, or persons in receipt of parochial relief are not. Councillors hold office for three years. The chairman is, in virtue of his office, a justice of the peace.

(2) **Powers.** In regard to sanitary matters, the powers of District Councils are ample. They superintend and control the drainage, and the inspection and abatement of nuisances, the cleansing and scavengering of the streets. In Urban Districts, the Councils may build and maintain hospitals and mortuaries, and where the district is not already supplied with water by a water company, the District Council may provide a water supply. It has considerable powers over the highways. In Urban Districts, the Council has many of the powers possessed by a Municipality.

A great difference between Urban and Rural District Councils is that the members of a Rural District Council are also the poor-law guardians of the district. Each member of a Rural District Council represents his own parish on the Board of Guardians for the Union of which his parish forms a part, though, of course, the two bodies are quite distinct and have different functions. But in an Urban District, the members of the Urban District Council have nothing whatever to do with the Board of Guardians. Thus in Rural Districts one election does for the District Council and the Board of Guardians, but in Urban Districts two different elections are held, and the persons elected Councillors may or may not be elected Guardians of the Poor.

BOARDS OF GUARDIANS.

A Union, as its name implies, consists usually of a group of parishes united for poor-law purposes, but there are a few unions consisting of a single parish. Each union has a separate Board of Guardians, whose duty it is to attend to the relief of the poor.

CONSTITUTION. Any person, male or female, married or single, who is a parochial elector of any parish within the union, or has resided therein for twelve months preceding the election, is eligible as a Guardian; but paid poor-law officers, persons in receipt of poor-relief, those having an interest in any contract with the Board, persons who have within five years before the election been adjudged bankrupt, or convicted of a crime, are not eligible for election.

Guardians hold office for three years; one-third retiring each year. Each parish having a population of not less than 300 sends a member to the Board; smaller parishes may be grouped together for the purpose. Any guardian who is absent from all meetings of the Board for six months without good cause vacates his seat.

DUTIES. The principal duty of the Guardians is to relieve the poor, but they have other functions besides, e.g. the enforcement of the Vaccination Acts and the appointment of Registrars of Births and Deaths. The Guardians do not collect the poor rate, but merely issue an order to the overseers to collect so much from each parish in the union; and it is the duty of the overseers to fix the amount which each householder must pay, and to collect the amount so determined. The Guardians may, with the approval of the Local Government Board, borrow money for permanent works, such as hospitals, asylums, and workhouses.

CENTRAL CONTROL. There is no local body which has so little independence as a Board of Guardians. It cannot take the slightest initiative in anything, and everything done by it is rigidly supervised and corrected by the Local Government Board. For instance, a Board of Guardians cannot alter the dietary of the inmates without the consent of the Local Government Board, and it cannot even meet in any room other than the recognised board-room, without the consent of the same body.

COUNTY COUNCILS.

The county is an area under a form of government which as far as possible, approximates to that prevailing in the large towns. For the purposes of this system of local government, England and Wales is divided not into fifty-two counties, but into sixty-two administrative areas. Each of these areas is governed by a county council, of which the number of the members varies according to the size and the population of the county—from 28 for Rutland to 120 for the West Riding of Yorkshire, and 137 for London. Every County Council is a corporation, and may hold and acquire land without a licence in mortmain.

COMPOSITION. One-fourth of the members of a County Council are aldermen, who hold office for six years, one half of their number retiring every third year. The ordinary councillors are elected for three years, and at their first meeting in each period of three years they elect half the number of aldermen. Either members of the council or outsiders (provided they are qualified to be councillors), may be chosen as aldermen, but if a councillor is elected alderman he vacates his seat as a councillor, and the vacancy is filled up by the county electors choosing a fresh councillor. The chairman is, in virtue of his office, a justice of the peace for the county.

WHO MAY BE ELECTED AS COUNCILLORS. Every person (except women and minors) who is registered as a parliamentary voter in respect of property owned by him in the county; or who is qualified as a municipal elector in any borough in the administrative area, not being a county borough; or a person who would be qualified as a municipal elector in such a borough but for the fact that he is non-resident therein, provided he resides within fifteen miles of such borough. A peer owning property in the county is qualified to be a councillor, as are clergymen of all denominations.

Women, though entitled to vote at county council elections, are not eligible as councillors, neither is any person who holds any office of emolument in the gift of the council, nor a person who has any interest in any contract with the council, nor a bankrupt for five years after his discharge.

POWERS AND DUTIES. The County Council exercises all the powers and duties of the Justices in Quarter Sessions, except judicial powers, e.g. rating appeals, licenses for the sale of intoxicating liquors, which are still exercised by the Quarter Sessions. The county police are controlled by a joint committee of the County Council and the county justices, but in all other local concerns the County Council is the supreme body. They have power to levy county rates, and within certain limits to borrow money. They may oppose or promote bills in Parliament. Under the Education Act of 1902, the County Councils have extensive powers in matters of education. In fact, all education, primary and secondary, including technical instruction, is under their control.

The main functions of the County Councils are to provide and maintain Courts of Justice, Highways, County Buildings, Lunatic Asylums, Reformatories, Industrial Schools, Bridges, and Police. They prevent the pollution of rivers, and carry out the laws relating to contagious diseases in animals and to destructive insects. They appoint such officers as the coroner, the county treasurer, the surveyor, and the public analyst. All Local Government elections are under their control. Music and dancing licenses, and licenses for race courses are granted by them, and compulsory purchases of land for allotments may be authorised

by them. The use of proper weights and measures by shopkeepers and others is supervised by the County Council.

The County Council supervises all the local Councils, such as the Parish and District Councils within its area. It can compel these bodies to do their work, and if they neglect it, may do it for them. It settles disputes between the local councils, and, in short, it is the duty of the County Council to see that the work of the local government is carried out smoothly and efficiently.

To sum up, the County Council must perform all the duties which are not entrusted to the subordinate local authorities, such as the Town Councils, District Councils, and the Rural Councils.

EXTENT OF JURISDICTION. The County Council has jurisdiction over the entire area of the county, with the exception of those towns known as County Boroughs.

FINANCE. The funds for carrying on the work and performing the duties of the County Council are derived from various sources. It receives from the Imperial Government a share of the Excise duties collected in the county, and a portion of the Probate Duty collected throughout the United Kingdom. These contributions are paid into a separate account called the "Exchequer Contribution Account," and are devoted to the payment of various officials, such as the poor-law officers, medical officers of health, and registrars of births, deaths and marriages. Any surplus left after payment of these officials may be devoted to general purposes, more particularly for the promotion of technical education.

As the sums thus obtained are insufficient for local purposes, the County Council has power to levy a County Rate. In fixing the rate, the Council may employ the poor-law valuation, or may make a valuation of its own. The rate having been struck, the Council issues a precept or order to the poor-law guardians of each union, bidding them collect from each parish in the union an amount fixed in proportion to the value of the property in the parish. This amount is collected by the overseers of the poor, and handed over to the guardians, who in turn pay it to the county treasurer. The guardians must pay this money within the time named in the precept, otherwise the Council may themselves order the overseers to collect the amount due from each parish.

Other sums are derived from fines inflicted for the breach of bye-laws or certain statutes, tolls, rent of county property, and the like.

All moneys received by the Council other than those contributed by the Imperial Exchequer are paid into the County Fund Account. These moneys can only be employed to meet the expenses incurred by the Council in the exercise of its statutory powers and duties. The county treasurer is the only person authorised to draw money from the County Fund Account, and then only on an order of the Council signed by at least three members of the Finance Committee.

When the annual income is not sufficient to meet the annual expenditure, the Council may, with the sanction of the Local Government Board, borrow money where the expenditure is incurred on works of permanent value, the cost of which may properly be spread over a number of years, e.g. for purchasing land or erecting buildings which the Council is by law authorised to purchase or build. The loan is raised on the security of the income of the Council. No loan can, however, be raised without the express sanction of Parliament, given by a special Act for that purpose, if the loan will bring the total debt of the county above one-tenth of the rateable value of the property contained in the county.

THE LONDON COUNTY COUNCIL. It has powers similar to those of the County Councils of counties, with, however, some differences, for it succeeded to the powers, duties, and liabilities of the Metropolitan Board of Works. The London County Council has nothing whatever to do with the Metropolitan Police, whereas other County Councils pay half the cost, and share jointly with the Justices the control of the county police. Again, the London County Council has considerable control over the raising of loans by the Metropolitan boroughs, for its sanction is necessary to the raising of such loans. It consists of a chairman, 19 aldermen and 118 councillors. The aldermen are elected by the council but the councillors are elected by the parliamentary voters. The City of London elects four but the other London constituences return only two each.

MUNICIPAL GOVERNMENT.

A borough is "any place which for the time being is subject to the Municipal Corporations Act, 1882." Such places, before being subject to that Act, must have obtained a charter of incorporation.

MODE OF INCORPORATION. When a town has attained a size which in the opinion of its inhabitants renders it worthy of possessing a government of its own, a number of its inhabitant householders petition the King in Council to grant a charter of incorporation. This petition is advertised in the London Gazette, and notice of it is sent to the County Council of the county in which the town is situated. The Privy Council then directs a local inquiry into the circumstances of the case, and at this inquiry, evidence for and against the proposal is taken. The Committee of the Council to which the petition is referred, and which directs the inquiry, may then draw up a scheme by which all the existing local authorities are absorbed into the new corporation. If there is no opposition to this scheme, an Order in Council authorises the adoption of this scheme. Should, however, the local authorities oppose the scheme, an Act of Parliament is necessary before the scheme can come into force. The charter of incorporation fixes the number of the councillors of the borough, a number which varies according to the population. If it is necessary to divide the borough into wards, the charter fixes their number and determines their boundaries. It also appoints the first officers. On the granting of the charter, all the provisions of the Municipal Corporations Act at once apply to the newly created borough. The scheme of municipal government is the same for all boroughs—County Boroughs, Counties of Cities, Counties of Towns, and Non-County Boroughs. The main difference between these different kinds of bodies relates chiefly to the administration of justice, the control of the police, and to the fact that the first three are independent of the County Council, whilst the last is for some purposes controlled by the County Council.

THE MUNICIPAL CORPORATION. Every borough coming under the Municipal Corporations Act is a corporation consisting of the Mayor, Aldermen, and Burgesses. Should the borough be a city, the corporation consists of the Mayor, Aldermen, and Citizens. The difference in the two kinds of corporations is merely one of name.

THE GOVERNING BODY OF THE BOROUGH. The government of the borough is carried on by the Borough Council, consisting of the Mayor, Aldermen, and Councillors. The Councillors are elected for three years, and every year one-third of the Councillors retire in rotation. An outgoing Councillor may be re-elected.

The Aldermen number one-third that of the Councillors, and are elected by the Council at the quarterly meeting held on the 9th of November. Any person who is a Councillor, or an outsider who is qualified to be a Councillor, may be elected an Alderman, but if a Councillor is elected Alderman, he vacates his seat as Councillor. Aldermen hold office for six years, one-half of them retiring every three years.

The Mayor is elected by the Council from among the Aldermen or Councillors, but any person who is qualified to be a Councillor may be elected. He holds office for a year, but may be re-elected, his election being the first business transacted at the quarterly meeting held on the 9th November. In virtue of his office, the Mayor is a magistrate of the borough, and is chairman of all meetings of the Council. He is the returning officer in parliamentary and municipal elections.

WHO MAY BE COUNCILLORS. Generally speaking, any person entitled to vote at municipal elections may be a Councillor. But women, clergymen of all denominations (except in Metropolitan Boroughs), persons having an interest in any contract with the Corporation, and bankrupts, may not be elected as Councillors.

BOROUGH OFFICERS. The chief officers in a borough are the Town Clerk and the Treasurer or Cashier. The Town Clerk has the custody of the charters and other documents of the borough. He issues the summonses for the meetings of the Council and takes the minutes of the Council's proceedings. The Treasurer receives all moneys and makes all payments on behalf of the Council. Where the Borough has the organisation of a county, there will also be a Clerk of the Peace, and other additional officers. Most boroughs have, under the Sale of Food and Drugs Act, a Public Analyst.

DUTIES AND POWERS OF THE BOROUGH COUNCIL. The Council manages the property belonging to the Corporation, maintains a police force, controls the borough markets and the local burial grounds, levies rates, and raises loans whenever loans are necessary to meet extraordinary expenditure of a permanent nature. It is their duty to see that the town is properly paved, cleaned, lighted, and supplied with water, unless these duties are by special Acts of Parliament entrusted to other local bodies, in which case such bodies may at any time hand over their property and their functions to the Council.

In addition to these ordinary functions, the Council may exercise special functions. Certain Acts of Parliament may apply to any borough which chooses to adopt them, e.g. the Public Libraries Act and the Baths and Wash-Houses Act. Where these Acts are adopted, the Town Council is the authority to enforce them, e.g. such Acts as the Housing of the Working Classes Acts, the Cemeteries Acts, and the Public Health Acts. Where the Borough is a County Borough, the Council controls education, primary and secondary (including technical education).

The Town Council has also certain legislative powers. It can make bye-laws for the good government of the Borough, and for the "prevention and suppression of nuisances not already punishable in a summary manner, by virtue of any Act in force in the Borough." No bye-law can come into force until it has been promulgated for forty days. It must have been approved by the Home Secretary. Bye-laws must be reasonable and must not conflict with the law of the land. The fine for breach of such bye-laws must not exceed £2.

The Council may purchase land, not exceeding five acres, for borough buildings, such as the town hall, police stations, court houses, and the like. Without the sanction of the Treasury, the Council may not sell, mortgage, or grant long leases of land belonging to the Borough, except such long leases are for the purpose of erecting workmen's dwellings.

BOROUGH FINANCE. The sources of revenue and the details of expenditure of Boroughs are usually grouped under three heads, viz., Borough Fund, the General District Fund, and Municipal Undertakings (e.g. Gas, Tramways, and the like).

The Borough Fund derives its supplies from rents of corporate property, court fees, licenses, Government grants towards Education and Police, but the chief source of income is the Borough Rate. This rate is assessed by the Council and collected by the overseers of the poor. In London the Borough Councils are themselves the overseers. Out of the Borough Fund are paid such items as salaries of officers, expenditure on municipal buildings, free libraries, Police force, Elementary Education; and in the County Boroughs, expenses on secondary and technical education, lunatic asylums, and industrial schools.

The General District Fund receives its main supplies from the General District Rate, but other sources of income are rents, licenses, baths and wash-house charges, and grants from the County Council for the maintenance of highways. The General District Fund bears the expense of maintaining the highways, fire brigade, public health and sanitary measures, public lighting of streets, public improvements of streets, parks, and recreation grounds.

Municipal Undertakings include the supply of light, tramcars, and other matters which are usually supplied by private enterprise. On this part of a Borough Council's work there is much dispute as to its merits and demerits. The profits from these undertakings are employed for local purposes, serving to reduce the rates or to prevent their increase. But it frequently happens that these municipal enterprises do not show a profit, and thus additional burdens are thrust upon the ratepayers.

Raising Loans. Borough Councils have also large powers of raising loans for works of a more or less permanent character. These loans may be raised under the authority of general Acts of Parliament or under private Acts. Under general Acts, loans may be raised for libraries, baths, parks, lunatic asylums, sanitary works, industrial schools, cemeteries. Such loans must be repaid within a certain number of years, and the consent of some Government Department (in most cases the Local Government Board) must be obtained before the money can be borrowed.

In order to raise loans, Town Councils usually apply to Parliament to pass a special Act for the purpose of sanctioning the loan. But the cost of promoting such a bill in Parliament cannot be paid out of the revenues of the corporation, unless the proposal has been approved by a majority of the whole number of the Borough Council, and also of a public meeting of the ratepayers convened for that purpose.

Audit of Accounts. The accounts of the Borough Council, with the exception of the Metropolitan Borough Councils, are not audited by the Local Government Board, but by three borough auditors, two elected by the burgesses and one appointed by the Mayor. The Mayor's auditor must be a member of the Council, the other two must not, but they must be qualified to be councillors. The accounts are audited twice a year, and after the second audit, the Town Clerk furnishes the Local Government Board with an account of the receipts and expenditure for the year. The audit of the accounts is frequently of a perfunctory character. It would be a great improvement if each Borough Council prepared an annual budget showing its financial position, and giving an estimate of the amount of money required, and the purposes for which it is needed for the ensuing year.

COUNTY BOROUGHS. A County Borough is a town of such size and importance as to be independent of all control exercised by the County Council. It is a Municipal Borough, having all the powers conferred by the Municipal Corporations Act, 1882, the Public Health Acts, and various other Acts, and has in addition all the powers of a County Council. It will thus be seen that a County Borough possesses greater powers than have been given to County Councils. In fact, the County Borough is the highest form of local self-government within the British Isles. Its powers are, of course, exercisable only within the limits of the Borough boundaries.

Any town with a population exceeding 50,000, may apply to be admitted to the ranks of a County Borough; and the application will be granted after due inquiry by the Local Government Board. There are now about sixty-five of these County Boroughs.

A County Borough is governed by the Borough Council, which is also the County Council for the area of the Borough. For the purpose of saving expense, a County Borough may agree with the County Council to take the benefit of and to share the expenditure incurred for the county institutions, such as the Police and Asylums. But apart from this, a County Borough makes no contributions to the expenses incurred for county purposes, save that if no assizes be held in the County Borough, it must contribute to the cost of the assizes.

COUNTIES OF CITIES OR OF TOWNS. In addition to these County Boroughs which have been created by the Local Government Act of 1888, there are a few ancient

towns and cities, such as Bristol, Nottingham, and Norwich which have all the organisation of a county. These are known as the County of the City of Norwich or the County of the Town of Nottingham, according as the place is a city or a town. These counties of cities or counties of towns, of which there are nineteen, are wholly independent of the shire in which they are situated. They have their own Commissioners of the Peace, their own Courts of Quarter Sessions, and appoint their own Sheriffs.

NON-COUNTY BOROUGHS. They are those towns which possess a municipal corporation, and which have all the powers of such a body, but unlike County Boroughs, are not independent of the County Council of the county in which they are situate. The chief matters in which Non-County Boroughs are controlled by the County Council are as regards Main Roads, the provision of Secondary and Technical Education, and the payment of the salaries of Sanitary Officials. Most towns come under the heading of Non-County Boroughs.

METROPOLITAN BOROUGHS. By the London Government Act of 1899, the Metropolis was divided into twenty-eight boroughs, each with its Mayor, Aldermen, and Burgesses.

Powers. They took over the powers of the old vestries, but additional powers were conferred upon them. One important point in which they differ from most provincial boroughs, is that the councils of these boroughs are the overseers of the poor, and as such have the power of assessing and levying the poor rate, which is now joined with the general district rate and treated as one rate. This general rate has all the characteristics of the poor rate, and is levied for the purpose of providing all the expenses of each Borough Council, and for the expenses of other governing bodies in London, such as Boards of Guardians, the London County Council, Metropolitan Police. These obtain the supplies they need by issuing precepts on the Borough Councils which collect the amounts required as part of the general rate, and hand them over to the body issuing the precept.

Constitution. The Borough Council consists of the Mayor, Aldermen, and Councillors. The total number of Aldermen and Councillors must not exceed seventy, of whom one-sixth are Aldermen. Women are not entitled to sit on these Councils. The same applies to bankrupts, persons who have been convicted of crimes, persons in receipt of poor relief, or who have an interest in contracts with the Council. Clergymen of all denominations are eligible for seats in the Council.

THE CITY OF LONDON. The Corporation of the City of London is one of the few corporations whose position and privileges were left untouched by the Municipal Reform Act of 1834. It is, for all purposes except main-drainage, education, and one or two other matters, the sole local authority within the square mile of the city's area. It has its own police and its own courts of justice. It is a poor-law union, and is the sanitary authority for the port of London. It has a monopoly of all markets within seven miles of its boundaries.

The Corporation acts through three bodies—the Court of Aldermen, the Court of Common Council, and the Court of Common Hall, each of which is presided over by the Lord Mayor.

The Court of Aldermen consists of 26 Aldermen, including the Lord Mayor. These represent the twenty-six wards into which the city is divided, and a twenty-seventh ward, viz., that of Bridge Without. The Aldermen are elected for life, and are magistrates by virtue of their office. They elect the Recorder, who is a judge of the Central Criminal Court, and the presiding judge in the Mayor's Court.

The Court of Common Council consists of the 26 Aldermen, and 206 Common Councilmen, elected annually by the wards. It elects the Town Clerk, the City Remembrancer, the City Coroner, and the Secondary or Under-Sheriff. It has the control of the paving, lighting, and management of the streets, and has all the powers of an Urban District Council.

The Court of Common Hall consists of the Mayor, Sheriffs, Aldermen and all the Liverymen of the various City Companies, to the number of about 9,000. It meets on June 24th and September 29th. On this latter date it elects the Sheriff, the Chamberlain (City Treasurer), and nominates two Aldermen for the office of Mayor, one of whom is chosen by the Court of Aldermen to be Lord Mayor. The Lord Mayor is the chief magistrate and the lord-lieutenant for the city, and is admiral of the port of London.

Formerly only the members of the City Companies were citizens. But now any ratepayer in the City, or any person on the parliamentary register for the City, may, on payment of a guinea and by application at the Chamberlain's Court, Guildhall, become a freeman of the City of London.

LOCAL ELECTIONS.

We have already stated the law in regard to Parliamentary Elections (Refer to *Index*). We have now a similar duty to perform in regard to Local Elections.

MUNICIPAL ELECTIONS.

The procedure at Municipal Elections is regulated by the Municipal Corporations Act, 1882, which defines a Municipal Election as "an election to a corporate office." A "corporate office" means the office of mayor, alderman, councillor, or elective auditor.

1. THE ELECTION OF COUNCILLORS. Councillors are elected by the burgesses of the borough. No one is qualified for election as a councillor unless—

(1) He is entitled as a burgess, or, being entitled to be so enrolled in all respects except that of residence, is resident beyond seven miles but within fifteen miles of the borough, and is entered on a separate non-resident list kept for the purpose; and (2) is possessed of property to the value, in the case of a borough having four or more wards, of £1,000, and in the case of any other borough, of £500; or is rated to the poor rate in the borough on the annual value of £30, in the case of a borough with four or more wards, or £15 in the case of other boroughs.

There is, however, an additional proviso in the Act, which makes it possible for any person to be elected as councillor, if at the time of his election he is qualified to elect to the office of councillor. This qualification is alternative to the two mentioned above; but the qualification is lost in this case if the person ceases for six months to reside in the borough.

Certain persons are disqualified from becoming councillors; chief among them are women, clergymen and dissenting ministers (except in Metropolitan Boroughs), persons holding an office in the gift of the council (other than that of mayor or sheriff), and persons having an interest in a contract with, or employment by, the Council.

The term of office of a councillor is three years. On the 1st November in every year, one-third of the whole number for a borough or ward go out of office, their places being filled by election. The third to go out are those councillors who have been longest in office without re-election. On the occurrence of a casual vacancy in a corporate office, an election is held by the same persons and in the same manner as an election to fill an ordinary vacancy, and the person so elected holds the office until the time when the person in whose place he is elected would regularly have gone out of office.

2. THE VOTERS. It has been said that councillors are elected by the burgesses of the borough. No one can vote as a burgess unless he has been enrolled as a burgess, and he cannot be enrolled unless

(1) He is of full age. (2) Has been in occupation of a house in the borough during the whole of the twelve months preceding the 15th July of the year of enrolment. (3) Has during the said twelve months resided within seven miles of the borough. and (4) Has been rated to the poor rate and paid all his rates.

Further, no one is entitled to be enrolled as a burgess if he (1) is an alien who has not been naturalised a British subject, or (2) has within the said twelve months received union or parochial relief or other alms, or (3) is disentitled under any Act of Parliament.

Where the borough has no wards, one burgess roll is made for the whole borough, but if there are wards, a separate roll is made for each ward. No burgess may be enrolled in more than one ward roll. Where there are wards a separate election of councillors takes place for each ward. The returning officer for the whole borough is the mayor, and each ward has an alderman assigned to it to perform the duties of returning officer.

Nine days' public notice of election must be given by the town clerk. If the election is not contested, the returning officer publishes a list of the persons elected not later than eleven o'clock in the morning on the day of the election. If the election is contested, a poll is taken by ballot in a way very similar to that in the case of Parliamentary elections.

The following are the chief points in which the procedure at Municipal Elections differs from that at Parliamentary Elections:—

(1) If one hour elapses during which no vote is tendered, the returning officer may, if he thinks fit, except in the case of a riot, close the poll before 8 p.m.
(2) In the case of an equality of votes, the returning officer always has a casting vote.

3. ELECTION OF ALDERMEN. Aldermen are elected by the Council. The number of aldermen in each council must be one-third of the number of councillors. No one may be elected an alderman unless he is qualified to be a councillor. If a councillor is elected to, and accepts, the office of alderman, he vacates his office of councillor.

The term of office of an alderman is six years. On the 9th November in every third year, one half of the whole number of aldermen go out of office, and their places are filled by election. The half to go out are those who have been aldermen for the longest time without re-election.

The election takes place at the quarterly meeting of the council on the 9th November. The outgoing aldermen are not entitled to vote. Each voter may vote for any number of persons not exceeding the number of vacancies. The method of voting is for the voter to sign and personally deliver to the chairman at the meeting a voting paper containing the names, descriptions, and addresses of the persons for whom he votes. The chairman announces the result of the voting, and then gives the voting papers to the town clerk to be kept for twelve months. In case of equality, the chairman always has a casting vote.

4. ELECTION OF THE MAYOR. The Mayor is elected by the council from among the aldermen or councillors, or persons qualified to be such; an outgoing alderman is eligible. The term of office of the mayor is one year. He may receive such remuneration as the council thinks reasonable. The election usually takes place on the 9th November, and it is the first business transacted at the quarterly meeting of the council. Outgoing aldermen are entitled to vote. In case of equality of votes, the chairman has a casting vote.

The *deputy mayor* is appointed by the mayor. The appointment must be signified to the council in writing and recorded in the minutes. The powers of a deputy mayor, in the absence of the mayor, are the same as those of the mayor himself, except (1) that the deputy may not take the chair at a council meeting, unless specially appointed by the meeting to do so; and (2) that the deputy may not act as a justice of the peace unless he is a justice.

5. ELECTION OF AUDITORS. The Municipal Corporations Act, 1882, provides for the election of auditors to audit the accounts of municipal councils. As a rule there are three, but only two are elected, the other one being appointed by the mayor. The ordinary day for electing the two "elective auditors" is the 1st March, but the Municipal council may appoint some other day instead, with the approval of the Local Government Board. The electors are the burgesses of the borough. No elector may vote for more than one elective auditor. The elections are generally held in the Town Hall, but the mayor may appoint some other suitable place. In other respects the nomination and election by ballot is practically the same as that in the case of the election of councillors. In the Metropolitan boroughs the auditors are not elected, but are appointed by the Local Government Board.

COUNTY COUNCIL ELECTIONS.

1. DISTINGUISHED FROM MUNICIPAL ELECTIONS. County Council Elections are chiefly governed by the Local Government Act, 1888, and the County Councils (Elections) Act, 1891. In most respects the members of County Councils are elected in the same manner as Borough Councils, but there are certain differences.

(*a*) **As respects the Aldermen or Councillors.** Clerks in Holy Orders and other ministers of religion are not disqualified from election. Peers owning property in the county, or persons registered as parliamentary voters in respect of the ownership of property in the county, are qualified to be aldermen and councillors, though not qualified under the Municipal Corporations Act, 1882. County aldermen may not vote in the election of other county aldermen. County councillors are elected for three years and then retire together, their places being filled by a new election. The county is divided into "electoral divisions" instead of wards, and one county councillor only may be elected for each electoral division except in the County of London.

(*b*) **As respects the Electors.** In boroughs the electors are the burgesses enrolled in pursuance of the Municipal Corporations Act, 1882, and its amending Acts; but in other places the electors are the persons registered as county electors under the County Electors Act, 1888, which Act enables any person possessing, in any part of a county outside a borough, any property which if situate within the borough would give him a burgess qualification, to be registered as a county elector in the parish in which the qualifying property is situate. Moreover, a "ten pounds occupation qualification" will also entitle a person to be registered as a county elector.

(*c*) **As respects the Chairman.** In county councils he is called the "Chairman," instead of the "Mayor." The vice-chairman is appointed by the council. The Chairman is by virtue of his office a Justice of the Peace for the county.

2. THE ELECTION OF COUNTY COUNCILLORS. The ordinary day for the election of county councillors in each county is such day between the 1st and 8th of March as the County Council may fix; and if no date is fixed, it must be on the 8th March in every third year. Returning Officers may not hold an election for a county councillor to fill a casual vacancy which occurs within six months before the ordinary day of retirement of county councillors. The county register must be completed before the 20th December in every year, and it comes into operation on the 1st January following. The County Council Chairman and Aldermen are usually elected on the 16th March instead of the 9th November as in Borough Councils. In other respects the rules governing the elections are practically the same.

DISTRICT COUNCIL ELECTIONS.

1. QUALIFICATIONS OF DISTRICT COUNCILLORS. District Councils are of two kinds: (1) Urban. (2) Rural. Candidates for election as *Urban District* Councillors must either have resided in the district for the whole of the twelve months preceding the election, or else they must be parochial electors of some parish within the district.

Candidates for election as *Rural District* Councillors are only required to have resided for the said period of twelve months or to be parochial electors of some parish within the union. As a union is often larger than a rural district, it will be seen that a person may be elected as a Rural District Councillor for a district to which he does not belong. The reason for this is that there is a provision in the Local Government Act, 1894, which gives to the members of Rural District Councils the powers and duties of Guardians

of the Poor, so that Guardians and Rural District Councillors have not to be separately elected.

N.B.—Boards of Guardians and District Councils are separate bodies with separate duties and powers. The Local Government Act does not change this. It merely provides that the same individuals in rural districts shall serve on both bodies.

Women, whether married or single, are qualified for election as District Councillors; but infants, aliens, bankrupts, etc., are disqualified to the same extent as if they were candidates for election as Guardians (see *Election of Guardians*). Moreover, no paid poor law officer may be elected as a Rural District Councillor; but this rule does not apply to Urban District Councillors.

2. ELECTORS AND THE ELECTIONS. The electors of the councillors are the parochial electors of the constituent parishes or of the various wards if the parishes are divided into wards for the purpose of such elections. Women as well as men are qualified to vote. The voting takes place by ballot, and is subject to the rules and orders made by the Local Government Board in pursuance of the Local Government Act, 1894.

The chairman is elected by the councillors, and, unless a woman or disqualified by Act of Parliament, he is by virtue of his office a Justice of the Peace.

It is the duty of the Returning Officer at an election for District Councillors to see that the nomination papers are in the correct form according to the Local Government Board's rules; but it is no part of his duty to enquire whether any candidate is qualified for election. If an unqualified candidate is elected, he may be unseated on petition, and he is also liable to penalties. The clerk of the particular District Council is the person usually appointed returning officer for the elections.

PARISH COUNCIL ELECTIONS.

1. PARISH COUNCILS. The Parish Council of a rural parish is elected from among the parochial electors or persons who have entered into residence in, or within three miles of, the parish, on or before the 25th March of the year previous to the election. The Council consists of a chairman and councillors. The number of councillors is fixed by the County Council, but it is not to be less than five or more than fifteen. Women, whether married or single, are eligible for election and to elect; but a husband and wife may not both be qualified in respect of the same property. The councillors are ordinarily elected for one year, from 15th April, and are elected by the parochial electors. There is nothing to prevent a person, if duly qualified, from being registered in more than one register of parochial electors. The following persons are disqualified from being elected to a parish council:—

(1) Infants. (2) Aliens who have not been naturalised British subjects. (3) Persons who have been in receipt of parochial or union relief within twelve months of their election. (4) Persons who have within five years of their election been sentenced to hard labour without the option of a fine, or to penal servitude, unless they have been pardoned. (5) Persons who have within five years of their election been adjudged bankrupt or made a composition or arrangement with their creditors, unless they have paid their creditors in full or had the bankruptcy annulled, or obtained a discharge with a certificate that the bankruptcy was caused by misfortune. (6) Persons who hold any paid office under the parish council. (7) Persons (subject to a few minor exceptions) who are concerned in contracts with the Council.

2. PROCEDURE AT THE ELECTIONS. The procedure at elections for parish councillors is regulated by rules framed by the Local Government Board. They provide, amongst other things:—

(1) For every candidate being nominated in writing by two parochial electors as proposer and seconder, and no more. (2) For preventing an elector at an election for a union or for a district not a borough, from subscribing a nomination paper, or voting in more than one parish or other area in the union or district. (3) For preventing an elector at an election for a parish divided into wards from subscribing a nomination paper, or voting for more than one ward. (4) For fixing the day of the poll, and the hours during which the poll is to be kept open, so, however, that the poll shall always be open between the hours of six and eight in the evening. (5) For the polls at elections held at the same date and in the same area being taken together wherever practicable. (6) For the appointment of returning officers.

The elections take place by ballot in a way similar to that of municipal elections.

ELECTION OF GUARDIANS.

1. QUALIFICATIONS. The Local Government Act, 1894, provides that there shall be no ex-officio or nominated Guardians, and that all Guardians must be elected. No one is qualified to be elected unless

(1) He is a parochial elector of some parish within the Union; or (2) has during the whole of the twelve months preceding the election resided in the Union; or (3) in the case of a guardian for a parish, wholly or partly situate within the area of a borough, is qualified to be elected a councillor for that borough.

No one is disqualified by sex or marriage from being elected as a Guardian, so that women, both married and single, are eligible. The term of office is three years, but one-third of the Guardians must retire on 15th April in each year, unless the County Council orders that they shall all retire together on that date in the third year of their office.

2. DISQUALIFICATIONS. The following persons are disqualified from election as Guardians:—

(1) Infants. (2) Aliens, who have not been naturalised. (3) Persons who have been in receipt of parochial relief within twelve months of the election. (4) Persons who within five years of the election have been sentenced to hard labour, without the option of a fine, or to any greater punishment. (5) Persons holding a paid office under the particular Board of Guardians to which they desire to be elected. (6) Persons concerned in certain contracts with the Guardians. (7) Persons who within five years of their election have made a composition with their creditors, or been made bankrupt.

This last disqualification does not apply if the debts have afterwards been paid in full, or if the adjudication has been annulled, or if the bankrupt has obtained a discharge showing the bankruptcy to be due to misfortune without misconduct.

3. BY WHOM ELECTED. The parochial electors of the various parishes elect most of their own Guardians, and if the parishes are divided into wards, the electors in each ward are those of the parochial electors who are registered in respect of qualifications within the ward. Each elector may give one vote and no more for each of any number of persons not exceeding the number to be elected. The actual procedure at the election is regulated by rules and orders issued from time to time by the Local Government Board. The voting takes place by ballot as in the case of other elections. When the parochial electors have duly elected a Board of Guardians, such board has power to elect two additional members and a chairman and vice-chairman from outside its own body, provided that such persons are qualified to act as guardians; but generally the chairman and vice-chairman are chosen from within the body.

The County Councils have the power to fix the number of Guardians which each parish may elect, and they also have the power of adding small parishes together or dividing large parishes into wards for the purpose of the election of Guardians.

The elections of Guardians as such only take place in Urban Districts; for the Local Government Act, 1894, provides that in Rural Districts the members of the Rural District Councils shall also be Guardians.

DISPUTING THE RESULT OF ELECTIONS.

1. ELECTION PETITIONS. The procedure to upset the return in Municipal and other elections is similar to that in the case of Parliamentary elections. The procedure in these cases is chiefly governed by the Municipal Corporations Act, 1882, the Municipal Elections (Corrupt and Illegal Practices) Act, 1884, the Local Government Acts, and the Rules made under these Acts. The trial of the petition takes place in an Election Court, before a Com-

missioner, who must be a barrister of at least fifteen years' standing. Where corrupt or illegal practices have been alleged, instead of reporting to the Speaker, as in the case with Parliamentary electors, the Commissioner must make a report to the High Court.

2. CORRUPT PRACTICES. The proceedings relating to corrupt practices at municipal and local elections are similar to those for parliamentary elections, but they are governed by different Acts. The expression "corrupt practice," includes bribery, treating, undue influence, personation, or a false declaration as to election expenses. But the offence must be committed with a corrupt motive, or it will be an "illegal" practice and not a corrupt one. The commission of corrupt practices by a candidate or his agents makes the election void. Moreover, the election may be declared void if such corruption has been generally prevalent at an election, without the proved connivance of the candidates or their agents.

The commission of corrupt practices before, during, or after an election is visited with very severe punishment. The punishment includes disfranchisement and incapacity of being elected for a number of years, and also fine and imprisonment. In the case of bribery and treating, both the giver and the recipient are equally guilty. Moreover, the bribe, promise, or refreshment need not have been given directly. A man is generally responsible in law for the action of his agents acting in his supposed interests.

A person is said to be guilty of "Personation" if (1) he applies for a ballot paper in the name of some other person, or (2) having voted once he attempts to vote again at the same election. Those who counsel or abet others to commit this offence are also guilty of corrupt practices. The withdrawal of custom from a tradesman, or a threat to withdraw it, or a threat to dismiss an employee, would amount to "undue influence," if it were done with the intention of causing the voter to vote in a particular way.

3. ILLEGAL PRACTICES. The commission of "Illegal Practices" at an election means the doing of any act which has been declared by Parliament to be illegal. It does not matter whether or not there was an illegal motive in the commission of the act. The following are some of the principal "illegal practices":—

(1) Making and publishing false statements as to the character and conduct of a candidate. (2) Paying or contracting to pay for the conveyance of electors to or from the poll, whether for the hiring of horses or carriages, or for railway fares or otherwise. (3) Paying or contracting to pay an elector for the use of any land or premises for the exhibition of any address, bill, or notice, unless the elector receives such payment in the ordinary course of his business as an advertising agent. (4) Paying or contracting to pay for more committee rooms than are legally allowable. (5) The incurring by a candidate or his election agent of an expense greater than is legally allowable, provided that the candidate knows of the fact. (6) Knowingly inducing a person to vote who is prohibited from voting by any Act of Parliament. (7) Knowingly publishing a false statement of the withdrawal of a candidate.

The commission of illegal practices is visited with heavy penalties, and generally makes the election void.

In addition to the above offences there are other offences under the Corrupt and Illegal Practices Prevention Act, 1883, which involve penalties, but which do not make the election void unless they are committed by the candidate himself or his election agent or sub-agents. These offences include

(1) Providing money for illegal practices. (2) Employing, even gratuitously, public stage or hackney carriages (but not private vehicles) or horses kept for the purposes of hire, to convey electors to or from the poll; but the voters themselves may hire such a conveyance for taking themselves to the poll. (3) Corruptly paying a candidate to withdraw from the election. (4) Paying for bands, torches, flags, banners, cockades, ribbons, or other marks of distinction. (5) Publishing posters relating to the election without the address of the printer and publisher. (6) Using a house licensed for the sale of intoxicating liquor, or a refreshment house, or an elementary school as a committee room.

RATES.

THEIR NATURE. The expression "rate" means (1) a contribution levied by some local authority either for local government purposes or for the purpose of providing for the poor; or (2) a charge made by a public company (e.g. a water company), for services rendered. Rates differ from Taxes in that they are not of general application, each locality has its own rates according to its needs. In fact, a rate may be defined as a local tax, or a tax for local purposes. The principles which govern the law and practice of rating as we find them to-day date from the Statute 43 Eliz., c. 2, which provided for the appointment of Overseers of the Poor, who were to make the poor rate, and which provided a means for appealing against the rate. This Statute of Elizabeth's reign has been modified slightly by subsequent legislation, but it is still the principal Act dealing with the subject.

VARIETIES OF RATES.

1. THE POOR RATE. The most ancient and perhaps the most important of all rates is the Poor Rate. There is in law a duty imposed on every parish to make provision for its own poor, though in certain cases two or more parishes are allowed to unite in forming a Union for that purpose. The expense incurred by each parish in providing for its poor is defrayed from the Poor Rate, which is a rate levied on the occupiers of certain kinds of property. The rate is made by the overseers of the poor, who are given that power by the above-mentioned Statute of Elizabeth. Properly the only duty of the overseers is to make and to levy the poor rate, the various other local authorities having power to make rates for other purposes; but the overseers are called upon by the local authorities to levy those other rates by using their poor rate machinery. The advantage of this course of procedure is that the expense of a double levy is saved to the community.

2. THE PUBLIC LIBRARIES RATE. The rating of occupiers for the purpose of maintaining Public Libraries in various districts is governed chiefly by the Public Libraries Acts, 1892 to 1901.

(1) Where the library district is situate in a municipal borough, the expense of maintaining it is defrayed either out of the borough fund or borough rate, or out of a separate Library rate, made, assessed, and levied in the same manner as the borough rate.

(2) Where the library district is in an urban district other than a borough, the cost of maintenance is defrayed either out of the rate applicable to general purposes incurred in the execution of the Public Health Acts, or out of a separate rate made, assessed, and levied in like manner.

(3) Where the library district is in a parish, its expenses are defrayed out of a rate raised with and as part of the poor rate, subject, however, to this qualification, that every person assessed to the poor rate of the parish in respect of lands used as arable, meadow, or pasture ground only, or as woodlands or market gardens, or nursery grounds, is entitled to an allowance of two-thirds of the sum assessed upon him in respect of those lands, for the purposes of the library rate.

(4) In London, the expenses of the Public Libraries are paid either out of the consolidated rate levied by the Commissioners of Sewers, or by a separate rate made, assessed, and levied in like manner.

3. THE GENERAL DISTRICT RATE. The Public Health Acts provide for the payment of most of the expenses of urban authorities out of the district fund. Where that fund is insufficient to meet these expenses, it is provided by the Public Health Act, 1875, that the urban authority may from time to time, as the occasion may require, make and levy a rate or rates called "general district rates." Such rate may be either prospective (i.e. for the purpose of paying future expenses), or retrospective (i.e. for the payment of expenses already incurred); but if retrospective, the rate must be made within six months of the time when the expenses were incurred. Public notice of the intention to make any such rate, and of the time when it is intended to make it, and of the place where a statement of the proposed rate is deposited for

inspection, must be given by the urban authority in the week immediately before the day on which the rate is intended to be made, and at least seven days previously thereto.

4. PRIVATE IMPROVEMENT RATE. The Public Health Acts provide that whenever an urban authority has incurred certain expenses called "private improvement expenses," such authority may, if it thinks fit, make and levy on the occupier of the premises in respect of which the expenses have been incurred, in addition to all other rates, a rate or rates called "private improvement rates," of such amount as will be sufficient to discharge such expenses, together with interest thereon, at a rate not exceeding 5 per cent. per annum, in such period not exceeding thirty years, as the urban authority may in each case determine. But if any person considers himself aggrieved by any such decision of the local authority, he may, within twenty-one days after notice of such decision, appeal to the Local Government Board. The following are some of the principal "private improvement expenses."

(1) Expenses incurred in providing houses with proper and effective drainage in cases where the owner or occupier has not provided it. (2) Expenses incurred in providing houses with proper privies and ashpits. (3) Expenses incurred in supplying a house with water. (4) Expenses incurred in sewering, levelling, paving, metalling, flagging, channelling, lighting, or making good any street which is not a highway repairable by the inhabitants at large.

Section 232 of the Public Health Act, 1875, gives a similar power of making private improvement rates to *rural* authorities.

5. THE HIGHWAY RATE. The expenses incurred in repairing and keeping up Highways are frequently included in the General District Rates, but sometimes a special Highway Rate is levied.

(*a*) For *urban* districts the Public Health Act, 1875, provides (1) where the whole of the district is rated for works of paving, water supply, and sewerage, or for works for such of these purposes as are provided for in the district, the cost of repair of highways must be defrayed out of the General District Rate; (2) where parts of the district are not rated for such works, the cost of repair of highways in those parts must be defrayed out of a Highway Rate to be separately assessed and levied in those parts by the urban authority, and the cost of such repair in the residue of the district must be defrayed out of the General District Rate; (3) where no such works are established in the district, the cost of repairing the highways must be defrayed out of a highway rate to be levied throughout the whole district by the urban authority.

(*b*) The expenses incurred by *rural* district councils in carrying out their duties are divided into general expenses and special expenses; the former are generally paid by the district as a whole, whereas the latter are incurred in respect of certain contributory places within the district. The general expenses are payable out of a common fund, whereas the special expenses fall on the contributory place for which they are incurred. The expenses incurred for the repair of highways are usually treated as general expenses, but in exceptional cases the district council has the power to charge them on a contributory place. The common fund out of which the general expenses are paid is raised out of the poor rate of the parishes in the district, according to the rateable value of each contributory place.

6. SEWERS RATE. The Public Health and other Acts give to the various local authorities the power to make and maintain sewers. Generally speaking, the main difference between a sewer and a drain is that the former serves two or more houses, whereas the latter serves only one. In order to properly make and maintain their sewers, the various authorities are empowered to levy sewers rates. This rate is frequently combined with the general rate of the various districts. In certain cases, however, the local authorities are given the power to recover the expenses from the owner or occupier of the property immediately affected by the particular sewer.

7. BATHS AND WASH-HOUSES' EXPENSES. The Baths and Wash-houses Acts, 1846 to 1899, provide for the establishment and control of public baths and wash-houses in various places which adopt the Acts. If the baths and wash-houses are situate within a borough, so much of the cost of maintenance as is not covered by the income of the establishment is defrayed out of the Borough Fund. But where they are established in a parish which is not within a borough, the expenses not covered by the income are chargeable upon and paid out of the moneys to be raised or applicable for the relief of the poor of the parish.

8. THE BURIAL RATE. The law relating to Burial Grounds is contained in the Burial Acts, 1852 to 1900. They provide that the income arising from the Burial Grounds (except the fees to the incumbent, clerk, sexton, etc.), are to be applied for the purpose of defraying expenses; but where such income is insufficient for that purpose, the difference is charged on the rates. The rate may either take the form of a separate Burial Rate, or it may be raised with or as part of some other rate, as the Poor Rate, the Borough Rate, or the General District Rate.

9. BOROUGH RATE. This rate is dealt with in the Municipal Corporations Act, 1882, which provides for the payments of the rents and profits of all corporate land, and of all sums and fines payable to the corporation, to a "borough fund." The ordinary expenditure of the borough is to be paid out of this fund; but where the fund proves insufficient for the purpose, the difference is defrayed by a Borough Rate, which is assessed by the municipal council but collected by the overseers.

10. COUNTY RATE. The income received by the various county Councils is generally quite inadequate for the purpose of defraying their expenses. The balance is paid out of a county rate levied under the County Rates Act, 1852. The assessment valuations for this rate are not always the same as those for the poor rate, though the poor rate valuations are often adopted by the county rate assessment committees for convenience.

11. GENERAL RATE. The London Government Act, 1899, provides for all the expenses of London Borough Councils being paid out of one general rate, to be called "the general rate," and for the discontinuance of a separate poor rate, sewers rate, lighting rate, etc. The general rate is assessed, made and levied by the Borough Council as if it were the Poor Rate. The act further provides that all the rates collected in a Metropolitan borough from any person must, as far as is practicable, be levied on one demand note, and the demand note shall state

(1) The rateable value of the premises in respect of which the rate is levied. (2) The rate in the pound. (3) The period for which the rate is made. (4) The several purposes for which the rate is levied. (5) The approximate amount in the pound required for each purpose (including, as far as is practicable, the proportionate amount of the estimated costs of and loss in collection); and (6) The equalisation charges and other contributions to the County Council under the London (Equalisation of Rates) Act, 1894, and other enactments.

As will be seen later, a tenant is generally entitled to deduct the amount paid in sewers rate from his rent. The London Government Act, 1899, does not deprive him of this right; where the right exists, he is still entitled to deduct from his rent such portion of the general rate as represents the sewers rate.

12. POLICE RATE. The expenses of the police force in the Metropolitan police district is met by a police rate levied over the whole of the Metropolitan police district. The rate must not exceed ninepence in the pound. In Boroughs, these expenses are paid out of the Borough Fund, which is augmented by the Borough Rate and by Watch Rates. In counties the expenses of keeping up the police are defrayed by a police rate levied by the County Councils.

13. WATCH RATE. The Municipal Corporations Act, 1882, provides that where at the commencement of this Act any rate might be levied in a borough for the purpose of watching by day or by night, the council may from time to time make and levy a watch rate on the occupiers of all hereditaments within such parts of the borough as are watched by day and by night. The watch rate may be

made either yearly or half-yearly. The rate is made, levied, and collected in the same way as the Borough Rate; but it must not in any one year exceed eightpence in the pound on the net annual value of the property rated thereto. All the money raised by the watch rate goes to the borough fund.

14. LIGHTING RATE. The cost of lighting the streets in London and in Urban Districts, and in those Rural Districts the councils of which have urban powers, are borne by the various local authorities and paid out of the general rates for the particular district; but in the case of rural parishes not situate within a district the council whereof has urban powers, the parochial electors may at a parish meeting adopt the adoptive Lighting and Watching Act, 1833. Where it has been adopted the amount to be raised for the purposes of the Act is fixed by the ratepayers at the annual parish meeting. It is levied by the overseers under order of the parish meeting in the same manner as the poor rate is levied.

15. EDUCATION RATE. By the Education Act, 1902, it is provided that the expenses incurred in carrying out that Act by the various councils having powers under that Act should be defrayed:

(1) In the case of counties, out of the county fund. (2) In the case of boroughs, out of the borough fund or borough rate, or out of a separate education rate to be made, assessed, and levied in like manner as the Borough Rate. (3) In the case of an Urban District, other than a borough, out of the poor rate of the parish or parishes comprised in the district.

16. GAS AND WATER RATES. The rates dealt with above are all rates in the first of the two meanings of the word given at the commencement of this article, the gas rates and water rates have the second meaning in that they are usually a charge made by a public company for services rendered. Gas is usually paid for according to the quantity consumed as measured by the meter. The private Acts of most gas companies have provisions dealing with the testing of gas meters and the recovery of over-charges if the meters do not register correctly, but many of the Acts provide that allowances for the incorrectness of meters can only be made on the current quarter's account. Water rates, however, are generally assessed and are payable on the rateable value of the premises, though it is not unusual for an extra charge to be made where garden hoses are employed or where there is otherwise reason to believe that an abnormal supply of water will be used.

TOTAL EXEMPTION FROM RATING.

Certain property is exempt from being rated:—

1. CROWN PROPERTY, which has been held to include royal palaces, dockyards, the offices of the Secretaries of State, the Houses of Parliament, the Horse Guards, Post Offices, Assize Courts, etc., and even the judges' lodgings in the various Assize Towns. Where, however, property has been acquired by the Government under the Defence Act, 1860, for the purpose of defending the country, the Act provides that where before the Act the land was charged with rates, it shall continue to be so chargeable, but that it must not be assessed to a higher value than that at which it stood at the time when it was acquired by the Government.

2. PERSONAL PROPERTY, also, is exempt from rating. This has not always been so. Indeed, the Statute 43 Eliz., c. 2, which established the present system of rating, expressly provided for the rating of such property. However, the practice of rating personal property gradually fell into disuse until it was abolished in 1840.

3. TURNPIKE TOLLS. These are exempted from assessment to the rates by virtue of the Turnpike Roads Act, 1822, which also exempts the toll-houses erected for the purpose of collecting the tolls.

4. CHURCHES AND CHAPELS. Churches, chapels, and premises exclusively appropriated to public religious worship are exempted from the payment of rates by the Poor Rate Exemption Act, 1833. There is a proviso in the Act which exempts such buildings from being rated, if the only other use to which they are put, besides that for public religious worship, is for the purpose of holding a Sunday School, or an infant school, or for the charitable education of the poor.

5. SCIENTIFIC, LITERARY, AND FINE ARTS SOCIETIES. The Scientific Societies Act, 1843, provides that societies established exclusively for the purposes of science, literature, or the fine arts shall be exempt from rates in respect of land and buildings occupied by them for the transaction of their business and for carrying into effect their purposes; but before any such society can claim the benefit of this Act, it must cause three copies of all its laws, rules, and regulations, signed by its principal officers, to be submitted to the barrister appointed for the purpose of certifying the rules of friendly societies. If this barrister decides that any such scientific, literary, or fine arts society is entitled to exemption, he grants it a certificate to that effect. It should be noted that Religious, Educational, and other societies cannot claim any exemption from rating under this Act.

6. LIGHTHOUSES, BUOYS, BEACONS, etc. These, and also all the premises and property belonging thereto, or occupied by lighthouse authorities, or for the purpose of the lighthouse services, are exempted from rates of every kind by the Merchant Shipping Act, 1894.

7. VOLUNTEER STOREHOUSES. Storehouses appointed for the depositing and safe keeping of arms, ammunition, and stores of volunteer corps are exempted from rates by the Volunteer Act, 1863.

8. SUNDAY SCHOOLS AND RAGGED SCHOOLS. These cannot themselves claim to be exempt from the incidence of the rates; but the Sunday and Ragged Schools (Exemption from Rating) Act, 1869, gives to all rating authorities the power to exempt such schools from the rates if they think fit. Moreover, as has already been seen, if the school is a Sunday School, infant school or school for the charitable education of the poor held in a church or chapel, it is exempted from rates by the Poor Rate Exemption Act, 1833.

PARTIAL EXEMPTION FROM RATING.

Certain other property is entitled to partial relief from rating:—

1. AGRICULTURAL LAND. By the Agricultural Rates Act, 1896, it is provided that the occupiers of agricultural land in England shall be liable to pay one-half only of the rate in the pound payable in respect of buildings and other hereditaments. The Act does not apply to rates assessed under any commission of sewers or in respect of any drainage, wall, embankment, or other work for the benefit of the land; nor does it apply to those rates with which agricultural land was already assessed at a half or less than a half, as compared with other property. In this Act the expression "Agricultural Land" is defined as meaning "any land used as arable, meadow, or pasture ground only, cottage gardens exceeding one quarter of an acre, market gardens, nursery grounds, orchards, or allotments"; but it does not include "land occupied together with a house as a park, gardens, other than as aforesaid, pleasure grounds, or any land kept or preserved mainly or exclusively for purposes of sport or recreation, or land used as a racecourse."

Persons of the middle and upper classes often occupy cottages in the country; they cannot claim to be rated at one-half only in respect of their gardens, for the Act goes on to define a "cottage" as "a house occupied as a dwelling house by a person of the labouring classes."

2. TITHES. By the Tithe Rentcharge (Rates) Act, 1899, it is provided that the owner of a tithe rent-charge attached to a benefice shall be liable to pay only one-half of the amount which he would have to pay if it were ordinary rateable property. The Act does not apply in those cases where the property is already assessed at one-half or less than one-half as compared with other rateable property. Thus it is provided by the Public Health Act, 1875, that "the owner of any tithes, or of any tithe commutation rent-charge, or the occupier of any land used as arable, meadow, or pasture ground only, or as woodland s

market gardens, or nursery grounds, or used only as a railway constructed under the powers of any Act of Parliament for public conveyance, shall be assessed in respect of the same in the proportion of *one-fourth* only of its net annual value."

N.B.—Allotments, towing paths, and land covered with water, can also generally be treated as liable only to one-fourth of their net annual value.

3. **LIGHT RAILWAYS.** By the Light Railways Act, 1896, it is provided that where the Treasury agree to make any special advance as a free grant, the order authorising the railway may make provision as regards any parish that, during a period not exceeding ten years to be fixed by the order, so much of the railway as is in that parish shall not be assessed to any local rate at a higher value than that at which the land occupied by the railway would have been assessed if it had remained in the condition in which it was immediately before it was acquired for the purpose of the railway.

4. **BURIAL GROUNDS.** It is provided by the Burial Act, 1855, that land acquired under the Burial Acts to be used as Burial Grounds shall not be assessed at a higher value than that at which the property was assessed at the time of its acquisition.

5. **VOLUNTARY SCHOOLS.** By the Voluntary Schools Act, 1897, it is provided that no person shall be assessed or rated to or for any local rate in respect of any land or buildings used exclusively or mainly for the purposes of the schoolrooms, offices, or playground of a voluntary school, except to the extent of any profit derived by the managers of the school for the letting thereof.

THE RATEPAYER.

1. **WHO PAYS THE RATES?** The Statute of Elizabeth makes the rates payable by the *occupier* of the property, whether he be the *owner* of the land or not. But certain later Statutes have made the rates payable by the *owner* in certain cases. Again, even in those cases where the occupier has to pay in the first instance, he may sometimes, if he is a tenant, deduct from his next rent the amount he has paid in rates, as will presently be seen. Questions often arise as to the precise meaning of "occupier" and "occupation" in rating cases. No really satisfactory definition has ever been given. A person may be said to be in "occupation" for rating purposes if he is in possession of the property and derives some tangible benefit from it.

The owner of a vacant house is not rateable for it as an occupier, as long as he keeps it vacant; if, however, he furnishes it and keeps it ready for habitation, he is an occupier even if he does not actually reside in it at all. If a person occupies only certain rooms in his house, and does not use certain other rooms, he is yet liable to be rated for the whole. There is an exception to this rule in those cases where each suite is to be regarded as a separate piece of rateable property, as in the case of flats.

Where a house is occupied by servants on behalf of their master, the master is usually rated and not the servants. Again, where a house which is to be let unfurnished is merely in the custody of a care-taker for the purposes of protecting it, it is generally not liable to be rated; but if the owner also at the same time uses it as a store-house for his furniture, he is liable to be rated as the occupier. The occupation of a room or rooms by a lodger does not make him rateable as the occupier thereof; as his landlord is rated in respect of the whole house.

It is provided by the Poor Rate Assessment and Collection Act, 1869, Amendment Act, 1882, that an outgoing occupier shall only be liable to pay so much of the rate as shall be proportionate to the time of his occupation, notwithstanding he may not be at once succeeded in his occupation by an incoming tenant. In like manner the incoming tenant is only liable to pay in proportion to the time of his occupation.

2. **WHERE OWNER IS RATED INSTEAD OF OCCUPIER.** As has been seen, the occupier and not the owner is generally the person who is primarily liable for the payment of the rates; though, in the case of a landlord and tenant, the parties frequently agree between themselves that the liability shall ultimately fall on the landlord. Certain Acts have, however, made the landlord primarily liable, either in substitution for or in addition to the occupier.

(*a*) By the Metropolitan Police Act, 1829, it is provided that where any property within the Metropolitan police district is occupied by an ambassador, agent, or other public minister of any foreign state, or by any other person not liable to the poor rate, all money payable for the purposes of the police by the occupier of such property shall be paid by and recoverable from the landlord or owner, who shall for this purpose be deemed the occupier.

(*b*) Under the Allotments Act, 1887, and the Local Government Act, 1894, where urban and rural district councils and parish councils acquire land under those Acts, such councils shall for the purposes of all rates, etc., be deemed to be the occupiers of all the allotments which are let.

(*c*) By the Advertising Stations (Rating) Act, 1889, it is provided that where any land is used for the exhibition of advertisements, but not otherwise occupied, the person who shall permit the same to be so used, or (if he cannot be ascertained) the owner thereof, shall be deemed to be in occupation thereof, and shall be rateable therefor.

(*d*) By the Poor Rate Assessment and Collection Act, 1869, it is provided that in the case of property of which the rateable value does not exceed £20 in London, or £13 in Liverpool, or £10 in Manchester or Birmingham, or £8 elsewhere, if the owner is willing he may enter into an agreement with the overseers by which he agrees to pay the poor rates on the property, whether occupied or not, and in exchange he is allowed a commission not exceeding 25 per cent. on the amount.

(*e*) By the same Act the local authority may *order* that the owners of such property shall be rated instead of the occupiers, and that they shall be allowed an abatement of 15 per cent. on the amount of the rate. In this case the owner is only rated so long as the premises remain occupied. If he desires to be rated, whether they are occupied or not, he may enter into an agreement with the overseers whereby he can get a further abatement not exceeding 15 per cent. So that an owner who desires to compound for the rates, whether the property is occupied or not, should wait until the local authority orders him to be rated instead of the occupier, for in that case he can get a total abatement of thirty per cent. instead of twenty-five per cent.

(*f*) By the Public Health Act, 1875, the Urban Authority is given the option, if it think fit, to rate the owner instead of the occupier, where the rateable value of the premises does not exceed £10, or where the premises are let to weekly or monthly tenants, or in apartments. The owner in this case does not get a commission or deduction as under the Poor Rate Assessment and Collection Act, 1869.

(*g*) In the case of Flats under one roof, the landlord is usually rated in respect to each of the flats which is let.

Again, by the Poor Rate Assessment and Collection Act, 1869, the occupier of any rateable property let to him for a term not exceeding three months is entitled to deduct the amount paid by him in respect of the poor rate from the next rent he pays to his landlord.

By the Rating Act, 1874, the tenant may generally deduct from the next rent the whole of the amount he has spent in rates in respect of land used for a plantation or a wood, or for the growth of saleable underwood; and half the amount he has spent in rates in respect of a tin, lead, or copper mine.

Though the tenant usually has to pay the rates, it is not uncommon for him to enter into an agreement with his landlord by which the latter has to pay them. This is generally the case where property is let in flats.

N.B.—When the landlord agrees to pay "all the rates," it does not mean that he can be called upon to pay the gas rate, for this is really in the nature of a payment for goods supplied to the tenant.

3. WHEN RATES CAN BE DEDUCTED FROM RENT. With the exception of the rates dealt with above, all rates fall in the first instance upon the tenant. In some cases, by the terms of his agreement with his landlord, there is an arrangement by which they, or some of them, ultimately fall upon the landlord. Where no mention has been made of rates in the contract of tenancy, the tenant is entitled to deduct from the next rent due to his landlord the amount he has spent in paying the tithe rent-charge and the sewers rate. (He can also deduct the Property Tax and Land Tax, but not the House Duty). The landlord must always ultimately pay the tithe rent-charge, for it is provided by the Tithe Act, 1891, that any agreement between the parties to the effect that the tenant must bear it is void.

VALUATIONS OUTSIDE THE METROPOLIS.

1. PREPARATION OF VALUATION LISTS. It is provided by the Union Assessment Committee Act, 1862, that the Board of Guardians in every union shall, in every year, at their first meeting appoint an assessment committee from among themselves. Where the union has the same bounds as a borough, the names of the committee must be transmitted to the town council, which may appoint additional members. Within three calendar months after the appointment of the committee, the overseers of each parish make a list of all the rateable property in the parish, with the annual value thereof. Moreover, unless the overseers think that the valuation last acted upon correctly shows the full annual rateable value of all the property, they must revise such valuation. The overseers must sign all the valuation lists. The valuation lists contain:—

(1) The name of the occupier. (2) The name of the owner. (3) The description of the property. (4) The name or situation of the property. (5) The estimated extent. (6) The gross estimated rental. (7) The rateable value.

The "gross estimated rental" for this purpose is the rent at which the property might reasonably be expected to let from year to year free of all usual tenants' rates and taxes. The overseers must deposit their valuation lists in the place where the parish rate books are usually kept, and must give public notice of such deposit on the following Sunday. All persons assessed to the poor rates have the right to inspect and take extracts from the lists at reasonable times. At the expiration of fourteen days from the Sunday on which the public notice of the deposit was given, the overseers must transmit the lists to the assessment committee; but the ratepayers still have the right to inspect and take copies or extracts from the lists so transmitted.

2. OBJECTIONS TO THE VALUATION LISTS. Any person who may feel himself aggrieved by any valuation list on the ground of unfairness or incorrectness in the valuation of any property included therein may, at any time after the deposit and before the expiration of twenty-eight days after the notice of the deposit, give to the assessment committee and to the overseers a notice in writing of his objection, specifying the grounds thereof.

The assessment committee holds meetings for the purpose of hearing the objections after giving twenty-eight days' notice of such meetings; but such notice is not necessary where a meeting is merely an adjournment of a previous meeting.

The committee may, whether any objection be made or not, make such alterations in the valuation lists as they think right. Where they have made any such alteration, the list must again be deposited for inspection as above. If a ratepayer appeals to the special or quarter sessions and the result of the appeal is to amend the rate, the committee must amend the valuation list in conformity thereto. When the valuation lists have been approved by the assessment committee they are delivered to the overseers for safe custody.

When any property not included in a valuation list becomes rateable, the overseers have the power to make supplemental valuation lists. The same rules as to deposit, notice, objections, etc., apply to the supplemental lists as to the original lists.

The assessment committee must cause a copy of the valuation lists for the parishes of the union to be deposited in the board room of the Board of Guardians, and such lists shall be open at seasonable times to the inspection of any of the guardians or overseers of the union free of charge, and of any ratepayer on payment of one shilling.

3. APPEAL AGAINST VALUATION LISTS. If an aggrieved ratepayer does not receive the satisfaction he desires at the hands of the assessment committee, he must give twenty-one days' notice to the assessment committee, and fourteen days' notice to the overseers of his intention to appeal to the next practicable sessions. Where the only objection is the inequality, unfairness, or incorrectness of the valuation, the appeal may be made to the Special Sessions of the Justices; but if other questions (e.g. the liability to be rated) are to be raised, the appeal must be to the Quarter Sessions. The Sessions have power to amend or quash the assessment. If both parties consent to the course, the dispute may be referred to arbitration under the Quarter Sessions Act, 1849. If the Court of Sessions thinks the case one of great difficulty, it may state a case for the opinion of the King's Bench Division, that is, to the Divisional Court, the decision of which is final unless it gives leave to appeal to the Court of Appeal.

VALUATIONS IN THE METROPOLIS.

1. THE VALUATION LISTS. The principal Act dealing with the assessment of property within the Metropolis is the Valuation (Metropolis) Act, 1869. This Act provides for the appointment of an assessment committee by the Guardians. But where the whole of a poor law union is within one of the Metropolitan boroughs, it is provided by the London Government Act, 1899, that the Borough Council shall appoint the Assessment Committee instead of the Guardians. The overseers of every parish must make, sign, and deposit a valuation list, in duplicate, before the first of June in every year. The overseers must send one duplicate of the valuation list to the surveyor of taxes of the district at the same time that the other is deposited by them. The surveyor of taxes inserts in the duplicate sent to him his estimate of the gross value of the property, if such amount differs from the amount inserted by the overseers, and transmits the duplicate to the Assessment Committee.

The overseers having deposited the valuation list in the place where the rate books are usually kept, must give public notice of the fact on the following Sunday. Not less than fourteen nor more than seventeen days after the notice the overseers must transmit their list to the assessment committee. Any person who feels himself aggrieved by anything in the valuation list may, within twenty-five days after the notice of the deposit, give to the Assessment Committee and to the overseers a written notice of his objection. The committee holds meetings to hear and determine the objections as in the case of proceedings outside the Metropolis. The notice of objection must specify the alteration in the list which the objector desires to be made. Ratepayers have the right to inspect and take copies from the lists.

The valuation lists, as approved by the Assessment Committee and as altered by the session on appeal (if any), comes into force on the 6th April of the year following that on which it was made, and lasts for five years subject to any alterations that may be made by any supplemental or provisional list.

The rate is levied notwithstanding that there may be an appeal pending, but if the Court alters the list the difference is paid, repaid, or allowed, as the case may be. For the purpose of calculating the rateable value, certain deductions are made from the gross value, and for this purpose the rateable property is divided into eleven classes. The maximum deduction varies according to the class, from one quarter to one-twentieth.

2. APPEAL AGAINST VALUATION LISTS. For the purpose of hearing appeals under the Valuation (Metropolis) Act, 1869, proceedings should be taken before the London Quarter Sessions. The persons entitled to appeal to these sessions include surveyors of taxes, overseers, and any ratepayer who may feel aggrieved by any decision of the Assessment Committee, or an objection to which he was a party, or by any decision of special sessions, whether he were a party or not. The Act also provides for appeals being made to special sessions in respect to the valuation lists; but the right to appeal to special sessions does not deprive a person of the right to appeal to the Quarter Sessions. If the appellant is a ratepayer, he must within seven days after giving notice of appeal enter into recognizances (i.e. a bond) with two sureties, or make a £50 deposit, as security for costs.

MAKING AND COLLECTION OF RATES. The amount of the poor rate is fixed by the overseers of the poor, and to them belongs the task of collecting it. The rate is usually made half-yearly, in the months of April and October, the overseers calculating what amount will probably be required in the ensuing six months. When the overseers have fixed the amount due from each ratepayer that amount is due immediately, so that roughly speaking rates are and ought to be paid in advance. In some cases the overseers agree to accept payments by instalments.

Other rates are assessed and determined by the various local bodies which issue a precept or order to the overseers empowering them to collect these rates at the same time as the poor rate is collected. The overseers collect the rates and then hand them over to the body issuing the precept. In the Metropolitan Boroughs, the Borough Councils are themselves the overseers, and they collect not only the local rates needed for their own purposes, but also for the purposes of Boards of Guardians, the London County Council, and the Receiver of the Metropolitan Police and other bodies.

ENFORCEMENT OF THE PAYMENT OF RATES. It is the duty of the overseers to collect the rates from the ratepayers. If the ratepayer refuses to pay his rates, no action can be brought for their recovery; but a distress may be levied on the goods of the offender. It should be noted here that this power of distress given to the overseers is not nearly so extensive as that given to landlords for the non-payment of rent. The goods of a stranger or of a lodger cannot be distrained upon for the non-payment of rates. The distress levied on the offenders' goods need not take place on the premises in respect of which he is rated, the overseers may distrain upon his goods wherever they may be found. Where a tenant leaves the premises without paying his rates, they cannot be recovered from a tenant who succeeds him. The offender cannot avoid a distress by means of a bill of sale, for by the Bills of Sale Act (1878) Amendment Act, 1882, a bill of sale is declared to be no protection in respect of personal chattels included in such bill of sale, which would otherwise have been liable to distress under a warrant for the recovery of taxes, and poor and other parochial rates. When the person liable for the payment of any rate refuses or neglects to pay it, the overseers should make a complaint before the local justices, and take out a summons against the offender calling on him to show cause why he has not paid the rate. On the hearing of the summons, if the rate is regular and legally imposed, the magistrates cannot pay heed to such arguments as are often raised by Passive Resisters. The magistrates' duty is to issue a distress warrant. If the offender tenders part of the rate, the magistrates may, if they think fit, accept it and issue a distress warrant for the balance, or they may issue a warrant in respect of the whole amount. An appeal against the issue of a distress warrant lies to the Court of Quarter Sessions; but not before the distress has been levied.

When the constable or other person having the execution of the distress warrant makes a return that he could not find sufficient goods or chattels of the offender's whereon to levy the sum due together with the costs of the levy, two or more justices, acting together, may issue a warrant committing the offender to prison for any time not exceeding three calendar months, unless the sum due be sooner paid.

THE POOR LAW.

All experience proves that blind and indiscriminate almsgiving is an evil in disguise. Unless it is regulated and carefully administered, it has only the effect of encouraging indolence and vagrancy. The State for several centuries has recognised the duty of its citizens to contribute in proportion to their means to the support of the indigent: and it has also recognised the wisdom of regulating the disposal of the funds contributed so as to obviate abuses. The Legislature has accordingly, from time to time, passed various enactments, known generally as the "Poor Laws."

POOR LAW LEGISLATION.

1. SKETCH OF ITS HISTORY. It was not till the reign of Henry VIII. that any organised attempt was made at poor law administration. Even then the arrangements were devised merely with a view to collecting and administering alms, the payment of which by the rich still remained purely voluntary.

The reign of Edward VI. brought matters a step further. Though in general the gifts remained voluntary, yet if a wealthy person bestowed in alms a grossly inadequate amount, having regard to his wealth, complaint might be made to the justices, who had power to order the defaulter to pay a reasonable sum.

The next advance came in Elizabeth's reign, when, in 1601, the foundations of the present poor law system were laid. The Act passed in this year (43 Eliz. c. 2) provided

(1) That the needs of the aged and impotent poor should be attended to. (2) That work should be provided for the able-bodied poor. (3) That each parish should look after its own poor. (4) That "overseers of the poor" should be appointed in each parish to look after the interests of the poor. (5) That the overseers should have power to levy a compulsory *Poor Rate*. (6) That the overseers should have power to build workhouses in certain places. (7) That the parents, grandparents and children of the poor and impotent should, if able to do so, be compelled to contribute to the support of their relatives.

The main principles of this Statute are still law. In 1782-3, "Gilbert's Act" was passed, authorising the appointment of guardians in the place of the overseers of the poor in certain cases, and providing for the creation of unions and the establishment of workhouses. In 1819 the Select Vestry Act was passed, permitting the formation of Select Vestries to supervise the administration of the Poor Laws. In 1824 the Statute 5 Geo. IV., c. 83, provided for the punishment on summary conviction of those able-bodied persons who run away leaving their families chargeable to the parish.

In 1834 the Poor Law Amendment Act was passed, providing for:—

(1) The appointment of Poor Law Commissioners to superintend the Guardians and Vestries, and to regulate the management of workhouses and other similar institutions. (2) The formation of Poor Law Unions, that is, the union of several parishes for the better administration of the relief of the poor in the respective parishes. (3) The building of workhouses, etc. (4) The removal of paupers to their place of settlement. (5) The creation of the so-called "workhouse test."

The principle of the "workhouse test" was that outdoor relief was withdrawn from the able-bodied, who would thenceforward have to enter the workhouse to obtain assistance.

In 1847 the Poor Law Commissioners were replaced by a Poor Law Board. In 1871 the Poor Law Board was replaced by the Local Government Board, which now supervises the various authorities which deal with Poor Law, Public Health, and Local Government matters.

2. A PAUPER'S "SETTLEMENT." Reference has been made above to the removal of paupers to their place of settlement. The law relating to "settlement" is and has been most important for those concerned in the administration of the Poor Law. Able-bodied paupers, with no intention of working, were in the habit of migrating to those parishes where they would meet with better treatment than at home; so that parishes striving to carry out the duties imposed on them by the Statute of Elizabeth's reign, were often saddled with the maintenance of paupers who ought rightfully to be chargeable to another parish. The abuses that this state of affairs brought about led to the passing of a Statute in 1662, which provided for the removal of paupers either to the parish in which they were born, or to the one in which they had acquired a "settlement." The effect of this law was that it tied people to the soil, for it prevented poor persons from travelling in search of work. Subsequent legislation has somewhat altered the law relating to the places of settlement of paupers.

When a pauper acquires a settlement, he has a right to relief under the poor laws in that particular place. Generally the settlement is in the parish in which the particular pauper was born. But a new settlement may be acquired by residence or otherwise.

A legitimate child under the age of sixteen has the same settlement that his father has; or if his mother be a widow he has her settlement. Bastards up to the age of sixteen derive their settlement from their mother. After attaining that age, children have a settlement in the place of their birth until they acquire another. Married women always have their husband's settlement.

The commonest way in which a settlement in any place, other than the place of birth, is acquired by paupers, is by continuous residence in a parish for three years; but a settlement may also be acquired by renting and occupying a house for a year, at a rent of at least £10, or by the payment of rates, or by owning an estate, or by being bound apprentice in a parish and residing therein for at least forty days.

3. REMOVAL OF PAUPERS. Where a pauper becomes chargeable to the rates, the Guardians have the power to apply to the local magistrates to have him removed to his place of settlement. But they have no power to remove him if he has resided in the district for a year before the warrant for his removal is issued. Time spent in the army or navy, or in prison, or in a hospital or lunatic asylum is not counted in reckoning the year of residence. Moreover, the Guardians cannot have a person removed to his place of settlement if the fact of his becoming chargeable to the rates was due to sickness or accident, unless the justices who grant the warrant for removal are satisfied that the disability resulting therefrom is permanent. A foreigner, having no place of settlement, cannot be removed, but if he acquires a place of settlement he may be removed there. Persons born in Scotland, Ireland, the Channel Islands, etc., are not "foreigners," so that they are liable to removal unless they have acquired rights to remain, by a year's residence as above. On the hearing by the justices of the application for the removal of a pauper, the man himself is often the most important witness as to what is his real place of settlement. He may be compelled to attend and give evidence.

Appeals against an order for the removal of a pauper to the place of his settlement are generally made to the Court of Quarter Sessions of the borough or county of the place where the order is made. But if the Boards of Guardians interested in the question prefer it, they may submit the dispute to the final decision of the Local Government Board.

Paupers returning to the places from whence they have been removed and becoming chargeable to the rates, are liable to be dealt with as "idle and disorderly persons."

4. VAGRANTS AND DISORDERLY PAUPERS. The poor law system is supposed to be sufficient for the purpose of alleviating all cases of genuine want. Therefore, begging and similar forms of imposture are not tolerated by the law. For the purpose of properly suppressing imposture and rascality, offenders are divided into three main classes:—

(*a*) **Idle and disorderly persons.** These include (1) Able-bodied paupers who have become chargeable to the rates through refusing to work. (2) Paupers returning and becoming chargeable to parishes from which they have been "removed." (3) Paupers who leave casual wards or workhouses before they are entitled to be discharged therefrom. (4) Paupers who refuse to be discharged from such places at the proper time. (5) Paupers who refuse to do their allotted tasks, or to obey the regulations of the institution in which they are placed. (6) Persons who wilfully give false names or addresses or who otherwise make false statements with a view to obtaining the benefit of the poor law. (7) Beggars, disorderly prostitutes, and unlicensed hawkers.

Idle and disorderly persons are liable on summary conviction to a month's hard labour. Appeal against a conviction lies to a Court of Quarter Sessions.

(*b*) **Rogues and Vagabonds.** These include (1) Persons who commit a similar offence after having been previously convicted as idle and disorderly persons. (2) Persons who run away leaving their wives and children chargeable to the parish. (3) Persons found wandering about without any home or other visible means of subsistence, who cannot give a good account of themselves. (4) Paupers who wilfully destroy their clothes or who injure the property of the guardians. (5) Persons who expose wounds or other deformities, or who make false statements of fact with a view to obtaining alms. (6) Persons who violently make resistance when they are arrested as idle and disorderly persons.

Various other persons, as persons who bet or game in public places, persons who expose indecent pictures, persons who live on the immoral earnings of others, and suspected persons found under certain suspicious circumstances, are also classed as rogues and vagabonds.

The maximum punishment for a rogue and vagabond on summary conviction is three months' hard labour. Appeals lie to a Court of Quarter Sessions.

(*c*) **Incorrigible rogues.** These include (1) Rogues and vagabonds, and idle and disorderly persons, who escape from confinement before the expiration of the term of their imprisonment. (2) Persons who are convicted again of a similar offence after a previous conviction as a rogue and vagabond.

The treatment awarded to incorrigible rogues is that on conviction by a magistrate they are committed to the next Court of Quarter Sessions, and are meantime kept at hard labour. The said Court of Quarter Sessions may order that the offender be imprisoned for a further period of not more than one year, and in addition the incorrigible rogue is liable, if a male, to be whipped.

POOR LAW AUTHORITIES.

1. THE LOCAL GOVERNMENT BOARD. The principal authority for the administration of the poor law is the Local Government Board. It consists of a President, appointed by the Crown, certain high officers of state as *ex officio* members, and a permanent staff with a principal Secretary at its head.

The Board has power to make special rules and regulations for the administration of the poor laws in the various unions; but copies of such rules and regulations must first be sent to the Guardians, Overseers, and Local Justices, and be open to the inspection of local ratepayers before they can be enforced. Similarly, the Local Government Board has power to revoke rules and regulations already made. No rule, order, or regulation of the Board will be valid unless it bears the signatures of the President and Secretary, together with the seal of the Board.

Every year the Board must present a general report to Parliament; and all new orders, rules, and regulations must also be laid before Parliament as soon as possible after their publication.

Workhouses cannot be built, altered, or substantially repaired without the consent of the Board, which consent is also required for the formation or alteration of unions.

The chief poor law function of the Local Government Board is the supervision of the acts of the Guardians. The control the Board exercises is so extremely stringent, that there is hardly any step which the Guardians may take without its approval or sanction, e.g. the Guardians cannot hold a board meeting in any room other than that

prescribed for the purpose, without the previous permission of the Local Government Board.

2. BOARD OF GUARDIANS. The Guardians of the Poor are elected bodies representing the electors in the various Unions. In *urban* districts the Guardians are a separate body from the Urban District Council, and consequently require a separate election. But in the case of *rural* districts, the Local Government Act, 1894, provides that the Rural District Councils shall also have the duties and powers of Guardians of the Poor; so that Guardians are not separately elected in such districts.

Nearly all Guardians are elected by the parochial electors; but when the body has been elected it has the power to add two additional members and a chairman to its number, who though not elected by the Parish must yet be qualified in other respects to act as Guardians. No Guardian may represent more than one electoral parish on the board. If elected for more than one, he may choose which he will represent. The Local Government Board and the County Council of the district in which the Union is situate have power to regulate the number of Guardians which each Parish or "ward" (i.e. an electoral sub-division of a large parish) may elect. Both men and women are eligible as Guardians. Every elector may cast one vote for each vacancy, but not more than one for any single candidate. The voting is by ballot.

Boards of Guardians must meet to transact business at least once a month; and they must also have an annual meeting for the election of a chairman and vice-chairman, and for the appointment of committees. Their meetings must not take place on licensed premises if other suitable premises are available. Questions at the meetings are decided by a majority of votes, the chairman being entitled to vote. He also has a casting vote if the voting is equal. The necessary *quorum* at a meeting of the Guardians is seven members or a third of the total number, whichever is the least. The transactions and resolutions of the Guardians at their meetings are recorded in their *minutes*. The meetings themselves may be held in private, should the Guardians deem it advisable.

The Overseers of the Poor are charged with the duty of collecting the Poor Rate, but on the Guardians is imposed the duty of administering it for the relief of the poor. It is the duty of the Guardians to see that the inmates of workhouses and other similar institutions are properly fed and clothed. They must also see that the inmates obey the rules of the institutions in which they are sheltered, and that they perform their allotted tasks.

It is the duty of the Guardians to appoint officials, as masters and matrons of workhouses, medical officers, porters, nurses, and relieving officers for the purpose of properly administering relief to the poor. But all such appointments must be confirmed by the Local Government Board. These officials cannot be dismissed by the Guardians, but only by the Local Government Board; the Guardians may, however, suspend them. Indeed, the sanction of the Local Government Board is needed for every important act of the Guardians.

Though the imposition and collection of the Poor Rate is primarily the work of the Overseers of the Poor, yet the Guardians have some voice in the matter, for the valuation list prepared by the Overseers is revised by the Assessment Committee of the Guardians, which committee has power to hear objections to the assessment. Appeals against the decisions of the Assessment Committee are heard by a Court of Quarter Sessions. The Assessment Committees of the Boards of Guardians are appointed at the annual meeting, and must consist of at least six and not more than twelve members of the Board. A *quorum* generally consists of three members, but the Board may fix a different number.

Guardians also have duties connected with the enforcement of the Vaccination Acts, the appointment of Registrars of Births and Deaths, and certain educational and other duties not immediately connected with the Poor Law.

The Account of Boards of Guardians have to be examined half-yearly by an auditor appointed by the Local Government Board. For a week before the audit the accounts must be open to the inspection of ratepayers, who may attend the audit and raise objections to the accounts. The auditor disallows any expenditure which has been improperly made, the difference being surcharged to the Guardians or any of them. Appeals against surcharging are generally made to the Local Government Board, but in certain cases the auditor's order may be quashed by a Divisional Court.

3. OVERSEERS OF THE POOR. In addition to the Guardians, poor law matters are also looked after by Overseers of the Poor. These overseers are generally appointed, not elected. In *urban* districts the overseers are generally appointed by the local justices, who, however, usually appoint the nominees of the parish vestries. The Local Government Board may, however, make an order conferring on Urban District Councils the power of appointing overseers. In *rural* districts the overseers are generally appointed by the Parish Councils. Both men and women may be appointed overseers; they must, however, be householders. Usually three or four overseers are appointed, but in certain cases the number may be increased. In the Metropolitan boroughs, the Borough Councils are the Overseers of the Poor.

Certain persons are disqualified from appointment. They include undischarged bankrupts, persons convicted of fraud, felony, or perjury, and those engaged in supplying goods to workhouses, etc. Masters of Workhouses and Relieving Officers may only be appointed with the consent of the Local Government Board. A person appointed as overseer is generally bound to serve, but certain persons are exempt from service. They include members of Parliament, judicial and magisterial officers, clerks in Holy Orders, practising barristers, solicitors, doctors, surgeons, dentists and apothecaries, civil servants, soldiers, sailors, etc.

The principal duty of the overseers is the levying of the poor rate for the parish they represent. The rates they make must receive the formal assent of the local justices, which assent the justices are bound to give. The overseers must see to the collection of the rate, and they are responsible to the Guardians for its collection. If a person refuses to pay his rates after receiving a demand note, the overseers may take proceedings before the local magistrates to enforce it. Overseers also have many other duties and powers which are not directly connected with poor law matters.

Generally all the overseers are jointly liable for their contracts, but if an overseer borrows money for the purposes of the parish, he alone is liable, as overseers have no power to contract loans in the discharge of their duties. An overseer is not generally liable for the criminal acts of his co-overseers, unless he has been guilty of gross negligence contributing to the commission of the crime.

The overseers of the poor cannot give relief to paupers except in cases of urgent necessity, for the giving of relief is the duty of the Guardians.

4. JUSTICES OF THE PEACE. Local Justices have not very many powers in respect of giving relief to paupers. Their principal functions are judicial. Consequently their poor law duties are chiefly confined to dealing with refractory paupers and other idle and disorderly persons. Any two local justices have, however, the power of directing that relief should be given to impotent paupers without requiring them to enter the workhouse. The justices have also the power to inspect workhouses. Applications for the removal of paupers to their places of settlement are heard by the justices.

As has already been seen, the parents, grandparents, and children of impotent paupers are bound to maintain them. The local justices have the power to assess the amount which such persons must contribute. Such persons are, however, only bound to support their legitimate blood relations. They cannot, therefore, be called on to support their relations by marriage, or illegitimate relations. If a woman commits adultery and her husband does not con-

done it, he cannot be made liable for her maintenance. Continuing to live with her would generally amount to condonation. Otherwise a man is liable for the support of his wife, and if he runs away, leaving her or his children chargeable to the parish, he may be dealt with by the justices as a rogue and a vagabond.

5. DISTRESS COMMITTEES. The Unemployed Workmen Act, 1905, provided for the establishment of distress committees in and out of London :—

(*a*) **In London.** By order of the Local Government Board distress committees are formed in every Metropolitan Borough, consisting partly of members of the Borough Council and partly of members of the boards of guardians and of persons experienced in the relief of distress. There is also a central body for the whole of the administrative county of London, consisting partly of members of, and selected by, the distress committees and of members of, and selected by, the London County Council, and partly of persons co-opted to be additional members of the body, and partly, if the order so provides, of persons nominated by the Local Government Board, but the number of persons so co-opted and nominated must not exceed one fourth of the total number of the body and one member at least of each committee must be a woman.

(*b*) **Outside London.** By order of the Local Government Board for every municipal borough and urban district with a population of over 50,000 (and for such municipal boroughs and urban districts with populations between 10,000 and 50,000 as obtain the consent of the Board) distress committees are formed, partly consisting of members of the council, and partly of co-opted and additional members.

DUTIES OF DISTRESS COMMITTEES. It is the duty of the various distress committees to make themselves acquainted with the conditions of labour within their area, and when so required by the central body, to receive, inquire into and discriminate between any applications made to them by unemployed persons. If the committee be satisfied that an applicant is honestly desirous of obtaining work and consider that the case is more suitable for treatment under the Act than under the Poor Law, they may endeavour to obtain work for the applicant or they may refer the case to the central body. But the distress committee has no power to provide the work themselves or contribute towards its provision.

EXPENSES OF DISTRESS COMMITTEES. The expenses of the central body and such of the expenses of distress committees as have been incurred with the consent of the central body, are defrayed out of a central fund, which is supplied by voluntary contributions and by contributions made on demand of the central body by the councils out of the borough and county funds.

REGULATIONS OF THE LOCAL GOVERNMENT BOARD. The Act gives the Board power to make regulations providing *inter alia* for the establishment of farm colonies, for determining the conditions under which a central body may aid emigration or removal, for the due performance of their duties by the distress committees, for the audit of accounts and for the holding of local inquiries.

MODES OF RELIEF.

1. THE WORKHOUSE. The establishment and chief control of workhouses are in the hands of the Local Government Board; but locally they are supervised by the Guardians. It is the duty of the Guardians to see that the workhouses are supplied with furniture and other necessaries. The visiting committee of the Guardians must visit and inspect their workhouse at least once a week, and make entries from time to time in the visitors' book. All guardians and local justices may visit the workhouse at reasonable times; but ratepayers cannot claim a similar right without the permission of the Guardians. The person in the actual immediate charge of the workhouse is the master, and the matron is usually his wife. The master and matron are appointed in the first instance by the Guardians, but the appointment must be confirmed by the Local Government Board. In cases of urgent necessity, the master may admit a pauper on his own responsibility; but except in such cases, he may only admit them on the order of the Guardians, the relieving officer, an overseer, or the justices.

Paupers must be admitted at any time during the day or night, and also on Sundays. On admission, adult male paupers are searched by the master and females and children by the matron. They are supplied with workhouse garments, their own clothes being taken away. They are also deprived of any intoxicating liquors, obscene literature, cards, dice, matches, or food found on them. The pauper's property is returned to him when he leaves. If he has money he may be compelled to maintain himself. Paupers are liable to be washed on admission, but the Guardians cannot compel them to submit to having their hair cut, unless it is necessary for sanitary reasons. On admission, paupers are examined by the medical officer. If they are found to be diseased they are placed apart in special wards; but if free from disease they are placed in the class in the workhouse to which they belong, and they have to perform the duties ordained for that class.

2. CLASSIFICATION OF PAUPERS. Healthy paupers are divided into seven main classes, but sub-divisions of these classes may be made. The classes are :—

(1) Infirm adult males. (2) Able-bodied males over fifteen years of age. (3) Boys between the ages of seven and fifteen. (4) Infirm adult women. (5) Able-bodied females over fifteen. (6) Girls between seven and fifteen. (7) Children under seven.

Each class is kept in separate wards, with the exception that infirm married couples need not be separated from each other, they may be given accommodation separate from the other paupers. The Guardians may permit various members of a family in a workhouse to see each other. Paupers must go to bed and rise at the times appointed for their class, they must have their meals in the prescribed manner, and must conform generally to the rules and regulations of the house or ward in which they are placed.

The health of the members of the various classes is looked after by the medical officer, who may change the diet of a pauper if he thinks it necessary on medical grounds, but such change must be reported to the Guardians at their next meeting. Paupers cannot be compelled to attend any service of a religion other than their own.

Paupers may quit the workhouse on giving reasonable notice of their intention to do so. They must, however, take their families with them, unless the Guardians consent to their being left behind. But the Guardians may prevent orphan children under sixteen leaving if they think it desirable.

3. CASUAL WARDS. Provision is made by the Poor Laws not only for the parochial poor, but also for destitute tramps who apply for shelter at night. Special wards are generally provided for such persons, so as to keep them apart from the ordinary inmates of a workhouse. In cases of urgent necessity, the master may admit casuals to the ward without an order, but except in such cases they must always have an order. The proper person to give an order is the relieving officer, but an overseer may give one in an urgent case. If the casual ward is full, the master must refer the applicant to the relieving officer. Casuals are washed and cleansed on admission. Their clothes are taken from them, but returned in the morning, special attire being provided for their use during the night. Any money found on a casual is liable to be taken away and devoted to the common fund of the Union.

Casuals generally are not entitled to be discharged before 9 a.m. on the second day after their admission, and even then they are only entitled to be discharged if they have performed their allotted tasks. They may, however, be discharged at 5.30 a.m. in summer and at 6.30 a.m. in winter. Tasks are provided for the casuals to perform, and if they do not perform them, or if they otherwise disobey the regulations of the ward, they are liable to be dealt with as idle and disorderly persons.

4. OUT-DOOR RELIEF. The Local Government Board evidently leans strongly against the giving of out-door relief and towards the imposition of the workhouse test. For though it is cheaper to give a family out-door relief

than to support it in the workhouse, yet there are so many that would accept such relief who would not go into the workhouse, that the giving of out-door relief becomes dearer in the long run. There are eight principal cases in which the Guardians may give out-door relief instead of imposing the workhouse test:—

(1) In cases of sudden and urgent necessity. (2) In cases of accident, or bodily or mental infirmity. (3) For funeral expenses. (4) To widows in the first six months of their widowhood. (5) To widows with legitimate children dependent on them. (6) To the wives and children of persons in prison, or abroad, or in an asylum. (7) To the wives and children of soldiers, sailors, and marines on service. (8) To the wives and children residing within the Union of men residing elsewhere.

Out-door relief should be given to able-bodied men only under very exceptional circumstances.

5. **LABOUR TESTS.** When there is no room in the workhouse, and also in those cases where the Guardians think it undesirable to impose the workhouse test or to give ordinary out-door relief to able-bodied paupers, they may provide a labour test, so that on completing a prescribed task the pauper may receive some out-door relief. The test is generally stone breaking or oakum picking, but other tasks may be imposed instead.

6. **MEDICAL RELIEF.** Sick wards and infirmaries are attached to most workhouses, and medical attendance may be obtained in these in the same way as ordinary shelter in the workhouse. But paupers permanently sick or disabled, residing within a Union and receiving poor law relief, are generally given a ticket by the Guardians which will enable them to obtain medical assistance, attendance, and medicines from the medical officer.

7. **PAUPER LUNATICS.** When the medical officer of a Union learns that a pauper resident in the district is a lunatic, he must give notice of the fact to the relieving officer within three days. If there is no relieving officer, the notice must be given to an overseer. Within three days of receiving the notice the relieving officer or overseer must give notice to a magistrate of the district. The magistrate may order the temporary removal of the lunatic to the workhouse. Dangerous lunatics must not be kept in a workhouse for more than fourteen days. They should be sent to an asylum. Lunatics in an asylum who are not dangerous may be removed to and detained at a workhouse with the consent of the Local Government Board.

8. **APPRENTICESHIP OF PAUPER CHILDREN.** The Guardians have certain powers of apprenticing pauper children in workhouses. They must not apprentice any child for more than eight years, nor any child under the age of nine, nor any child who cannot read and write. No child under fourteen may be bound as an apprentice without his own consent, and no child under sixteen may be bound against the consent of his father. The consent of the mother is required in the case of an illegitimate child under sixteen. The Guardians should exercise great care in the children's interest when they are binding them to serve as apprentices. They should not bind them to infants or married women, or journeymen, or chimney-sweeps. They should also keep a register of their apprentices, and see that they are visited at least once a year.

9. **MAINTENANCE OF RELATIVES.** The Statute of Elizabeth provided that the parents, grand-parents and children and grand-children of the poor and impotent should, if able to do so, be compelled to support them. By other Acts a husband is compelled to support his wife. The guardians also have power to make an order against a putative father to contribute towards the maintenance of his offspring, though primarily it is the duty of the mother of an illegitimate child to support it. The liability to support pauper relatives does not extend to brothers, sisters, uncles, aunts, or other collateral relations.

PUBLIC HEALTH.

HEALTH LEGISLATION. It is little more than half a century since the legislature began to take a serious interest in the health of the community as a whole. Prior to 1845 the law of the country on this subject was in a very anomalous condition. Different places would from time to time apply to Parliament for Improvement Acts to regulate their water supply, drainage, etc. The powers conferred by these Acts varied according to the requirements of the various localities concerned. The inconsistency and inconvenience of this state of affairs brought about the passing of various "clauses" Acts.

These Acts contained clauses which the various localities might incorporate, either wholly or in part, in their Private Local Acts. Amongst these Acts may be mentioned the Markets and Fairs Clauses Act, the Gasworks Clauses Act, the Commissioners Clauses Act, the Waterworks Clauses Act, the Towns Improvement Clauses Act, and the Cemeteries Clauses Act—all passed in 1847. In the following year was passed the Public Health Act, 1848, and although it has been repealed by the Public Health Act, 1875, it is historically important as being the basis of the present law on the subject.

The year 1875 is by far the most important year in the history of Public Health. The Public Health Act, 1875, is a vast and comprehensive piece of legislation, setting forth in code form the bulk of the law on the subject. In sundry respects, dealing chiefly with administration, it has suffered amendment by subsequent Acts; but generally speaking it contains the law of Public Health as we find it to-day. It does not apply, however, except in a few minor details, to the Metropolis.

Until recently the sanitary affairs of London were governed by various "Metropolis Management Acts"; but in 1891 a codifying Act, known as the Public Health (London) Act, 1891, was passed. It does not, however, entirely supersede the Metropolis Management Acts. The powers conferred by this Act are very similar to those conferred by the Public Health Act, 1875, and the Acts amending it. It has been itself amended by the Public Health (London) Acts, 1893 and 1896. It deals with Nuisances, Offensive Trades, Smoke, Refuse Removal, Closets, Infectious and Epidemic Diseases, Hospitals, Mortuaries, etc.

SANITARY AUTHORITIES.

Under the Public Health Act, 1875, all England, except the Metropolis, was divided into districts of two kinds, called respectively Urban Sanitary Districts and Rural Sanitary Districts, or more shortly, Urban Districts and Rural Districts. These districts are subject, respectively, to the jurisdiction of the Urban and Rural Sanitary Authorities. The Urban Sanitary Authorities are now (under the Local Government Act, 1894) divided into Urban District Councils and Borough Councils.

1. **URBAN DISTRICT COUNCILS** consist of a chairman and councillors. The CHAIRMAN of a district council (whether Urban or Rural) is, unless a woman or personally disqualified, by virtue of his office a justice of the peace for the county in which the district is situate. A woman, though not eligible as justice of the peace, may be elected either as councillor or chairman. Amongst those personally disqualified from becoming justices of the peace are undischarged bankrupts, sheriffs, and practising solicitors.

COUNCILLORS to be elected must themselves be parochial electors, or have resided in the district for twelve months previously. They are elected by the parochial electors for a term of three years, but, unless the County Council otherwise orders, one-third of their number must go out of office every year, their places being taken by newly elected councillors.

2. **BOROUGH COUNCILS.** In boroughs the control of sanitary affairs is vested in the Borough Councils by virtue of Section 6 of the Public Health Act, 1875. The Urban Authority in the Boroughs being the Mayor, Aldermen and Burgesses acting by the Council. The Local Government Act, 1894, did not alter this in any way.

3. **RURAL DISTRICT COUNCILS.** The Rural Sanitary Authorities, now (since the Local Government Act, 1894) called Rural District Councils, consist of a chairman and councillors, the councillors being elected by the parishes

or other areas for the election of Guardians in the district. These Rural District Councillors also act as Guardians of the Poor in their respective parishes. No person is qualified for election unless he is a parochial elector of some parish within the Union, or has during the whole of the year preceding his election resided within the Union. No person is disqualified from election by sex or marriage. The term of office is three years, but, as in the case of Urban District Councillors, one-third of their number must retire annually.

POWERS OF LOCAL AUTHORITIES.

1. BYE-LAWS. Local authorities have, under the Public Health Acts, the power to make bye-laws for a vast number of different purposes. Under the principal Act they have power to make bye-laws regulating the cleansing of pavements, the removal of refuse, the well-ordering of common lodging houses, the conduct of offensive trades, the management of mortuaries and the construction of new streets and buildings. They also have power to make bye-laws for the proper management of pleasure grounds, markets, slaughter-houses, etc. Urban authorities can also make bye-laws in respect of the stands for hackney carriages and the rates of hire. But it must be clearly understood that no local authority has any power to make a bye-law which is repugnant to the law of the land or to the provisions of the Act under which it is made. The local authorities may attach to these bye-laws such penalties as they may think reasonable; but these penalties must not exceed £5 for each offence, or, in the case of a continuing offence, forty shillings for each day after written notice of the offence from the local authority.

The Bye-laws made under the Public Health Acts do not take effect until they have been submitted to and confirmed by the Local Government Board, which has power to allow or disallow them as it thinks fit. It will not confirm any bye-law unless notice of the intention to apply for confirmation has been given in a local newspaper at least one month before the making of the application, and unless a copy of the proposed bye-laws has been open for inspection by the ratepayers of the district during office hours for a whole month before the application. If any ratepayer, after having perused the proposed bye-laws, objects to them, he should apply to the Local Government Board with a view to prevent their confirmation. It is the duty of the Local Government Board to consider both the legality of and the policy underlying the proposed bye-laws; but it must not be supposed that the Local Government Board's confirmation can make valid any bye-law which is repugnant to the law of the land.

All bye-laws made by a local authority under the Public Health Acts must be printed and hung up in the office of such authority and be open to the inspection of ratepayers at all reasonable hours. In all legal proceedings the mere production of a copy of the bye-laws made by urban or rural district councils and signed and certified by the clerk of the council is, until the contrary is proved, sufficient evidence of the due making, confirmation, and existence of the bye-laws.

2. PROTECTION OF LOCAL AUTHORITIES. It would be manifestly unjust that any person, who acting in a *bona fide* manner endeavours to carry out his duties under the Public Health Acts, should be personally responsible for his actions in such a way that legal proceedings may be taken against him for any illegality he may have committed. Accordingly, it is provided in Section 265 of the Public Health Act, 1875, that no member or officer of a local authority, or person acting under the direction of such authority, is under any personal liability for anything done by him *bona fide* for the purpose of executing the Act. This, of course, does not mean that a local authority can avoid the consequences of the wrongful acts of itself or its servants, acting within the scope of their authority. It merely means that the local authority is responsible as a whole and not individually. It should be sued in its corporate name. The exemption from individual responsibility even extends to contractors who have *bona fide* contracted with the local authority to carry out some work under its direction. But a member, officer, or servant of a local authority is not exempted from personal liability if he acts entirely beyond the scope of his authority.

Moreover, it is laid down in the Public Authorities Protection Act, 1893, that no legal proceedings can be brought against any person for any act done in pursuance of any Act of Parliament or any public duty or authority, in respect of any alleged neglect or default in the execution of any such Act, duty, or authority, unless the proceedings are commenced within six months after the wrongful act or omission complained of.

Further, where the proceeding is an action for damages, the defendant is allowed to tender amends before the commencement of the action, and if in the opinion of the Court the plaintiff has not given the defendant a sufficient opportunity for tendering amends before the commencement of the action, the Court may award to the defendant costs to be taxed as between solicitor and client.

3. POWERS OF RATING. The powers given by the Public Health Acts for the purpose of defraying the expenses of local authorities in carrying out their duties under the Acts are not the same for Urban and Rural Districts.

(*a*) In the case of URBAN AUTHORITIES, all expenses not otherwise provided for are defrayed out of the district fund and general district rate, except in the case of borough councils where, if before 1875 they were payable out of the borough fund or borough rate, they must continue to be paid out of the same fund or rate. Before the general district rate can be made, a week's notice of the intention to make it must be publicly given, and a statement of the proposed rate must be open to the inspection of ratepayers.

General district rates are levied on the occupiers of all kinds of property assessable to the Poor Rate; but the urban authority may at its option levy a reduced rate on the owner instead of the occupier where the rateable value of the premises is under £10, or where the premises are let to weekly or monthly tenants or in apartments. Certain kinds of property, too, are to be assessed at only one quarter of their net annual value; these include allotments, tithes, tithe rent charges, arable, meadow, pasture or woodlands, market gardens and land covered with water, towing paths and railways.

(*b*) In the case of RURAL AUTHORITIES, the expenses incurred are divided into general expenses and special expenses. The former being the expenses of the establishment and officers of the rural authority, the expenses in relation to disinfection and, generally, all expenses incurred for the benefit of the district as a whole. Special expenses are those incurred in respect of any particular contributory place within the district, and include the cleansing of the sewers and providing and maintaining the water supply of such places. *General expenses* are payable out of a common fund to be raised out of the Poor Rate of the parishes in the district according to the rateable value of each contributory place; but *Special expenses* are a separate charge on each contributory place. Where, however, the expenses are incurred for the common benefit of any two or more contributory places, the local authority may apportion the expenses between them.

(*c*) Again, where the expenses have been incurred in respect of some private improvement, local authorities, whether urban or rural, have power to levy a private improvement rate. If a person fails to pay any rate, levied under the Public Health Acts, for a space of fourteen days after it has been lawfully demanded in writing, an order for its payment may be obtained from a court of summary jurisdiction, and in default of compliance with such order, a distress warrant may be issued.

REMOVAL OF NUISANCES.

1. WHAT IS A NUISANCE? Nuisances generally are either public or private. Vice-Chancellor Kindersley, in the leading case of Soltau *v.* de Held (21 L.J. Ch. 153), declared that "to constitute a public nuisance the thing must be such as in its nature or in its consequences is

a nuisance—an injury or a damage to all persons who come within the sphere of its operation."

A PUBLIC NUISANCE is dealt with by indictment or information and punished by fine and imprisonment; but if an individual can show that he has suffered some special damage in consequence of the nuisance, he can bring an action for damages.

A PRIVATE NUISANCE is one which does not affect the public generally, but only some particular individual or individuals. These nuisances are not subject to the criminal law. Civil actions may be brought to restrain them or to obtain compensation for any substantial damage they may have caused.

The Public Health Acts have declared a number of things to be nuisances, and have provided for their being dealt with summarily. Amongst these statutory nuisances are fireplaces which do not as far as practicable consume the smoke arising therefrom, and factory chimneys which emit volumes of black smoke. Again, such things as pools, ditches, privies, urinals, cesspools, drains, and ashpits must not be allowed to get into a condition which is offensive or injurious to health, for if they do they will be treated as nuisances.

2. KEEPING SWINE. Section 47 of the Public Health Act, 1875, makes it an offence to keep swine or pigstyes in any dwelling-house, or so as to be a nuisance to any person, in any urban district. There is a similar provision with heavier penalties in the Public Health (London) Act, 1891.

3. OFFENSIVE TRADES. The Act of 1875 declares certain trades to be offensive and forbids their being established in any urban district without the written consent of the urban authority. The trades specified are those of blood, bone, soap, or tripe boilers, fellmongers and tallow melters. The penalties imposed are very heavy.

4. REFUSE REMOVAL. Local authorities have power to undertake or contract for the removal of house refuse from private premises; and where they have exercised this power it is an offence for any one else to remove, or to obstruct authorised persons from removing, such refuse. But there is a provision exempting occupiers of houses from liability in respect of such refuse as is produced on their own premises and intended to be removed for sale or for the occupier's own use if it is meantime kept so as not to be a nuisance. If the local authority, after having undertaken or contracted for the removal of the refuse, unreasonably neglects to have it removed within seven days of being requested in writing to do so by the occupier of the premises, it renders itself liable to penalties.

5. STREET MUSIC. This objectionable practice may frequently be treated as a public nuisance and punishable as such; but there are other remedies, thus:—

(*a*) **In London.** By the Metropolitan Police Act, 1839, every person, except the guards and postmen belonging to the Post Office in the performance of their duty, who blows a horn or uses any other noisy instrument in any thoroughfare or public place is liable to a penalty not exceeding forty shillings. Again, by the Metropolitan Police Act, 1864, any householder may require any street musician or street singer to depart from the neighbourhood of his house on account of the illness, or on account of the interruption of the ordinary occupations or pursuits of any inmate of the house, or for other reasonable or sufficient cause. Penalty for refusing to go away when so requested, a fine not exceeding forty shillings, or imprisonment for not more than three days.

(*b*) **Outside London.** The above Acts do not apply outside the Metropolis, but in most populous districts the playing of street music and other nuisances are sufficiently regulated by bye-laws issued by the various local authorities under the powers conferred on them by the Local Government and other Acts.

DISEASE PREVENTION.

The legislature has passed innumerable statutes with a view to the prevention of disease. It is impossible in the space at our command to deal with more than a very few of them.

1. VACCINATION. The law on this subject is to be found in the Vaccination Act of 1867 and its amending Acts, in the Vaccination Act, 1898, and in the Local Government Board's Vaccination Order, 1898.

It is the duty of Guardians to appoint public vaccinators, who must be properly qualified medical men. Parents are required under a penalty of twenty shillings to have their children vaccinated before they are six months old, either by the Public Vaccinator or by some medical practitioner. If, however, the parent can satisfy two justices or a stipendiary or metropolitan police magistrate, within four months of the child's birth, that he conscientiously believes that vaccination would be prejudicial to the health of the child, he will obtain a certificate which will exempt him from the penalty. But he must deliver the certificate to the vaccination officer within seven days of obtaining it.

Though the cost of public vaccinations is paid from the Poor Rate, yet it is expressly provided that the acceptance of it does not amount to Parochial Relief or subject the parent to any disability or disqualification.

2. EPIDEMIC, ENDEMIC, AND INFECTIOUS DISEASES. Under the Epidemic and other Diseases Prevention Act, 1883, whenever any part of England appears to be threatened with or affected by any formidable epidemic, endemic, or infectious disease, the Local Government Board may make regulations for the speedy interment of the dead, for house to house visitation, for the provision of medical aid and hospital accommodation, for the promotion of cleansing, ventilation, and disinfection, and for guarding against the spread of disease.

The Infectious Disease (Prevention) Act, 1890, which applies to London and to such Urban or Rural Sanitary Districts as adopt it, deals with the inspection of dairies and the prohibition of the sale of milk in certain cases. It also deals with the cleansing and disinfecting of premises, bedding, etc., and regulates the disposal of the bodies of persons who have died from infectious diseases. It is an offence under this Act to knowingly cast infected refuse into any ash bin or receptacle for refuse.

3. NOTIFICATION OF DISEASE. Under the Infectious Disease (Notification) Acts, 1889 and 1899, where a person in any house, other than a hospital, is suffering from small pox, cholera, diphtheria, membranous croup, erysipelas, scarlatina, scarlet fever, typhus, typhoid, enteric, or relapsing, continued or puerperal fever, or from such other infectious disease as the local authority may, with the consent of the Local Government Board, direct, the head of the house and the medical practitioner in attendance must notify the fact to the medical officer of health for the district.

4. SEWAGE AND DRAINAGE. Generally speaking, the difference between a sewer and a drain is that the latter is one which receives the drainage of a single house, whilst the former receives that of two or more houses.

By the Public Health Act, 1875, all sewers within the district of a local authority are vested in that authority, unless they are sewers made by any person or company for profit, or under the authority of a private Act of Parliament, or of the Commissioners of Sewers.

5. SANITARY POWERS. Local authorities are given the following powers:—

(1) They may purchase, make, and maintain sewers necessary for the purpose of effectually draining their districts.

(2) They may carry any sewer through, across, or under any street, or under any cellar or vault situated under the pavement or carriage-way of any street.

(3) They may even carry their sewers into, through, or under any lands whatever within their district, after giving reasonable notice in writing to the owner or occupier.

(4) They may alter and improve sewers in any way that may be found desirable, and should the local authorities deem it necessary, they can discontinue the use of a sewer, if they provide an equally effective one for any person who may have been deprived of its use.

The Public Health Acts give local authorities powers

to construct works for the disposal of sewage, but they must be careful to create no nuisance in the exercise of these powers. They are not allowed to pollute with their sewage any natural stream, watercourse, canal, pond, or lake; and they must keep their sewers properly cleansed and ventilated.

The owners and occupiers of premises within the district of a local authority are entitled to empty their drains into the sewers of that authority; but before doing so they must give notice of their intention, and they must also have the connections made under the direction and control of the local authority. Where any house is without a drain sufficient for its effectual drainage, the local authority must, by written notice, require the owner or occupier of the house, within a reasonable time, to make a covered drain emptying into the local authority's sewers or cesspools, under the direction of the authority. It is an offence to build a house without proper and effectual drainage in any urban district.

SALE OF FOOD, DRUGS, POISONS, AND COAL.

1. UNSOUND FOOD. Under Section 116 of the Public Health Act, 1875, as amended by Section 28 of the adoptive Public Health Acts Amendment Act, 1890, Medical Officers of Health and Inspectors of Nuisances have power to inspect any articles intended for human food sold or exposed for sale within their districts; and if such food appears to be diseased, unsound, unwholesome, or unfit for human food, they may seize it and take it before a magistrate, who, if satisfied as to the justness of the complaint, may order the destruction of the unsound food and inflict a penalty of £20 or, in his discretion, he may send the offender to prison for three months. It is also an offence to hinder the inspectors in the exercise of their duty.

2. ADULTERATION OF FOOD AND DRUGS. Under the Sale of Food and Drugs Act, 1875, and its amending Acts (1879 and 1899) it is an offence to knowingly adulterate any article of food, intended for sale, with any ingredient or material that would render it injurious to health, or, in the case of a drug, that would affect its quality or potency.

It is likewise an offence to sell to the prejudice of the purchaser any article of food or any drug which is not of the nature, substance, and quality of the article demanded; but in the case of spirits adulterated only with water, it is a good defence to prove that the spirit is not thereby reduced more than twenty-five degrees below proof in brandy, whisky, or rum or thirty-five degrees in the case of gin. Again, in the case of compound articles and compound drugs containing ingredients other than those asked for, it is a good defence to show that a label has been attached to the article to the effect that it is a mixture, provided, of course, that the added ingredients are not injurious to health or intended fraudulently to increase its bulk, weight, or measure, or to conceal its inferior quality.

3. SALE OF MARGARINE. The sale of this substance is chiefly regulated by the Margarine Act, 1887, and the Sale of Food and Drugs Act, 1899. Every package of this substance must be branded on its top, bottom, and sides with the word "Margarine" in capital letters at least three-quarters of an inch square. If exposed for sale by retail it must bear a label with letters at least an inch and a half square; and it must be delivered to the customer in a paper wrapper on which the word is printed in capital letters not less than half an inch long. Margarine manufactories are required by law to be registered.

4. SALE OF HORSEFLESH. Under the Sale of Horseflesh, etc., Regulation Act, 1889, horseflesh, which term includes the flesh of asses and mules, must not be sold in any shop which does not bear a conspicuous sign with letters at least four inches in length to the effect that such flesh is sold there. Again, horseflesh must not be sold for human food under the guise of some other kind of food.

5. SALE OF POISONS. By the Arsenic Act, 1851, every person who sells arsenic must enter full particulars of the sale in a book kept for the purpose, which entry must be signed by both the purchaser and the vendor. No one may sell arsenic to any one unknown to him, unless the sale is made in the presence of a witness known to both parties. Arsenic must not be sold to a minor. The Act does not apply to the sale of arsenic made up as medicine in accordance with a doctor's prescription, nor to the sale of arsenic by wholesale to retail dealers. Offences against the Act are punishable with a penalty not exceeding £20.

The Poisoned Grain Prohibition Act, 1863, imposes a penalty not exceeding £10 on every person who offers or exposes for sale or sells any grain, seed, or meal which has been so steeped or dipped in poison, or with which any ingredient has been so mixed as thereby to render it poisonous and calculated to destroy life. The Act does not, however, apply to the selling of any solution or infusion, or any material or ingredient for dressing, protecting, or preparing any grain or seed for *bona fide* use in agriculture only.

By the Pharmacy Act, 1868, persons are forbidden to retail poisons unless they are pharmaceutical chemists, or chemists and druggists within the meaning of the Act, and duly registered as such, or unless they are legally qualified apothecaries, veterinary surgeons, or dealers in patent medicines. Moreover, every compound containing any poison, within the meaning of the Pharmacy Act, 1868, which is prepared or sold for the destruction of vermin is treated as a poison under that Act. The Act makes it unlawful to sell any of the poisons to which the Act refers, either by wholesale or retail, unless the bottle or box containing it is distinctly labelled with the name of the article and the word "poison," and the name and address of the seller. The other regulations respecting the sale of poisons in general are similar to those relating to arsenic (See above).

6. SALE OF BREAD. By the Bread Act, 1836, and other Acts it is provided that, with the exception of fancy bread and rolls, all bread sold must be sold by weight. The penalty for selling bread otherwise than by weight is a sum not exceeding £2. Bread must be sold by avoirdupois weight under a penalty not exceeding £5 nor less than £2. Sellers of bread must provide in some conspicuous part of their shops, on or near the counter, a beam and scales with proper weights in order that all bread there sold may be weighed in the presence of the purchasers under a penalty not exceeding £5. All carts used by bakers or sellers of bread must be provided with proper weights and scales under a penalty not exceeding £5.

7. SALE OF COAL. The Weights and Measures Act, 1899, provides that all coal is to be sold by weight unless sent by boat-load or railway-truck direct from the colliery to the purchaser. Local authorities have power under this Act to make bye-laws regulating the sale of coal, and many of such bye-laws provide *inter alia* for the carrying of proper scales and weights by carts delivering coal.

PUBLIC PROTECTION.

1. POLICE.

The modern policeman dates from Sir Robert Peel's Act, 1829, by which a Metropolitan Police force was created. This was followed, in 1835, by the institution of a police force in boroughs, and in 1839 in counties.

POWERS AND DUTIES OF POLICE CONSTABLES.

1. TAKING INTO CUSTODY. A policeman may arrest without warrant in various cases:—

(1) When on reasonable grounds he suspects a person of having committed a felony.

(2) To prevent a breach of the peace, or whenever a breach of the peace has been committed in his presence.

(3) Under the Vagrancy Act, persons guilty of street gaming and other offences.

(4) Under the Penal Servitude Acts, any person "on ticket of leave," or under police supervision, suspected of having committed any offence.

It is the duty of every citizen to assist a policeman in the execution of his duty, and if called upon by a policeman to assist him in effecting an arrest, the citizen must give every assistance in his power, otherwise such citizen will be guilty of a crime.

2. DEALING WITH CONFESSIONS. In regard to confessions by a prisoner, it is the duty of a policeman to warn him that anything he may say may be given in evidence against him. Further, he must not compel, or induce, or persuade a prisoner to confess. The confession must be entirely voluntary on the part of the prisoner, otherwise it cannot be given in evidence against him.

3. DISCIPLINARY REGULATIONS. Generally speaking, policemen may vote, but must not canvass or take part in parliamentary or municipal elections. For neglect of duty, resigning without permission, refusing to give up accoutrements on discharge, a policeman may be convicted summarily in a Police Court or Court of Petty Sessions, or may be suspended, fined, or reduced in rank. It is an offence to harbour, on licensed premises, constables on duty.

4. DISPOSAL OF PROPERTY (stolen or lost). Property in the possession of the police in connexion with a criminal charge may be recovered by the owner of such property on his applying to a Court of Summary Jurisdiction. The Court will order the delivery of the property to him. Any person who claims to have a better right to such property may take legal proceedings at any time within six months of such order, but not afterwards.

Unclaimed property in the possession of the police may be sold and the proceeds applied in payment of necessary expenses, payment of compensation to the person who has delivered the property to the police, making payments for the benefit of discharged prisoners, or such other purposes as the Home Secretary may think fit.

5. OBSTRUCTING THE POLICE. Assaulting or obstructing the police in the execution of their duties is a criminal offence punishable with fine and imprisonment. Where the obstruction is with a view to assisting the escape of a criminal, the person so assisting him is regarded as an accessory to the crime if it be a felony, and as a principal if it be a misdemeanour. It is also a crime to refuse to come to the assistance of a police officer when called upon by him to do so.

CONTROL AND MAINTENANCE OF THE POLICE.

The police forces of England and Wales may be dealt with under the headings of Metropolitan Police, County Police, and Borough Police.

1. METROPOLITAN POLICE. London County (excluding the City, which has its own police force), within a radius of 15 miles from Charing Cross, is under the control of the Commissioners of Police for the Metropolis. There is a Chief Commissioner with three Assistant Commissioners, who are justices of the peace for London, Middlesex, Hertford, Kent, Surrey, Essex, and Bucks, and on the river Thames. They have power to issue warrants for the purpose of raiding gaming houses and for searching for stolen goods. They grant licenses for hackney and stage carriages. They cannot sit at Quarter Sessions.

The expenses of maintaining the police force are met by a police rate not exceeding ninepence in the pound. This rate is collected by the Metropolitan Borough Councils, and handed over to the receiver of police.

The whole force is under the direct control of the Home Office, and not, as in other cases, under that of the local authorities.

2. COUNTY POLICE. The county police are controlled by a joint committee appointed annually by the County Council and the Justices of the Peace from each body. They appoint the chief constable, divide the county into police districts, and fix the total number of police, and the number for each district, subject to the approval of the Home Secretary.

There is an annual inspection of the police, and if the report be unsatisfactory, the Home Secretary will refuse a certificate, and thereupon the county will lose the contribution from the Exchequer, which amounts to half the cost of the pay and clothing for the year.

The chief constable appoints his subordinates, and decides on the promotion of the officers.

3. BOROUGH POLICE. In the municipal corporations the police are under the control of the local Watch Committee appointed by the Town Council, and consisting of the mayor and one-third of the Council. This committee is responsible for the discipline of the force, and may appoint, dismiss, or suspend constables. Quarterly returns concerning the borough force must be made to the Home Secretary.

The force is annually inspected and reported upon by Inspectors of Constabulary. If the report be unsatisfactory, the Home Secretary refuses to grant a certificate of efficiency. Thereupon the borough loses the contribution paid by the county treasurer out of the grants made by the Exchequer. This contribution amounts to half the cost of the pay and clothing of the force.

The expenses of the borough police are met by a rate not exceeding eightpence in the pound, and by a grant of half the cost of the pay and clothing made by the Government.

2. PROTECTION FROM FIRE.

THE METROPOLITAN FIRE BRIGADE. In the Metropolis it is the duty of the County Council to provide an efficient fire brigade. The brigade is under the command of a chief officer who is usually a retired naval officer. On the occasion of a fire the officer in charge of the regular firemen may also take command of any volunteer fire brigade or of any persons who voluntarily place their services at his disposal, and may remove, or order any fireman to remove, any persons who interfere by their presence with the operations of the fire brigade. The fire brigade officers have power to take any measures that may appear expedient for the protection of life and property, even to the extent of breaking into or pulling down premises, but they must be careful to do as little damage as possible. The brigade officers may also cause the water to be shut off from the mains and pipes of any district, in order to give a greater supply and pressure of water in the district where there is a fire; and no water company will be liable to any penalty or claim for an interruption of the supply caused in consequence of the order of the fire brigade officers. Police constables are expected to assist the fire brigade in the execution of their duties. They may close any street in or near which there is a fire. All damage done by the fire brigade in the execution of their duties is, by virtue of the Metropolitan Fire Brigade Act, 1865, to be deemed "damage by fire" within the meaning of any fire insurance policy; so that a policy holder could recover such damage from the insurance company.

SALVAGE CORPS. All insurance companies insuring property in the Metropolis against fire are bound by law to contribute towards the expenses of the Metropolitan Fire Brigade. These insurance companies have power to establish a salvage corps, that is, a body of men charged with the duty of attending fires and saving insured property. It is the duty of the Fire Brigade, subject to its regulations, to afford the necessary assistance to the salvage corps, and upon the application of an officer of the corps to hand over the custody of any property that may be saved from the fire.

FIRE BRIGADES OUTSIDE THE METROPOLIS. Under the Public Health Act, 1875, in urban districts and in those rural districts where the council has acquired urban powers, the district council may provide such engines, horses, water-buckets, pipes and other implements for protection from fire as they may think fit. They may also employ fire-men, build fire-stations and generally make such rules and regulations as they may think necessary or proper.

In boroughs the council may by resolution delegate to the watch committee its powers for the establishment of

a fire brigade; and where such a resolution has been passed the watch committee may employ police constables to act wholly or partially as firemen.

In rural districts the parish councils and meetings have under different Acts similar powers of establishing and maintaining fire engines and fire-men.

LETTING OFF FIREWORKS. By the Explosives Act, 1875, if any person throws or lets off any fireworks in any highway, street, thoroughfare, or public place, he is liable to a penalty not exceeding £5. Moreover, if a person wilfully or negligently throws fireworks or other dangerous substances about, he is responsible for any damage that may ensue, and the burden of proof will be upon him to show that he took all proper precautions to avoid accidents.

CHIMNEYS ON FIRE. If a person wilfully sets a chimney on fire, or causes it to be set on fire, he is liable to a penalty not exceeding £5. It should be noted this provision will not prevent the offender being indicted for the felony of arson for which the maximum punishment is penal servitude for life (except in the case of His Majesty's arsenals, etc., where it is death).

If a chimney accidentally catches fire (except in London), the person occupying or using the premises is liable to a penalty not exceeding ten shillings, unless he can prove to the satisfaction of the court that the fire was in nowise due to the omission, neglect, or carelessness of himself or his servant.

The law relating to accidental chimney fires in London is somewhat different. By the Metropolitan Fire Brigade Act, 1865, if the chimney of any house or other building within the Metropolis gets on fire (whether any one has been guilty of negligence or not) the occupier is liable to a penalty not exceeding twenty shillings; but if the occupier can prove that he has incurred the penalty by reason of the neglect of any other person, he may recover summarily from such person the whole or any part of the penalty. It will thus be seen that though no one is bound by law to have his chimneys periodically swept, he is liable to a penalty if a fire results from his neglect.

3. LUNACY.

In this article the word lunatic will be used in its widest sense to include idiots and all persons who are *non compos mentis*, whether their infirmity takes the form of mere delusions or renders them dangerous or incapable of managing their affairs. *Prima facie* the law presumes everyone to be sane, so that it would be interfering with the liberty of the subject and opening the way for manifold abuses were people to have an unrestricted power of detaining those whom they regarded as lunatics.

DETENTION OF LUNATICS.

There are only five ways in which it is lawful to detain a lunatic against his will:—

1. AFTER INQUISITION. The inquisition is a legal inquiry as to whether a person is of unsound mind and incapable of controlling himself and his affairs. He can demand a trial by jury if he wishes it. If the result of the inquiry is that he is found incapable as above, he is called a lunatic, "so found by inquisition," and a person called a "committee" is usually appointed as a sort of guardian for him. By the Lunacy Act, 1890, a lunatic so found by inquisition may be received in an institution for lunatics, or as a single patient, upon an order signed by his "committee."

2. AFTER PETITION. Except in the case of pauper lunatics, and lunatics so found by inquisition, the ordinary way for a person to be detained is under a reception order made by a judicial authority under the Lunacy Acts, 1890 and 1891. The judicial authority is either a justice of the peace especially appointed for lunacy matters, or a county court judge or a magistrate. The course of procedure is for someone connected with the alleged lunatic, and preferably the husband or wife, to present a petition to the judicial authority, together with a statement of particulars, signed by the petitioner, and two medical certificates. The judicial authority hears the petition, and if satisfied makes the reception order.

3. UNDER AN URGENCY ORDER. In cases of urgency, where it is expedient either for the welfare of a person (not a pauper) alleged to be a lunatic, or for the public safety, to place such person under restraint, he may be detained upon an urgency order made (if possible) by the husband or wife, or by a relative, and accompanied by a medical certificate.

4. UNDER A SUMMARY RECEPTION ORDER. If any constable, relieving officer, or overseer has knowledge that *any person* (whether a pauper or not) is a lunatic wandering at large, the Lunacy Act, 1890, gives him power to immediately apprehend and take the alleged lunatic before a justice, who must call in a medical practitioner to make an examination, and who will, if satisfied, make a summary reception order.

5. UNDER A COMMISSIONERS' ORDER. Under the Act of 1890 any two or more of the Commissioners in Lunacy may visit a pauper lunatic or alleged lunatic not in an institution for lunatics or workhouse, and may, if they think fit, call in a medical practitioner. If finally they are satisfied that the pauper is a lunatic, they have power to make a reception order.

N.B.—All reception orders expire at the end of a year from their date of issue; but in the case of any institution for lunatics, the Commissioners may, by order, direct that it be continued.

ASYLUMS.

It is impossible in the space at our command to give more than a very brief outline of the law relating to the care and management of lunatics. Those who desire to have the care and control of persons thus unhappily afflicted, should provide themselves with copies of the Lunacy Acts, 1890 and 1891, and of the rules made under these Acts for their guidance.

1. LUNATICS IN PRIVATE FAMILIES. If it comes to the knowledge of the Commissioners that any person appears to be, without an order and certificates, detained or treated as a lunatic by any person receiving no payment for the charge, they may require such person to send them a report or periodical reports, by a medical practitioner, of the condition of the patient. The Commissioners may at any time visit the patient and report to the Lord Chancellor.

2. LICENSED HOUSES. In and around London the licensing of houses for the reception of lunatics is in the hands of the Commissioners in Lunacy; but elsewhere the county and borough justices hold sessions for the purpose of granting licences. Before the justices may grant a new licence the house must be inspected and reported on by one or more of the Commissioners. The licensee, or one of them, must in all cases undertake to reside in the house. No alterations may be made in a licensed house without the consent of the Commissioners. If the licensee dies or becomes incapable, the Commissioners or justices may transfer the licence to someone else for the unexpired term of the same.

3. HOSPITALS. Every hospital for the reception of lunatics must have a resident medical attendant, as must also those houses which are licensed for a hundred or more patients. Hospitals for the reception of lunatics require to be registered. If the superintendent of a registered hospital knowingly permits any lunatic to be detained or lodged in any building not shown on the plans of the hospital sent to the Commissioners, he is guilty of a misdemeanour.

4. COUNTY AND BOROUGH ASYLUMS. The Act of 1890 requires all local authorities to provide and maintain asylums for the accommodation of pauper lunatics. The local authorities may provide asylum accommodation for pauper and private patients, together or in separate asylums, and they may provide separate asylums for idiots or for persons suffering from any particular class of mental disorder.

Local authorities are given power to unite with each

other for the purpose of providing and maintaining district asylums.

OFFENCES AGAINST THE LUNACY ACTS. Every person who, except under the provisions of the Lunacy Acts, 1890 and 1891, (1) receives or detains a lunatic or alleged lunatic in an institution for lunatics, or who (2) *for payment* takes charge of, receives to board or lodge, or detains a lunatic or an alleged lunatic in an *unlicensed house*, is guilty of a misdemeanour, and in the latter case is also liable to a penalty not exceeding £50. It is also a misdemeanour (1) to neglect to send to the Commissioners the notices prescribed by the Act on the removal, discharge, or death of a patient; or (2) to make wilful misstatements of any material fact in any petition, reception order, certificate, or report; or (3) to omit to send to the coroner notice of the death of a lunatic; or (4) to obstruct any visitor or Commissioner exercising the powers conferred on him by the Lunacy Acts, or (5) to illtreat or wilfully neglect a patient.

The usual punishment for misdemeanours is fine or imprisonment, not exceeding two years, or both fine and imprisonment. The breach of other rules and regulations is punished by the infliction of heavy fines.

4. DETENTION OF OFFENDERS.

Imprisonment of criminals is punitive, remedial and protective. It is the aim of our prison authorities to punish criminals for their wrong-doing, to reform them if possible, and to take care that they do not become a source of danger to the public at large.

PENAL SERVITUDE. This form of detention was first introduced by the Penal Servitude Act, 1853, in substitution for transportation, which was finally abolished in 1857. Wherever by an Act passed before 1853, a person might be sentenced to transportation, he may now be sent to penal servitude. Where under any Act of Parliament a court has power to award a sentence of penal servitude, the sentence may, at the discretion of the court, be for any period not less than three years. The greatest amount of penal servitude authorised by any Act is a life sentence; but where the Act authorising penal servitude does not state a maximum the courts have no power to order more than five years, under the Penal Servitude Act, 1891. Persons sentenced to penal servitude are detained in convict prisons, and are liable to be removed from one such prison to another. By the Prisons Act, 1898, the Prison Commissioners and other persons appointed by the Home Secretary, have many duties in respect of the inspection and regulation of convict prisons. The mode in which sentences of penal servitude are to be carried out is regulated by prison rules (made by the Home Secretary); in making such rules regard is paid to the sex, age, health, industry, and conduct of the prisoner. No prison rule may come into force until a draft thereof has lain before each House of Parliament for not less than thirty days. Corporal punishment may be inflicted on persons sentenced to penal servitude who break the prison rules. Various acts give the Secretary of State power to release on licence (ticket-of-leave) prisoners before the completion of their term of penal servitude. Conditions are appended to the licences whereby the prisoners are required to notify the police if they change their address. Where a prisoner on ticket-of-leave is convicted of an offence, he forfeits his licence, and must complete his original term besides being punished for the second offence.

HARD LABOUR. In every case where a court has power to award a sentence of penal servitude, and in the case of nearly every serious crime, a prisoner may be sentenced instead to imprisonment with hard labour. But in no case may a court now sentence a criminal to more than two years' hard labour. Hard labour generally consists in tread-mill, crank turning, shot-drill, oakum picking, and other forms of unproductive and useless labour authorised by the prison rules. The very fact that the labour is unproductive is a part of the punishment, and it is often said that penal servitude for ten years is preferable from a humane point of view to two years of hard labour.

IMPRISONMENT WITHOUT HARD LABOUR. All but the least serious of crimes may be punished with ordinary imprisonment. Such imprisonment with very few exceptions may not be for a longer period than two years. By the Prisons Act, 1898, provision is made for persons sentenced to imprisonment without hard labour being divided into three divisions, according to the gravity of their offence, and the circumstances of the case. Moreover, the same Act provides that where a person is imprisoned in default for the payment of a debt, he is to be placed in a separate division and treated under special prison rules, and not placed in association with criminal prisoners nor compelled to wear prison dress, unless his own clothing is unfit for use. Provision is usually made in the prison rules for enabling a prisoner sentenced to imprisonment to earn by special industry and good conduct a remission of part of his sentence.

REFORMATORIES. By the Reformatory Schools Act, 1893, it is provided that when a person under sixteen years of age is convicted of a crime punishable with penal servitude or imprisonment, and either is under twelve or has been previously convicted, he may be sent to a certified Reformatory School for a period of from two to five years instead of being sent to prison. In choosing the Reformatory School the court, as far as possible, causes the offender to be sent to one conducted in accordance with the religious persuasion of the youthful criminal. If the youthful offender conducts himself well the managers of the School may, with his own consent, and that of the Secretary of State, apprentice him to a trade or provide for his emigration even though his period of detention has not expired.

INDUSTRIAL SCHOOLS. By the Industrial Schools Act, 1866, and its amending Acts the following classes of children may be sent by order of the magistrate to a certified Industrial School until the child is not more than sixteen years of age:—

(1) Children under fourteen found begging or being in any street for the purpose of receiving alms; or (2) found wandering without home, proper guardianship, or visible means of support; or (3) found destitute, either being an orphan or having a parent who is undergoing penal servitude; or (4) frequenting the company of reputed thieves; or (5) residing with reputed prostitutes or in a house frequented by such persons; or (6) who are so refractory that their parents or guardians are unable to control them, and desire that they should be sent to an industrial school.

Children may also be sent to Industrial Schools who habitually play truant or whose parents wilfully disobey an order of the court requiring their attendance at school. Moreover, children under twelve on conviction for an offence, not being a felony, punishable with imprisonment, may be sent to an Industrial School instead of to a Reformatory.

N.B.—Children under the age of seven are held in law to be incapable of committing, and therefore of being punished for, any crime.

POLICE SUPERVISION. By the Prevention of Crimes Act, 1871, where a person is convicted on indictment of a crime, and a previous conviction is proved against him, the court may, in addition to any other punishment, direct that he be subject to the supervision of the police for a period of not more than seven years after the termination of his sentence. Such a prisoner is much in the same position as a convict released on ticket-of-leave. He must keep the police informed of his whereabouts, and on failure to do so may be imprisoned for a term not exceeding twelve months.

5. REGISTRATION OF BIRTHS AND DEATHS.

By the Births and Deaths Registration Acts, 1836 to 1901, provision is made for keeping a register of all births, deaths, and marriages of His Majesty's subjects in the

United Kingdom. Every Registrar must at all reasonable times allow searches to be made in his registers and grant certified copies of any entries on payment of a fixed fee. The fee for searching is 1s. for any year, and 6d. for each additional year. The fee for a certificate is 2s. 6d. and a penny for the stamp.

Severe penalties are attached to the giving of false information in respect of the registration of births and deaths.

BIRTHS. In the case of every child born alive, it is the duty of the father and mother of the child, and in default of them, of the occupier of the house where the child is born, and of each person present at the birth, and of the person having charge of the child, to give to the Registrar information of the birth within forty-two days thereof. In those cases where living new born children are found exposed, it is the duty of the finder and of the persons into whose charge such children are placed to give information to the Registrar within seven days. In the case of an illegitimate child, the father is not required to give the information, and, indeed, he will only be registered as the father on the joint request of himself and of the mother. Illegitimate children are usually registered in the mother's name.

No charge is made for registering a child within three months of its birth, unless the Registrar goes to the informant at his request. For registering a birth between three and twelve months the fee is 2s. 6d.; after twelve months 5s.

When the birth of any child has been registered, and the name by which it was registered is altered, or if it is registered without a name, when a name is given to it the parent or guardian of such child may within twelve months after the registration deliver to the Registrar a certificate containing the new name, which the Registrar must add to the original entry without any erasure. If the name is changed in baptism, the certificate must be signed by the minister who performed the rite. Still-born children are not registered. If a child is born at sea in a British ship, or in any ship carrying passengers to or from a port in the United Kingdom, the master of the ship must record the particulars thereof in his log. On the arrival of the ship in the United Kingdom, the master must make a return of the facts to the Registrar General of Shipping and Seamen. If the child is born on one of His Majesty's ships, the captain makes the return to the Registrar General of England, Scotland, or Ireland, as the case may be.

Workhouses are usually given a number in the street in which they are situate, so that the fact that a person has had the misfortune to be born in a workhouse need not appear on the face of his certificate of birth.

DEATHS. The death of every person dying in the United Kingdom, and the cause of such death, must be registered. When a person dies in a house it is the duty of the nearest relatives of the deceased present at the death, or in attendance during the last illness, to give notice to the Registrar within five days after the death. In default of such relatives, the duty of informing the Registrar devolves upon the relatives who reside in the same district as the deceased, and in default of them, upon the occupier and inmates of the house where the death occurred, and upon the person causing the body to be buried.

Where a person dies in a place which is not a house, the duty of informing the Registrar falls primarily on the relatives of the deceased, and in default of them it falls on every person present at the death, and on every person finding or taking charge of the body or causing it to be buried.

The deaths of still-born children are not registered, but such a child may not be buried until the person having control of the burial ground has received a certificate that the child was still-born. The certificate in this case must be signed by a medical practitioner, or if such cannot be obtained, by one of the persons who would have to give notice of the death or by the coroner.

6. BURIAL OF THE DEAD.

PERSONS RESPONSIBLE FOR BURIAL. The persons whose primary duty it is to cause a dead body to be buried are his executors. It is the duty of the executors to give the deceased a decent burial, according to his wealth and station, and to pay for it out of his estate. But though the executors are primarily liable, it is also the duty imposed by law on the householder of any house where a death occurs to give the body a decent burial. If, however, the deceased was a pauper, the guardians or overseers have power to bury the body at the expense of the parish to which the pauper rightfully belonged. In the case of bodies cast up by the sea or found in rivers, they must be buried by the parish where they are found.

CREMATION. The Cremation Act, 1902, gives to burial boards and other burial authorities the power to provide and maintain crematoria for the purpose of burning human remains instead of burying them. But no crematorium may be constructed nearer than two hundred yards from any dwelling-house, without the written consent of the owner, lessee, and occupier, nor within fifty yards of a public highway, nor in the consecrated part of a burial ground.

The Secretary of State has power to make regulations prescribing in what cases and under what conditions the burning of any human remains may take place, and directing the disposition or interment of the ashes. The breach of these regulations involves the offender in heavy penalties, and in certain cases in imprisonment. The incumbent of any ecclesiastical parish is not under any obligation to perform a funeral service at a cremation, but with the permission of the bishop any clerk in Holy Orders may perform such service.

CHRISTIAN BURIAL. Every baptised Christian has the right of being buried in consecrated ground if he has not "laid violent hands upon himself." A verdict of suicide (*felo de se*) would formerly have disentitled him to the privilege, and that is why coroner's juries are so fond of adding to their verdicts a rider denoting that the act was committed during temporary insanity. The rider has lost some of its force, for a suicide may now, by virtue of the Interments (*Felo de se*) Act, 1882, be buried in consecrated ground, but no clergyman can be compelled to take the service. Moreover, interments may by virtue of the Burial Laws Amendment Act, 1880, take place in consecrated ground without any service or with a service other than that of the Church of England if forty-eight hours' notice in writing is given to the incumbent.

DISORDERLY CONDUCT AT FUNERALS. By the Burial Laws Amendment Act, 1880, all burials, whether with or without a religious service, must be conducted in a decent and orderly manner; and every person guilty of any riotous, violent, or indecent behaviour at a burial, or wilfully obstructing such burial or any such service, or delivering an address not being part of a religious service, or otherwise permitted by lawful authority, or wilfully endeavouring to bring into obloquy or contempt the Christian religion, is guilty of a misdemeanour.

THE BURIAL ACTS, 1852—1900. These Acts provide for the appointment of Burial Boards by parishes. In Urban Districts the functions of a Burial Board are usually performed by the District Council. In other cases the Burial Board is a body elected from and by the parochial ratepayers, and consists of from three to nine persons, of whom a third retire annually. The expenses of an ordinary parish Burial Board are defrayed out of the Poor Rate, but where the functions are exercised by an Urban District Council they are paid either out of the General District Rate or out of a separate Burial Rate. Burial Boards manage, subject to the control of the Local Government Board, the burial grounds under their care. The Local Government Board has power to make a compulsory order for District Councils to provide cemeteries where they are needed in the interests of public health.

BURIAL CERTIFICATES. By the Registration of Births and Deaths Act, 1874, the Registrar of Births and Deaths is required to give, without fee or reward, either to the person giving information of the death or to the undertaker, a certificate for burial. But a Coroner upon holding an Inquest may give the undertaker an order for burial before registration of the death. The person who buries or performs any funeral or religious service for the burial of a dead body without having such an order or certificate, must within seven days give notice of the fact in writing to the Registrar; if he fail to do so he is liable to a penalty not exceeding £10.

EDUCATION LAW.

THE CENTRAL AUTHORITIES. English Education Authorities may be placed in two groups, "central" and "local." The Board of Education, the Board of Agriculture, the Home Office, the War Office, the Admiralty, and the Local Government Board are the Central Authorities, all having jurisdiction in matters educational. Of the six authorities named, the Board of Education is by far the most important. The other five have a very limited jurisdiction, restricted to a few institutions maintained for special purposes. The Local Government Board deals with Poor Law Schools, the Home Office with Reformatory and Industrial Schools, the War Office with Army Schools, the Admiralty with Naval Schools, and the Board of Agriculture distributes certain grants made for the purpose of encouraging education in agricultural subjects.

THE BOARD OF EDUCATION. The Board of Education was constituted by an Act passed in 1899. For more than half a century preceding that date there existed a body known as the Education Department. This Department dealt only with Elementary Education, but the Board of Education has cognizance of Elementary and Higher Education, and speaking generally, it may be said that it has to guide and control the local educational authorities, who are charged with the duty of providing and maintaining educational facilities within their respective areas.

The Board of Education consists of a President, the Lord President of the Privy Council, His Majesty's principal Secretaries of State, the First Commissioner of the Treasury, and the Chancellor of the Exchequer. The President is appointed by the Crown and may receive a salary of not more than £2,000 a year. The Board is assisted in its duties by a Consultative Committee consisting of 18 members. These members are well-known educationists, many of whom have special knowledge of certain sections of educational work. The duties of the Consultative Committee include that of advising the Board of Education on any matter referred to the Committee by the Board.

LOCAL EDUCATION AUTHORITIES. The Education Act, 1902, created local education authorities as they now exist. There is no part of England which is not included in an area under the control of a local education authority, and some parts are, for certain purposes, within the area of two authorities. The counties may be taken as the principal areas, but out of these are carved portions which are either entirely or partly outside the control of the County Councils acting as local education authorities. All County Boroughs, certain non-County Boroughs, and certain Urban districts have their own local education authorities, but their powers in their respective areas are not exactly alike.

POWERS AND DUTIES OF LOCAL EDUCATION AUTHORITIES:—

(1) **County Councils.** The powers and duties of these Councils include the provision of Higher and Elementary Education within their respective areas.

(2) **County Borough Councils.** Their powers and duties are exactly the same as those enjoyed by County Councils.

(3) **Councils of Non-County Boroughs with populations of over 10,000.** These are the Councils of the old boroughs, which existed long before County Councils came into being, many of these being of most ancient character. These Councils control Elementary Education, but in the matter of Higher Education, the County Councils have concurrent powers.

(4) **Councils of Urban Districts with a population over 20,000.** Their powers and duties are exactly the same as those of the Councils of Non-County boroughs with like populations.

(5) **Non-County Boroughs with a population of 10,000 and less, and Councils of Urban Districts with population of 20,000 and less.** These Councils have powers in Higher Education only. The provision of Elementary Education is a duty which falls upon the Council covering the area, and even in Higher Education the County Councils have powers concurrent with those of these Borough and Urban District Councils. The Councils of these "10,000 and under" districts are not local education authorities in the statutory meaning of the term, although they have powers in respect of Higher Education.

EDUCATION COMMITTEES. Local education authorities must establish education committees. The Education Act, 1902, clearly sets forth what functions *must* be performed by these committees, and also those which *may* be so performed. The Act says:—

> "All matters relating to the exercise by the Council of their powers under this Act, except the power of raising a rate or borrowing money, *shall* stand referred to the Education Committee, and the Council before exercising any such powers shall, unless in their opinion the matter is urgent, receive and consider the report of the Education Committee with respect to the matter in question. The Council *may* also delegate to the Education Committee, with or without any restrictions or conditions as they think fit, any of their powers under this Act, except the power of raising a rate or borrowing money."

It will thus be seen that a local education authority may divest itself during pleasure or for a fixed period of all its powers (except that of raising a rate or borrowing money), and confer them on an education committee. The members of this committee may include persons who are not members of the council, but more than half the members *must* be councillors, except in the case of the committee of a County Council. In that case a majority of councillors is not a statutory condition. The committees are constituted in accordance with schemes framed by the various councils and approved by the Board of Education.

WHAT ARE PUBLIC ELEMENTARY SCHOOLS? An Elementary School, as its name denotes, is one in which elementary education is the principal part of the education given, but with the prefix "public" a new factor is introduced. A *public* elementary school is one which receives grants from funds voted by Parliament for the purposes of education, and such grants cannot be made unless the following conditions are fulfilled:—

(1) No scholar must be compelled to attend or to abstain from attending any Sunday School or place of religious worship.

(2) Any scholar may be withdrawn by his parent from attendance at any religious observance or instruction in the school.

(3) Religious instruction, if given, must be given either at the beginning or end of the school meeting, and then only. The times of the giving of such instruction must be set forth in a Time Table, which Time Table must be approved by one of His Majesty's Inspectors.

(4) No scholar shall be examined by His Majesty's Inspector in religious knowledge, nor shall His Majesty's Inspector inquire into any instruction which may be given in religious subjects.

These conditions are contained in the famous "Conscience Clause," which was made law in 1870, and has remained so since that date without modification of any kind.

SCHOOLS FOR HIGHER EDUCATION. The statutory definition of higher education is exclusive rather than inclusive. "Education other than elementary" is the definition given in Section 2 of the Education Act, 1902. Elementary education is also statutorily defined as "instruction given in a public elementary day school under the regulations of the Board of Education to scholars,

who at the close of the school year will not be more than sixteen years of age" (Sec. 22 (1) v (2) Education Act, 1902). All local education authorities have cast upon them the duty of considering the educational needs of their respective areas and of taking such steps as seem to them desirable, after consultation with the Board of Education, to supply or aid the supply of Higher Education. There is a limit as to the annual expenditure which a Council may incur on this form of education. The education limit is the sum of the amount handed to the Council under the provisions of the Local Taxation (Customs and Excise) Act, 1890 (commonly called the "Whisky Money"), and of an amount equal to that produced by a twopenny rate. The smaller non-county borough Councils and the Councils of the smaller Urban districts, although not local education authorities, may spend annually in the promotion of Higher Education a sum not greater than that produced by a penny rate.

DEFAULTING LOCAL EDUCATION AUTHORITIES. It is the duty of the local education authority to maintain and keep efficient *all* public elementary schools within their area (Sec. 7 Education Act, 1902). If the local education authority fail to perform their duty, then the Board of Education may, after holding a public enquiry, make such order as they may think necessary, and any such order may be enforced by *mandamus*.

SOURCES OF INCOME. From whence does the money come for the purposes of education? In the case of Higher Education there are three sources of income: (1) The "Whisky Money" paid to the Local Authorities under the provisions of the Local Taxation Act, 1890. (2) Parliamentary grant for instruction in Science and Art, subject to conditions laid down by the Board of Education. (3) The County rate. This rate must not exceed twopence in the £ in the case of County Councils (unless with the consent of the Local Government Board), and must not exceed one penny in the £ in the case of Councils of Boroughs or Urban Districts. A Council of a County borough is not limited as to its expenditure from the rate fund.

To meet the expenditure on Elementary Education, sums are drawn from the following three sources: (1) Parliamentary Grants; (2) School Fees, where the local education authority allow them to be charged; (3) The local rate. As to the amount which may be drawn from the local rate, there is no restriction, as in the case of Higher Education.

APPOINTMENT OF TEACHERS—HIGHER EDUCATION. In institutions providing Higher Education, the appointment and dismissal of teachers is vested in the Council, if the institution is provided and maintained by the Council. By far the larger number, however, of places of Higher Education are of a private or semi-private nature. Many are governed by schemes formulated either by the Board of Education or the Charity Commissioners. These Schemes constitute bodies of governors, and prescribe the powers of these bodies, which include that of appointing the head teacher, and sometimes that of appointing the assistant teachers. In many cases, however, the power of appointing the assistant teacher, is vested in the head teacher. So far as the qualifications of the teachers in these schools are concerned, there is no binding rule. The bodies of governors and the councils usually have an unfettered discretion in making their choice.

APPOINTMENT OF TEACHERS—ELEMENTARY EDUCATION. Teachers in these schools cannot be recognised except under certain conditions and qualifications. These conditions and qualifications are prescribed by the Board of Education and embodied in a "Code of Regulations for Public Elementary Schools," a public document which is published annually by the king's printers. The power of appointment of teachers for Council schools is in the Council, as is also the power of dismissal. The teachers hold office "during the pleasure" of the Council, and have no vested interest in the office beyond that which accrues as a result of the contract of hiring and service made between the Council and the teachers.

RELIGIOUS INSTRUCTION—HIGHER EDUCATION. We have stated that a council may either aid or provide a place of Higher Education. In the case of an institution which is "aided" only, the Council cannot intervene in any way in the matter of religious worship or instruction. With regard to an institution provided and maintained by the Council it is imperative that "no pupil shall, on the ground of religious belief, be excluded from or placed in an inferior position in any school, college, or hostel provided by the Council, and no catechism or formulary distinctive of any particular religious denomination shall be taught in any school, college, or hostel so provided" (Sec. 4 Education Act, 1902). But at the request of parents the buildings may be used for the purpose of giving *any* religious instruction, provided no cost is defrayed by the Council.

RELIGIOUS INSTRUCTION—ELEMENTARY EDUCATION. The State entirely dissociated itself from religious instruction in 1870. Before that date the State Inspector examined in religious subjects, and no school could receive a Parliamentary Grant unless the Inspector reported on the religious instruction. But the Education Act, 1870, provided that no grant should be given for religious instruction, and further, that a school might receive parliamentary aid, even although no religious instruction was given in that school. But this same Act went much further, for it brought into being the famous "Conscience Clause," the purport of which we have given under the heading, "What are Public Elementary Schools?" Accordingly, any scholar may be withdrawn by his parents from religious instruction without forfeiting any of the other benefits of the school.

THE "COWPER-TEMPLE" CLAUSE. "No religious Catechism or religious formulary which is distinctive of any particular denomination shall be taught in the school" (Education Act, 1870, Sec. 14 (2). This is the famous Cowper-Temple Clause, which now applies to all Council Schools, as it formerly did to all Board Schools. A local education authority may determine that there shall not be given any religious instruction in its schools, but if religious instruction is given the character must be such as not to infringe the clause quoted above. Of course, Biblical instruction may be given, but no part of the Church Catechism other than the Lord's Prayer and the Decalogue can be taught in a Council School.

COMPULSORY ATTENDANCE AT SCHOOL. One of the duties of local education authorities is that of enforcing the law as to the attendance of children at school. If a child of school age is not attending school or is attending irregularly, then it becomes the duty of the local education authority (after having made investigation) to summon the parent of the child before a court of summary jurisdiction. If the Court is satisfied that the child ought to attend and does not do so, then a penalty not exceeding 20s. with the costs may be inflicted for each offence. If the child is employed by any person, that person also is liable to a penalty of an amount not exceeding 40s. for each offence.

NO PENALTY IN CERTAIN CASES. If on being summoned the parent can bring himself within any one of the following exceptions, then no penalty can be inflicted:

EXCEPTION 1. That there is no Public Elementary School open which the child can attend within three miles of the child's residence. EXCEPTION 2. That the child is prevented from attending school by sickness or other unavoidable cause. As to what is an "unavoidable cause" much discussion has arisen, and no general rule can be stated, but one or two decided cases will serve to indicate the view of the Court.

(1) The parents of a child were in poverty, but in no degree as a result of their own idleness or misconduct. Their child had received an elementary education and was twelve years old. Without the child's earnings the parents could not provide food for the rest of the family. The Magistrates held (and on appeal, the High Court upheld them) that the circumstances constituted good "cause" for non-attendance (London School Board *v.* Duggan).

(2) A child of ten years presented himself at a voluntary

school for admission, which was refused by the Managers. The local education authority informed the parent that the child must attend another school. There were other schools in the neighbourhood with vacant places, but the parent would not send the child to one of them. The Board of Education held that the Managers of the first School were justified in refusing to admit the child. On being summoned, the parent pleaded the above circumstances as a reasonable "cause" for the non-attendance, but the magistrates did not allow the plea, and a penalty was inflicted. On appeal, the decision of the justices was upheld (Jones *v.* Rowland).

EXCEPTION 3. That the child is under efficient instruction in some other manner. The parent may be instructing the child at home, and if the local education authority are satisfied that such instruction is efficient, then no proceedings should be commenced. If the parent will not allow the local education authority to satisfy themselves by examining the child or some other means as to the efficiency of the education being given, then the issue of a summons is justifiable, and it will be for the magistrates to decide as to the question of the "efficiency" of the instruction being given.

WHEN A CHILD MUST ATTEND SCHOOL. The provisions respecting this are contained in several Acts of Parliament. They are summarized in the following paragraphs.

(1) **A child between the ages of five and twelve.** Such a child must attend school full time. The only exception to this rule relates to a child employed in agriculture, and then only if the local education authority have made special provisions in their bye-laws. If the bye-laws contain no special provision, the general rule applies. The local bye-laws may provide for the partial exemption from school attendance of a child who has reached the age of eleven years, and who fulfils the following conditions: (*a*) The parent must give notice to the local education authority that the child is to be employed in agriculture. (*b*) The child must have reached the Standard named in the bye-laws as qualifying for partial exemption. (*c*) The child cannot claim total exemption until the age of thirteen is reached; and (*d*) The child must attend school 250 times in each year, between the ages of eleven and thirteen.

(2) **A child between the ages of twelve and thirteen.** Such a child must attend school full time, unless he has reached the Standard fixed by the local bye-laws for either partial or total exemption. If the bye-laws do not provide for partial exemption, then full time attendance is compulsory until the total exemption Standard has been reached. No child under the age of thirteen can be employed full time in a Factory, Workshop, or Laundry. If so employed, the child must attend school half-time, although that child may have reached the total exemption Standard. No child under the age of thirteen can be employed below ground in a mine, nor must employment above ground exceed half-time.

(3) **A child between the ages of thirteen and fourteen.** In localities where bye-laws extend to a child of the age of fourteen years, then a child between these ages must attend school until either partially or totally exempted by the bye-laws. If the bye-laws do not so extend, then the child must attend school until he has either passed Standard IV. *or* has obtained a certificate of having made 350 attendances after five years of age, in not more than two schools during each year for five years. These years need not be consecutive. If the bye-laws do not extend beyond the age of thirteen, then such a child may be employed half-time in a Factory, Workshop, or Laundry without educational test, provided it attend school half-time; but full time employment is illegal unless the child has either passed Standard V. *or* has obtained an attendance certificate as set forth in the former part of this paragraph. A girl between these ages cannot be employed below ground, but a boy may be so employed provided he is either partially or totally exempted from school attendance.

PART III.

GENERAL PRINCIPLES & PRACTICE OF ENGLISH LAW.

SOURCES OF THE LAW.

There is no one book, or series of books, in which the Law of England is authoritatively given. We have no complete code of law such as Napoleon gave to France, or such as exists in some of our dependencies. The law as we have it to-day has come to us from the customary law of our remote forefathers, from Statute Law and from the Canon Law. Jurists have sometimes divided our laws into the two divisions: (1) the written law; (2) the unwritten law. Sir Matthew Hale spoke of these divisions as the *lex scripta* and the *lex non scripta*. The former consists of Acts of Parliament, which were, of course, reduced to writing when drafted and passed, and are still to be found in their original form. The unwritten law, or *lex non scripta*, includes all the general customs relating to law known as the Common Law, and also some particular laws relating to certain places and classes of persons. "And," Sir Matthew Hale says, "when I call those parts of our laws *leges non scriptæ*, I do not mean as if those laws were only oral, or communicated from the former ages to the later merely by word; for all those laws have their several monuments in writing, whereby they are transferred from one age to another, and without which they would soon lose all kinds of certainty; the laws of England which are not comprised under the title Acts of Parliament are for the most part extant in records of pleas, proceedings, and judgments; in books of reports and judicial decisions. But I style those parts of the laws *leges non scriptæ* because their authoritative and original institutions are not set down in writing in that manner, or with that authority that Acts of Parliament are; but they are grown into use and have acquired their binding power and the force of laws by a long and immemorial usage, and by the strength of custom and reception in this kingdom.

1. **THE COMMON LAW** may be defined then as the body of English customary law as distinct from that embodied in Acts of Parliament. It was derived from the three great bodies of Customary Law which prevailed in various parts of England during the Saxon times, viz., the Dane Law, the Mercian Law, and the Wessex Law. During the Norman period, the King's Court selected such of these customs as were generally applicable to the whole country, and rejected the rest. The customs which were retained may be described as the custom of the King's Court, and formed what we now know as the Common Law.

Few Englishmen realise how many rights, privileges, and liabilities they have which have never been the subject of an Act of Parliament. Some of this common law is as ancient as the Early Britons, and Blackstone has pointed out that "however compounded, and from whatever fountains derived, it has subsisted immemorially in this kingdom; and, though somewhat altered and impaired by the violence of the times, in great measure it weathered the rude shock of the Norman conquest. This endeared it to the people in general, as well because its decisions were universally known, as because it was found to be excellently adapted to the genius of the English nation. In the knowledge of this law consisted great part of the learning of the dark ages." Our judges have always sought to apply to new combina-

tions of circumstances, as they arose, the rules of law which were found in these ancient legal principles and judicial precedents.

2. **THE STATUTE LAW** is, of course, to be found in the Acts of Parliament. It is to be noted that Parliament (King, Lords and Commons) has power to alter any law or to make any new one. The dream of the reformer is to see our multitudinous statutes consolidated, but in the meantime a great reform has been carried out by the Statute Law Revision Acts, which have removed from the Statute book a host of provisions which had become obsolete, and is still pursuing its useful work.

3. **THE OLD CANON LAW** is of no force in England, though our modern law in some particulars has doubtless been influenced by it. The term is now often applied to the Canons of the Church, which are Ecclesiastical laws ratified after the Reformation by 25 Henry VIII., c. 19, so far as they were not repugnant to English law. They were revised in 1603, and are still binding on the clergy.

THE LAW COURTS.

THE CROWN. All judges and other executive officers of the law derive their power from the Crown; in other and familiar words, the King is the fountain of justice. "All jurisdiction exercised in these kingdoms that are in obedience to our King," wrote Matthew Bacon, whose Abridgment of the Law has been a standard work for nearly two centuries, "is derived from the Crown; and the laws, whether of a temporal, ecclesiastical, or military nature are called his laws; and it is his prerogative to take care of the due execution of them. Hence, all judges must derive their authority from the Crown, by some commission warranted by law; and must exercise it in a lawful manner, and without any the least deviation from the known and stated forms."

One of the PREROGATIVES OF THE CROWN is the *power of pardoning offenders*, and it is a power which cannot be delegated in this country to a subject. In practice, the power is always exercised on the advice of the Home Secretary. But colonial governors are often empowered by their commissions to grant pardons, as the Act of Parliament (27 Henry VIII, c. 24, s. 1), limiting the exercise of the power to the King personally does not apply to the colonies. There are certain technical limitations to the exercise of the royal pardon which will be found explained at length in works like Hawkins' Pleas of the Crown.

THE HOUSE OF LORDS:—The highest court of appeal in England is the House of Lords, to which an appeal lies from any order or judgment of the Court of Appeal. Appeals from Scotland and Ireland also go to the House of Lords, while those from India or the Colonies go to the Judicial Committee of the Privy Council. The history of the judicial functions of parliament is one of great interest, but cannot be detailed here (consult Hallam's Constitutional History and Taswell Langmead's Constitutional History). The Appellate Jurisdiction Act, 1876, sec. 5, provides that an appeal shall not be heard and determined unless there are present not less than three of the following persons: (1) the Lord Chancellor, (2) the ordinary Lords of Appeal as appointed by the Act, and (3) such Peers of Parliament as are, for the time being, holding or have held any high judicial office. It is thus ensured by Statute, as was already a rule regularly followed, that some members of the Court shall be trained and experienced lawyers. It is very seldom that any peers, not lawyers by training, take any part in appeals, but they are not disqualified from attending, and the late Lord Denman sat and voted in the appeal of *Bradlaugh v. Clarke*. All appeals to the House of Lords must begin by petition, which prays "that the order or judgment appealed against may be reviewed before His Majesty the King in his Court of Parliament, in order that the said Court may determine what of right according to the law and custom of this realm ought to be done in the subject matter of such appeal." The House of Lords has power to sit and hear appeals during the prorogation of Parliament, and also during dissolution, if authorised to do so by the King under his sign manual.

JUDICIAL COMMITTEE OF THE PRIVY COUNCIL. This judicial body was created by 3 & 4 William IV., mainly to hear appeals from India and the Colonies, though it has other functions, especially the hearing of ecclesiastical appeals under the Clergy Discipline Acts, and with regard to "Patents." The Court is constituted of the Lord President of the Council, the Lord Chancellor, the Lords Justices, members of the Privy Council who have held high judicial office, and others whose qualification is given by various Acts of Parliament. The chief of these are lords ordinary of appeal, appointed by virtue of the Appellate Jurisdiction Act, 1876.

THE SUPREME COURT OF JUDICATURE.

At a time well within the memory of most adults, the Court of Chancery and various kinds of Common Law Courts were existing side by side, each having its own separate jurisdiction, to the annoyance and bewilderment of litigants. It was no uncommon thing for a common law court to order a litigant to do some special act which the Court of Chancery at once forbade him to do. The more reasonable system which now prevails was introduced by the Judicature Acts, 1873 and 1875. Under these acts all the Courts which now sit at the Royal Courts of Justice in the Strand were united and consolidated into one Supreme Court of Judicature, consisting of two permanent Divisions, the Court of Appeal and the High Court of Justice.

1. **THE COURT OF APPEAL** consists of the Lord Chancellor, the Lord Chief Justice of England, and the Master of the Rolls as ex-officio judges, and of five ordinary judges whose title is that of Lord Justice of Appeal. Each judge must be a barrister of at least fifteen years' standing, or have had at least one year's experience as a judge of the High Court. It hears and determines appeals from the High Court of Justice or from any of its judges.

2. **THE HIGH COURT OF JUSTICE** is subdivided into the following three divisions—(1) the Chancery Division, (2) the King's Bench Division, in which the jurisdiction formerly exercised by the Court of King's Bench, the Court of Exchequer, the Court of Common Pleas, and the London Court of Bankruptcy is now vested, and (3) the Probate, Divorce, and Admiralty Division.

THE HIGH COURT OF JUSTICE.

1. **CHANCERY DIVISION.** The history of the development of the Chancery Court, of which the present Chancery Division is the successor, is one of great interest. It arose out of the jurisdiction of the Chancellor as a member of the King's Council. But his Court, known as the Court of Chancery, competent to give relief to suitors, and to override the common law where it was thought equitable (hence the name Court of Equity) to do so, had an independent existence from the reign of Edward III. up to 1875. The Chancery Division has the Lord Chancellor as its President, and its active judicial staff consists of six judges, the number having been increased by one a few years ago. One result has been to do away with the old and often well-founded complaint of delays in chancery. There is now no division of the High Court where cases are so promptly heard, and the only one where there are practically no arrears. The business with which the Chancery Division deals is regulated by section 34 of the Judicature Act, 1873, and is mainly as follows:—(1) the administration of the estates of dead persons; (2) the dissolution of partnerships and the taking of partnership and other accounts; (3) mortgages, with their redemption and preclosure; (4) the raising of portions or other charges on land; (5) the sale and distribution of the proceeds of property, subject to any lien or charge; (6) trusts, both charitable and private, and their execution; (7) the rectification or setting aside or cancellation of deeds or other written instruments;

(8) the specific performance of contracts between vendors and purchasers of real estate, including contracts for leases; (9) the partition or sale of real estates; (10) the wardship of infants and the care of infants' estates. Differing from the practice in the King's Bench Division, every case commenced in the Chancery Division must be marked with the name of one of the judges. The name of the judge is ascertained by a system of rotation, and the litigant is not at liberty to select the judge before whom the cause shall be tried.

2. **KING'S BENCH DIVISION.** It is so called because, in former times, the King frequently sat there in person. Its judicial staff consists of the Lord Chief Justice and fourteen puisne judges. Its powers are very great. They include the hearing of almost all kinds of actions, and the restraining of inferior courts by means of writs of certiorari, prohibition, and mandamus. It orders by a writ of Habeas Corpus the immediate bringing up to the Court of any persons wrongly deprived of their liberty. Most of its sittings for the trial of actions are known as sittings in *nisi prius*. The origin of the name is due to the fact that formerly all questions in dispute were ordered to be tried at Westminster (where the Courts were then situated), in some Easter or Michaelmas term, before a jury, *nisi prius* (unless before) the day fixed judges of assize should come into the county where the action arose. A good deal of the work of the judges in this Division consists in going on circuit through the county towns of England and Wales, and holding assizes for the trial of civil and criminal cases. The judges of the Division also sit in rotation at the Central Criminal Court, formerly known as the *Old Bailey*.

3. **COURT FOR CROWN CASES RESERVED.** The judges of the King's Bench Division may sit together (five forming a quorum, of whom the Lord Chief Justice must be one) as a Court of Criminal Appeal, known as the Court for Crown Cases Reserved. Here they can deal only with questions of law, for we have no Court of Criminal Appeal for re-hearing questions of fact. The questions of law are usually reserved for their consideration by Assizes or Quarter Sessions.

4. **PROBATE, DIVORCE, AND ADMIRALTY DIVISION.** The third division of the High Court is the Probate, Divorce, and Admiralty Division. It has two judges, the first of whom is known as the President of the Division. The matters with which the division deals is indicated in the title. In the Admiralty Division the judge is often assisted by two assessors, who are usually officers or past officers in the mercantile marine.

5. **DIVISIONAL COURTS.** Each Division of the High Court may sit in what are known as Divisional Courts. In the Chancery Division this power is very seldom exercised. In the Probate, Divorce, and Admiralty Division the two judges occasionally sit together to hear cases in which some abstruse point of law arises. It is, however, in the King's Bench Division that Divisional Courts are brought most into use. There they hear appeals from County Courts and inferior courts of record, decide cases stated by Courts of Summary Jurisdiction, Recorders and Stipendiary Magistrates, hear applications for mandamus and certiorari against judges of inferior courts, magistrates and others, and transact much important business affecting local government.

VARIOUS OTHER COURTS.

1. **THE ECCLESIASTICAL COURTS,** which formerly had extensive jurisdiction concerning wills relating to personal property, divorces and other matters, are still of importance with regard to church matters. The *Archdeacon's Court* has existed certainly from before the time of the Norman Conquest. When the archdeacon does not himself sit as judge, his place is taken by a person known as the Official. Since the Church Discipline Act of 1840, no criminal suit in regard to ecclesiastical offences or offences against good morals can be begun against a clergyman in this Court. The *Court of Arches* is a Court of which the judge is the Archbishop of Canterbury, whose place is usually taken by the Dean of Arches. The Court takes its title from the Church of St. Mary-le-Bow, the steeple of which is on pillars arranged like arches (*Sancta Maria de arcubus*), where the sittings formerly took place. This Court has important, though seldom utilised, powers under the Public Worship Regulation Act. The *Consistory Court* is the Court of each bishop for the trial of Ecclesiastical causes in his diocese. The Chancellor of the Diocese usually presides, and there is an appeal to the Archbishop. The *Provincial Courts* are the Courts of either of the archbishops. They are generally presided over by a judge, who is appointed jointly by the archbishops, and who is usually the same person as the Dean of Arches, and he has extensive powers. For a full statement concerning the whole of the Ecclesiastical Courts, reference should be made to Phillimore's Ecclesiastical Law.

2. **THE COUNTY COURT** is one of great and growing popularity. Its jurisdiction has been much extended by the County Courts Act, 1903, which came into operation on 1st January, 1905. Hitherto, in most cases, its jurisdiction had been limited to cases in which the amount claimed did not exceed £50. But now the County Court may deal with all personal actions where the debt, demand, or damage claimed is not more than £100, or where the debt or demand claimed is reduced by an admitted set-off to £100. Further information as to the actions which may be brought in the County Court will be found in the section relating to Procedure. There are fifty-four County Court Circuits in England and Wales, each having its judge, who must be a barrister of at least seven years' standing.

3. **OTHER CIVIL COURTS.** There are numerous other Courts in England, the majority of which are now of slight importance. Prominent among the exceptions is the MAYOR'S COURT OF LONDON, an ancient court of record, that is a court "the records of which are absolutely authoritative, as distinguished from courts not of record, the acts of which may be evidenced by rolls and records, but are not absolutely established thereby." It has unlimited jurisdiction in personal actions, if the cause of action arises wholly or in part within the city. Another important court is the PASSAGE COURT OF LIVERPOOL, which has its special judges, and extensive jurisdiction in cases where the defendant resides within the borough, or the cause of action arose there. The Court has important Admiralty jurisdiction. Among the LOCAL COURTS OF RECORD, about forty in number, there are many which have had no sittings for many years. The two Universities of Oxford and Cambridge have each a UNIVERSITY COURT, in which the Chancellor may exercise considerable authority in ecclesiastical, criminal and civil matters affecting its members, and especially as regards its undergraduates. There are also throughout the country various MANORIAL COURTS, whose powers are now of little more than academic interest.

4. **ASSIZE COURTS.** Coming now to courts exercising *Criminal Jurisdiction*, we must mention first the Assize Courts held several times each year in every county. The King's Commission to hold the assize is issued to His Majesty's judges, one of whom usually presides, but it may be directed also to some King's Counsel or other barrister, who then, if need be, takes the place of the judge. The commission is in several parts, the united effect of which is to empower the judge to try treasons and felonies, to clear the gaols of all prisoners, and to try all civil causes.

For the purpose of holding the Assizes the country is divided into eight circuits:

(1) **The Western:** Cornwall, Devon, Dorset, Hants, Somerset, and Wilts.
(2) **The Northern:** Cumberland, Lancashire, and Westmoreland.
(3) **The Midland:** Bedford, Buckingham, Derby, Leicester, Lincoln, Northants, Notts, Rutland, and Warwick.
(4) **The Oxford:** Berks, Gloucester, Hereford, Monmouth, Oxford, Stafford, Salop, and Worcester.
(5) **North Eastern:** Durham, Yorkshire, and Northumberland.

(6) **South Eastern:** Cambridge, Essex, Herts, Huntingdon, Kent, Norfolk, Suffolk, Surrey, and Sussex.
(7) **North Wales:** Anglesey, Carnarvon, Chester, Denbigh, Flint, Merioneth, and Montgomery.
(8) **South Wales:** Brecknock, Cardigan, Carmarthen, Glamorgan, Pembroke, and Radnor.

London and Middlesex are not included in the Circuit System. Civil cases are tried in the High Court of Justice in the Strand, and criminal cases, which in the country would be sent to the Assizes, are tried at the Central Criminal Court formerly known as the "Old Bailey."

5. QUARTER SESSIONS. By far the larger amount of the work in connection with charges of crime is done by Justices of the Peace, familiarly known as magistrates, some of whom are *Stipendiary* Magistrates. (Their appointment and duties have been already described. Refer to "Magistrates" in *Index*.) The assemblies in which justices of the peace have their highest criminal jurisdiction are known as Quarter Sessions. In counties, these sessions are held quarterly, and, excepting treasons, murders, capital felonies, and some other serious crimes (such as those punishable by penal servitude for life), all manner of offences may be tried there. Quarter Sessions may, however, try burglary, but the maximum punishment which they can inflict is penal servitude for fourteen years. The chairman is elected by the magistrates themselves. The Court has also wide jurisdiction with regard to vagrancy, the administration of the poor laws and highways. In boroughs having a separate court of quarter sessions, the Recorder presides.

6. PETTY SESSIONS. The ordinary sittings of justices of the peace are known as Petty Sessions. A petty sessional court is defined by the Interpretation Act, 1889, as a court of summary jurisdiction, that is, one empowered to deal with various offences and complaints without the intervention of a jury. It consists of two or more justices, or of a borough police magistrate sitting in a court house or place at which they or he are accustomed to sit for holding special or petty sessions. The justices have the assistance of a clerk, who is always a man with some legal training and frequently a solicitor. They can hear and deal with a very large number of offences.

PROCEDURE IN THE COURTS.

We do not propose to give an account of the procedure in *all* the Courts—a course that would be tedious and profitless to the general reader—but only in the Courts where cases are tried of most concern to the general public.

1. THE HIGH COURT—KING'S BENCH DIVISION.

WRIT OF SUMMONS (Issue of). The commencement of every action in the High Court is by the issue of a writ of summons. It may be issued in London or (except in Probate cases) in a District Registry. District Registries are established in provincial towns in order to facilitate proceedings in cases which arise outside the Metropolitan area. These Registries are under the direction and charge of an official known as the District Registrar. Writs are issued on the application of the plaintiff himself, or on that of a solicitor acting for the plaintiff. In London, the place of issue is the Writ Department, at the Central Office of the High Court of Justice. The fee is ten shillings. It is issued in duplicate, the duplicate being filed by the Court officials, while the original is handed to the person issuing.

FORM OF THE WRIT. The form of the Writ is prescribed, and after stating the name of the plaintiff (or plaintiffs), and the defendant (or defendants), and the Division of the High Court to which the action is assigned, it runs as follows:—

"Edward, by the grace of God, etc., to A. B. (the name of the defendant). We command you that within eight days after the service of this Writ on you, inclusive of the day of such service, you do cause an appearance to be entered for you in an action at the suit of C. D. (the name of the plaintiff). And take notice, that in default of your doing so, the plaintiff may proceed therein, and judgment may be given in your absence.

Witness, etc.————"

In certain rare cases, such as actions against justices, officers of the army, navy, customs, and excise in their official capacity, it is necessary to give a month's notice before issuing a writ; but in all other cases it is not incumbent on the plaintiff to give any notice to the defendant before doing so.

ENDORSEMENT OF WRIT. On the back of the Writ there must be an endorsement setting forth the ground of complaint or the nature of the relief which the plaintiff seeks, also the name and address of the plaintiff and his solicitor (if he brings his action by a solicitor), and an address for service within three miles of the Royal Courts of Justice, Strand. The endorsement is usually very succinct and gives no particulars. "The plaintiff claims damages for slander"; "The plaintiff claims £120, arrears of salary"; "The plaintiff's claim is for the price of goods sold and delivered," are common forms. In the case of an action to recover damages for libel, the endorsement must indicate the book, newspaper, or document in which the libel was published. In actions for a debt or a liquidated demand (i.e. for a sum certain or capable of being made certain) arising out of a simple contract or on a statutory debt, or for the recovery of land, there may be an endorsement giving fuller particulars. The writ is then said to be *specially endorsed*. If a writ has been so endorsed and the defendant does not appear within the eight specified days, final judgment may be signed and execution issued, three days after the close of the period for appearance.

SERVICE OF WRIT. A true copy of the writ of summons must be served personally on each defendant, and may be served at any hour of the day or night, except on Sundays. Within three days of service, the person serving must endorse on the original writ the date of service. If the action is against a firm, then service on a partner, or on a person in control of the business is valid. If a Limited Company are the defendants, then service may be performed by sending a copy of the writ through the post to the Registered Office of the Company. If husband and wife are sued (as is frequently the case in action for defamation when the wife is the actual defamer), then both must be served. An infant (a person under twenty-one years of age) is effectively served by the delivery of a copy to his father or other legal guardian. In many cases the defendant's solicitor will accept service and undertake to appear.

When the defendant has not named any solicitor, and personal service cannot be effected, an order for substituted service will be made. Such substituted service may be made on some person connected with the defendant, or by sending a copy through the post to the defendant or by advertisement. An order for substituted service is only made after a Judge (Chancery Division) or a "Master" (King's Bench Division) has been satisfied by means of an affidavit that personal service cannot be promptly effected.

ENTERING APPEARANCE. The Writ commands the defendant to "cause an appearance to be entered" within eight days. Appearance must be entered either at the Central Office or the District Registry. The command may be obeyed either by the defendant himself or his solicitor, and it is done by handing in to the proper officer two copies of a memorandum containing an address for service and the name and address of the defendant's solicitor, or stating that the defendant appears in person. Two shillings must be paid for each defendant appearing. One copy is returned to the defendant "sealed" with the official stamp, and he thus has evidence that he has appeared, and the other copy is filed by the official. Notice of appearance should be given by the defendant to the plaintiff or to the plaintiff's solicitor. In the case of either party to the action (plaintiff or defendant) having given

the name of a solicitor at the beginning or at any subsequent stage of the proceedings, all further notices and documents are thereafter delivered to the solicitor.

DEFAULT OF APPEARANCE. As stated in a previous paragraph, judgment may be very promptly obtained by the plaintiff if a writ is specially endorsed and if no appearance is entered within eight days. If the claim is for a liquidated demand, for liquidated damages, or for recovery of land, judgment for the amount claimed, or relief sought, may be at once entered, whether the writ be specially endorsed or not. But in some cases, e.g. where the claim is for an injunction, judgment cannot immediately be entered on default of appearance by the defendants. In these cases, the plaintiff must file at the Writ Department, Central Office, an affidavit of service of the writ, and also at the Filing Department a statement of claim. The action will then proceed as though the defendant had appeared. The plaintiff need not endeavour to actually serve the Statement of Claim, for technical service is effected by filing a copy of the Statement of Claim at the Filing Department. After the lapse of ten days, if no defence has been entered, the plaintiff may serve notice of motion for judgment. In due course the motion is set down for hearing, and judgment for the plaintiff entered, unless the defendant puts in an appearance, and shows good cause why the final step should not be taken.

Again, where the claim is for unliquidated damages (e.g. damages for personal injuries) or for the detention of chattels, the plaintiff is not entitled to sign final judgment, should the defendant fail to enter an appearance. The plaintiff can only obtain an *interlocutory* judgment, that is, a judgment in his favour but not stating the amount of damages to which he is entitled. The damages or the value of the chattels are subsequently assessed by a jury or by an Official Referee. When the damages are assessed, the plaintiff may sign final judgment for the amount so assessed.

SUMMONS FOR DIRECTIONS. If within the "eight days" named in the Writ the defendant enters an appearance, the plaintiff has to take the next step, by making application for a *Summons for Directions*. In Admiralty Actions, in Trials without Pleadings, and in proceedings under what is known as "Order 14," (which deals with cases where the writ has been specially endorsed,) this summons is not necessary. As its name implies, the object of this step in an action is to obtain from the Court directions as to the future course of the action. The plaintiff must issue the summons within fourteen days of the date upon which the defendant enters an appearance. In default of this being done, the defendant may apply for the dismissal of the action. Four days before the summons is to be heard, the defendant must be served with it. At the hearing of the summons, the officer of the Court decides, after having heard the parties or their solicitors upon such details as pleadings, the place of trial, whether the action shall be tried by special or common jury, the discovery (i.e. production) of documents, etc. Formerly these details were decided by a number of summonses, and this *general* summons was introduced with the view to saving expense to the parties.

PLEADINGS.

This is the name given to certain documents which have to be prepared by the parties to an action before the trial. Usually they are two in number: (1) Statement of Claim; (2) Defence. These are the only pleadings which can be delivered without special leave.

1. OBJECT OF PLEADINGS. The following are the purposes which pleadings serve:—

(1) They enable the parties to know exactly what are the matters in dispute, and to know what facts they must prove at the trial. Neither party can, at the trial, give evidence of matter not contained in the pleadings except by leave of the Court. This prevents either side from being taken by surprise.

(2) Further, pleadings are useful in determining the proper mode of trial. If the matter in issue is a pure point of law, it should be decided by the judge without the aid of a jury. On the other hand, the matter may be a series of involved accounts, which should be dealt with by an official referee, or it may be question of fact to be decided by a jury.

(3) Lastly, pleadings serve as a record of the matters in dispute between the parties. It is most important that there should be certainty as to these matters, for decisions on them made by a final Court cannot be upset or even re-opened by any subsequent proceedings.

2. STATEMENT OF CLAIM. The first step in the pleading is the Statement of Claim. As we have already said, there must be endorsed on the Writ of Summons a short statement indicating the nature of the plaintiff's claim, but except when the Writ is specially endorsed with precise particulars, this "short statement" must be elaborated, and in his Statement of Claim the plaintiff must give the material facts upon which he relies and the specific relief which he claims. But the evidence by which the plaintiff propose to prove his case must not be stated. Usually the time within which the Statement of Claim must be delivered to the defendant or his solicitor is fixed by an order made when the Summons for Directions (see above) is heard; but if no time is fixed, then the delivery must take place within twenty-one days from the date of the order for directions. If the Statement of Claim is not delivered within the time specified, then the defendant may apply to have the action dismissed. Frequently, however, the time for delivery is extended on the application of one of the parties to the Court.

3. THE DEFENCE. The Writ, Summons for Directions and Statement of Claim are documents which must be served or delivered by the plaintiff. The Defence is the first document (in the ordinary course) which is delivered by the defendant. In it he states whether he admits or denies the various allegations in the plaintiff's Statement of Claim. It is not necessary that the defendant should specifically admit any statement, as omission to deny is construed as admission. With regard to denials, it is well to note that a defendant may succeed in an action and yet be ordered to pay part of the costs, if the Court or Judge is of opinion that the defendant unnecessarily compelled the plaintiff to prove facts which ought to have been admitted. If the Writ was specially endorsed with particulars of claim, then the defence must be delivered within eighteen days from the date of service of the Writ, the day of service included; but if a Statement of Claim has been delivered, then within ten days of such delivery or within such shorter period as may have been fixed by the Order for Directions.

4. REPLY. Until recent years, a "Reply" by the plaintiff *always* formed part of the pleadings, but now, except in Admiralty Actions, no reply may be delivered unless ordered by the Court. Leave is not given to deliver a reply unless the defendant sets up a case in his Defence to which the plaintiff wishes to reply, or unless the defendant sets up a definite counter-claim, or unless the plaintiff wishes to allege new facts.

PAYMENT INTO COURT. A defendant may, before or at the time of delivering his defence in an action for debt or damages, pay into Court a sum of money to meet the plaintiff's claim. A defendant may admit liability on part of the claim, and it is then a question for the plaintiff to decide whether he will take the money out of Court and close the matter or proceed further. Should the plaintiff continue the action and not recover more than the amount paid into Court, the defendant will be entitled to the whole costs of the action. If the claim is one for unliquidated damages (i.e. damages not certain in amount), such as the general damages claimed in an action for personal injuries, then the defendant may pay into Court any sum, at the same time denying liability. In this case, should the plaintiff succeed in his action, even though he may recover less than the amount paid in, he will be entitled to *all* costs down to the date of payment into Court, and the subsequent costs entailed by the proving of the liability of the defendant.

RIGHT TO A JURY. Speaking generally, it may be said that either plaintiff or defendant has a right to trial

with a jury. There are exceptions, however. In the Chancery Division, unless otherwise ordered by the Court, actions are tried without juries, neither party being entitled to claim a jury as a matter of right. In the King's Bench Division, any matter requiring long examination of documents, accounts, or local investigation may be tried without a jury. Further, the Court may, if it shall appear desirable, direct a trial without a jury under certain circumstances. Either party, when entitled to a jury, may have a special jury on giving notice to that effect.

THE TRIAL.

1. NOTICE OF TRIAL. Notice of trial has to be given by the plaintiff within six weeks of the close of the pleadings. Ten days is the usual notice given, but shorter notice may be given with the consent of the parties or by Order of the Court. This does not in any way indicate that the action will be heard on the tenth day, but merely that it will not be heard before that day. The action is set down in the list and takes its turn, unless a special day for the hearing is fixed by the Court.

2. NON-APPEARANCE AT THE TRIAL. Should neither party appear at the hearing, the action is struck out. If the plaintiff appear and not the defendant, then the plaintiff may proceed to prove his case and judgment may be given. If the defendant appear and not the plaintiff, the defendant is entitled to dismissal of the action with costs. "Appearance" does not necessarily mean appearance in person of the parties. In fact in the large majority of cases the parties appear by counsel.

3. COURSE FOLLOWED AT THE TRIAL. The following are the steps taken in the conduct of the Trial:—

(1) The plaintiff (or his counsel) opens his case with a speech and then calls his witnesses. Each of them is examined by the plaintiff's counsel, and may be subjected to cross-examination by the counsel for the defence. If, during the cross-examination, new matter is introduced, the plaintiff's counsel may re-examine, but not otherwise.

(2) After the close of the plaintiff's evidence, if the defendant (or his counsel) intends to call evidence, he opens his case with a speech, then calls his witnesses, and makes a second speech, to which the plaintiff's counsel has the right of reply.

(3) If, however, defendant's counsel does not intend to call any witness, the plaintiff's counsel sums up the evidence he has called before the defendant's counsel begins. Afterwards, defendant's counsel addresses the Court on the whole case, and has thus the advantage of the last word.

4. JUDGMENT. If the trial be with a jury, the judge then addresses the jury, and tells them the points upon which they have to make a decision, at the same time summarizing and commenting on the evidence which has been adduced. Often, the judge submits to the jury a series of questions to which they have to give replies, and based on these replies the judge gives a decision or judgment.

APPEALS. An appeal from a decision of a judge or a judge and jury, provided that decision be a final judgment, may be entered within three months from the time when the judgment or order was signed. All appeals are by notice of motion, and the appellant must at least one week before the appeal is likely to come on leave three copies of the notice of appeal, three copies of the judgment, and three copies of the pleadings. The respondent to the appeal (i.e. the party to the action who has won in the Court below) may apply to the Court of Appeal for security for costs, and this is usually granted if the appellant is poor or the appeal is of a frivolous nature. If the security ordered is not given within fourteen days, the appeal is struck out.

A party dissatisfied with a judgment or order may apply for a new trial within eight days after the trial, if it took place in London or Middlesex. If the trial took place elsewhere, notice of motion for a new trial must be served within seven days after the end of the circuit in which the trial took place. The grounds for which an application for a new trial may be based are various:—

(1) That the judge misdirected the jury.
(2) That the judge wrongly rejected or wrongly received certain evidence.
(3) That there was no evidence to go to the jury.
(4) That fresh evidence has been discovered.
(5) That the jury found a verdict against the weight of evidence.
(6) That the damages were excessive or inadequate.
(7) That the defeated party was taken by surprise.

ENFORCEMENT OF JUDGMENT.

1. FIERI FACIAS. A judgment for the recovery of money is usually enforced by the issue of a command to the sheriff of the county in which the party has goods and chattels. The sheriff is commanded "quod fieri facias de bonis, etc." The document sent to the sheriff is called a writ of "Fi Fa," and it becomes his duty to make of the goods and chattels of the party the amount of the judgment debt. The sheriff may sell the goods, subject to certain restrictions. One of these restrictions is that the goods cannot lawfully be sold unless the landlord be first paid any rent due before execution. It should also be noted that the sheriff cannot break open any outer door for the purpose of executing the writ, nor can the writ be executed on a Sunday. Wearing apparel, bedding, tools, and implements, not exceeding £5 in value, are protected from seizure.

2. WRIT OF ELEGIT. Where it is necessary to take the debtor's land in order to satisfy a judgment, then a writ of Elegit must be issued. As in the case of "Fi Fa," this writ is issued to the sheriff, who, on its receipt, must empanel a jury for the purpose of enquiring as to the location and value of the lands of the debtor. Having made this enquiry, the sheriff makes what is known as a "return" to the writ, and this "return" vests the legal estate of the lands in question in the judgment creditor, who is thenceforward known as the tenant in elegit. The lands are held by him until the full amount of the judgment debt has been satisfied out of the rents.

3. WRIT OF SEQUESTRATION. A writ of sequestration is usually used to enforce the judgments or orders of the Chancery Division. The following are instances in which this procedure has to be employed:—

(1) Enforcing the payment of a sum of money to the credit of an action pending. (2) Enforcing judgment pronounced for the recovery of title-deeds or heir-looms. (3) Enforcing an order to a person to execute a certain deed.

Although these writs are usually issued in connexion with Chancery Division actions, they may be used when occasion arises in connexion with actions in which the proceedings have been in the King's Bench Division.

4. ATTACHMENT OF DEBTS. Any person who has obtained a judgment or order for the recovery or payment of money may apply to a Court or a judge for an order that all debts owing or accruing to the judgment debtor shall be attached to answer the judgment or order. If the Court makes such an order, then the person who owes the judgment debtor any sum is called the "garnishee." The garnishee is summoned to appear before the Court or judge or an officer of the Court to show cause why he should not pay the money owing to the judgment creditor for the purpose of satisfying the judgment debt. The garnishee may either admit or dispute the debt, but even if he admits it he should not pay the money to the judgment creditor until he has received the order of the Court.

5. WRIT OF ATTACHMENT. We have already dealt with attachment of debt. In certain cases judgments or orders of Courts can be enforced by attachment of the person. A writ is addressed to the sheriff, requiring him to attach the defendant, in other words, to arrest him and lodge him in gaol.

This writ may be issued for the purpose of (1) Enforcing a judgment for the recovery of any property other than land or money. (2) Enforcing a judgment or order against a corporation which has been wilfully disobeyed. In this the officers or members (or both) of the corporation are attached. (3) Enforcing an order to any person to produce documents required for the purposes of an action.

6. COMMITTAL. There is not a great difference between attachment and committal. Committal is the

proper remedy when the offender has committed contempt of Court by doing what he ought not to do, while attachment is the remedy when the contempt consists of not doing what he has been ordered to do. The writ of attachment is addressed to the sheriff. No writ is issued in a case of committal, but a warrant which is handed to the tipstaff of the Court for execution. Release from prison can only be obtained from an order of the Court for discharge, except in certain cases under the Debtors' Act, 1869. In these cases, at the end of a year, the prisoner is entitled to discharge.

2. COUNTY COURTS.

THEIR JURISDICTION. All England, with the exception of London, is divided into Districts for County Court purposes, and each District has its Court. A Registrar is appointed to each Court, who must be a solicitor of at least five years standing. He deals with the routine work of the Court and makes decisions in undefended cases. Each Court is under the care of a judge, who must be a barrister of at least seven years standing. He is entitled to the prefix "His Honour."

The County Courts can deal with all personal actions where the debt, demand, or damage claimed is not more than £100, whether as a balance of account or otherwise. Personal actions include those of contract and tort. With regard to the latter, however, it should be noted that actions for libel and slander cannot be tried in the County Court, unless with the consent of the parties or unless the case has been remitted from the High Court on its being shown by the defendant to the satisfaction of the Court that the plaintiff has no visible means of paying his costs. The same rule applies in actions for seduction and breach of promise of marriage.

This Court also has jurisdiction in actions for ejectment, where neither the value of the land, etc., claimed nor the rent thereof exceeds £100 per year; but if the title to other land is affected, then the defendant or his landlord may apply to have the action tried in the High Court.

COMMENCEMENT OF ACTION. Action in the County Court is commenced by the entry of a plaint. This is entered in the plaint book by the officials of the Court, after the person desiring to sue has filled in a form (called a *præcipe*) giving the particulars required as to the plaintiff, his address, the defendant, his address, the amount claimed, etc. If the plaintiff is illiterate, the Registrar's clerk must fill up the *præcipe*. On the entry of the plaint, the plaintiff has to pay certain fees, which vary in amount with the amount of the debt or claim.

A summons is then issued to the defendant calling on him to appear at the Court on a certain day to show cause why judgment should not be entered against him. The summons may be served on the defendant personally, or on any person apparently not less than sixteen years old, at the residence or place of business of the defendant. If the defendant admit the claim before the hearing day, he may save half the hearing fee and subsequent costs. If the defendant dispute the claim, he need not give notice of his intention to do so, unless the summons is a default summons, in which case he must within eight days give a written notice of his intention to defend, but it will be sufficient if he appear at the Court (either personally or by solicitor or counsel) on the hearing day. If the claim exceeds £5, either the plaintiff or the defendant may claim trial by a jury of eight persons.

COUNTY COURT TRIALS. The procedure in the actual trial of the action is similar to that already described in an action in the High Court.

APPEALS. An appeal may be made to the High Court against *any* determination or direction of a County Court Judge in point of law or equity, or upon the admission or rejection of any evidence, provided at the trial the judge is asked to take a note of the question of law raised, of the facts relating thereto, and of his decision thereon. Thus litigants have the right of appeal on a question of law, whatever may be the amount of the debt or the nature of the claim.

There is also a *right* of appeal (1) in all equity actions or matters; (2) in all actions of ejectment; (3) in all actions respecting title; (4) in all actions where the debt or damage claimed exceeds £20; (5) in all actions for the recovery of tenements where the rent or value of the premises exceeds £20.

Although the parties have no *right* of appeal in other matters, yet the judge may give leave to appeal in *any* matter or action upon which he has given a decision.

NEW TRIAL. A County Court Judge may order a new trial on grounds which would be sufficient for granting a new trial in the High Court. The order may be made upon such terms as the judge shall think reasonable, and pending the re-hearing he can stay all proceedings.

ENFORCING JUDGMENT OR ORDER. A judgment or order for the payment of money must be prepared by the registrar and delivered to the bailiff, who must serve it by post or otherwise on the party to whom it is addressed within twenty-four hours. For a sum not exceeding £20, exclusive of costs, the order may be for payment by instalments, the time of payment and the amount of such instalments being fixed by the Court. Should the debtor make default in the payment of any one instalment, execution may issue for the whole sum remaining due, including costs. Where judgment has been given for a sum exceeding £20, the judge has no power to order payment by instalments, except with the consent of the plaintiff. On the issue of execution, the bailiff or his officers may seize and take any of the goods and chattels of the debtor, excepting the wearing apparel and bedding of such debtor or his family and the tools and implements of his trade to the value of £5.

JUDGMENT SUMMONS. If a creditor thinks fit, he may proceed against his debtor (after judgment) by means of a judgment summons. If it is proved to the satisfaction of the Court that the debtor has, or has had, since the date of the judgment or order made against him, the means to pay his debt, and has refused or neglected to do so, such debtor may be committed to prison for a term not exceeding six weeks.

COURT FEES. For every plaint a fee of one shilling in the pound. When the claim exceeds forty shillings, and an ordinary summons is to be served by a bailiff, an additional fee of one shilling; and if there are more than three defendants to be served with the summons, an additional fee of one shilling for each defendant above three. The fee for trying the case is two shillings in the pound.

For every default summons to be served by a bailiff the fee is one shilling, and where there are more defendants than one, a fee of one shilling for each defendant who has to be served with the summons by a bailiff.

The Treasury has power to make, with the consent of the Lord Chancellor, orders as to the fees to be made on any proceedings in the courts. A table of all fees must be posted in some conspicuous place in every court house and in every registrar's office. Want of space makes it impossible to set them out at length here and summaries are dangerous. The tables which are posted are divided into two schedules. Schedule A for court fees and schedule B for officers' fees.

3. PROCEDURE IN CRIMINAL MATTERS.

ARREST. An offence has been committed and an individual is suspected of having committed that offence. How is he to be brought before the proper authority? This may be done either by arrest or by summons. Only in certain cases is arrest permissible, the right of the subject to personal liberty being jealously guarded. Usually an arrest is not made without the authority of a warrant, a "warrant" being an order in writing instructing an officer (constable or other) to bring the suspected person before a Court. Warrants may be issued by the Privy Council, Judges of the High Court, Justices of the Peace, and Coroners.

A constable may arrest without a warrant

(1) Anyone whom he suspects of having committed a felony.

(2) Anyone committing a breach of the peace in his presence, or about to commit a breach of the peace, or

committing an indictable offence by night, or doing malicious injury to property.

A private person may arrest without a warrant

(1) Anyone whom he suspects of having committed a felony, provided that a felony has actually been committed.

(2) Anyone whose freedom will lead to a breach of the peace.

(3) Anyone committing treason or about to commit treason.

(4) Anyone committing offences under the Vagrancy Acts, e.g. street gaming and the like.

(5) Anyone for whom he has become bail in order to give him up so that he (the bailor) may be discharged from his liability.

It follows, of course, that where a private person may arrest without a warrant, so also can a constable.

SUMMONS. A Justice of the Peace, a Stipendiary Magistrate, or a Metropolitan Police Magistrate has the power to issue a summons on an information being laid before him, or on a complaint being made to him.

An information is required if the charge is one which renders the person liable to imprisonment or fine, but a complaint only is necessary if all that is desired by the applicant is an order for the payment of money. An information must always be in writing, unless it is laid in the Metropolitan district, but a complaint (as a rule) may be made orally. The summons calls on the person named therein to appear at a certain time or place, and states succinctly the nature of the information or complaint. If the person named does not obey the summons, then the Court may issue a warrant for arrest, after the proper serving of the summons has been proved and the information or complaint has been made on oath. It is not necessary that the information or complaint should be sworn in the first instance if a summons only is asked for, but no warrant can be issued either when the matter is first dealt with or afterwards until the informant or complainant has sworn his statement. No warrant can be issued for the arrest of any person who does not appear in answer to a summons, issued for the purpose of recovering civil debt.

SUBPŒNA. It is within the discretion of a Court to issue a summons ordering a person to attend and give evidence in any case, and if such witness fail to appear, he may be arrested by authority of a warrant. Such a summons is called a *Subpœna*, but the person on whom it is served is not bound to obey it, unless he has been offered a sum sufficient to cover the reasonable expenses incurred in attending the Court.

SUMMARY CONVICTION. If the offence specified in the information is one which can be finally disposed of by the magistrates, or if an order for payment is asked for, the following is the procedure at the hearing. The defendant is told the nature of the charge or the claim, and is asked whether he pleads "guilty" or "not guilty" in the case of an offence, and in the case of a claim whether he wishes to show cause why an order should not be made. If he pleads "guilty," or shows no cause, then he is convicted or an order made, but otherwise, the prosecutor or complainant states his case and calls his witnesses. The defendant has the right to cross-examine each witness, and to state his defence and call his witnesses after the prosecutor has completed his case. Both prosecutor and defendant have the right to be represented by solicitor or counsel, and if so represented the statements are made and the witnesses examined and cross-examined by the advocates instead of by the parties. Neither side has any right of reply, but if the defendant raises a legal point, then the prosecutor may address the Court before the decision is given.

ADJOURNMENT.—RECOGNIZANCE. It is within the power of the Court to adjourn the hearing, and pending the adjourned hearing they may order that the defendant be kept in custody. It is not usual for this to be done, as in ordinary cases the defendant's freedom is unfettered, and he simply has to obey the summons to appear at the adjourned hearing as on the first occasion. In some cases, before being allowed freedom, recognizances (with or without sureties) are required from the defendant to appear on the day named. A recognizance is really a contract, whereby the defendant and his sureties (if any) bind themselves to pay to the king a certain sum of money, if on the day fixed for the adjourned hearing the defendant does not appear. If recognizances have been taken and the defendant or witness (for witnesses may be bound over by recognizance to appear) does not put in an appearance when required to do so, the recognizance is said to be "estreated"; because it was formerly the custom to *extract* the recognizance or bond from the records of the Court where it had been filed and to forward it to the Exchequer Court which took proceedings to enforce the penalty.

COMMITTAL FOR TRIAL. With some offences, magistrates cannot finally deal. In such cases if unrefuted evidence is given, which leads the magistrates to form the opinion that the accused may have committed the offence, then the magistrates must send the case for trial by jury. The procedure before the magistrates is nearly the same as that described under the heading "Summary Conviction." There is, however, one very important difference. The evidence of each witness is taken down in writing, and when complete is read over to the witness, who signs the document or "deposition" as it is technically called. The deposition is also signed by the magistrates. If the magistrates decide to commit, then the accused is either sent to prison to await trial at the next quarter sessions or assizes, or he is released on bail.

BAIL. A person who is "bailed out" is delivered to his sureties, who undertake to produce him at the sessions or assizes. The justices have power to grant or allow bail in *all* cases except treason. In serious cases, however, it is seldom allowed. In nearly all cases of misdemeanour the magistrates *must* allow bail, but they have discretion as to the amount in which the accused and his sureties shall be bound. If the accused fail to find sureties in the amount fixed, he must await trial in prison. Before accepting the sureties tendered by the accused, it is usual for the police to make enquiries as to whether the parties named as sureties have the means to pay the sum fixed, if the prisoner should not appear at the trial. The sureties obtain discharge from their bail if they either deliver the accused up at the trial or before the time of trial. This latter course is only justifiable if there is cause to believe that the accused contemplates non-appearance.

A BILL OF INDICTMENT. After a person has been committed for trial, the next step is to prefer a "bill of indictment" against him. This preferment is made before the grand jury of the Court to which the accused has been committed. A "bill of indictment" is a written statement of the offence with which the person is charged. The grand jury sit in private and they examine the witnesses for the prosecution (whose names are on the back of the bill) or some of them. The defendant does not appear before the grand jury nor is he permitted to be represented in any way. If the grand jury are satisfied that there is a *prima facie* case against the accused, they find a "true bill," but if they are not so satisfied then they find "not a true bill," and the accused is at once a free man, but he may be afterwards arrested on the same charge if fresh evidence is forthcoming; whereas if the prisoner had been found "not guilty" by the petty jury, he could not afterwards be arrested and tried on the same charge.

ARRAIGNMENT OF PRISONER. A "true bill" having been found, the defendant is brought into open court by the police officers if already in custody, or surrenders himself, and is then arraigned. His name is called and the indictment (no longer called a bill of indictment) read over to him. He is then asked whether he pleads "guilty" or "not guilty." On a plea of guilty, the Court may at once pass sentence or order him to be detained in custody until a later time during the same sessions or assizes, when sentence is given. If "not guilty" is pleaded, it puts on the prosecution the onus of proving all they allege against the prisoner. If the defendant

refuses to plead, then the Court may order the plea of "not guilty" to be entered, and the trial will then proceed just as it would have done had the prisoner himself pleaded.

THE HEARING. The trial of a defendant who has pleaded "not guilty" takes place before a judge (at the assizes) and a jury, or before a chairman or recorder (quarter sessions) and a jury. The course followed at the trial is the same as that already described in Civil Cases before the High Court (see p. 479).

VERDICT AND SENTENCE. After the witnesses have been examined and the speeches of counsel made, the judge sums up the whole case to the jury, and explains the law as it affects the matter before the Court. If the jury can agree upon their verdict (which must be unanimous) without retiring they do so, but if not, they are placed in charge of an officer of the Court, who takes them to a private room for consultation. If they cannot agree on a verdict, then the judge may discharge them and the defendant may be put on his trial before a new jury.

If a verdict of "guilty" be returned, the judge proceeds to pass sentence unless the Court is moved to arrest judgment. This can only be done if there is an irregularity on the face of the record or parchment which contains an account of the trial. But the Court may reserve any point of law for the consideration of the Court for Crown Cases Reserved, and pending the decision of the point raised may postpone judgment. Also under the First Offenders' Act, the Court may (in certain cases) release the offender on probation, instead of sentencing him, if he enters into a recognizance with or without sureties to come up for judgment when called upon, and meanwhile to keep the peace and be of good behaviour.

4. SPECIAL PROCEDURE FOR PAUPERS.

ADVICE. There are many people, especially in our large towns, who are quite unable to afford the means of procuring legal advice on matters of every-day occurrence. Such people are in the habit of applying to their local stipendiary magistrate for advice. There is no legal duty imposed on the magistrate to give any such advice; but in practice he almost invariably does so; especially if the facts disclosed show that some one is endeavouring to take an unfair advantage of the person's ignorance or poverty.

SUING IN FORMA PAUPERIS. The presence of solicitors or counsel is not essential in any case that comes before our courts. A litigant, be he plaintiff or defendant, may always appear and conduct his case in person, paying the court fees, and acting generally as his legal representatives would have done had they been employed. But some persons are too poor even to pay the court fees. Such persons are allowed to sue or defend *in formâ pauperis*, "as a pauper." They must first submit their case to a barrister for his opinion. If the barrister's opinion be favourable, the pauper must make an *affidavit* (i.e., a statement on oath duly sworn before a Commissioner for Oaths) which must declare:

> (1) That the litigant is not worth £25, his wearing apparel and the subject-matter of the dispute only excepted; and (2) that the case submitted to counsel contains a full and true statement of all the material facts to the best of the pauper litigant's knowledge and belief.

He should also prepare a written petition to the court applying for leave to sue or defend *in formâ pauperis*. If the leave is granted, a counsel and a solicitor will be assigned to the pauper. No court fees will be payable and the services of the counsel and solicitor will be gratuitous, except for the solicitor's out-of-pocket expenses.

POOR PRISONERS. In criminal cases it often happens that a prisoner or his friends while able to raise a guinea or so for the purpose of his defence are yet unable to afford to pay both solicitor and counsel. The general rule is that counsel (i.e., barristers) can only be instructed through a solicitor; and as solicitors have not the right of audience in criminal cases at quarter sessions or assizes, it might appear that both a solicitor and a barrister would have to be employed by a prisoner. But this is not so, for there is an exception to the general rule, whereby for the fee of £1 3s. 6d. it is possible for a prisoner to secure the services of any barrister present in the court, without the intervention of a solicitor.

Some prisoners are too poor even to find this small fee and for their benefit the Poor Prisoners' Defence Act, 1903, was passed. Under this Act a prisoner, without sufficient means to obtain legal aid, may obtain the services of a solicitor and counsel without cost to himself. He must, however, disclose to the committing justices, the nature of his defence. The application for legal aid should be made to the committing justices, though it may also be made to the Judge, Chairman of Quarter Sessions, or Recorder who tries the case. The granting of the application is discretionary.

JURIES.

A Jury is a body of men selected according to law, whose function it is to decide, under the guidance of a Judge, what is the truth in questions of fact arising in the course of a trial, whether in a civil or a criminal case. It will be seen in the following account of our Jury system that there are various kinds of juries differing in the number of men composing them, in their qualifications, and in the precise part they are called upon to perform.

CIVIL CASES.

1. WHEN THE TRIAL MAY BE BY JURY. Not in all Civil cases does there exist a right to trial by Jury, but in actions of slander, libel, false imprisonment, malicious prosecution, seduction, breach of promise of marriage, and generally where the claim is for damages, either the plaintiff or the defendant may signify his desire to have the issues of fact tried by a judge with a jury. In all High Court actions the mode of trial is by a judge without a jury, unless one of the parties to the action insists on exercising his right to trial by jury. A court or a judge may, however, at *any* time order *any* cause to be tried by a judge with a jury.

2. COMMON AND SPECIAL JURIES. A trial may be either by a judge and a common jury or by a judge and a special jury. In the majority of cases the former is the method, but when the action is one in which either the plaintiff or the defendant is entitled to have a jury, then either party may claim a special jury. If the plaintiff desire a special jury he must give notice to the defendant at the time he gives notice of trial. In the case of the defendant he must give notice not less than six clear days before the day for which notice of trial has been given. Whichever party applies for a special jury, that party is in any event liable to the costs over and above those which would have been incurred had a common jury been engaged upon the case, unless the judge specially certifies for a special jury. If he so certifies, then the costs of the special jury fall in the ordinary way upon the loser in the action.

3. COMMON JURYMEN. Every man in England or Wales between the ages of twenty-one and sixty is liable to serve as a juryman in the county in which he resides, if he has in that county freehold or copyhold property of the annual value of £10; *or* if he has leasehold property to the annual value of £20; *or* is a householder assessed to the Poor Rate on a value of not less than £30 (Middlesex), or £20 (other counties). In the City of London there is a special qualification to the effect that the juror must be an occupier of premises within the city, and be possessor of property of not less value than £100. Women cannot act on a jury except to determine whether a woman convicted of murder is pregnant. For that purpose a jury of matrons is empannelled, for no woman is hanged while pregnant.

4. SPECIAL JURYMEN. Certain of those who are liable to serve as common jurymen are also liable to serve as special jurymen. These are (1) persons legally entitled to be called Esquires; (2) persons of higher degree (Knights, Baronets, etc.); (3) bankers or merchants; (4) occupiers of private dwelling houses assessed to the poor rate or inhabited house duty at a value of not less than £100 in a town of 20,000 inhabitants and upwards. In the case of smaller towns and rural areas, the value is £50 and upwards, unless the occupier happened to be a farmer, when the value remains at £100; (5) all farmers occupying lands and premises rated at a value of not less than £300.

5. COMPULSORY ATTENDANCE OF JURYMEN. If a juror is duly summoned to attend a Court and fails to do so, he is liable to a fine, unless reasonable cause is shown for his non-attendance. Reasonable causes include: absence from the United Kingdom, illness, or permanent residence in another part of the country. No person is liable to be summoned to serve on any jury or inquest more than once in any one year, provided there remain on the jurors' list persons who have not already served in that year. Exemption from serving as a common juryman cannot be claimed either by special jurors or grand jurors.

6. MODE OF SUMMONING A JURY. Seven days before what is known as Commission Day (the first day of each sitting of the Court) the Sheriff makes up his "panel" of jurors. This "panel" is a slip of parchment bearing the names of those jurors summoned to attend. The summons may be issued by post. The names of the jurors are written on slips of paper and placed in a box. Twelve slips are drawn out and the persons whose names are thereon are called, and if all reply they form the first jury, unless a "challenge" is made. Should one or more fail to answer the call or be challenged, then other slips are drawn until the number of twelve is completed. The other jurymen on the panel may either be discharged from further attendance, or called upon to form another jury, or ordered to remain during the sitting of the Court so as to be available should necessity arise.

7. CHALLENGE. Before the jurors are sworn, either party may "challenge." To "challenge" is to raise an objection either against all the jurors on the panel or to individual jurors. Objection to the whole panel may be taken on the ground that the summoning officer has failed in his duty from partiality to one of the parties to the action or other cause. Such a challenge is very unusual, but if it be made its validity is determined by the Court or by two persons (called "triers") appointed by the Court.

An individual juror may be challenged on various grounds, such as infancy, old age, alienage, conviction of crime, partiality. If such a challenge be made, the place of the challenged juror is taken by another juror, or two "triers" are appointed for the purpose of determining the validity of the objection raised. The right of challenge is rarely exercised in England, but it is frequently resorted to in Ireland, but only in criminal cases.

8. MODES OF SWEARING JURORS. There are three modes of swearing jurors. The first and most general is that of kissing the New Testament held in the right hand after the oath has been taken. The second is that practised by members of the Hebrew faith; instead of the New Testament the book used is the Old Testament, and the oath is taken with the head covered. The Oaths Act of 1888 prescribes a third method, which may be used by any person who desires to affirm instead of taking the oath. This affirmation is made in the Scotch form without any kissing of the book and with uplifted hand. Such an affirmation is usually made by a juror who has no religious belief, or whose religious persuasion enjoins him not to take an oath. Believers in any creed can be sworn in any manner which they consider binding.

9. VERDICT—WITHDRAWAL OF JUROR. The verdict of a jury must be unanimous, unless both parties in the case agree to accept a verdict of the majority. In some cases, after the trial has commenced a juror is withdrawn. This is done when neither party wishes that the case should proceed. Usually such a course is pursued on the suggestion of the judge, both plaintiff and defendant agreeing thereto. When this is done the action is at an end, and any further proceedings to try the same issue cannot be taken, and each party pays his own costs.

CRIMINAL CASES.

1. THE GRAND JURY. A grand jury consists of not more than twenty-three persons nor less than twelve. In the case of every person committed for trial to an assize or sessions, there must be presented to the grand jury a bill of indictment. This bill informs the accused as to the charge against him. It is the duty of the grand jury to satisfy themselves that there is a *prima facie* case for submission to the petty jury (i.e. the ordinary jury of twelve men). The grand jury sits in private and hears some of the evidence which is to be submitted to the petty jury on behalf of the prosecution. If the evidence is satisfactory, then the grand jury find that the bill of indictment is true.

2. CASES FOR THE GRAND JURY. Nearly all the accused who appear for trial by a grand jury have been committed by an inferior court of summary jurisdiction or a coroner's jury. This process is, however, not an essential preliminary to a presentment to a grand jury. A supposed criminal may be arrested and brought before a grand jury under the authority of a warrant issued by the Privy Council or a Secretary of State, or on an information filed by the Attorney General with leave from the Court of King's Bench, such leave being granted at the instance of an individual. A private person still has the right (although now almost obsolete from disuse) to prefer a bill to the grand jury against an absent party and without giving any preliminary notice. This, however, is a dangerous procedure, as it renders the prosecutor liable to costs should the accused be acquitted.

3. SPECIAL AND PETTY JURIES. With regard to petty juries, the statements already made respecting common juries in civil cases apply generally. It is for the petty jury to decide whether the accused is guilty or not guilty. The obtaining of a special jury is not so simple a procedure in criminal cases as it is in civil cases. Application must be made to the Court of King's Bench by way of motion. This motion can be made on behalf of the Crown or of any prosecutor or defendant, but no special jury can be claimed if the alleged offence is a misdemeanour to be tried on the Crown side of a court of assize or at a sessions.

4. THE RIGHT OF CHALLENGE. Under the heading Civil Cases we dealt with this right. The rights there stated also obtain in criminal cases, but in addition to these which are for cause shown, a defendant in certain criminal cases can challenge peremptorily individual jurors, and need not show any cause. If the accused is charged with murder or any other felony, the number of his challenge is limited to twenty, if with treason to thirty-five, if with an attempt to injure the person of the monarch to twenty. There is no right of challenge by the defendant without cause shown, if the charge is one of misdemeanour.

JURY.—COUNTY COURT. In every action tried by a County Court in which the claim exceeds £5, either party has the right to demand trial by jury, and even in cases where the claim is under £5, the judge may order a jury to be summoned. There is one exception to this general rule which prevents trial by jury if the action is of such a nature as would assign it to the Chancery Division were it tried in the High Court. The jury consists of eight persons, and is selected from among the jurors who are qualified and liable to serve at the assizes. The party requiring a jury to be summoned must give notice to the Registrar of the Court and pay the sum of 5s., which sum is considered as costs in the action unless otherwise ordered by the judge.

JURY.—CORONER'S COURT. A coroner's jury consists of not less than twelve nor more than twenty-three "good and lawful men." In contradistinction to one of the rules

respecting other juries is the fact that there is no age limit for service on a coroner's jury. Generally, however, it may be taken that the persons qualified and liable to serve as jurymen in civil and criminal cases are also liable to service on coroner's juries. A person who has been duly summoned to serve on a coroner's jury and does not appear, may be fined a sum not exceeding £5.

REMUNERATION OF JURYMEN. A common juryman is not legally entitled to any payment, but in the High Court it is the usual practice to give a fee of 1s. if the trial is in London, and 8d. if in the country, in respect of each case in which he is sworn. This applies to civil cases only, as no fee is allowed under any circumstances in a criminal case. A special juror is allowed for his services a sum not exceeding one guinea for each case, however long it may last. As a matter of practice the full guinea is usually paid, although it is within the discretion of the judge to allow a smaller sum.

FUNCTIONS OF JUDGE AND JURY. Broadly speaking, in any trial, questions of fact must be decided by the jury, and questions of law by the judge. It is within the province of the judge to prevent vexatious and irrelevant cross-examination, to decide as to the admissibility of evidence, to allow amendments, to postpone or adjourn the trial, and to rule as to any questions of law which present themselves. It is also the duty of the judge to summarize the evidence and to put before the jury the issues of fact upon which they have to decide. If the evidence as to fact is conflicting, whatever may be the opinion of the judge he must leave it for the decision of the jury.

The jury may persist in finding a verdict contrary to the opinion and direction of the judge. If, however, it can be shown to another Court that the verdict is against the weight of evidence, or that evidence has been improperly admitted or rejected, then a new trial may be ordered.

PERSONS EXEMPT FROM SERVING ON JURIES. All who have reached the age of sixty; Peers; Members of Parliament and officers of the Houses of Lords and Commons; judges; clergymen and ministers not following any secular employment except that of schoolmaster; practising barristers; practising solicitors and their managing clerks; officers of the courts of law and the clerks of the peace or their deputies; coroners; keepers in public lunatic asylums and houses of correction, and all subordinate officers of the same; medical men and pharmaceutical chemists; officers of the navy, army, militia, and yeomanry, while on full pay; licensed pilots and masters of vessels in the buoy and light service; household servants of His Majesty, his heirs and successors; officers of the post office, officers and officials connected with the Customs and Inland Revenue Service; police officers, magistrates of the Metropolitan police courts, their clerks, ushers, doorkeepers and messengers; members of the London County Council or of any municipal borough, and every justice of the peace assigned to keep the peace therein.

TO SECURE EXEMPTION. It is advisable to inspect the jury list posted early in September each year at the entrance to places of worship, and in the case of your name appearing there to state to the overseers of the parish, or other local authority preparing the jury list, the grounds on which exemption is claimed. This should be done without delay, as the lists are revised and confirmed by the justices, each year, in the last week of September. Remember it is not sufficient to be entitled to exemption, it is necessary to claim exemption, and to do so before the justices have confirmed the list. You may, for instance, have reached the age of sixty, but that fact will not be operative until you have taken steps to make it known in the right quarter.

CORONERS AND INQUESTS.

THE CORONER AND HIS DUTIES. Every part of the British Isles, with the exception of Scotland, is within the jurisdiction of a Coroner. He is the most important civil officer in the country, and ranks next to the sheriff, whose duty he performs, when the sheriff is prevented from doing so. His most important duty is that of inquiring into the cause of the death of any person whose dead body is lying within the area of his jurisdiction, if there is reasonable cause to suspect that such person has died either a violent or unnatural death. He must also make inquiry if the cause of death is unknown or if the person has died in prison. Other duties are imposed upon Coroners, the two principal of which are referred to in subsequent paragraphs, which deal with Treasure Trove and Fire Inquests.

WHO MAY BE A CORONER. Although it is generally conceded that a Coroner should be a medical man, yet there is no binding rule on this point. He must be a "fit person," but cannot be either a councillor or an alderman. This prohibition is necessary, because the election of a Coroner now rests with the County and Borough Councils. Councils having elected a Coroner, have no power to dismiss him from his office. He holds office for life, except that in cases of extreme misconduct or incapacity he may be dismissed by the Lord Chancellor. In early times the office of Coroner was honorary, but later and down to 1860 Coroners were paid by fees for each inquest held. Now, however, the Coroners for counties are paid fixed salaries, which are subject to revision every five years. In Boroughs they are still paid by fees. Every Coroner must appoint a deputy, who must be a fit person and approved by the Chairman of the County Council or the Mayor of the Borough, as the case may be. The justices of the High Court are coroners *ex officio*, and there are certain bodies which have the power of electing their own coroner. These bodies include the University of Oxford, the Admiralty, the City of London, and the Dean and Chapter of Westminster.

INQUEST AND JURORS. A formal inquiry conducted by a Coroner is called an Inquest. The inquiry is made by a jury of not less than twelve nor more than twenty-three "good and lawful men." These jurors are summoned by the Coroner to determine who the deceased was, and how, when, and where he came by his death. Any male householder of the full age of twenty-one years is liable to be summoned as a juror, unless he is specially exempted by Statute. There is no age limit above which exemption from service may be claimed, but certain classes are exempted by various Acts of Parliament. Among the exempted are the soldiers in the regular army, dentists, income tax commissioners, and practising barristers. If a person fails to answer a summons to appear as a juror, or if he appear and refuse to serve without reasonable excuse, then the Coroner may inflict a fine not exceeding £5, or he may issue a warrant for the apprehension of the offender, and on his being brought to the Court commit him to prison for contempt in not obeying the Coroner's summons.

WHEN AN INQUEST MUST BE HELD. The Coroner *must* hold an inquest if there is lying within his district the dead body of a person as to whose death there is reasonable cause to suspect that it was not natural. An inquest is not necessary in the case of a still-born infant, but in some instances an inquest is held for the purpose of determining whether a child was still-born, and if not still-born, how it came by its death. No still-born child can be buried lawfully without a written certificate signed by a medical practitioner to the effect that the child was still-born. If no medical practitioner was present at the birth, then a declaration to that effect must be made, and also that the child was still-born. Liability to a penalty of £10 is incurred by any person who disobeys the law in this respect.

Whenever there exists any reasonable suspicion as to the cause of death, it is the duty of the person entertaining that suspicion to give information to the Coroner's officer or to the police. The information given need not be upon oath. It is the duty of the Coroner's officer to make enquiries and to collect information as to the circumstances of death. This information he conveys to the Coroner,

who decides whether it is necessary to hold an inquest or not. The information collected by the Coroner's officer may be inaccurate, but if that information is of such a character as to raise doubt as to the cause of death, then it is the positive duty of the Coroner to hold an inquest.

On the other hand, the Coroner has no absolute right to hold inquests in every case in which he chooses to do so. "It would be intolerable," said Mr. Justice Stephen, "if he (the Coroner) had power to intrude without adequate cause upon the privacy of a family in distress, and to interfere with their arrangements for the funeral. Nothing can justify such interference, except a reasonable suspicion that there may have been something peculiar in the death, that it may have been due to other causes than common illness. In such cases the Coroner not only may, but ought to hold an inquest."

WHAT TO DO WHEN DEATH OCCURS. Every death should be registered and a Certificate of Registry obtained before the funeral. This certificate is given by the Registrar for the District, but before he can give it, personal information respecting the death must be given by the nearest relative of the deceased present at the death or in attendance during the illness. In default of any relative, then any person present at the death, or the occupier of the house in which the death occurred, may give the information and sign the Register. Written information may be substituted for personal if accompanied by a certificate of the cause of death signed by a registered medical practitioner, and sent within five days of the death. In this case the time for signing the register is extended to fourteen days, but in every other case the information must be given and the register signed within five days. No fee can be demanded by the Registrar for giving the necessary certificate.

SUDDEN DEATH. The law assumes that in every case of sudden death an inquiry is necessary; but an inquest may be unnecessary if a doctor familiar with the case will give a certificate to the effect that the cause of death was natural. If no such certificate is obtainable, information should be at once given to the Coroner's officer, as otherwise delay in the burial may be occasioned. The burial cannot take place until the death has been registered, and the Registrar cannot register in the case of a sudden death until he has had produced to him either a doctor's certificate or a certificate of the finding of the Coroner's Jury. In the case of a prolonged enquiry by a jury, the Coroner may make an order for burial, before the registry of death, but this procedure is exceptional.

PROCEDURE AT AN INQUEST.

1. OPENING OF THE COURT. The Court is opened and not less than twelve of the persons summoned are called into the jury box. They appoint a foreman, and after having been sworn diligently to inquire concerning the death in question, and to give a true verdict according to the evidence, they proceed to view the body. This "view" cannot be dispensed with. Under all ordinary circumstances the Coroner's Court is open to the public, but it is within the Coroner's sole discretion to order the Court to be cleared of the general public, or to exclude from the room in which the enquiry is being held any particular person or persons. If during the progress of the enquiry any person obstructs or hinders the enquiry, the Coroner can either fine that person or commit him to prison.

2. WITNESSES. All persons who have any knowledge respecting the circumstances of the death should attend for the purpose of giving evidence, but usually the evidence is given by witnesses who have been summoned by the Coroner's officer. The non-appearance of a witness who has been summoned by the Coroner's officers is a serious matter, for disobedience to the summons may be followed by apprehension or fine at the discretion of the Coroner. The Coroner swears and examines each witness, and then asks the jury if they desire to put any questions. The Coroner may then permit persons interested, or their representatives, to ask questions, but they have no right to do so. This applies to counsel and solicitors who may appear on behalf of interested parties, for it is entirely within the discretion of the Coroner to allow or not to allow *any person* to examine a witness or to address the jury.

The function of a Coroner's Court is that of inquiry and not that of trial, and hence statements are often permitted in the course of the inquiry which would not be evidence at the trial of a person charged with causing the death of the deceased person. A Coroner is not prohibited from receiving unsworn statements, but such statements are rarely received, and should not be allowed to influence the jury when arriving at their verdict.

3. VERDICT. After the evidence has been heard, the Coroner usually addresses the jury, stating the question or questions which they have to answer. He summarizes the evidence, and tells the jury what their verdict should be if they find certain facts. If, for instance, they find as a fact that the deceased died from injuries caused by a fall down a cliff, the verdict may be "accidental death," "manslaughter," or "murder." It is the Coroner's duty to instruct the jury what verdict to give on their findings as to facts.

4. MURDER OR MANSLAUGHTER. If the verdict be either murder or manslaughter by a known person, then the Coroner must issue his warrant for the arrest of that person. In the case of a verdict of manslaughter, the accused may be admitted to bail by the Coroner, but he has no power to accept bail if a verdict of murder has been found. In a case of murder or manslaughter, the evidence of all witnesses must be put into writing by the Coroner, signed by each witness and by the Coroner. The statements are called "depositions," and copies of these must be supplied to the person charged, on his demand and payment of the usual fees.

5. A MAJORITY VERDICT. The verdict of the majority of a Coroner's jury, provided that majority consist of not less than twelve, may be accepted. If at least twelve of the jury cannot agree on a verdict, then the Coroner has power to detain them as long as he may think fit, or he may adjourn the enquiry until the next assizes, when they may be charged by the judge. If after being charged by a judge they cannot agree, then they may be discharged.

EXHUMATION OF A BODY. A Coroner has power to order the churchwardens and overseers of a parish where a body is buried to permit its disinterment for the purpose of holding an inquest upon it. Exhumation is now, however, usually carried out by order of the Home Secretary, issued either by his own motion or at the instance of the Coroner. Under certain circumstances the High Court of Justice may order exhumation, as for instance where a Coroner has neglected to hold an inquest which should have been held, or where the interests of justice demand that a second inquest be held.

TREASURE-TROVE INQUESTS. "Treasure-trove is where any money, coin, gold, silver, plate, or bullion is found hidden in the earth or other private place, the owner thereof being unknown. And in such case the treasure found belongs to the Crown; but if he that hid it be known, or afterwards found out, the owner and not the Sovereign is entitled to it." (Stephen's Commentaries, ii. 555). From a very early date a Coroner has had jurisdiction to inquire as to found treasure, and this jurisdiction has been continued by recent legislation. The provisions set forth in the Coroner's Act, 1887, and which govern the procedure in enquiries by Coroners into causes of deaths, apply also to enquiries respecting treasure-trove.

FIRE INQUESTS. It is certain that in the 12th and 13th centuries Coroners held enquiries respecting alleged arson, and in 1859 an attempt was made to revive the practice. With one exception, however, it is not within the power of Coroners to make enquiry as to fires, unless arising in connection with an enquiry respecting deaths. The solitary exception is that of the City Coroner, who is authorized to hold Fire Inquests, as such, by the City of London Fire Inquests Act, 1888.

LAW OF EVIDENCE.

In a Court of Justice the ordinary man is frequently surprised to hear evidence rejected, which to his mind seems perfectly good evidence and material to the case which is being tried. In a court of law the "best" evidence only is admissible, and therefore a copy of a letter will not be admitted in evidence, if the original can be obtained. Similarly a witness must tell what he himself knows, and not what some one else has told him, except in certain cases when what is called "hearsay" evidence is accepted. It may be laid down as a general rule, that only such matters will be admitted in evidence as are relevant to the issue in dispute, i.e. which tends to prove or to disprove the main fact in dispute (which is called the *fact in issue*).

WHAT EVIDENCE IS ADMISSIBLE.

1. MATTERS USUALLY ADMITTED AS RELEVANT. Anything that a party to a lawsuit or a prosecution said or wrote is admissible in evidence, if it is *against* the interests of that party, and if it throws light on the matter in dispute, but it will not usually be admitted if it is in his *favour*. Again, anything which a party has done in the matter which is in dispute, or anything which explains the matter in dispute, will be admitted in evidence both *for* and *against* that party.

So, too, anything said or written by an outsider to, or in the presence of, a party to a lawsuit, is admitted in evidence if it throws any light on that party's subsequent conduct. Moreover, anything said or done by an outsider the moment that a material act was done, or so shortly before or after it, that it may fairly be said to form part of the transaction in question, will be admitted in evidence, even though it was not said or done in the hearing or presence of either party to the lawsuit or the prosecution.

> For example, the fact in issue was, whether A. murdered B. by shooting him. The fact that a witness in the room with B. when he was shot saw a man with a gun in his hand pass a window of the room in which B. was shot, and thereupon exclaimed, "there's butcher" (a nickname of A.), was admitted as evidence against A.

Of course such evidence would not conclusively prove that A. was the murderer, because the witness might be mistaken, but it would be admitted as tending to show at the time the occurrence took place, the witness's impression as to who the murderer was.

Lastly, when it is important to know the state of a man's mind when he did an act, anything he said or did while accomplishing the act, or anything which he did or said in other transactions, if it throws light on the state of his mind when he did the act is admissible in evidence. This is often done when it is sought to prove that a man is insane when he committed a murder.

2. MATTERS USUALLY NOT ADMITTED IN EVIDENCE. Anyone's opinion on the matter in issue, unless professional or expert opinion, and what other people said or did behind the back of the party *against* whom the evidence is tendered, are not allowed to be given in evidence.

> *N.B.* The word "party" means in a civil case the plaintiff or the defendant. In a criminal case it means the prisoner but not the prosecutor.

3. CIRCUMSTANTIAL EVIDENCE. As opposed to direct evidence which goes straight to prove the matter in dispute, circumstantial evidence merely proves surrounding circumstances from which the fact in issue may be inferred. For example, a passer-by sees a man emerging from a public house and wiping his mouth, the passer-by would naturally infer that the man had been taking a drink, though he had not actually seen the man doing so. In murder trials this is frequently the only evidence that is given to prove the murderer's guilt.

4. SECONDARY EVIDENCE. Sometimes first hand evidence is not available, as for instance the statements made by the victim of a murder. In that case the dying declaration of the victim will be allowed in evidence (see *Hearsay Evidence*). In other cases the original of a document may be lost or destroyed, and so therefore the document itself cannot be put in evidence, but evidence of its contents may be given, as for example a *copy* of the document can be put in, or a person may state from memory what the contents of the document were.

5. WHEN VERBAL EVIDENCE IS NOT ADMITTED. It is a general rule of the law that where the terms of a contract have been reduced to writing, no verbal evidence of those terms may be given; nor will any verbal evidence be admitted which tends to alter, add to, or contradict those terms.

But there are several exceptions to this general rule:—

(1) Verbal evidence is always admitted to prove fraud or a mistake (e.g. of a material date) of such a nature as to entitle one of the parties to relief.

(2) If it has been verbally agreed that the performance of the written contract is to depend on some condition precedent, oral evidence of this agreement may be given.

(3) Oral evidence would be admitted to prove the existence of any customary terms usually incorporated by implication in the particular kind of contract, provided they are not inconsistent with the written terms.

6. HEARSAY EVIDENCE. It would not be in the interests of the due administration of justice that persons should be called to give evidence on matters of which they have no first-hand knowledge; otherwise, the real truth, often only obtained by cross-examination, would seldom be arrived at. There are, however, certain exceptions to the rule excluding hearsay evidence; these exceptions chiefly concern the admissions of parties, matters affecting public rights, the declarations of deceased persons, and confessions.

A party to a suit may make admissions either on his pleadings or otherwise. These admissions are admissible in evidence against him. The admissions, too, of a partner are evidence against his co-partner in matters affecting the partnership.

In cases where a public right is claimed (e.g. a right of way), the origin of the right may be lost in obscurity, so the law allows the general belief of the inhabitants of the place to be admitted as evidence.

7. DECLARATIONS OF DECEASED PERSONS. The persons who know most of the truth of a matter in dispute may be dead. It would be wrong, therefore, always to exclude as hearsay any declarations they may have made when alive.

Consequently, where a deceased person has made a statement in the ordinary course of his business, such statement is admissible. And where the dead person, knowing the facts of the case, has made a declaration which is against his pecuniary interest, the declaration may be given in evidence. So, too, where a will has been lost or stolen, any declarations of the testator as to his testamentary intentions are evidence of those intentions. Pedigrees inscribed in Family Bibles and other similar records are also admitted as evidence of relationship. In cases of murder and manslaughter, a declaration as to the cause of death made by the victim after giving up all hope of recovery and in immediate fear of death is admissible against the prisoner.

8. CONFESSIONS. Persons guilty of crime may make confessions, and such confessions are admissible as evidence against them, but not against their accomplices or any one else. But such confessions will not be admissible unless they are voluntary, and they will not be deemed voluntary if they are made in consequence of any threat or inducement held out by a person in authority. The prosecutor is deemed a person in authority for such a purpose; so, too, are judges, magistrates, constables, and other officers of justice.

It lies with the prosecution to show that a confession is voluntary; but a confession does not become involuntary by the fact that it was made whilst the accused was drunk, though obviously this fact would diminish its value; nor is it involuntary when made under promise of secrecy.

COMPETENCY OF WITNESSES.

1. INFANTS, LUNATICS, ETC. An infant (a person under twenty-one years of age) is not by reason of his

infancy precluded from giving evidence. If, in the opinion of the judge, the infant is possessed of sufficient intelligence to understand the nature of the oath and the necessity for telling the truth, his evidence is perfectly admissible. There is no legal limit of age in this respect.

It would be well to point out here that the admissibility of evidence must not be confounded with its reliability. Generally not much weight can be attached to the evidence of a child of extremely tender age, though in some cases the evidence of a child is better and less liable to be corrupted by evil motives than that of a grown person. Monomaniacs and other lunatics are competent witnesses during their lucid intervals, if they are capable of comprehending the nature and obligations of the oath, though little weight will, of course, be attached to their evidence. Generally speaking, however, lunatics and idiots are not allowed to give evidence. Drunkenness, again, whether occasional or habitual, is no bar to the competency of a witness who understands the necessity for speaking the truth.

2. **ACCUSED PERSONS.** Except in certain revenue cases and in trials for the non-repair of, or nuisances in connection with, public highways, bridges and rivers, or in proceedings instituted for the purpose of enforcing purely civil rights, a person accused of a criminal offence cannot be called as a witness for the prosecution.

He may, however, by virtue of the Criminal Evidence Act, 1898, be called as a witness for the defence. But only if he wishes to be called. He is not bound to give evidence, and if he prefers not to go into the witness-box, the counsel for the prosecution must not make any comment to the jury on the fact that the prisoner could have given evidence to clear himself if he had chosen to do so.

If, however, he does avail himself of the opportunity to give evidence on oath, he renders himself liable to be cross-examined. But the cross-examining counsel must not ask him any question showing him to be a bad character, unless the prisoner relies for his defence on his own good character or on the bad character of the witnesses for the prosecution.

If the accused does not care to be sworn, he will generally be allowed to make a statement in his own defence (*always*, if he is undefended), and on this statement he will not be cross-examined.

3. **HUSBAND AND WIFE.** The consort of an accused person can, at common law, be compelled to appear as a witness for the prosecution in cases of treason and in cases where the husband is indicted for personal injuries to the wife. By statute the consort may be called in many more cases. Thus the consort may be called (1) Where the offence is connected with the non-repair of highways, or a nuisance to highways, bridges, and rivers, or, (2) Where the proceedings are to enforce a purely civil right, or (3) In cases of desertion or neglect to maintain his family, or (4) In cases of rape, indecent assault, and abduction, or (5) for offences under the Married Women's Property Act, 1882, the Criminal Law Amendment Act, 1885, and the Prevention of Cruelty to Children Act, 1904. The principal statutes which have effected this change in the common law are the Evidence Act, 1877, and the Criminal Evidence Act, 1898. The husbands or wives of the accused can be called as witnesses for the *defence* in all cases. They are liable to cross-examination, but they cannot be compelled to disclose any confidential communication made to them by their consorts during marriage.

BURDEN OF PROOF. PRESUMPTIONS. The burden of proving any given fact lies in law on the person whose case depends on the existence of that particular fact, not on the person who denies it. This is the general rule, though there are exceptions, as will be seen later.

The burden of proof is generally on the plaintiff in civil cases, and almost invariably on the prosecution in criminal cases. But while the burden may, at the outset, lie on the plaintiff or prosecutor, as the case goes on, it is frequently shifted to the defendant or accused. Thus in a libel action the plaintiff must prove that the words are libellous, that they refer to him, and that they have been published. When he has done this, the burden is shifted to the defendant, who to succeed in the action must prove that the words are true (but in *criminal* trials for libel, mere truth is not a sufficient defence, the publication of the words must also be for the public good), or that they are fair and *bona fide* comment on a matter of public interest, or that they are privileged, or, in the case of a newspaper libel, that they were published without malice and that an apology has been publicly made.

The burden of proof is often affected by *presumptions*; some of these legal presumptions are so potent that no amount of proof will be allowed to shift or contradict them, while others again are only *prima facie* and will be shifted by a very little evidence. Thus the legal presumptions that "a child under the age of seven cannot commit a felony," and that "everyone knows the law" (which means that ignorance of the law is not any excuse for a crime), are presumptions which no amount of evidence will be allowed to rebut. But the presumption that "a child between the ages of seven and fourteen is incapable of committing a crime" may be rebutted on proof that the child is possessed of a wicked and mischievous nature. Again, a person is "presumed to be innocent," but only until his guilt has been proved to the satisfaction of the jury.

Where a defendant pleads the statute of limitations, the burden of proving that the action is not barred by the statute lies on the plaintiff. This is an exception to the general rule given above. Again, in an action for malicious prosecution there is a presumption that there was reasonable and probable cause for the prosecution, so that the plaintiff must rebut this presumption by proving the absence of such cause.

The burden of proof is not always on the party who brings the action. Where a plaintiff heir-at-law seeks to upset a will proved in common form, the burden of proving the will in solemn form lies on the defendant.

COMPELLING THE ATTENDANCE OF WITNESSES. In civil cases, where it is desired to secure the attendance of a particular witness, he should be served with a *subpœna ad testificandum* which is issued by the Court. The original *subpœna* must be shown to the witness; but only a copy need be given to him. It should be served a sufficient time before his attendance is required, to enable him to put his more pressing affairs in order and to cancel his appointments; but domestic troubles or business arrangements are no excuse for disobeying the *subpœna*. The witness in a civil case is not bound to attend unless his reasonable travelling and other expenses are tendered to him. What his reasonable expenses are depends to a great extent on the position of the particular witness.

If the witness is called to give evidence on a matter of personal opinion or professional skill, and not as a mere witness to the facts of the case, he is entitled to reasonable compensation for his loss of time.

If a person is not required to give evidence, but merely to produce a document in his possession, he should be served with a *subpœna duces tecum*.

In cases of felony or misdemeanour the committing magistrates are in the habit of binding over by recognizances (i.e., a bond with a penalty which is *estreated* or forfeited if the witness fails to appear) the witnesses that appear before them, commanding them to appear at the trial. In other cases their attendance is secured by *subpœna*.

If the witness is in criminal custody, the person who desires his attendance should apply by affidavit to one of the judges of the King's Bench Division, or to the Home Secretary, for an order for him to be brought up and examined at the trial; and if he is in civil custody, an application, supported by an affidavit, should be made to a judge in chambers. Another way of securing his attendance is by a writ of *habeas corpus ad testificandum*.

The offence of refusing to appear as a witness when properly summoned to do so is usually regarded as con-

tempt of court and may, as such, be visited with imprisonment. Occasionally it is subject to indictment. Where the defaulting witness has been bound over to appear, his recognizances are liable to be estreated. A witness attending a trial cannot be arrested on any civil process while there, or on his way there or back.

PERSONS PRIVILEGED TO WITHHOLD EVIDENCE. Not every kind of person can be called as a witness, and those called on to give evidence cannot be compelled to answer every question that may be put to them. Generally speaking, no person can be compelled to give an answer to a question which would render him liable to criminal proceedings. The law will not allow the powers of courts of justice to be employed as a means of extorting confessions of crime.

The law, too, with a high regard for the sanctity of married life, regards communications which pass between married couples as privileged. No husband or wife can be compelled to disclose any such communication. Of a somewhat similar nature are the communications which pass between a person and his legal advisers. No barrister or solicitor can, without his client's consent, be called upon to disclose any communication that his client may have made to him in his professional capacity. But such communication must not have been made in the furtherance of some criminal object, or the privilege lapses.

The law is not on the same footing with regard to confidential communications to medical men and confessions to priests. Medical men can be compelled to disclose such communications. With regard to priests, the authorities are somewhat conflicting. The better opinion appears to be that while the priest may, if he likes, disclose such a communication, it would be contrary to good feeling to compel him to do so, and that judges would not countenance any such compulsion.

Jurymen, again, cannot be called upon to disclose information they have obtained in their capacity of jurors; nor can any question be asked as to what may have happened during their consultations. Similarly, judges cannot be called on to disclose anything which has come to their knowledge in the discharge of their official duties; barristers cannot be compelled to give evidence as to any remarks they may have made in Court in their legal capacity. Nor can Members of Parliament be compelled to testify, without the consent of the House, as to what has occurred in debate.

Under the Bankers' Books Evidence Act, 1879, no officer of a bank can be compelled, in any action in which the bank is not a party, to give any evidence of the bank's transactions, or to produce the books of the bank without an order from the judge. So when a party desires evidence of such a nature, he must apply to a judge for an order to inspect and take copies of such entries in the banker's books as he may require. For reasons of public policy, civil servants and other state officials cannot be compelled to disclose communications they have received in their official capacity, without the consent of the heads of their respective departments.

THE OATH. The general rule is that evidence is not admissible unless it is given on oath, or by some form of affirmation which the law regards as equivalent to an oath. If a person objects to taking the oath on the ground that he has no religious belief, or that the taking of an oath is contrary to his religious belief, he may make a solemn affirmation which has in law the same effect as an oath.

There is no particular compulsory form for the oath. The witness may adopt any form which would be binding on his conscience or employ any ceremonies required by his religion. In the case of a Christian, the usual ceremony is for the witness to hold a copy of the New Testament or Gospels in his naked right hand and listen attentively whilst the officer of the court says: "The evidence which you shall give between the parties shall be the truth, the whole truth, and nothing but the truth, so help you God." After which the witness must kiss the book.

In the case of an affirmation, the witness must say: "I, John Jones (or whatever his name may be), do solemnly, sincerely, and truly declare and affirm, that the evidence I shall give will be the truth, the whole truth, and nothing but the truth." Scottish witnesses usually swear with uplifted hand, instead of touching or kissing the book. Jews are sworn on the Pentateuch, with their heads covered. And Mohammedans are sworn on the Koran.

The ceremony in the case of a Chinaman is peculiar. The witness kneels down and breaks a saucer, whereupon the officer of the court says: "You shall tell the truth, and the whole truth; the saucer is cracked, and if you do not tell the truth, your soul will be cracked like the saucer."

If a witness, contrary to his oath or affirmation, wilfully gives false evidence, either by stating a thing to be true, when he knows it to be untrue, or by stating a thing to be true when he knows nothing whatever about its truth or falseness, he is guilty of perjury, which is a misdemeanour punishable with penal servitude for seven years.

There are two exceptions to the general rule excluding evidence not given on oath, in addition to the case already mentioned, where the accused makes an unsworn statement. These exceptions were made by the Criminal Law Amendment Act, 1885, and the Prevention of Cruelty to Children Act, 1904. Under the first of these acts, where a person is charged with defiling a girl under thirteen years of age, the girl may make an unsworn statement, if in the opinion of the Court she understands the duty of speaking the truth. Under the second Act there is a similar provision which extends not only to the child cruelly treated, but also to other children, witnesses of the cruelty. The unsworn evidence of children is not, however, to be accepted without corroboration.

AN AFFIDAVIT. This is a written statement on oath sworn before a Commissioner for Oaths, and used in cases where oral evidence is not required; for instance, in support of an application for an injunction. Affidavits usually require to be stamped with a 2s. 6d. stamp.

CRIMINAL LAW.

WHAT IS A CRIME? A crime is an act of commission or omission which is punishable by law. As an example of a crime by simple omission, may be mentioned the neglect of children by their parents or guardians. For an act to be a crime it is necessary that the doer of the act shall have a genuine intention to do the act; that is, he must so fix his mind upon the act as to know that it will be the actual one done by him when the moment for doing it comes. This criminal intention is generally referred to as "the guilty state of mind," and unless this is present the law does not regard the act as a crime, except in certain cases where the law says that the doing of an act is a crime irrespective of the intention of the wrong-doer, e.g. offences against the licensing laws, committing nuisances, and the like. When a criminal intention is present, we say the person is actuated by malice.

DIFFERENCE BETWEEN A CRIME AND A TORT. A crime, as we have seen, is an act committed or omitted which is unlawful, and for which the law provides a definite punishment. A tort, on the other hand, is a wrong which arises, according to that celebrated jurist, Sir Frederick Pollock, Bart., from either of the following circumstances:

(1) It may be an act not justified or excused by the law, and intended by the doer to cause harm, and which actually does cause harm.

(2) It may be an act contrary to law which causes harm not intended by the doer.

(3) It may be an act or an omission which causes harm not intended, but which should have been foreseen and prevented.

(4) It may consist in not preventing harm which the party was bound within certain limits to prevent.

It has been frequently stated that a tort is a breach of duty fixed by law, and for which redress can be obtained by a lawsuit. In other cases, a tort has been defined as

a wrong independent of contract, because in a contract the wrongs which arise are restricted by the terms of the contract. Torts embrace wrongs, some of which are of a personal character; some affect property, whilst others affect persons and property, either or both. Certain acts may be either a crime or a tort; i.e. the injured party may bring a criminal prosecution against the wrong-doer or may bring an action for damages, e.g. libel.

SUMMARY AND INDICTABLE OFFENCES. Breaches of the criminal law are divisible into (1) offences punishable upon summary conviction, that is, without the intervention of a jury, and (2) indictable offences, that is, such crimes as can only be adequately punished after trial by jury. Such crimes are called indictable because the accusation must be formally set down in writing as preliminary to a trial before a jury. The charges thus preferred in writing constitute an *indictment*, and the *counts* of an indictment are its several parts, charging distinct offences. Indictable offences are triable at quarter sessions, or at the assizes (in London, at the Central Criminal Court), or in the King's Bench Division of the High Court.

LIMITS OF RESPONSIBILITY for doing what in ordinary circumstances would constitute a crime:—

1. **Children under seven** years of age are held incapable of committing a crime.

2. **Children between seven and fourteen** years of age:—No act done by a child between these ages is held to be a crime unless it can be shown that the child has sufficient capacity to know that the act is wrong. The law presumes that between these ages innocence still continues, but if it can be shown that malice, revenge, craft, cunning, and such like exist, then the doer of the act is held responsible.

3. **Lunatics.** No act committed by a lunatic is a crime if at the time when the act is done the doer, in consequence of a defective mental power or of any disease of the mind, is incapable of knowing the nature of the act, or from knowing that the act is wrong, or from being unable to control his own conduct, unless such inability to control himself has been produced by his own default.

> Thus, if A kills B under the delusion that he is breaking a jar, A's act is not a crime. But if A allows his mind to dwell upon and desire B's death, and then, under the influence of mental disease, this desire becomes uncontrollable, and A kills B, the act of A would be a crime.

The law presumes every person to be sane and responsible for his acts until the contrary be proved.

4. **Persons acting under fear.** A person who acts in company with others under threat of being killed, or instantly of receiving grievous bodily harm if he refuses to act with them, is in one case not held to be guilty of the crime committed. This is where the threats have been applied by rebels or rioters. But threats of future injury, or the command of another, does not excuse any offence. Thus a man may be forced to serve in a rebel army under threat of immediate death if he refused. He would not, in this case, be guilty of a crime.

5. **Married women** are held to be innocent of a crime if they commit acts of theft, or if they knowingly receive stolen goods in the presence of their husbands. It is presumed that they act under the coercion of their husbands; but this presumption may be set aside if it can be shown that as a matter of fact they were not coerced by their husbands. This presumption of innocence does not apply to high treason, murder, manslaughter, or robbery.

6. **Acts done under the authority of law** are not crimes unless it can be shown that undue force or undue liberty was exercised in the doing of such acts.

7. **Acts in self-defence.** The law does not regard it as a crime if a person kills or grievously wounds another, if that person has to kill or wound in order to save himself from death or grievous wounding, and provided also that he does not use more force than he believes to be really necessary under the circumstances. Thus a householder may kill a burglar if he has good reason to know that his own life or the lives of members of his family are in point of fact in immediate danger.

8. **Drunkenness.** As a rule, drunkenness is no excuse for a crime, but if the drunkenness be not voluntary, as may be the case when brought about by the contrivance of others, the prisoner will not be held responsible for his conduct whilst under the influence of drink. Again, where a person's drunken habits cause insanity, or a temporary fit of madness like delirium tremens, so as to make him incapable of distinguishing right from wrong, he will not be accountable whilst acting in that state of his mind.

ACCESSORIES OF CRIMES. Accessories are those who are not actually present at the commission of a felony, and who are not the chief actors in it, but are in some way connected with it. These are divided into two classes:—

> (1) An accessory "before the fact" is one who directly or indirectly counsels, commands, or influences any person to commit a crime, which is really committed in consequence of such counselling, commanding, or influence.
>
> (2) An accessory "after the fact" is one who knows that a crime has been committed, and does such acts as are calculated to enable the doer of the crime to escape from punishment. This does not apply to a married woman who does such acts on behalf of her husband.

Any person who shall become an accessory before the fact to any felony may be indicted, tried, convicted, and punished in all respects as if he were a principal felon; and any person who becomes an accessory after the fact to any felony, may be indicted and convicted either as an accessory after the fact with the principal felon, or he may be indicted and convicted of a substantive felony. In order to substantiate the charge of harbouring a felon, it must be shown that the party charged did some act to assist the felon personally.

DISTINCTION BETWEEN FELONIES AND MISDEMEANOURS. In English law, crimes are divided into "Felonies" and "Misdemeanours." The difference between them does not depend upon their gravity or seriousness, it is purely historical. Before the Felony Act of 1870, certain crimes at Common Law brought with them the loss or forfeiture of goods. Felony was in past times an act for which a man lost or gave up his "fee" or estate. The only practical distinction between felony and misdemeanour is that for felony arrests may be made by private persons acting without judicial authority. The chief felonies are treason, murder, arson, rape, theft. It has been said that the word "misdemeanour" is applied to all those crimes and offences for which the law has not provided a particular name.

CRIMES AGAINST THE PUBLIC.

1. **TREASON.** Every one commits high treason who forms and displays by any overt act, or by publishing any printing or writing, an intention to kill or destroy the king, or to do him any bodily harm tending to death or destruction, maim or wounding, imprisonment or restraint. The foregoing includes such acts as attempts to depose the monarch, to levy war against the monarch, or to instigate any foreigner to invade the realm or any of the British dominions. Treason is a capital offence.

2. **MISPRISION OF TREASON.** Misprision of treason consists in knowing that some other person has committed high treason, and refraining from giving information thereof to a judge of assize or a justice of the peace. Any person convicted of this offence is punished by imprisonment for life, and forfeits all his goods and the profits of his lands for life.

3. **ATTEMPTS TO ALARM OR INJURE THE SOVEREIGN.** The following are regarded by the law as attempts to alarm or injure the Sovereign:—

> (1) To point, aim, present at or near the person of the king, any firearm, loaded or not, or any other kind of arm. (2) To discharge at or near the person of the king, any loaded arm or explosive material. (3) To strike, or to strike at, the person of the king in any way whatever, or to throw anything at or upon the king. (4) To attempt to do any of these acts, or to produce or have near the person of the king, any arm or destructive or dangerous thing, with intent to use the same to injure or alarm the king.

Upon conviction for any of the above, the punishment is imprisonment and whipping.

4. TREASON FELONY. The crime of Treason Felony means the general defiance of public government, and includes any attempts or acts which have for their purpose the overthrow by means of force of the existing system of government. The Treason Felony Act was passed in 1848. The use of explosives by the Fenians, Gallagher and others, in 1883, amounted to Treason Felony. Intending to depose the king, intending to levy war, inciting to mutiny or to invasion of the realm are treason felonies, the maximum punishment for which is penal servitude for life.

5. SEDITION. A seditious intention is an intention to bring into hatred or contempt, or to incite disaffection against the King, the Houses of Parliament, the administration of justice, or to incite His Majesty's subjects, otherwise than by lawful means, to alter the mode of government, or to incite any person to disturb the peace, or to raise discontent, or to promote feelings of ill-will and hostility between different classes of His Majesty's subjects. There is no such offence as "sedition" itself known to the law. There are seditious libels, seditious conspiracies, and seditious meetings.

Unlawful Oaths. It is unlawful to administer, to cause to be administered, to assist in administering, to be present at and to consent to the administering or taking of any oath or obligation which is intended to be binding upon the person taking the same, when such oath has reference to mutinous or seditious purposes, or to the disturbance of the peace. It is further unlawful to obey the orders or commands of any body of men not lawfully constituted; it is also unlawful not to inform or give evidence against any associate, confederate, or other person. Punishment upon conviction, varies from penal servitude for life to three years' imprisonment.

Unlawful Societies. Any club or society is unlawful if its members are required, or permitted to do any unlawful act or undertaking, or to take any oath not required or authorised by law. It may be mentioned that the various monastic orders now existing in England and also the Jesuits are unlawful societies within the meaning of this term.

Unlawful Drilling. All assemblies which are held in order that those assembled may train or drill themselves, or be trained or drilled in the use of arms, or for practising military movements are unlawful unless duly authorised. Punishment on conviction—seven years' penal servitude.

6. FOREIGN ENLISTMENT ACT. Any person commits a misdemeanour who, within the limits of His Majesty's dominions, prepares or fits out any naval or military expedition to proceed against any friendly state, or is engaged in such preparation or fitting out, or assists therein, or is employed in any capacity in such expedition; or who, being a British subject, accepts or agrees to accept commission in any foreign state at war with any friendly state; or who, if he be a master of a ship, takes or has on board within His Majesty's dominions any illegally enlisted person. Punishment is fine and imprisonment and forfeiture of ships.

7. MUTINY. Mutiny is a felony for which the maximum punishment is penal servitude for life. It includes any malicious endeavour to seduce any person serving in His Majesty's forces from duty and allegiance, or to incite or stir up any person to commit any act of mutiny.

8. COINING. Every person commits a felony who makes, gilds or silvers any current counterfeit coin; or who files, clips, or alters any coin with intent to make it pass for current gold or silver coin; or who buys, sells, receives, pays, or puts off any counterfeit gold or silver coin at a lower rate than it imports, or was apparently intended to import, or offers to do any such thing whether or not such coin was in a fit state to be uttered, or whether or not the counterfeiting was finished; or who imports any counterfeit coin from beyond the seas, knowing it to be counterfeit; or who makes, or mends, or has in his possession any puncheon, matrix, stamp, or die pattern or mould adapted and intended to be used in the making of counterfeit coins. It should be remembered that coining *good* money without the permission of the Crown is also a crime.

9. BLASPHEMY includes the publishing of matter relating to God, Jesus Christ, the Bible, or the Book of Common Prayer, intended to wound the feelings of mankind, or to excite contempt and hatred against the Church by law established, or intended to promote immorality. The punishment is fine and imprisonment not exceeding three years.

10. SACRILEGE. This is a felony punishable with penal servitude for life. It consists in (1) Breaking and entering a church, chapel, meeting-house, or other place of divine worship, and committing a felony therein, or (2) Being in such a place, committing a felony therein and then breaking out.

11. DISTURBING PUBLIC WORSHIP. Any person maliciously or contemptuously disturbing a lawful meeting of persons assembled for worship or molesting any person there, is liable to a fine of £40. "Brawling" in a place of worship or in a burial ground is punishable by a fine of £5 or two months' imprisonment.

12. CONCEALMENT OF TREASURE-TROVE. Any person finding treasure, that is to say, gold or silver, either in the shape of coin, plate, or bullion, which was hidden in ancient times, and which has now no owner, commits a misdemeanour if he conceals such treasure. It makes no difference whether a person finds the treasure himself, or received it from another person who was ignorant of its nature. Such treasure is the property of the Crown.

13. LOST AND FOUND. When a person has found a lost article, the owner of which may not improbably be found, he must not keep it with the intention of claiming a reward. If any reward is given, it is of the nature of a gratuity, the loser not being obliged to give any. If the finder in the supposed case retains the article in his own possession, he is guilty of larceny. He is not bound, however, to advertise the find. His duty is to hand it over to the police, and if the owner is not found within a reasonable time (usually three months), the finder may claim it from the police, for he has a right to it against the whole world except the true owner. If the true owner is found, even after the three months, the article must be returned to him. People who lose their property often insert advertisements in the newspapers announcing the fact, and sometimes offering a reward for its return. They should be careful how they word these advertisements, for by the Larceny Act, 1861, if such advertisement contains any words purporting that no questions will be asked of the person returning the property, or even that a return will be made to any pawnbroker who has lent money on it, the advertiser, the printer, and the publisher will have to pay a penalty of £50 to the person who first undertakes, with the consent of the Attorney-General, to sue them for it.

OFFENCES AGAINST PUBLIC JUSTICE.

1. PERJURY means false swearing, knowing it to be false. In order, however, for such false swearing to be perjury, it must take place in a judicial proceeding, and before a competent authority; the false swearing must also be material to the issue being tried; that is to say, it is perjury to swear falsely in any circumstances which conduce to the explanation of the case.

Procuring a person to commit a perjury, which he actually commits in consequence of such procurement, is *subornation of perjury*. The maximum punishment for either of these offences is seven years' penal servitude.

2. BRIBERY. Every one who gives or offers to any person holding any judicial office, and every person holding any judicial office who accepts any bribe, commits a misdemeanour. This crime is now very rare. Bribery of voters includes a series of acts such as giving, lending, or promising money or any valuable consideration, or accepting the same with a view to procure the return of any person in any election.

3. INTERFERENCE WITH SUITS. The following are the chief forms of such interference:—

(*a*) **Common Barratry** implies moving, exciting, or maintaining suits or quarrels either at law or otherwise.

(*b*) **Maintenance** implies assisting the plaintiff in any

legal proceeding in which the person giving the assistance has no valuable interest, or in which he acts from any improper motive.

(*c*) **Champerty** implies that the motive of the maintainor is an agreement that if the suit maintained by him succeeds, the subject matter of the suit shall be divided between himself and the plaintiff.

4. INTERFERENCE WITH THE COURSE OF JUSTICE. Of the other ways of interference with the course of justice, may be mentioned the following:—

(*a*) **Embracery.** Any one who by any means whatever, except the production of evidence and argument in open court, attempts to influence or instruct any juryman, or to incline him to be more favourable to one side than the other, commits the misdemeanour of embracery.

(*b*) **Compounding Offences.** The crime of compounding an offence is the taking of any reward for refraining from prosecuting a person for felony. The punishment on conviction includes fine and imprisonment.

(*c*) **Misprision of Felony** consists in the concealment of felony, whether such felony be at Common Law or by Statute. If a man silently observes the commission of a felony without using any endeavour to apprehend the offender, or without giving information as to the offender, he is guilty of "misprision of felony."

(*d*) **Contempt of Court** is an insult to a Court of Justice, or any defiance or resistance to its authority. "If the attempt be committed in the face of the Court, the offender may be instantly apprehended and imprisoned at the discretion of the judges, without any further proof or examination." Doing anything calculated to prejudice a fair trial of any case, or the disobedience of a judicial order, or the interference with the due course of justice amounts to contempt of court. Commenting in a newspaper on the facts of a case which is proceeding (*sub judice*) at the time, especially if it be in a way calculated to influence the jury, and writing letters about such a case to the judge and jury who are trying it, are instances of gross contempt of court.

OFFENCES AGAINST THE PUBLIC PEACE.

1. A RIOT is an unlawful assembly which has actually begun to execute the purpose for which it assembled by a breach of the peace and to the terror of the public. A lawful assembly may become a riot if those assembled proceed to execute an unlawful purpose, and to terrorise the people, although the assembly had not that purpose when it assembled. The punishment is imprisonment with hard labour.

Wherever twelve or more persons are unlawfully and tumultuously assembled to the disturbance of the public peace, the magistrate must read a proclamation calling upon them to disperse in the King's name. This is popularly known as "Reading the Riot Act." Any person obstructing the reading of this proclamation, or remaining for one hour after it has been read, is guilty of felony and liable to penal servitude for life.

If the mob is actually committing crime, it is lawful to disperse them by force without reading the Riot Act, and if in so doing any member of the mob is killed, such killing is not murder.

The proclamation runs:—"Our Sovereign Lord the King chargeth and commandeth all persons being assembled immediately to disperse themselves, and peaceably to depart to their habitations or to their lawful business, upon the pains contained in the Act made in the first year of King George for preventing tumultuous and riotous assemblies. GOD SAVE THE KING."

2. PRIZE FIGHTS. Not only are the combatants in a prize fight guilty of a breach of the peace, but all persons who assemble for the purpose of seeing the fight are principals in the breach of the peace, and are indictable for an assault as well as the actual combatants. All prize fights are illegal, and all persons engaged in them are punishable by law. If one of the combatants kill the other, not only is he guilty of manslaughter, but also the seconds, promoters, and everybody present and approving. Sparring as an exhibition of skill is not unlawful unless the fighting continue so as to endanger the lives of the exhibitors.

3. DUELLING. If two persons deliberately engage in a duel, it may be regarded as a felony even if no injury is done to either party. The possibility of its being classified as a heinous offence arises from the fact that legally it is an attempt to murder. Should either party be killed, such killing is murder. Both seconds as well as the living principal are liable to be punished as murderers in the event of a duel proving fatal.

4. SENDING THREATENING LETTERS. Any person who maliciously sends or delivers, directly or indirectly, or causes to be received, knowing the contents thereof, any letter or writing threatening to kill any person, is guilty of a felony. So also is any person who, knowing the contents thereof, sends or causes to be sent any letter or writing threatening to burn or destroy any house, barn, or building, or any rick of hay, grain, or straw, or any agricultural produce, or any ship or vessel, or to kill, maim, or wound any cattle. Maximum punishment is ten years' penal servitude.

5. A LIBEL is a malicious defamation either in printing, writing, or drawing or caricature, which tends to blacken the memory or the reputation of any person or persons, and expose him or them to public hatred, contempt, or ridicule. It is no answer to an indictment for libel for the defendant to prove that the libel is true, unless he can show that it was for the public benefit. If a libel tends to make a breach of the peace, it is punishable criminally, though communicated only to the person defamed and not published to a third party. (See "Libel" under *Torts*.)

6. FORCIBLE ENTRY AND DETAINER. Forcible entry means entering upon any lands or tenements, in order to take possession of them, in a violent manner; and it is immaterial whether such violence consists in actual force applied to any other person or in threats, or in breaking open any house, or in collecting together an unusual number of persons for the purpose of making such entry. Forcible detainer consists in having wrongfully entered upon any lands or tenements, and then detaining such lands or tenements in such a way as would need forcible means to repossess them.

OFFENCES AGAINST PUBLIC TRADE.

1. COMBINATIONS TO INTERFERE WITH TRADE. Any conspiracy between two or more persons to do or to procure to be done any act to restrain trade is punishable by law.

2. COUNTERFEITING TRADE MARKS. This may be done in a variety of ways, such as by forging or counterfeiting any trade mark, applying any forged or counterfeit trade mark to any article; enclosing any article in any case or vessel bearing a forged trade mark; attaching any article to any case, cover, reel, ticket, or label to which any trade mark has been falsely applied. Punishment for this misdemeanour includes fine and imprisonment.

3. ABSCONDING DEBTORS. By the Debtor's Act, 1869, if any person who is adjudged a bankrupt, or has his affairs liquidated by arrangement after the presentation of a bankruptcy petition against him or the commencement of a liquidation, or within four months before such presentation or commencement, makes preparation for quitting England and for taking with him any of his property amounting to £20 or upwards, which ought by law to be divided amongst his creditors, he commits a felony and is liable on conviction to two years' imprisonment with hard labour. Moreover by the same Act, where the plaintiff in a superior court proves, at any time before final judgment, on oath to the satisfaction of the judge, that he has a good cause of action to the amount of £50 and upwards, and that there is a probable cause for believing that the defendant is about to quit England, the Judge may order the arrest and detention of the defendant, for a period not exceeding six months, unless he gives security that he will not go out of England without the leave of the court.

4. FRAUDULENT DEBTORS. These are persons adjudged bankrupt who fraudulently fail to fully and truly discover to the trustees all their property, to deliver up to the trustee such property as is in their custody or

under their control, to deliver up as the trustee directs all books, papers, documents, and writings relating to their property. The maximum punishment is two years' imprisonment.

5. UNDISCHARGED BANKRUPT OBTAINING CREDIT. Any undischarged bankrupt under the Bankruptcy Act of 1883 who obtains credit to the extent of £20 or upwards from any person without informing such person that he is an undischarged bankrupt, commits a misdemeanour, and is liable to two years' imprisonment.

6. FALSE CLAIMS ON A BANKRUPT'S ESTATE. Any person is liable, upon conviction, to one year's imprisonment with hard labour who, being a creditor, wilfully and with intent to defraud, makes any false claim, or any proof, declaration, or statement of account, which is untrue in any material particular.

7. SMUGGLING. The law punishes persons by fine varying from £100 to £500, who assemble together in order to smuggle, or who actually do unship, land, run, carry, convey, or conceal any spirits, tobacco, or prohibited goods. Likewise any person who in any way resists or obstructs any officer of the army, navy, marines, coast-guard, customs, or any other person lawfully employed for the prevention of smuggling, in the execution of his duty, is liable to a fine of £100.

OFFENCES AGAINST PUBLIC MORALS AND HEALTH.

1. NUISANCES. A nuisance is an act which is not warranted by law, or an omission to discharge a legal duty, which act or omission obstructs or causes inconvenience or damage to other persons in the exercise of rights common to all His Majesty's subjects. Thus the failure to repair a public highway is a common nuisance. Every one who commits a common nuisance is guilty of a misdemeanour.

2. DRIVING TO THE PUBLIC DANGER. Any person having charge of any carriage or vehicle, who by careless or furious driving or racing does or causes to be done any bodily harm to any person, is guilty of a misdemeanour and liable to two years' imprisonment. (Refer to *Motor Cars and Motor Cycles.*)

3. VAGRANCY. There are three classes of vagrants recognised by law: (1) Idle and disorderly persons; (2) Rogues and Vagabonds; (3) Incorrigible rogues. For a statement of the law respecting these three classes of vagrants, see "Punishment of Vagrants," under *Poor Law Administration.*

4. INDECENCY. The leading idea with reference to indecent conduct is that whatever outrages decency and is injurious to public morals is criminal in the eyes of the law and is a misdemeanour. As examples of such criminal conduct may be mentioned: (1) Undressing on the beach and bathing near inhabited houses. (2) The publication of any obscene books or pictures. (3) Any obscene exhibition to which spectators are admitted on payment.

5. BIGAMY means marrying again during the lifetime of the first wife or husband. If, however, it can be proved that the person charged really believed and had reasonable grounds for believing that his or her wife or husband was dead at the time of the second marriage, then the charge fails. Likewise if the person charged has neither seen nor heard of or from the first wife or husband for seven years immediately preceding the second marriage, the charge also fails. The maximum punishment is seven years' penal servitude.

6. UNWHOLESOME FOOD. The law forbids any person to wilfully expose, or cause to be exposed for sale articles of food unfit for consumption, or to knowingly permit unwholesome ingredients to be mixed in articles of food. Such acts are held to be dangerous to the health or life of the public.

7. GAMING AND GAMING HOUSES. Gaming means playing at games either of chance or of mixed chance and skill. The keeper of a gaming-house may be fined up to £50 and costs, or in default may be sent to gaol for twelve months. An Act of 1853 makes it a specific offence to publish advertisements, handbills, placards, etc., showing that any house is kept or opened for the purpose of betting. The Vagrant Act of 1873 contains the following clause respecting gambling:

> Every person playing or betting by way of wagering or gaming on any street, road, highway, or other open and public space, or in any open place to which the public have or are permitted to have access, at or with any table or instrument of gaming, or any coin, card, token, or other article used as an instrument or means of gaming, at any game or pretended game of chance, shall be deemed a rogue and a vagabond.

The aim of the legislature in recent times has been to reduce the opportunities of gambling by poor people. It has prohibited, under a penalty not exceeding £30 and costs, or two months' imprisonment, the sending or publishing in any way of any letter, telegram, or advertisement, whereby it is made to appear that any person will give information or advice as to any bet or wager relating to a horse-race or any other sport, or will make on behalf of any other person any such bet or wager. By the Betting and Loans (Infants) Act, 1892, the sending of any such letter or advertisement to an infant (i.e., any one under twenty one years of age), is made a misdemeanour to which imprisonment and heavy fines are attached.

It should be noted that gaming and wagering transactions being void in law, no action can be brought to recover any money alleged to have been won in any such transaction. (Refer to "Illegal Agreements" in *Index.*)

8. STREET BETTING. By the Street Betting Act, 1906, "any person frequenting or loitering in streets or public places, on behalf either of himself or of any other person, for the purpose of bookmaking, or betting, or wagering, or agreeing to bet or wager, or paying, or receiving, or settling bets," shall be liable to a maximum fine of £10; for a second offence, to a fine not exceeding £20; and for a third or subsequent offence, on conviction on indictment, to a fine of £50 or six months' imprisonment, or, on summary conviction, to a fine of £30 or three months' imprisonment. The penalties incurred by a third offence are also incurred whenever a bookmaker has any betting transaction in a public place with a person under 16 years of age. A constable is authorised by this Act to take into custody without warrant any person found committing an offence under this Act.

9. HOUSES OF ILL FAME. A house of ill fame is a house or room or set of rooms in any house, kept for purposes of prostitution. It is immaterial whether indecent or disorderly conduct is or is not perceptible from the outside. Persons keeping such houses are liable to be sentenced to hard labour.

By the Vagrancy Act, 1898, every male person who knowingly lives wholly or in part on the earnings of prostitution, or who in any public place persistently solicits or importunes for immoral purposes, may be dealt with as a rogue and a vagabond. (Refer to "Rogues and Vagabonds" in *Index.*) Again under the Vagrancy Act, 1824, prostitutes behaving in a riotous or indecent manner in a place of public resort are liable to imprisonment with hard labour for one calendar month.

10. FORTUNE TELLING. It is an offence against the Vagrancy Acts to pretend or profess to tell fortunes, or to use any subtle craft, means, or device, by palmistry or otherwise to deceive or impose on any of His Majesty's subjects.

11. RAFFLES AND LOTTERIES. By the Gaming Act, 1802, the keeping of an office for the purpose of carrying on any lottery not authorised by Parliament is punishable with a penalty of £500, and imprisonment as a rogue and a vagabond. By the Lotteries Act, 1823, the selling of tickets or chances in any lottery (including Foreign State Lotteries) not authorised by Act of Parliament, or the publishing of any scheme for the sale of such tickets or chances involves a penalty of £50 and punishment as a rogue and a vagabond. Whether or not a prize competition in a newspaper amounts to a lottery depends on whether the prizes are to be won by the skill of the competitors or by chance.

Raffles often take place at bazaars. They are quite

illegal, being lotteries, and the fact that they are being conducted on behalf of a Charity makes no difference whatever. Certain lotteries, however, are authorised by Act of Parliament, and chief among them are those carried on by Art Unions under a Royal Charter or under a Constitution and rules approved by the Privy Council.

12. ALIENS. The Aliens Act, 1905, makes it possible for immigration officers to prevent the landing in this country of undesirable alien immigrants if they be lunatics, idiots, or persons suffering from any disease or infirmity which renders them likely to become a charge on the rates or otherwise a detriment to the public. They may also be excluded if they cannot show that they have in their possession, or are in a position to obtain, means of decently supporting themselves and their dependants; or if they have been sentenced for an extraditable crime in a foreign country; or if they have already been expelled from this country under an Expulsion Order. Alien Immigrants are not, however, to be excluded merely on the ground of want of means, if they are seeking a refuge in this country to avoid religious or political persecution. If an alien is convicted of any serious offence, the Secretary of State may, on the certificate of the court which tried the case, order him to be expelled from the country, either in lieu of, or in addition to, the ordinary sentence.

OFFENCES AGAINST INDIVIDUALS AND THEIR PROPERTY.

1. HOMICIDE, that is, the killing of a human being by a human being, whether by an act or by an omission; whenever, in fact, the death of a person can be proved to be the result of such act or omission. Unlawful homicide with malice aforethought is *murder*.

2. SUICIDE. When a person kills himself in a manner which in the case of another person would amount to murder, he is guilty of murder, and every person who aids and abets any person in so killing himself is an accessory before the fact, or a principal in the second degree in such murder.

3. MANSLAUGHTER is unlawful homicide without malice aforethought. Thus, if a man strikes another not intending to kill him, or to do him grievous bodily harm, and the blow causes death, the crime is manslaughter, not murder. Every person who kills another is presumed to have wilfully murdered him, unless the circumstances are such as to raise a contrary presumption. In the case of three men who were firing at a target, and the shot from one of their rifles killed a boy who was on a tree, it was held that all three were guilty of manslaughter. Lord Chief Justice Coleridge said:

> "If a person will, without taking proper precautions, do an act which is in itself dangerous, even though not an unlawful act in itself, and if in the course of it he kills another person, he does a criminal act which in law constitutes manslaughter."

To reduce murder to manslaughter, the "provocation" must be such as would upset not merely a hasty and hot-tempered person, but one of ordinary sense and calmness. A person convicted of manslaughter is liable to penal servitude for life.

4. ATTEMPT TO MURDER. Any one who attempts to commit murder is guilty of felony and is liable on conviction to penal servitude for life. The following are among the things which are looked upon as attempts to commit murder: administering poison or any other destructive thing; wounding or causing serious bodily harm; shooting at any person; attempting to drown, suffocate, or strangle any person; destroying or damaging any building by means of explosive substances. The punishment is the same as for manslaughter.

5. ABORTION is any attempt to bring about the miscarriage of any woman whether she be pregnant or not, and any person who administers or causes to be taken by the woman any poison or other noxious thing, or who unlawfully uses any other instrument or any means whatsoever with the like intent, is liable on conviction to penal servitude for life.

6. ABDUCTION. Any person who from motives of *lucre* takes away or detains against her will a woman of any age who has expectations of a fortune with intent to marry her is guilty of felony and is liable to penal servitude for fourteen years. The same punishment applies to the taking away *by force* or detaining against her will of a woman of any age with intent to marry her. Any person who for immoral purposes takes any unmarried girl under the age of *eighteen* years out of the custody of her parents or guardians is liable to imprisonment for two years. Any person who unlawfully takes or causes to be taken any unmarried girl under the age of *sixteen* years out of the possession and against the will of her parents or guardians, is guilty of the crime of abduction, and is liable to two years' imprisonment. It matters not whether the girl consents or not, or whether the prisoner believed that the girl was over the age of sixteen years.

7. OFFENCES AGAINST CHILDREN. Any person who by force or fraud steals or decoys away or detains a child under fourteen years of age, with the intention of withdrawing or withholding such child from the possession of its parents or guardians, is guilty of felony, and is liable on conviction to a punishment of seven years' penal servitude. And any person who receives or harbours any such child, knowing it to be thus dealt with, is liable to the same punishment.

Unlawfully to abandon or to expose any child under the age of two years so as to endanger its life or its health, or to injure it permanently, is an offence punishable with penal servitude for five years. Any person convicted of concealing the birth of a child is liable to two years' imprisonment.

By the Prevention of Cruelty to Children Act, 1904, any person over the age of sixteen years who, having the custody, charge or care of any child under that age, wilfully ill-treats or neglects such child, or who causes it to be ill-treated or neglected, in a manner likely to cause it unnecessary suffering or injury to its health is guilty of a misdemeanour and liable to fine or imprisonment.

8. **CRUELTY TO ANIMALS.** It is an offence under the Cruelty to Animals Act, 1849, punishable with a penalty not exceeding £5, or imprisonment with or without hard labour not exceeding three months, to cruelly beat, ill-treat, over-drive, over-ride, abuse or torture any animal. Similar punishment is awarded under the Wild Animals in Captivity Protection Act, 1900, to those who infuriate, tease or terrify animals or who cause them unnecessary suffering.

9. ASSAULTS. An assault is an attempt unlawfully to apply the least actual force to the person of another, either directly or indirectly. It is also the act of using a gesture towards another, so as to give him reasonable grounds to believe that the person using such gesture meant to use actual force upon him. It includes also the act of depriving another person of his liberty. Common assaults are punishable by fine or imprisonment. When the assault occasions actual bodily harm, then it is punishable by a maximum punishment of five years' penal servitude. When the assault is with intent to maim or to disfigure or disable, the crime is punishable with penal servitude for life.

Any person who assaults, resists, or wilfully obstructs any peace officer in the execution of his duty, or any person aiding such officer, is liable upon conviction to two years' imprisonment and hard labour.

10 LARCENY, or theft, is the act of dealing unlawfully with anything capable of being stolen, with the intention of permanently converting the thing to the use of any person other than the owner.

> Thus, if a carter converts his master's cart to his own use, or if a man finds lost property and knowing the owner converts it to his own use; or if a man finds money in a bureau sent to him for repairs, and appropriates it; or if a post office clerk destroys two letters to hide his mistake in sorting—all these acts amount to theft.

11. RECEIVING STOLEN GOODS OR MONEY, knowing them to have been stolen, or unlawfully obtained, is a crime. It is also a crime to take any money or reward

directly or indirectly on the pretence of helping any person to recover any stolen property, unless the receiver uses due diligence to cause the offender to be brought to trial.

12. **EMBEZZLEMENT.** This crime is theft by a clerk or servant, or any other person employed in the capacity of clerk or servant, when such person converts to his own use anything received by him from another person for his master or employer. The test to establish the crime of embezzlement is this, viz., "whether the person charged is under the control and bound to obey the orders of his master. He may be so without being bound to devote his whole time to his master." A person indicted for embezzlement must be shown either to have been "a clerk or servant," or, at all events, to have been "employed for the purpose, or in the capacity of, a clerk or servant." The maximum punishment is fourteen years' penal servitude.

13. **OBTAINING GOODS BY FALSE PRETENCES.** When goods are obtained by false pretences, it means that they are obtained by false representation made either verbally, by writing, or by conduct, and such a representation may amount to a false pretence, although a person of common prudence might easily have detected its falsehood. It amounts to this, that if a particular idea is intended to be conveyed, and it really is conveyed, and if such idea be false, then the conduct amounts to a "false pretence." But the false representation must be of an *existing* fact, otherwise there is no crime. For example, a single man induces a woman to part with her money on the pretence that he is going to marry her and to furnish a home for her. Here the false statement is made with regard to a *future* event, and therefore there is no crime. Had a married man done the same thing, he would by his conduct have led the woman to believe that he was a single man, and therefore he would have made a false representation of an existing fact, and hence would have been guilty of the crime of false pretences. The maximum punishment for false pretences is five years' penal servitude.

14. **BURGLARY** is the breaking and entering a dwelling house between 9 p.m. and 6 a.m., with intent to commit a felony, or the breaking out after having committed one inside, or after having gone in with the intention of committing one. "**Breaking**" means the breaking of any part, internal or external, of the building itself, or the opening by any means whatever of any door, window, shutter, cellar-flap, or any other thing intended to cover openings to the house, or to give passage from one part to another. "**Entering**" means the entrance into the house of any part of the offender's body, or of any instrument held in his hand for the purpose of intimidating any person in the house, or of removing goods. Persons convicted of burglary are liable to penal servitude for life.

15. **HOUSEBREAKING** differs from burglary in two important particulars: (1) It is not material between what hours it is committed. (2) It is not confined to dwelling houses alone, but extends to out-houses, shops, school houses, etc. The maximum punishment for housebreaking is fourteen years' penal servitude.

16. **FORGERY** means making a false document with intent to defraud. And this may be done by alteration of its contents, by adding to its contents, or by signing it in the name of any other person with the intention to defraud. The punishment varies according to the nature of the offence, the maximum being penal servitude for life.

17. **OFFENCES AS TO DOCUMENTS.** The law is very severe in the case of any person fraudulently destroying, cancelling, or obliterating documents relating to property:—

(*a*) **Wills.** Any person who either during the life of the testator, or after his death, steals, or for any fraudulent purpose destroys, cancels, obliterates, alters, or conceals the whole or any part of any will or testamentary instrument, commits a felony, and is liable, upon conviction, to penal servitude for life.

(*b*) **Registers.** Any person who destroys, defaces, injures, or fraudulently alters any register of births, deaths, baptisms, or burials required by law to be kept, or who does any of the above things to a certified copy of such registers; or who inserts or causes to be inserted false entries; or who forges the seal belonging to any register office or burial board, is liable, on conviction, to a minimum punishment of penal servitude for life.

(*c*) **Title Deeds.** Any person who steals, destroys, cancels, obliterates, or conceals, with fraudulent intent, the whole or any part of any document of title to lands, commits a felony and is liable, on conviction, to five years' penal servitude.

(*d*) **Judicial Documents.** Any person is liable to five years' penal servitude who steals or unlawfully and maliciously cancels, obliterates, injures, or destroys any original document belonging to any Court of Record, or in any way relating to the business of any office or employment under His Majesty.

(*e*) **Disclosure of Official Documents.** Any person who wrongfully obtains possession of such documents (including plans of any fortress, arsenal, etc.), or wrongfully communicates such documents or information thence derived, will be held guilty of a misdemeanour; and where such communication is made to the agent of a Foreign Power, will be held guilty of felony and be liable to penal servitude for life.

18. **RECOVERY OF STOLEN PROPERTY.** If goods have been stolen and have not been sold again in *market overt*, the owner may retake them wherever he finds them, provided he do so without a breach of the peace. If he fears committing such a breach, he should bring a civil action for their return. If the stolen goods have been bought by a *bonâ fide* purchaser in market overt, the owner must first prosecute the thief to conviction, upon which he may either apply to the court for an order for their restitution or bring a civil action for their return.

If the property stolen has been pawned, the court has power to make the restitution order on such terms as it may think just, usually on payment to the pawnbroker of the amount he has advanced. In cases where the property has not been stolen but has been obtained by *false pretences*, or some other misdemeanour, the owner cannot as a rule recover it from a *bonâ fide* purchaser.

CONTRACTS.

No branch of English law is so important as that relating to contracts. All the business of every-day life is based on contract, and probably at least nine-tenths of the litigation which arises is owing to some breach, real or supposed, of contract. It is important, therefore, to form a correct idea as to

WHAT IS A CONTRACT? It is often said that a contract is an agreement between parties, but that definition is not enough. It must be an agreement of such a nature as will be recognised and enforced by law. A contract has been defined as "an agreement entered into between two or more persons sanctioned by the law, by which agreement each undertakes to do, or to abstain from doing, a specified act or acts, in consideration of the other or others doing, or abstaining from doing, some other act or acts." It is true that every contract is an agreement, but not every agreement is a contract. The law requires before an agreement becomes an enforceable contract, that certain requirements shall be fulfilled, such as the legal capacity of the parties, the legality of the object aimed at, and, in some cases, the way in which the contract is evidenced. Before proceeding further with contracts, it will be convenient to explain what is meant by a *Deed*.

WHAT IS A DEED? Most people have had occasion at some time or other to sign or witness a deed, as they are always used in the transfer of houses and land. A deed is a written instrument, sealed and delivered, and Coke says it must be written on paper or parchment. In practice it is always signed, but there have often been long arguments as to signature being necessary. By the

common law signature was not necessary; but in certain cases the Statute law makes it obligatory. The seal in olden times was always that of the person signing; now it generally takes the form of an ordinary red wafer. The document must be "delivered," which is simply the handing over of the writing by the person to be bound thereunder. But in modern practice, the delivery is done by the person signing placing his finger on the seal and saying, "I deliver this as my act and deed." Deeds have always been most seriously regarded by the law. "It is called a deed," says Blackstone, "because it is the most solemn and authentic act that a man can possibly perform with relation to the disposal of his property; and therefore a man shall always be estopped by his own deed, or not permitted to aver or prove anything in contradiction to what he has once so solemnly and deliberately avowed." In the present day, a deed may be either written, printed, type-written, or lithographed. When a deed is made by one person only, it is called a *deed poll;* when by two or more persons, it is an *indenture.* Formerly, when deeds were made between two or more persons, it was usual to write the copy for each on the same piece of parchment, with some words or letters written between them. The parchment was then cut with a saw-like edge, and it was always easy to see by these indentations that the one piece had been cut from the other. Hence the name indenture. By the Real Property Act, 1845, it is provided that a deed purporting to be an indenture shall have the effect of an indenture though not actually indented. An *escrow* is an instrument, executed as a deed in favour of one person, but delivered to a third person, to be held by him till the beneficiary does something stipulated for, when this condition is performed the escrow becomes a deed.

FORMS OF CONTRACT.

Contracts may be divided into three classes—contracts by matter of record, contracts under seal, that is by deed, which are sometimes spoken of as specialties, and contracts not under seal which are called simple contracts and sometimes parole contracts.

1. CONTRACTS OF RECORD are contracts which are founded on the authority of a court of record. Their main feature is that they prove themselves; in other words, the mere production of the record of the court is sufficient evidence of the existence of the contract. Further, they require no consideration to render them binding. A judgment of a Court ordering a person to pay a sum of money to another is a contract of record, but such contracts are not really contracts, as they lack the essential ingredient of agreement between the parties.

2. CONTRACTS UNDER SEAL. Such contracts are those made by deed, and speaking generally, they require no consideration to support them. It is, however, allowable in disputing the validity of a deed to show that the consideration was illegal or immoral, or that the deed was obtained by duress or fraud. If the contract be in restraint of trade, and it is made without consideration, although under seal, it will be held to be void.

3. CONTRACTS NOT UNDER SEAL, or simple contracts, may be made either in writing or by word of mouth. The law requires writing in various cases, including assignments of copyright, Bills of Exchange and Promissory Notes, contracts of Marine Insurance, acceptance and transfer of shares, acknowledgment of a debt barred by the Statute of Limitations, and all contracts coming under section 4 of the Statute of Frauds, or section 4 of the Sale of Goods Act, 1893.

The latter requirements as to Contracts which must be in Writing are so important, especially to tradesmen, that special reference must be made to them. The Statute of Frauds enacts by the fourth section:—

> That no action shall be brought whereby to charge any executor or administrator upon any special promise to answer damages out of his own estate; or whereby to charge the defendant upon any special promise for the debt, default or miscarriage of another person; or to charge any person upon any agreement made upon consideration of marriage; or upon any contract or sale of lands, tenements or hereditaments, or any interest in or concerning them; or upon any agreement that is not to be performed within the space of one year from the making thereof; unless the agreement upon which such action shall be brought or some memorandum or note thereof, shall be in writing and signed by the party to be charged therewith, or some other person thereunto by him lawfully authorised.

The Sale of Goods Act by section 4 enacts:—

> A contract for the sale of any goods of the value of ten pounds or upwards shall not be enforceable by action unless the buyer shall accept part of the goods so sold, and actually receive the same, or give something in earnest to bind the contract, or in part payment, or unless some note or memorandum in writing of the contract be made and signed by the party to be charged or his agent in that behalf.

If these requirements are not rigidly complied with, the agreement is unenforceable, and no action against the party can be successful simply for the want of proper evidence to prove the existence of the contract. More upon the subject will be found in the section relating to "Sale" in *Commercial Guide.*

In the ordinary affairs of life there are numerous transactions where no formal declaration of intention to pay is made. The man who, rushing to his train past a bookstall to the keeper of which he is well known, seizes a newspaper, is under an obligation to pay. This is an *Implied Contract.* In such matters the law is always ready to imply intention from conduct.

THE ESSENTIALS OF A CONTRACT.

There are certain features common to all simple contracts. They are offer, acceptance and consideration.

1. OFFER First there must be an *offer* by one of the parties. It need not be, and frequently is not, made in words. For instance, the penny omnibus passing along the street makes an offer to carry passengers, though the conductor may not have said a word. Persons entering the omnibus are deemed to have accepted the offer and to have agreed to pay the proper fare. Another familiar form of offer is the one which appears in advertisements offering rewards for lost articles. A offers a reward of £1 to any one who will find and return to him his lost dog; when B, in answer to the advertisement, returns the dog he is entitled to the £1. The danger of making general offers by advertisement was shown in what is known as the Smoke-ball Case. Carlill *v.* Carbolic Smoke Ball Co. [1893], 1 Q. B. 256.

> The Company issued an advertisement in which they said "£100 reward will be paid by the Carbolic Smoke Ball Company to any person who contracts the increasing epidemic, influenza, after having used the ball three times daily for two weeks, according to the printed directions supplied with each ball. £100 is deposited with the Alliance Bank, Regent Street, showing our sincerity in the matter." A Mrs. Carlill, on the faith of this advertisement, bought a Carbolic Smoke Ball, used it as directed, for the stipulated period, but afterwards was attacked by influenza. She brought an action to recover the £100, and Mr. Justice Hawkins gave judgment in her favour. The Company appealed, it being contended that the words in the advertisement expressed an intention but did not amount to a promise. Further, that the plaintiff had never intimated her acceptance of the offer, if one had been made. But the Court held there had been an offer and a valid acceptance, and the Company had to pay the £100.

2. ACCEPTANCE. The second essential of a contract is acceptance. This may be given in several ways, but is usually by assent, either verbal or written. A writes to B, "I will sell you 100 tons of coal for £50, if I get a letter by return of post." B accepts the offer by return, and the contract is complete. The acceptance may be by a promise, as where an employer promises wages for services offered. It may, as we have seen, be made by the doing of an act, as the return of a dog advertised for. As a rule the acceptance, like the offer, must be communicated to the other party to the contract, but the necessity of communicating the acceptance may be waived by the terms of the offer, as was the case in the Smoke Ball Case, where Lord Lindley said, "The true view in a case of this kind is, that the person who makes the offer shows by his language and by the nature of the transaction that he does not expect and

does not require notice of the acceptance apart from notice of the performance." Another rule with regard to acceptance is that it must be to an offer which was intended to, and was capable of, creating legal relations. The acceptance must also be in the identical terms of the offer. Thus, if A offers to B a truck load of potatoes free on rail at Canterbury, and B replies, "I accept your offer carriage paid to London," there is no contract, for B has introduced a new condition. It must be noticed that an offer may be withdrawn or varied at any time before acceptance, and that it may be determined by the effluxion of the prescribed or of a reasonable time, or by the death of either of the parties before acceptance. (See "Offer" and "Acceptance" under *Sale* in *Commercial Guide*.)

3. CONSIDERATION. The third essential in all simple contracts is that there must be what the lawyers call consideration. Familiar as the term is, the exact definition is not so easy. It is not by any means necessary that it should consist of money. The late Mr. Justice Lush said, "a valuable consideration, in the sense of the law, may consist either in some right, interest, profit or benefit accruing to the one party, or some forbearance, detriment, loss, or responsibility, given, suffered, or undertaken by the other." It may, therefore, be either a present act, forbearance or sufferance, or a promise to do, forbear, or suffer. The Courts will never enquire into the adequacy of the consideration, as was shown in a case which has become historic. It is known as Thornborow *v.* Whitacre, and is to be found in Lord Raymond's Reports, p. 1164.

> Mr. Thornborow, one day early in the reign of Queen Anne, said to Mr. Whitacre, "If I give you £5 down, will you give me two rye corns next Monday, four grains on Monday week, eight grains on the following Monday, and so on in proportion each Monday for a year." There were no Board Schools in those days, and Mr. Whitacre readily agreed to the proposal. He took the £5, and set about fulfilling the contract. But he found it impossible for all the rye grown in England that year would not have been sufficient. Mr. Thornborow brought an action. Mr. Whitacre urged there was no adequate consideration. But the Court held there was consideration, and the defence failed.

The importance of consideration may be shown from the other examples. A says to B, "Will you give me £50 a year for life?" B agrees, but the agreement cannot be enforced because there is no consideration. But it is otherwise if A, a gentleman, says to B, a lady, "Will you marry me?" and B replies "I will," for here the mere promise of the one is the consideration for the promise of the other. Agreements which lack any of the essentials, offer, acceptance or consideration, are therefore not enforceable contracts. An agreement made without consideration is sometimes called *nudum pactum*—a naked agreement. It must be noticed that the consideration must be a legal one, and it must not be immoral. Nor will a past consideration make the agreement enforceable, unless it consists of services rendered by the plaintiff at the defendant's request.

WHO MAY CONTRACT?

With regard to the capacity of parties, it may be generally stated that all persons of adult age may enter into contracts. But the following points must be noticed.

1. CONTRACTS OF INFANTS. First as regards *infants*: that is, persons under twenty-one years of age. The old rule of Common Law was that contracts entered into by an infant were not enforceable against him unless they were for necessaries. If the contract were for his benefit, however, he could enforce it as against the other party, and the other party could in certain cases enforce it against the infant, e.g. a contract of apprenticeship. After reaching the age of twenty-one he could ratify any contract he had made. Two recent Acts have materially modified the former law. The Infants' Relief Act, 1874, provides that all contracts entered into by infants for the payment of money lent or for goods supplied (other than necessaries), and all accounts stated with infants are absolutely void. It further provides that even if the infant on reaching full age shall ratify the contract, it shall not be enforceable. The second Statute, the Betting and Loans (Infant) Act, 1892, also provides in section 5, that if an infant who has contracted a void loan agrees, after he comes of age, to repay it, the agreement, and any instrument, negotiable or otherwise, given in pursuance of such agreement, shall be void absolutely as against all persons whatsoever. The law, therefore, is that, except with regard to necessaries, no infant can be sued on a contract, though the infant may sue supposing the other contracting party is an adult.

An infant's necessaries are not merely food and clothing, but all those things which, taking into consideration his station in life, it is essential for him to have. In the case of Peters *v.* Fleming, the infant was an under-graduate at Cambridge. His father was a Member of Parliament, and a man of considerable means. The jury found that four rings, a gold watch chain, and a pair of breast pins were necessaries, and a court of four judges refused to disturb the verdict. There is an important provision in the Sale of Goods Act, 1893, which says, "where necessaries are sold and delivered to an infant . . . he must pay a reasonable price therefor; 'necessaries' in this section mean goods suitable to the condition of life of such infant . . . and to his actual requirements at the time of sale and delivery." Tradesmen, therefore, who supply even "necessaries" to a minor do so at great peril, for the young gentleman may show that he was already well supplied, and in those circumstances the tradesman cannot recover. The chief authority for this proposition is the case of Johnstone *v.* Marks. In that case, Mr. Johnstone, a tailor, had supplied clothes to young Mr. Marks. When he sued for the amount, the defence was made that Mr. Marks was an infant. "That may be so," said Mr. Johnstone, "but these clothes were necessaries." "No they were not," said Marks, "for although you did not know it, I had plenty of clothes already." So Mr. Johnstone could not recover. Lord Esher, on the case coming before him, said:—

> "It lies upon the plaintiff to prove, not that the goods supplied belong to the class of necessaries as distinguished from that of luxuries, but that the goods supplied, when supplied, were necessaries to the infant. The circumstance that the infant was sufficiently supplied at the time of the additional supply is obviously material, as well as fatal to the contention of the plaintiff."

There are still some contracts made by infants upon which an infant may be sued after he has attained his majority. Where infants acquire an interest in permanent property to which obligations are attached as e.g. under a lease, or make a contract which involves continuous rights and liabilities and have taken some benefit under such contract, as e.g. a contract under which they became possessed of shares in a company; such infants will be bound unless they expressly disclaim or repudiate the contract within a reasonable time after they have attained their majority.

2. CONTRACTS OF MARRIED WOMEN. Under the Common Law, any contract entered into by a married woman was void, and that remained the law until the passing of the Married Women's Property Acts, the most important of which is the Act of 1882. There were a few exceptions to the *Common Law Rule* as to the contracts of married women being void; (1) a married woman might have contractual rights concerning a *chose in action* assigned to her, or with regard to her own personal services; (2) the wife of the king could also make contracts as a *femme sole* (i.e., an unmarried woman); (3) so could the wife of a man who had been outlawed; (4) by custom of the City of London, a married woman might trade there, and make the necessary contracts; (5) and a divorced woman reverted to her former position as *femme sole*. Under the *Married Women's Property Act*, 1882, a married woman may sue and be sued with regard to her separate property. [Refer to section relating to the law of *Husband and Wife*.]

3. CONTRACTS OF LUNATICS AND DRUNKEN PERSONS. Lunatics, like infants, are liable for contracts for necessaries, even though the other contracting party knew of the lunacy. As regards other contracts, provided they be fair, the lunatic is liable unless he can prove that the

other party knew of his condition. "When a person enters into a contract and afterwards alleges that he was so insane at the time that he did not know what he was doing, and proves the allegation, the contract is as binding on him in every respect as if he had been sane when he made it, unless he can prove further that the person with whom he contracted knew him to be so insane as not to be able of understanding what he was about." (Lord Esher). The contracts of *intoxicated persons* follow the same rules. It must be noticed, too, that though a contract entered into by a drunken person may be avoided by him if he can show that the other party to the contract knew of his condition, yet if he ratify his contract after becoming sober, he will be held liable for it. It is never open to one party to a contract to avoid it on the ground that the other party was intoxicated when it was entered into.

4. CONTRACTS OF CORPORATIONS. A corporation can contract only through an authorised agent. A non-trading corporation, such as a borough council, must contract under seal, unless the contract be of trifling importance, like the hire of a porter. Trading corporations, of which the most familiar examples are Limited Companies, can contract like a private person in regard to all matters within the scope of their powers as defined by the Memorandum of Association. Thus, where the law requires a private person to contract by deed, so must a Limited Company; and where a private person can enter into a contract by a simple writing or by word of mouth, so also can a Limited Company.

Certain statutes, like the Public Health Acts, have made it imperative that the contracts of corporations should be under seal. Thus, where the sanitary authority of a locality enter into a contract for the execution of sanitary works, the contract must be under seal, otherwise the party executing the works will not be able to sue either for the contract price or for the value of the work he has actually done.

5. CONTRACTS OF ALIENS. With few exceptions, an alien has the same contractual capacity as a British subject. It is provided in the Naturalization Act that no alien can become owner of a British ship. As regards aliens who are at war with Great Britain, they cannot contract without licence from the Crown, nor, during war, can they enforce any existing contract. But on peace being restored, all their rights under existing contracts are restored. Foreign States, and their representatives here, as well as the officials and household of the latter, cannot be sued here unless they care to submit themselves to the jurisdiction.

6. SOME SPECIAL DISABILITIES. No *convict* whose offence has been either treason or felony can make a valid contract, nor enforce one already made, during the continuance of his punishment. A *barrister* cannot sue for his fees. *Medical men* were under much the same disability until 1858, but now they can sue for their professional fees. The College of Physicians has power to make bye-laws prohibiting their Fellows from exercising the privilege.

AGREEMENTS WHICH ARE VOID OR VOIDABLE.

If there be certain flaws in an agreement, they may render it "void," that is, destitute of legal effect; or they may only make it "voidable," which means that one of the parties to the agreement has the option of affirming or rejecting the agreement. Sir William Anson explains the difference in this way:—

> A *void* contract, when shown to be void, can create no legal rights, the whole transaction is null and falls to the ground. A *voidable* contract is a contract with a flaw, of which one of the parties may, if he please, take advantage. If he do not exercise this right within a reasonable time, so that the position of parties is altered, or if he take benefit under the contract, or if third persons acquire rights under it, his power of avoidance ceases, and he is bound by the contract.

1. MISTAKE IN CONTRACTS. A mistake on the part of one of the parties does not vitiate a contract. But where there is a genuine mistake as to the nature of the transaction, or as to the person with whom the contract is made or (in some cases) as to the subject matter of the contract, the contract will be void. In fact there is no contract. The following cases give apt illustrations.

> (1) Mackinnon, a very old man, was induced to indorse a bill for £3,000. He was told it was a guarantee: in fact it was an ordinary bill of exchange. It afterwards came into the possession of one Foster, for value, who sued Mackinnon for the amount. The jury found there was no negligence on the part of Mackinnon, and it was held that Foster could not recover. Such a proceeding, Mr. Justice Byles said, "was invalid, not merely on the ground of fraud, where fraud exists, but on the ground that the mind of the signer did not accompany the signature; in other words, that he never intended to sign, and therefore in contemplation of law never did sign the contract to which his name is appended; and therefore there was no contract."
>
> (2) One Jones had been in the habit of buying leather piping from a Mr. Brocklehurst. He sent to him an order for some piping, which was received by a Mr. Bolton, who had just purchased Brocklehurst's business. Bolton executed the order without advising Jones of any change in the business. Jones sometime afterwards learned that the goods had not come from Brocklehurst, and refused to pay for them. It was held that Bolton could not recover, because there was no contract made with him.
>
> (3) A contract was made for the sale of a cargo of corn, the contracting parties believing that it was then on its way from Salonica to England. But the corn had got damaged, and at the time the contract was made it had been unloaded and sold at Tunis. The contract was held to be void, one of the judges remarking that it clearly implied "that there was something to be sold and something to be purchased, whereas the object of the sale had ceased to exist."

2. MONEY PAID BY MISTAKE. The general rule is that if money has been paid under a mistake of facts it is recoverable, but that money paid under a mistake as to the law is not. This is in accordance with the old legal maxim, *Ignorantia facti excusat; ignorantia juris non excusat* (ignorance of the fact excuses; ignorance of the law does not excuse). Every Englishman is presumed to know the law. "Every man," said Lord Ellenborough, "must be taken to be cognisant of the law: otherwise there is no saying to what extent the excuse of ignorance might not be carried. It would be urged in almost every case."

3. MISREPRESENTATION. Each party to a contract is expected to exercise ordinary care and to make due investigations and enquiries. But where one of the parties is at the mercy of the representations of the other, and cannot make enquiries for himself, any misrepresentations by the other, though made innocently, will render the contract voidable. In contracts of insurance and the sale of land (as to both of which more will be said hereafter), any material misrepresentation, though innocent, may cause the contract to be set aside.

4. CONCEALMENT. But in certain contracts it is not enough that there should be no material misrepresentation; there must also be a full disclosure of material matters. "These," says Sir W. Anson, "are contracts in which one of the parties is presumed to have means of knowledge which are not accessible to the other, and is then bound to tell him everything which may be supposed likely to affect his judgment. In other words, every contract may be invalidated by material misrepresentation, and some contracts even by non-disclosure of a material fact. Contracts of marine, fire, and life insurance, contracts for the sale of land, for family settlements, and for the allotment of shares in companies, are of the special class affected by non-disclosure.

5. FRAUD. Fraud on the part of one of the parties will vitiate any contract. There has always been a reluctance on the part of judges to define fraud, but from a consideration of the cases it may be said to be a false representation of fact, made with the knowledge that it is false, or with a reckless disregard as to whether it is true or false, with the intention that the party to whom it is made should act upon it, and which does actually induce him to act upon it. Not every misrepresentation is a fraud, for a misrepresentation may be made innocently. *Caveat emptor* (let the buyer beware), has long been a

maxim of the law; and a seller is not obliged to make known the existence of defects in the articles he sells, but the law will not allow him to state such defects do not exist. Where there has been a misrepresentation, the only remedy of the party aggrieved is an action to set aside the contract; where there has been fraud he may bring an action for the wrong committed. "No action," Lord Justice Bramwell once said, "is maintainable for a mere statement, although untrue, and although acted on to the damage of the person to whom it is made, unless that statement is false to the knowledge of the person making it." But under the Directors' Liability Act, directors are liable to persons who have taken shares on the faith of a prospectus which contains false statements that the directors honestly believe, unless they had reasonable grounds for such belief, or unless they made the statements on the report of an expert whom they honestly and reasonably believed to be competent, or unless the statements were a correct version of an official document.

6. DURESS AND UNDUE INFLUENCE. A contract made under duress or undue influence is also voidable. *Duress* consists in actual or threatened violence or unlawful imprisonment to the contracting party or his wife, child, or parent. It must be inflicted or threatened by the other party to the contract, or by some one acting under him. *Undue influence* is often presumed from the relationship of the parties, as in the case of transactions between solicitor and client, guardian and ward, parent and child, trustee and cestui-que trust (that is the person possessing the equitable right to property vested in the trustee). In these cases the burden of proving the validity of the transaction lies upon the person obtaining the benefit under it. As to these cases, Lord Chancellor Selborne said:—

> Fraud does not here mean deceit or circumvention; it means an unconscientious use of the power arising out of these circumstances and conditions; and when the relative condition of the parties is such as prima facie to raise this presumption, the transaction cannot stand unless the person claiming the benefit of it is able to repel the presumption by contrary evidence, proving it to have been, in point of fact, fair, just, and reasonable.

7. CONTRACTS WHICH MUST BE IN WRITING. It is a common error to suppose that verbal contracts cannot be enforced in a Court of Law. The true rule is that any legal contract, whether verbal or otherwise, can be enforced unless there is in existence some Act of Parliament which requires such a contract to be in writing. There are many such Acts. The Statute of Frauds, 1677, provides that the following contracts cannot be enforced unless they be in writing, or unless some note or memorandum thereof in writing has been signed by the defendant or his authorised agent.

> (1) Promises by an executor or administrator to answer damages out of his own estate. (2) Promises to answer for the debt, default, or miscarriages of another person. (3) Agreements made in consideration of marriage (i.e, promises to pay a person money if he will marry some one). (4) Contracts concerning lands, tenements, or hereditaments, or interests therein. (5) Agreements incapable of being performed within the space of one year from the making thereof.

Lord Tenterden's Act, 1828, provides that no action may be brought whereby to charge any person by reason of any representation or assurance made concerning the character, conduct, credit, ability, trade or dealings of any other person, unless such representation or assurance is in writing signed by the party to be charged. The Sale of Goods Act, 1893, provides that contracts for the sale of goods of the value of £10 or upwards, cannot be enforced by action unless the buyer accepts part of the goods so actually sold and actually receives the same or gives something in earnest, or part payment, or unless some note or memorandum in writing of the contract be made by the party to be charged or his agent.

Other Statutes require that leases must be by deed, unless they be leases for a term not exceeding three years, upon which the rent reserved amounts to two-thirds at least of the full annual value of the property. Moreover, by other Acts, acknowledgments of debts barred by the Statutes of Limitations, Assignments of Copyright, Contracts of Marine Insurance, Assignments of *choses in action* (i.e., proprietary rights enforceable by action), Bills of Exchange, Promissory Notes, Acceptances and Transfer of Shares in Companies, and certain contracts made between solicitors and their clients, are not enforceable unless they be in writing.

ILLEGAL AGREEMENTS

1. GAMING. There are some agreements which from their very nature are illegal, and which therefore cannot become enforceable contracts. Wagering and gaming contracts are prohibited by statute. Sec. 18 of the 8 & 9 Vict. c. 109 provides:—

> That all contracts or agreements, whether by parol or in writing, by way of gaming or wagering, shall be null and void: and that no suit shall be brought or maintained in any court of law or equity for recovering any sum of money or valuable thing alleged to be won upon any wager, or which shall have been deposited in the hands of any person to abide the event upon which any wager shall have been made.

The matter is carried farther by Sec. 1 of the Gaming Act, 1892, which says:—

> "Any promise, express or implied, to pay any person any sum of money paid by him under, or in respect of, any contract or agreement rendered null and void by the Act of 8 and 9 Vict., c. 109, or to pay any sum of money by way of commission, fee, reward, or otherwise, in respect of any such contract, or of any services in relation thereto or in connection therewith, shall be null and void, and no action shall be brought or maintained to recover any such sum of money."

The effect of these statutes is to make all wagers and all transactions collateral thereto null and void. With regard to speculative transactions in which certain outside-brokers engage, if it appears that, looking at the transactions as a whole, the contract is not one for the *bonâ fide* purchase or sale of shares, but merely a gamble in differences, it is void as a wager. Money or securities deposited "to cover differences" may be recovered by the depositor even in a wagering transaction. (Refer to "Differences, Paying" in *Index*.)

2. AGREEMENTS AGAINST PUBLIC POLICY. A contract which is for the benefit of an enemy, or which is an affront to a friendly foreign power, will not be enforced by the courts. Nor will contracts be enforced which have for their object the sale of public offices, the assignment of the salaries or pensions attaching to such offices, the securing of votes of members of Parliament, contracts to present to Ecclesiastical benefices in consideration of money or other payment also come under the same head. Agreements to commit a crime or a wrong are also illegal.

3. INTERFERING WITH THE COURSE OF JUSTICE. Any contract which tends to interfere with the course of justice will not be enforced. Any agreement which has for its object the stifling of a prosecution or the compounding of offences is illegal and void. "You shall not," said Lord Westbury, "make a trade of a felony. If you are aware that a crime has been committed you shall not convert that crime into a source of profit or benefit to yourself." There is an exception, however, in those cases where civil and criminal remedies exist side by side. A compromise of a prosecution is then permissible. Lord Chief Justice Denman expressed the rule thus:—

> We shall probably be safe in laying it down that the law will permit a compromise of all offences, though made the subject of a criminal prosecution, for which offence the injured party might sue and recover damages in an action. It is often the only manner in which he can obtain redress. But if the offence is of a public nature, no agreement can be valid that is founded on the consideration of stifling a prosecution for it.

In this connection we may refer to MAINTENANCE, which is defined as "the offence of intermeddling in a suit that in no way belongs to one, by maintaining or assisting either party, with money or otherwise, to prosecute or defend it. It is an offence against justice, as it keeps alive strife and contention, and perverts the remedial powers of the law into an engine of oppression. A man may, however, maintain the suit of his near kinsman, servant,

or poor neighbour, out of charity and compassion, with impunity; or he may maintain a suit in which he has any interest, actual or contingent." CHAMPERTY, which is an agreement between a plaintiff or a defendant in a suit and a third person to share in the profits of a suit is also illegal.

4. RESTRAINT OF MARRIAGE. Any agreements restricting freedom of marriage are discouraged by the courts as being injurious to the moral well-being of the community.

> Mr. Newsham Peers, a gentleman who lived a century and a half ago, gave a document to Mrs. Catherine Lowe, which said, "I do hereby promise Mrs. Catherine Lowe that I will not marry with any person beside herself; if I do I agree to pay to the said Catherine Lowe £1,000 within three months next after I shall marry any one else." Ten years later the gentleman altered his mind and married another lady. Mrs. Lowe, therefore, brought an action to recover the £1,000, but it was decided the agreement was void as being in restraint of marriage.

But the cases show that conditions are valid which prohibit a person marrying before reaching the age of twenty-one, or with a named person, or with a person of a particular nationality or religion or calling in life. In other words, it appears to be the law that a condition is good if it does not directly or indirectly "import an absolute injunction to celibacy." Marriage brokerage contracts or agreements to pay money for bringing about a marriage are also illegal.

5. RESTRAINT OF TRADE. Formerly it was held that contracts in general restraint of trade were void, but that contracts in partial restraint of trade were good. Nowadays the distinction between general restraint and partial restraint is no longer of importance. The true test is, is the restraint *reasonable*, does it only do what is necessary to protect the interests of the party for whose benefit the covenant not to carry on the trade was given. If it does this and nothing more the restraint, whether general or partial, is reasonable and perfectly good. A restraint upon the pupil of a dentist not to practise dentistry after his apprenticeship within 200 miles of his master has been held to be unreasonable, but a restraint upon a linen draper's assistant not to carry on that business within half a mile of her employer has been held reasonable. So long as a restraint is reasonable as to space, it does not matter for how long a time the condition is imposed.

What is reasonable as to space depends upon the circumstances of the case. What would formerly have been regarded unreasonable as to space would now, under modern industrial conditions, be held perfectly reasonable. Thus, Nordenfelt was a maker of guns, which he supplied to every civilised government. He sold his business to a company, and agreed that for twenty-five years he would cease to make guns or to carry on any business likely to compete with such business as the company was carrying on for the time being. It was held that owing to the nature of the business the restriction was reasonable though unlimited in point of space, and was therefore perfectly good.

ASSIGNMENT.

1. ASSIGNMENT OF CONTRACTS. As we have seen, the general rule is that the only persons who can be affected by a contract are those who are parties to it. And we shall hereafter see that certain contracts are ended by the death of one of the parties thereto. But it is nevertheless possible for some of the parties to a contract to drop out and for others to take their place, and this may be done either by the voluntary act of the contracting parties or by operation of law. At common law "a chose in action" (that is, a right to demand by action a debt or sum of money or other right) was not assignable unless by agreement of all the parties concerned, except in the case of negotiable instruments (bills of exchange, etc., as to which reference should be made to the special section dealing with that matter), which were excepted for the sake of mercantile convenience. There was another exception, for it is a prerogative of the Crown that a chose in action vested in it may pass under the sign manual. The courts of equity, however, always gave relief from the common law rule, and allowed assignment of all rights of action where they thought it equitable to do so. By a statute of the reign of Henry VII., the common law rule was modified, as the assignee was enabled to sue in the name of the assignor. This remained the law down to 1873, when the *Judicature Act* provided that any absolute assignment in writing by the assignor should at law, conditionally on express notice being given to the debtor, effectually transfer the chose in action, always provided that such assignment should not purport to be by way of charge only. *Any right to a debt therefore may now be assigned.* An apt illustration is found in one of the first cases to come before the Courts after the framing of the Judicature Acts.

> Mr. Gough was a shipbuilder, and he was building a ship for Mr. Bannister for which he was to be paid £1,375. But Mr. Gough owed some money to Mr. Brice, a solicitor, and gave to him a writing addressed to Mr. Bannister in these words:—"I do hereby order, authorise and request you to pay to Mr. William Brice, solicitor, Bridgwater, the sum of £100 out of moneys due or to become due from you to me, and his receipt for same shall be a good discharge." On the day he received this Mr. Brice served a written notice on Mr. Bannister, informing him of the assignment. But Mr. Bannister said he had nothing to do with Mr. Brice, and paid the shipbuilder direct. Then Mr. Brice sued Mr. Bannister for the £100, and Lord Chief Justice Coleridge gave judgment for the plaintiff. The case was then taken to the Court of Appeal, and the judgment was upheld. Being so soon after the passing of the Judicature Act it was new law, and the reluctance of the judges to find as they did was shown by Lord Justice Bramwell, who said:—"I have reluctantly come to the conclusion that this judgment should be affirmed . . . It does seem to me a strange thing, and hard on a man, that he should enter into a contract with another and then find that because that other has entered into some contract with a third, he, the first man, is unable to do that which it is reasonable and just that he should do for his own good. But the law seems to be so; and any one who enters into a contract with A must do so with the understanding that B may be the person with whom he will have to reckon."

In order that the assignment of a chose in action (other than a negotiable instrument) should be valid, the assignment must be in writing, notice must be given to the person liable, and the assignee must have given some consideration for the assignment. Further, the assignee takes the chose in action subject to all the equities, that is, whatever defence the debtor might have if sued by the assignor, will be equally good against the assignee. In the case of negotiable instruments the assignment is by simple delivery of the instrument, notice need not be given to the person liable on it, and the assignee who takes it in good faith and for value takes it free from the equities; that is, he is the absolute owner of the amount of the instrument, and whatever defences the debtor might have had against the assignor will be of no avail against the assignee.

2. ASSIGNMENT OF LIABILITIES. But a person cannot assign his liabilities except by permission of the person to whom he is liable, and of the assignee. This is really the formation of a new contract, and is called a NOVATION. That a person should not be able to transfer his liabilities is only reasonable, for as Lord Chief Justice Denman once said, "You have a right to the benefit you contemplate from the character, credit and substance of the party with whom you contract."

> Mr. Sharpe, a coachmaker, entered into an agreement to furnish Mr. Drummond with a carriage for the term of five years, at seventy-five guineas a year. At the time of making the contract a Mr. Robson was a partner with Mr. Sharpe, but this was unknown to Mr. Drummond, the business being carried on in the name of Mr. Sharpe only. Before the expiration of the first three years the partnership was dissolved, and Mr. Sharpe left it altogether. Mr. Drummond was informed of the dissolution, and that Mr. Robson was now the owner of the carriage and would look to Mr. Drummond for the hire. Mr. Drummond said under these circumstances he would not keep the carriage, and returned it. The Court held that he was entitled to do so. "The defendant," said Lord Tenterden, "may have been induced to enter into this

contract by reason of the personal confidence which he reposed in Sharpe, and therefore have agreed to pay money in advance. The latter, therefore, having said it was impossible for him to perform the contract, the defendant had a right to object to its being performed by any other person, and to say that he contracted with Sharpe alone, and not with any other person."

It must be noticed, however, that liabilities may be assigned by consent of all the parties. And it might be provided in the original contract that the assignees and heirs of the promisor should be bound if the contract relates to the sale of land. In cases also where the contract is to do work which may be done by any ordinary workman, the Court will not avoid the contract because the work is not done by the contracting person himself. Lord Chief Justice Cockburn, in one judgment, and referring to the case of carriage hire just quoted, said:

"When a person contracts with another to do work or perform service, and it can be inferred that the person employed has been selected with reference to his individual skill, competency, or other personal qualification, the inability or unwillingness of the party so employed to execute the work or perform the service is a sufficient answer to any demand by a stranger to the original contract of the performance of it by the other party, and entitles the latter to treat the contract as at an end, notwithstanding that the person tendered to take the place of the contracting party may be equally well qualified to do the service. Personal performance is in such a case of the essence of the contract, which, consequently, cannot in its absence be enforced against an unwilling party. But this principle appears to us inapplicable in the present instance (the repair of railway waggons), inasmuch as we cannot suppose that in stipulating for the repair of these waggons by the company—a rough description of work which ordinary workmen conversant with the business would be perfectly able to execute—the defendants attached any importance to whether the repairs were done by the company, or by any one with whom the company might enter into a subsidiary contract to do the work."

3. ASSIGNMENT BY STATUTE. In addition to the provision of the Judicature Act with regard to assignment (see above), there are a few special statutory exceptions to the Common Law rule: (1) With regard to LIFE INSURANCE POLICIES it is provided by 30 and 31 Vict., c. 144, that they may be assigned in a form prescribed by the Act, and that when this is done the assignee may sue in his own name. (2) POLICIES OF MARINE INSURANCE are somewhat similarly assignable by reason of 31 and 32 Vict., c. 86, but the statute contains no provision as to notice. In both cases the assignee takes the policy subject to all such defences as would have been available against the assignor. (3) SHARES IN PUBLIC COMPANIES are assignable under the Companies' Acts; indeed, as Lord Blackburn said in one case, "the great object when joint stock companies were established was that the shares should be easily transferred." (4) Also MORTGAGE DEBENTURES issued by companies under the Mortgage Debenture Act are assignable in the form prescribed in the Act.

DISCHARGE OF CONTRACT.

We have now to notice the means by which the obligations created by a contract are discharged. This may be done by the mutual agreement of the parties, by the performance of the contract, by a breach of the contract (which gives a right of action to the aggrieved party to the contract), by circumstances arising which make the performance of the contract impossible, and, in some cases, by operation of law.

1. BY MUTUAL AGREEMENT OF THE PARTIES. While a simple contract is still executory (an executory contract is one which is not completed; an executed contract which is completed or performed), it may before breach be discharged by parol agreement. But the consent of both parties is necessary. This is called waiver or release, and it is not necessary that the agreement should be in writing. But if the contract has been executed on one side, it cannot be discharged by a parol waiver without consideration or deed. As to contracts under seal, the old Common Law rule was that it could only be discharged by agreement expressed under seal; or as it was sometimes expressed, "a contract must be discharged in the same form as that in which it is made." This is still the rule, excepting that it has been somewhat modified by the Judicature Act. The Equity Courts were accustomed to grant an injunction to restrain action upon a deed in breach of a subsequent parol agreement, and the same principle is now recognised in all the Courts. Parol or simple contracts may be set aside either by writing or word of mouth, except in the cases where by law the original contract must be in writing. In these cases a total recession may be by word of mouth, but if a new contract is being substituted for the old, then this must be in writing.

2. BY SUBSTITUTED AGREEMENT. When the original contract is so altered by agreement between the parties that a new contract is created, the old one is discharged. The same result follows when a new party is introduced by agreement. These rules are well illustrated in the following cases:—

Mr. Neats entered into a contract whereby Mr. Thornhill was to build for him six houses and complete them by a given date or pay a penalty. But while the work was in progress it was mutually agreed that Thornhill should do other work at the houses, and it was impossible if this work was to be done to complete the houses in the stipulated time. It was held that the second agreement was so inconsistent with the first that it amounted to a waiver of the undertaking that a sum should be paid for the delay.

Mr. Hart, an officer serving in the King's forces in India, deposited money with a firm of bankers trading as Alexander & Co. Henry Alexander, one of the partners, retired. Hart continued to trade with the firm, and had notice of the retirement of the partner mentioned. Some years later Alexander & Co. failed. Thereupon Hart sued Henry Alexander for the sum of money due to him by the firm. It was held that he could not recover. The fact that he had continued to bank with the firm after notice of the defendant's retirement amounted to a recession of the original contract and to the formation of a new one. Baron Parke said, "If one partner goes out of a firm and another come in, the debts of the old firm may, by the consent of all the three parties—the creditor, the old firm, and the new firm—be transferred to the new firm."

The waiver of the old contract may be either expressly stated, or, as it was in this case, implied from the conduct of the parties.

3. BY IMPOSSIBILITY OF PERFORMANCE. Circumstances sometimes arise, after the formation of a contract, which make its performance an impossibility. As a rule such impossibility does not exempt the promisor from liability, for he might have guarded himself by the terms of the contract. Thus, if a man enters into a covenant to keep a house in good repair, and the house be accidentally burnt down, he is liable; or if a merchant undertakes to deliver a cargo on a certain quay by a given date, and is hindered by a dock labourers' strike, he is liable. But in each case the contracting party may protect himself by a clause in the contract. But there are *exceptions to the general rule*, and these may be treated under the headings Act of God and Legal Impossibilities.

4. BY ACT OF GOD. Act of God is a phrase used by lawyers to indicate "a direct, violent, sudden, and irresistible act of nature, which could not, by any reasonable care, have been foreseen or resisted," such as sudden severe storms, tempests and lightning. This is one of the few defences open to a common carrier who fails to safely deliver goods; he is always freed from liability if he can show that an act of God, as here defined, proved the sole, direct and irresistible cause of the loss. But the carrier must show that the loss could by no reasonable precaution under the circumstances have been prevented. It has been held that fire and fog do not come under the definition "Act of God." In all contracts for personal service the Act of God is taken to excuse the promisor unless the exact contrary appear on the face of the contract. Thus in a contract between master and servant, the contract is ended by the death of the master, though that occur before the end of the specified period. So if an actor, or public singer, or lecturer be taken suddenly ill, his non-appearance would not give rise to an action, but his negligence in not giving the earliest possible notice of his illness would do so. And such an illness as

renders a person unfit to do the public work he has contracted to do, gives to the other party the right of rescinding the contract.

Messrs. Spiers and Pond, in the year 1874, engaged Madame Poussard to sing at the Criterion Theatre. She was to take an important part in a new French opera, and the engagement was for three months. The first performance was fixed for November 28th, and Madame Poussard attended some rehearsals. But she was suddenly attacked with illness and could not attend any of the rehearsals in the final week, when alone all the music had been received from the composer. Nor could she attend on the first four days of the performance, and her place was taken by another lady. On the fifth day Madame Poussard tendered her services, but they were refused. She brought an action, but it was held that she could not recover.

5. BY LEGAL IMPOSSIBILITIES. The rule is that where the impossibility is caused by some change in the law occurring after the formation of the contract, the promisor is discharged. In one case a Mr. Bailey had leased from a Mr. de Crespigny, at Camberwell, a piece of land for eighty-nine years. Mr. de Crespigny was also the owner of an adjoining piece of land, and he had covenanted that neither he nor his assignees would put up any buildings thereon. But soon afterwards the London, Brighton and South Coast Railway Company obtained an Act of Parliament authorising them to put up buildings on that piece of land, which they proceeded to do. Mr. Bailey thereupon brought an action for damage against Mr. de Crespigny, but he failed. It was held that the defendant was discharged from his covenant by the subsequent Act of Parliament, which compelled him to assign to the railway company, and so put it out of his power to perform the covenant. "The legislature, by compelling the defendant to part with his land to a railway company," said Mr. Justice Hannen, "whom he could not bind by any stipulation, as he could an assignee chosen by himself, has created a new kind of assign, such as was not in the contemplation of the parties when the contract was entered into. To hold the defendant responsible for the acts of such an assignee is to make an entirely new contract for the parties."

6. BY DESTRUCTION OF THE SPECIFIC OBJECT. In contracts where the continued existence of a particular thing is essential to the performance, its destruction, if owing to fault of neither party, is a discharge. In 1861 Mr. Caldwell, the proprietor of the Surrey Gardens and Music Hall in South London, let them for four nights to Mr. Taylor, who desired to give entertainments there. Before the date arrived an accidental fire occurred and the place was quite destroyed. Mr. Taylor, who had incurred a good deal of expense in making the necessary preparation, thought Mr. Caldwell ought to pay damages, and sued him. The decision, however, was in Mr. Caldwell's favour, the Court saying, that "in the absence of any express or implied warranty that the thing shall exist, the contract is not to be construed as a positive contract, but as subject to an implied condition that the parties shall be excused in case, before breach, performance becomes impossible from the perishing of the thing without default of the contractor."

Another example of this rule of law may be found useful. A firm, Appleby & Co., contracted to erect certain machinery on the premises of Mr. Myers, the price to be paid on completion of the work. When some of the work had been completed and the remainder was in progress, the premises, with all the machinery and materials thereon, were destroyed by accidental fire. It was held that both parties were excused from further performance of the contract, and that no liability attached to either side.

7. BY PERFORMANCE. Every contract is fully discharged when all parties thereto have fulfilled their obligations—everything has been done that could be required to be done under the contract. But one or two points have to be noticed. The performance must be in strict conformity with the terms of the contract. Thus in the case of the sale of goods, a seller does not perform the contract by delivering either a larger or a smaller quantity of goods than that mentioned in the contract. Mr. Mills ordered four dozen bottles of wine from Mr. Hart, who sent eight dozen. Mr. Mills refused to keep the lot, but retained thirteen bottles, sending the remainder back. Mr. Hart thereupon sued Mr. Mills for the price of four dozen. It was held that the defendant, by retaining the thirteen bottles, had not acquiesced in the misperformance of the contract, and that the plaintiff could not compel Mr. Mills to carry out the original contract. The defendant paid the price of the thirteen bottles, and this of course went to the plaintiff, the Court saying, "The defendant orders two dozens of each wine and you send four; then he had a right to send back all; he sends back part. What is it but a new contract as to the part he keeps?"

8. BY PAYMENT. Where a contract depends upon the payment of a sum of money, the payment of such sum is, of course, a good discharge, or in other words is *accord and satisfaction*. So if in substitution of a contract a new contract is entered into which stipulates for the payment of a certain sum, the payment of that sum is a good discharge. Or if a person agrees with another that he will forgo a right of action in consideration of the payment of a specified sum, the payment of that sum is again a good discharge.

But the *payment of a smaller sum* in satisfaction of a larger is not discharge of a debt. **This is an important point for business people to consider**, and it is one that is often overlooked. Thus, if A owes B a sum of £8, and B, in a moment of generosity, accepts £5 in settlement, and gives a receipt for £5, saying it is in full discharge, this does not prevent B at some future time, or his personal representative in the case of his death, suing for the other £3. This is because there is no consideration for the acceptance of the smaller amount, and therefore it is a *nudum pactum* ("a bare agreement"). But if there be any benefit to the creditor thrown in, that will turn the scale, and give sufficient consideration to support the agreement. So if any new agreement is substituted, as for instance the handing over of a book, or piece of furniture, irrespective of its value, in settlement of a debt, and it is handed over, that will be a good discharge; or the acceptance of a negotiable instrument—a cheque or bill of exchange—in settlement of a debt, although it be for a less sum than the original debt, is a good discharge, for that sets up a new contract between the parties. It may be noticed, too, that the payment of a smaller sum may be discharge for a larger one, will be a good discharge if the receipt in full satisfaction is given under seal, for as we have seen a contract under seal needs no consideration. (See *Debt.*)

9. BY TENDER. A promisor in a contract may be quite ready and willing to fulfil his obligation, but may be prevented by the refusal of the other party. In such a case it is the duty of the promisor to offer to fulfil his promise, which is called a tender. Thus one Startup contracted to deliver to Mr. Macdonald ten tons of linseed oil within the last fourteen days of March. He tendered them on the evening of March 31st, and they were refused on the ground that this was an unreasonable hour. Mr. Startup then brought an action and succeeded, it being held that he had tendered the oil within the period specified in the contract. If the obligation consists in the *payment of money*, it is the duty of the promisor to tender the exact amount in

Legal tender. Bank of England notes are legal tender for any amount above £5 (except in the case of the Bank of England itself, which must on request pay in gold). Gold coins are also legal tender to any amount; silver coins are legal tender up to forty shillings; bronze coins up to twelve pence.

The money must be actually produced unless the creditor expressly dispenses with the tender. The tender must also be unconditional, but tender under protest is a valid tender. When a promisor has made a tender and it has been refused, there is not a discharge of the debt, but it puts the creditor in the wrong. No interest is recoverable after such a tender, even though the contract provides for it. If the creditor sues and the amount tendered is paid into court, not only can he get no costs, but will have to pay those incurred by the debtor.

10. BY BREACH. It is not every breach of a contract which operates as a discharge. But if one of the parties to a contract gives notice that he does not intend to fulfil his obligation, that discharges the other, and gives him the immediate right of action. A Mr. Delatour engaged Mr. Hochster to act as his courier upon a long tour. The services were to begin on June 1st, but before that date Mr. Delatour altered his mind and informed Mr. Hochster that he would not require his services. Mr. Hochster at once began an action, though the 1st of June had not arrived, and the Court said he was entitled to do so, and said, "Where there is a contract to do an act on a future day, there is a relation constituted between the parties in the meantime by the contract, and they implied by promise that in the meantime neither will do anything to the prejudice of the other inconsistent with that relation." A similar conclusion was arrived at when Miss Frost sued Mr. Knight for breach of his promise to marry. The promise had been to marry the plaintiff on the death of the defendant's father, but before that event occurred, Mr. Knight had announced his intention of not fulfilling his promise, and had broken off the engagement. Miss Frost at once began an action, and she recovered damages. "The promisee," said Lord Chief Justice Cockburn, "has an inchoate right to the performance of the bargain, which becomes complete when the time for the performance has arrived. In the meantime he has a right to have the contract kept open as a subsisting and effective contract. Its unimpaired and unimpeached efficacy may be essential to all his interests. His right acquired under it may be dealt with by him in various ways for his benefit and advantage." But in all such cases the remuneration must have reference to the entire contract and not to part of it, and if the promisee still insists on a performance, he cannot take the refusal as a discharge. Another breach which acts as a discharge is where one of the parties by his act or deed makes the performance of the contract impossible. Familiar examples are where a man has promised marriage to a woman at a certain date, but before that time has married some one else; or where a man has contracted to give a lease of certain property, but before completing the lease has sold the property.

11. BY OPERATION OF LAW. A contract is discharged by the judgment of a court of law. A simple contract is discharged by a contract under deed, between the same parties on the same subject matter. Where a contract in writing has been altered by one of the parties without the consent of the others, those others are discharged from their liabilities. When a bankrupt has obtained an order of discharge he is discharged from liability on contracts existing at the time of his bankruptcy, as to which see the special section of this work relating to bankruptcy.

REMEDIES FOR BREACH OF CONTRACT.

1. ACTION FOR DAMAGES is the most usual remedy for breach of contract. As to the mode of starting such action, reference should be made to "Procedure in the Courts," p. 477. The damages claimed should be those which represent the loss sustained, for, as Baron Parke expressed it, "the rule of the common law is, that where a party sustains a loss by reason of a breach of contract, he is, so far as money can do it, to be placed in the same situation, with respect to damages, as if the contract had been performed." But there is, as the same learned judge pointed out, an exception in the case of the sale of real property. "Contracts for the sale of real estate are merely on condition that the vendor has a good title; so that, when a person contracts to sell real property, there is an implied understanding that, if he fail to make a good title, the only damages recoverable are the expenses which the vendee may be put to in investigating the title." Damages cannot be recovered if they are too remote, that is, only such loss can be recovered as may be reasonably supposed to have been within the contemplation of the parties when the contract was entered into. Nor must they be based on the intention of punishing the party who has committed the breach. But in assessing the damages, respect may be paid to prospective loss arising from the refusal of the defendant to perform his contract.

2. SPECIFIC PERFORMANCE of a contract will sometimes be ordered by the Courts. Formerly this remedy could only be obtained in the Courts of Equity, but since the Judicature Act it is obtainable in all courts. Specific performance is most commonly resorted to, and most readily granted by the courts, in matters affecting the sale of land, and it will sometimes be granted though the provisions of the Statute of Frauds have not been rigidly complied with. Land is of a limited extent, and a purchaser may have set his heart upon possessing some particular property, or have chosen it from considerations of health, neighbourhood, or business convenience. In such a case, damages at law would be an inadequate recompense.

The remedy of specific performance is not confined to contracts for the sale of land, but is extended to all contracts where damages would be an insufficient or inadequate remedy, e.g. contracts for the sale of a patent, or of rare and curious works of art, or of shares in a private company. In all these cases damages would be an inadequate remedy, either because the things are limited in number and cannot be bought in the open market, or because, as in the case of a patent, it would be impossible to calculate the profits arising from its use, and therefore it would be impossible to assess the damages.

In no case in which damages afford an adequate remedy will specific performance be granted. "The remedy by specific performance," said Lord Justice Kay, "was invented and has been cautiously applied, in order to meet cases where the ordinary remedy by action for damages is not an adequate compensation for breach of contract. The jurisdiction to compel specific performance has always been treated as discretionary, and confined within well-known rules."

> Generally speaking, the effect of these rules is that specific performance will not be granted (1) in money-lending transactions, (2) in actions where the plaintiff would be adequately compensated by the payment of damages, as in a contract to buy shares, and (3) in cases where the Court could not enforce an order for specific performance, as where the land claimed by the plaintiff is situate abroad.

3. INJUNCTION. In some cases the courts will grant the remedy of injunction. This remedy is available in cases where the court could not enforce specific performance. Especially is it valuable for the enforcement of negative covenants. Thus, where a tenant covenanted not to carry on the trade of a retailer of wine, the court granted an injunction to restrain him from doing so. Sometimes it will be granted to enforce the negative covenants in a contract the positive covenants of which cannot be enforced by specific performance. An example may be found in the case of actors and public singers who have contracted to act or sing at a certain place and have expressly agreed not to act or sing elsewhere.

> The best known case is that in which Mdlle. Wagner had agreed with Mr. Benjamin Lumley that she would sing at his theatre, Her Majesty's, in London, during a stated period of time, and that during that time she would not sing elsewhere. She afterwards refused to sing at the theatre, and arranged with another theatre proprietor to sing elsewhere. Mr. Lumley then brought an action against her, and Lord Chancellor St. Leonards refused to make an order of specific performance, for it could not make a vocalist sing against her will, but granted an injunction restraining her from singing elsewhere.

The Lord Chancellor said, "Whenever this court has not proper jurisdiction to enforce specific performance, it operates to bind men's consciences, as far as they can be bound, to a true and liberal performance of their agreements; and it will not suffer them to depart from their contracts at their pleasure, leaving the party with whom they have contracted to the mere chance of any damages which a jury may give. The exercise of this jurisdiction has, I believe, had a wholesome tendency towards the maintenance of that good faith which exists in this country to a much greater extent, perhaps, than in any other."

THE STAMPING OF DOCUMENTS. Although not strictly a portion of the law of contracts, it is desirable to say something here concerning the stamping of documents. Elsewhere in this work will be found a list of the chief documents which require stamping, the value of the stamps to be attached, and whether such stamping may or may not be by adhesive stamps (see pp. 562–3 and 682. The important point to remember here is, that if a document needs stamping (as, for instance, all agreements do), it cannot be produced in court for any purpose (other than to prove fraud or a criminal offence), until it has been properly stamped, and the penalty for stamping a document after date is the substantial one of £10. There is also in such cases another fee of £1 to go to the officer of the court, and it not unusually happens that the subject matter in dispute is of less value than the penalty for stamping amounts to. Besides, certain instruments cannot legally be stamped after execution. (Refer to "Unstamped Documents" p. 684). When an adhesive stamp is used, the person who stamps the document must cancel the stamp by writing either his name or initials across it.

THE LAW OF TORTS.

WHAT IS MEANT BY TORTS? A tort (from the Latin word *tortus*—twisted, tortured) means a wrong to person or property, for which damages may be recovered in a civil Court. The word as used by the lawyers has received many definitions. One is that it is a wrong independent of contract, and that is the definition adopted in the Common Law Procedure Act, 1852. Sir Frederick Pollock takes up twenty pages of his admirable work on *Torts*, in defining, or rather in indicating, what a tort is. But the definition already quoted is sufficient for our present purpose. A tort may be a harmful, unlawful act, an omission of specific duty, a violation of another right, or an act of omission causing harm which might with due diligence have been foreseen and prevented; it may consist in "not avoiding or preventing harm which the party was bound, absolutely or within limits, to avoid or prevent." It is quite possible for the same act to constitute a breach of contract, a tort and a crime. A familiar instance is where a railway accident happens, say, through the criminal negligence of a signalman. Here the signalman is himself guilty of a crime, and may be indicted for manslaughter, while a passenger has two rights of action against the Railway Company, one for not fulfilling their contract to carry him safely, and one for a tort. And in the case of libel, to take another example, the person aggrieved may often proceed either in the criminal or civil courts.

ESSENTIALS OF TORT. It is sometimes thought by laymen that the mere doing of an act which causes another person to suffer damage will enable the injured party to bring an action for damages. But this is not the case. No action may be brought unless some right belonging to the plaintiff has been invaded by a wrongful act or omission on the part of the defendant, or of some person for whom the defendant is legally responsible. This may be shown best by three examples.

(1) In the reign of Henry IV. a worthy schoolmaster at Gloucester had been carrying on his work for some time when a rival appeared and started another school next door. The result was that the master of the original school found his profit diminishing, he got only twelve pence a quarter from each pupil instead of forty pence as formerly, and he brought an action against the new comer to recover damages. But he failed.

(2) A certain miller was dependent on a good flow of water to keep his millwheels turning. The local board of health sank a well for the purpose of supplying the inhabitants of the district with water. They had a perfect right to do this, though the unfortunate miller suffered considerably. It was held that he could not recover anything.

(3) At a certain election the returning officer wrongfully refused to record the vote of the plaintiff, a legally qualified voter. The candidate for whom he had intended to vote was nevertheless elected. In the action the defendant, the returning officer, pleaded that inasmuch as the result of the poll would have been the same, the plaintiff had suffered no damage by the rejection of his vote. Nevertheless the plaintiff won the action.

The first two of these cases establish the rule that mere loss or damage to the plaintiff, unaccompanied by any *wrongful* act or omission, is never a ground for an action. The third case establishes a rule, which is subject to a few exceptions, that even when no damage has been suffered an action may be brought by a person whose rights have been wrongfully invaded. The few exceptions to this rule are called by lawyers, "cases where damage is the gist of the action." They include actions for nuisance, negligence, and deceit, and most actions for slander.

TRESPASS.

1. TRESPASS TO REAL PROPERTY. A familiar form of tort is that known as trespass. Trespass may be either to land, or property, or to the person. A trespass on land "is an entry on another man's ground without a lawful authority, and doing some damage, however inconsiderable, to his real property. For the right of *meum* and *tuum*, or property in lands, being once established, it follows as a necessary consequence that this right must be exclusive; that is, that the owner may restrain to himself the sole use and occupation of his soil; every entry, therefore, thereon, without the owner's leave, and especially if contrary to his express orders, is a trespass or transgression" (Blackstone).

The proper person to bring an action for trespass is the person who is either in possession of the property at the time, or the person entitled to the immediate possession thereof. Thus, where the property is in the hands of a tenant, he, and not his landlord, must bring the action. But if it is in the hands of a caretaker, his master can bring the action, as he is entitled to the immediate possession of the property. To a certain extent the possessor of the property and his servants are allowed to take the law into their own hands. They may eject the trespasser; but they must not use more force than is reasonably necessary for the purpose, and they must give him the opportunity of retiring before they employ any force. Otherwise they will be guilty of an assault, which is a trespass to the person that may be treated both as an actionable tort and as a crime.

2. "TRESPASSERS WILL BE PROSECUTED." Every one is familiar with the notice boards often erected by the side of apparently well-worn roads cautioning people against using them. They may read simply "Private, no road," as to which a recently retired judge said he always went on these roads with the utmost confidence, for he concluded that some one was endeavouring to stop an old right of footway. Or they may read "Trespassers will be prosecuted," which Professor Maitland says is a "wooden falsehood," for mere trespassing on land is not a criminal offence, and therefore a trespasser cannot be prosecuted, though he may be liable to a civil action. Therefore the only meaning of the latter form of notice is that the man in possession may begin an action against him. There are, however, two forms of trespass in which the offender may be prosecuted. The first is trespassing in search of game. The second is doing wilful damage in connection with trespass. Thus, when Mr. G., desiring to make a short cut, walked across Mr. C.'s grass field for a distance of 130 yards, passing warning notice boards on the way, and persisted in going on after Mr. C. had asked him to retire, and did damage (as the justices estimated) to the value of sixpence, he was fined and the High Court upheld the conviction. In such cases the evidence of wilful intent to do damage does not need to be strong, for as Lord Justice Blackburn once said, "malice may be deemed to exist where any person does an act injurious to another without lawful excuse." But it should be noticed that there must in such cases be injury to the land or to cultivated crops, or to the fencing or other property. For instance, damage to mushrooms (unless they are cultivated) will not be a criminal offence.

3. REMEDIES FOR TRESPASS. It does not follow, however, that there is no remedy for trespass. Just as every Englishman's house is his castle, so every man has the right to the exclusive use of his own close, and for any entry upon it an action will lie. "By the laws of England," said a body of judges many years ago, "every invasion of private property, be it ever so minute, is a trespass. No man can set his foot upon my ground without my license, but he is liable to an action, though the damage be nothing." It is very seldom, however, that any action is started against a person for trespass upon a private road or footpath, unless it be done wilfully to annoy the possessor, for damages would be strictly nominal if awarded at all. In connection with trespass, it should be noticed that a man is liable for damages if he allows his cattle to stray on the lands of another. As a rule, a man is bound to so fence his own land that his cattle cannot escape, but he need not fence against his neighbour's cattle. Usage and local customs may alter this rule, and all railway companies must fence their own lands, and if they fail to do so, and cattle stray from rightful custody upon the line, and are injured, damages may be claimed.

4. TRESPASS TO PERSONAL PROPERTY. What are known as the trespass and conversion of personal property occur when a person wrongfully interferes with and exercises dominion over the goods of another, thereby wrongfully depriving him of their use and enjoyment. Here again the action must be brought by the person entitled to the immediate possession of the property, who need not be the true owner. When a person finds lost property, other than *treasure trove*, he must give it up to the true owner; but he has the right to its possession as against every one except the true owner.

> Thus in the case of Armory *v.* Delamirie, a chimney-sweep found a jewel. He took it to a pawnbroker, who offered him three half-pence for it. The offer being refused, the defendant Delamirie refused to give up the jewel. It was held that the finder, i.e. the possessor, had a remedy against all but the true owner, for the finder is the owner until the true owner makes his appearance, and that, on non-production, the jewels abstracted must be presumed to be of the finest water, because it is a maxim of the law that every presumption is made against a wrong doer. In this case the pawnbroker was guilty of conversion.

A person is liable for conversion of goods if, dealing with them at the request of the apparent owner, his dealing purports to involve a transfer of the supposed property in the goods. For instance, if a maid stole some silk from her mistress and sent it to her dressmaker to be made into a dress, afterwards to be returned to her, the dressmaker would not be liable in conversion; if, however, the maid directed a third person to sell the silk, that third person would be liable in conversion, even though she believed the silk to belong to the maid. An auctioneer is liable in conversion, when he sells the goods of another, even though he had no notice of the apparent owner's want of title. It has been held that an auctioneer selling the goods which had been assigned under a Bill of Sale by the instructions of the assignee was liable in conversion, where the assignee had no legal right to give such instructions.

WHEN CAN A WRONG-DOER GIVE A TITLE? The foregoing are examples of the legal rule, that no person can give a better title to property than he himself possesses. But there are exceptions to the rule, and in two cases a transferor can give a better title to an article than he himself possesses. They are the cases of negotiable instruments and sale in market overt. Where a person has given value for a Bill of Exchange or other negotiable instrument, and is unaware that it has been stolen, he obtains a good title to it and may sue upon it, although, of course, the thief or anyone aware of the theft could not do so. This only applies to *negotiable* instruments, so that where a cheque has been marked "not negotiable," a *bona fide* holder for value would have no more right to sue on it than the thief had. (See under "Cheques" in *Commercial Guide.*)

SALE IN MARKET OVERT. The second exception is in the case of goods sold in market overt. If a purchaser buys goods in market overt, *bona fide*, and without notice of any defect or want of title on the part of the seller, he acquires a good title to that which he buys. There is, however, a limitation to the application of the rule, as it is provided by the Sale of Goods Act, 1893, that if the goods have been stolen, and the thief has been prosecuted to conviction, the title to the goods reverts to the original owner.

> "Market overt," or open market, is a name given to certain markets and shops which have acquired the privilege by grant or custom. All shops in the *City* of London are markets overt for the sale of the class of goods usually dealt with by them, but not for the sale of other kinds of goods. Outside the city few, if any, shops have the privilege, though country market places usually have. The sale in the market overt must be a genuine and open sale, otherwise the privilege is lost.

Where goods have been obtained by fraudulent means, amounting to larceny, the thief has no title, and can give none except by selling in market overt; but where goods have been obtained by fraud, the person who has so obtained them may either have no title at all, or a voidable title, according to the nature of the transaction. If the nature of the fraud be such that there never was a contract between the parties, as for instance, if A obtains goods from B by falsely pretending to be X, then the person who so obtains the goods has no title at all and can give none. But if the person defrauded really intended to part with the property in, and possession of, the goods, although induced to do so by fraud, there is a contract which he may affirm or disaffirm at his election. Hence the person who obtains the goods has a voidable title, and can give a good title to an innocent purchaser while the matter is in suspense, that is, where the sale takes place before the defrauded person repudiates the contract or takes steps to recover the goods.

> "If," says Lord Cairns, "the chattel has come into the hands of the person who professed to sell it, by a *de facto* contract, that is to say, a contract which is purported to pass the property to him from the owner of the property, then the purchaser will obtain a good title, even although afterwards it should appear that the true circumstances connected with that contract would enable the original owner of the goods to reduce it and set it aside."

SALE OF HORSES IN MARKET OVERT. Where a horse is stolen and is afterwards sold in market overt, even to a *bona fide* purchaser for value, the property will not pass unless certain formalities are complied with. The horse must be exposed in open market for one hour between 10 a.m. and sunset, and an exact description of buyer, seller, horse and terms of contract must be entered in the book-keeper's book. If these formalities have been duly observed, the rightful owner cannot recover the horse from a *bona fide* purchaser unless he, within six months of the sale, refunds to the purchaser the sum the latter has paid.

RE-CAPTION AND REPLEVIN. Where a person has been wrongfully deprived of goods, other than negotiable instruments in the hands of a *bona fide* holder for value, provided they have not meantime been sold to an innocent purchaser in market overt, he is not always bound to go to law to recover them. He may take possession of them wherever he finds them if he can manage to do so without creating a disturbance or breach of the peace; this is the right of *re-caption.*

The action of *replevin* is one for the return or replevying of goods unlawfully distrained or seized under colour of distress or otherwise. The owner obtains the return of his goods on giving security to the Registrar of the District County Court, to prosecute an action of replevin forthwith, and to return the goods if a return be ordered by the Court. The action must be brought within one week in the High Court, but a period of one month is allowed before action brought in the County Court. (See under *Landlord and Tenant.*)

OTHER WRONGS AND LIMITATION OF ACTIONS. Other wrongs to personal property are the infringement of trade marks, the infringement of copyright, and the infringement of patents, as to each of which see the

different sections dealing with these matters. There are certain limitations as to the period in which actions may be brought. Actions for slander must be brought within two years, injuries to the person within four years, all other wrongs within six years. Actions against magistrates and constables or others in the execution of their public duty must be brought within six months. The Statute does not begin to run "until the time when such fraud shall or with reasonable diligence might have been first known or discovered." Claimants who are infants, under coverture or of unsound mind, may bring their actions within six years after their disability has ceased. But in no case can any such action be brought after thirty years, except in the case of concealed fraud.

DEFAMATION OF CHARACTER.

No branch of the law of torts is more interesting or more often of practical importance than that relating to libel and slander, or defamation of character. Every person has a legal right to earn the good-will and respect of his fellow-men. If, therefore, someone publishes concerning him a defamatory statement which causes him to be shunned by others, such publication is an invasion of his legal right, and generally a cause for action.

1. DISTINCTION BETWEEN LIBEL AND SLANDER. If in writing, printing, or in other more or less permanent form the defamation is a libel; if in spoken words or meaning gestures, it is slander.

There is another distinction between libel and slander in the matter of the consequences that flow from the making of the defamatory statement. Libel may be treated as a tort or as a crime, generally at the option of the person libelled; whereas slander is only a tort, unless perchance it happens to be obscene or blasphemous. Moreover, in an action for slander, the plaintiff must generally prove that he has suffered some special damage by reason of the defamatory statement. This is not the case in an action the libel.

2. PUBLICATION ESSENTIAL. No action will lie for libel or slander unless there be publication. Publication is a communication of the libellous or slanderous words to some one other than the plaintiff. To write a defamatory letter and send it enclosed in an envelope to the person himself would not be publication, and if the second person himself received the letter and no one else saw it, no action would be maintainable, but the person writing and sending the letter might be prosecuted criminally, as such a letter tends to a breach of the peace. It would be different if the letter was dictated and then forwarded. The letter would necessarily have been published, and its contents communicated to the dictatee. So again, it would be libel if a defamatory letter were written and posted with the knowledge that it would probably be opened by plaintiff's clerk or secretary. The defamatory statement would be a libel also if written on a post-card, and this is a point which irate correspondents who use post-cards should bear in mind. A husband and wife are "one;" therefore the statement made orally or in writing by a husband to his wife, defamatory of X, is not libel or slander, as there is no publication. There is publication, however, if a defamatory letter be sent to a wife about her husband.

3. WHAT THE PLAINTIFF MUST PROVE. The plaintiff must prove that the defamatory publication was aimed at him individually. Thus, in a certain case a person said to three of the witnesses: "One of you three is perjured." It was held that none of the three could bring an action, as the defamatory statement admittedly only referred to one of them, and there was no evidence available to show which one that was. Moreover, a person is at absolute liberty to publish a defamatory statement concerning any considerable class of persons. Thus, if you said or wrote "All old women are liars." No old woman could bring an action against you. But if the class is such a small one that all its members can be easily ascertained or identified, any of them can bring the action. Thus, if the words in the first example given had been "*All* you three are perjured," the defamatory statement would undoubtedly be actionable.

You cannot avoid the consequences of an action for libel or slander by disguising or omitting the plaintiff's name. If he can prove to the satisfaction of the jury that he is the individual aimed at, he has a right of action against you. Even words of praise, used ironically, are actionable if their hidden meaning is defamatory; but in such case the plaintiff must set forth in his statement of claim, the special meaning complained of, with an averment that the persons to whom it was published had knowledge of facts which would lead them to understand it in its defamatory sense; for unless he does this the judge will have to decide whether the words complained of are defamatory in their ordinary and natural meaning, and if he thinks they are not, the action will fail. Generally speaking, the judge has first to decide whether the words are of such a character that an ordinary reasonable person would consider them defamatory; and if so, the jury has to decide whether in the particular circumstances they actually bore that meaning. If the judge decides against the plaintiff the matter will be withdrawn from the jury and the plaintiff will lose his case.

4. WHEN SPECIAL DAMAGE MUST BE PROVED. In libel, an action lies on mere proof of publication and without proof of special damage; in slander, with four exceptions, noticed hereafter, special damages are essential to an action. Libel has always been regarded as a greater injury than oral defamation. "Oral slander is sudden and fleeting, whereas libel is deliberate, permanent, and in general propagated further. Hence a vague imputation of dishonesty, if oral, is not actionable, unless the imputation had reference to the business of the person defamed, and had the effect of damaging him in it. But such an imputation, if published in writing or in print, even without reference to his business, and without proof of any evil resulting from it, is actionable." (J. W. Smith.)

The four kinds of slander in which proof of this special damage is not necessary are as follows:—

> (1) Where the words accuse plaintiff of having committed a criminal offence. (2) Where the words allege that the plaintiff is suffering from certain disgraceful diseases or the plague. (3) Where the words affect the plaintiff in his trade or profession; for instance, to say that a surgeon is unskilful. (4) Where, the plaintiff being a woman or a girl, the words impute unchastity. This latter exception is the creation of a statute—"The Slander of Women Act, 1891."

As regards the first exception, it must be noticed that the allegation of *any* criminal offence comes within it, it need not be an offence indictable at assizes. As regards the second, the allegation must be, that the person is, at the time, suffering from a certain kind of disease; an allegation that he did, at some previous time, suffer from it is not sufficient. The reason of the difference is plain, as in one case the imputation causes a person to be shunned by society, but not so in the other. As regards the third exception, the test seems to be "will the words spoken hinder the man in his means of livelihood?" but the words must affect the man in his calling and be spoken in relation thereto.

5. REPETITION OF LIBEL. A person who repeats a libel or a slander is liable. So a news-agent who sells a paper containing a libel is *prima facie* liable. But both Lord Esher and Lord Justice Bowen agreed in the case of Emmens *v.* Pottle that a news-vendor would not be so liable if he did not know that the newspaper contained a libel; that his ignorance was not due to any negligence on his part; and that he did not know, and had no ground for supposing, that the newspaper was likely to contain libellous matter. The same applies to the owner of a circulating library, when one of the books he circulates contains a libel.

6. DEFENCES: JUSTIFICATION. The following defences are available to a libel action:—(1) Justification. (2) Fair comment. (3) Privilege. (4) Apology—where the libel is contained in a newspaper or other periodical publication. As to the first, *Justification*, if the defendant can

prove that the words complained of are *true*, he has a good defence to a civil action. But the words must be substantially true. For instance, in Bishop *v.* Latimer, a newspaper published a report with the heading "How Lawyer Bishop treats his Clients." The report did furnish an instance where one client of Lawyer Bishop had been ill-served by him, and the case was accurately reported, but it was held that the title was not justified by the facts, and Lawyer Bishop was held to be entitled to damages. The report would be privileged, but the headline was the libel. This is a point not always sufficiently well borne in mind by the conductors of journals prone to give sensational headlines to their paragraphs.

So, again, the plea of justification will not avail the defendant if gross exaggeration be proved. If X, a journalist, libels Z, and Z stigmatises X as "a libellous journalist," he cannot successfully plead justification from this isolated offence. Nor if A accuses B of having been a bankrupt three times, the plea of justification will not avail him, if he can prove that B failed on one occasion only. If, however, the gist of the libel is proved to be in substance correct, and that the inaccuracies produced no different effect on the mind than the strict truth would do, the plea of justification will succeed. In a criminal prosecution for libel, the defence of justification is of no avail unless the accused can prove that the publication of the defamatory words is for the *public benefit*, for "the greater the truth, the greater the libel," unless it is for the public benefit that the truth should be made known.

7. FAIR COMMENT. If the defendant can prove that the words complained of are a fair and *bona fide* comment as a matter of public interest, no action of libel will be maintainable, because fair comment is not defamatory, is not libellous. The judge decides whether the matter is one of public interest, and the jury find whether the comment is in fact unfair, if the judge holds that there is some evidence of the unfairness of the comment. "It is only when the writer goes beyond the limits of fair criticism," said Lord Justice Bowen, "that his criticism passes into the region of libel at all." There must be an attack which touches the character of the plaintiff to constitute libel. You might say with safety that a play is immoral, and be within the limits of fair criticism; a different consequence might ensue if you said the actor was immoral. The right of comment on matters of public interest affords the writer on such matters a great deal of freedom. "Every latitude," said Lord Esher, "must be given to opinion and to prejudice, and then an ordinary set of men, with ordinary judgment, must say whether any fair man would have made such a comment. Mere exaggeration or even gross exaggeration would not make the comment unfair. However wrong the opinion expressed may be in point of truth, or however prejudiced the writer, it may still be within the prescribed limit. The question which the jury must consider is this: would any fair man, however prejudiced he may be, however exaggerated or obstinate his views, have said that which this criticism has said?" On the other hand, no criticism is fair which imputes dishonourable conduct, and justification will not avail a defendant unless he can prove that the plaintiff was in fact guilty of such conduct. For instance, an action would lie against a journal which accused a witness in a case as being guilty of perjury.

8. ABSOLUTE PRIVILEGE. The defendant in an action for libel or slander may also plead privilege as a defence. This means that the defamatory words were published in a place or on an occasion of such a nature that no action will lie. It is well to bear in mind that privilege is of two kinds. It may be absolute or qualified. In a case of absolute privilege it is not material whether there may be malice as well. All state, parliamentary, and judicial proceedings are absolutely privileged. A member of Parliament in the House of Commons, a judge, counsel, jury, and a witness in the High Court, may utter slanderous statements about the plaintiff, and even if actuated by malicious motives in doing so, no action would lie, though the observations be irrelevant to the matter in issue or be untrue. This applies to High Courts, but it would not be so altogether in the Inferior Courts. The privilege extends to the Judge of an Inferior Court, provided he has jurisdiction in the matter. The statements of a Justice of the Peace made in office are privileged unless the words are not connected with the matter in issue. This privilege does not extend to the Theatre and Music Hall Licensing Committees of the London County Council, as was shown in the well-known case of the Westminster Aquarium *v.* Parkinson. The proceedings, to secure protection, must be judicial proceedings. In the same way public policy requires that everything said in naval and military and state proceedings, and between counsel, solicitor, and client, should be absolutely privileged.

9. QUALIFIED PRIVILEGE. The distinction between absolute privilege and qualified privilege is that in a case of qualified privilege, if malice be proved, the libel or slander is actionable.

> "An occasion is privileged," said Lord Esher," when the person who makes the communication has a moral duty to make it to the person to whom he does make it, and the person who receives it has an interest in hearing it. Both these conditions must exist in order that the occasion may be privileged."

It is not the legal duty of the master to give a character to his servant, but it is his moral duty to do so, and the person who receives the character has an interest in hearing it. Such communications are privileged, but if it can be shown that the person who made the communication acted maliciously towards the servant, then the matter would be actionable. Fair and impartial reports of proceedings in Parliament or in any Court of Justice, or even on *ex parte* matters, when the aggrieved party is not present or represented, are also privileged, and any public meetings and certain meetings of certain public bodies (if they are open to the public) are also privileged.

10. PRIVILEGED OCCASIONS. The question whether "occasion is privileged" is a *question of law*, and always a matter for the judge. The occasion is privileged if the duty is legal, social, or moral. But it is not sufficient to confer privilege on the person making the communication that he *believed* he owed the duty. At the same time there may be privilege even when the communication is volunteered.

> For instance, I give a servant a good character, I discover afterwards she is a thief, I make a second communication. The second communication is privileged if made without malice. It is so also if a master discharging one of his servants tells others his reason for doing so.

Bona fide communications made on reasonable grounds are privileged (1) "When the circumstances are such as to cast on the defendant the duty of making the communication to a third party" (Lord Lopes), or (2) When there is a common interest between the person who makes the statement and the one to whom it is made. Examples of the former privilege may be found in communications made by a father to his child, a master to his servant, or a servant to his master, a patient to his doctor, or a client to his solicitor. Examples of the second are to be found in communications to relatives concerning family matters, or by a ratepayer to the local authority upon some question affecting the rates, or by a schoolmaster or college tutor to a parent concerning a son. But such communications must be made reasonably, without exaggeration, and to the person directly affected. Yet the presence of a third party will not necessarily destroy the privilege. Thus, at a meeting of poor law guardians, one member made a communication to the others which, in ordinary circumstances, would be privileged; reporters were present, but it was held that their presence did not destroy the privilege, as it was a matter over which the guardian had no control.

> Communications may be made in self-defence, and in reply to an attack from another, but the privilege would be lost if the publication was excessive or disproportionate to the matter in issue. Such excessive publication would be evidence of malice, which would destroy the qualified privilege.

Bona fide, accurate, and impartial reports of proceedings in Courts of Justice, Parliament, and public meetings are

privileged if they are "substantially a fair account of what took place" in court. Privilege will be lost if the publication of proceedings are prohibited by order of the court, or are blasphemous, seditious, or immoral. No comment is privileged until the proceedings terminate. As to privilege in reporting Parliamentary proceedings the law is exactly similar to that with regard to the publication of judicial proceedings.

11. APOLOGY. An apology, however ample, is no defence to an ordinary action for libel; but if the libel has been published in a *newspaper* and an action is brought against those who have the conduct of it, provided the defendants have not been guilty of malice or gross negligence, they are allowed to insert a full apology in the paper and to tender pecuniary compensation to the plaintiff; and if they do this they can plead it as a good defence to the action. It must be borne in mind that where a libel appears in a newspaper or other periodical the injured party may sue the original writer, the editor, the proprietor, the printer, the publisher, the newsvendor, and indeed any one who assists in disseminating it. It would, therefore, be hard indeed if one of such persons, having acted innocently, were not allowed to plead an apology as a defence.

12. MALICE. It is necessary to say a word as to what is meant by malice in actions for libel. In practically every pleading in cases of libel, the lawyers allege that the defendant used the words complained of maliciously. By this they mean that he used the words without legal excuse. But this is not the malice which is alluded to as doing away with qualified privilege. This malice, is malice in fact, that is a disposition to injure another in a spirit of revenge, spite or ill-will. "If," said Lord Justice Brett, (afterwards Lord Esher), "a defendant uses a privileged occasion to gratify his anger or his malice he uses the occasion not for the reason which makes the occasion privileged, but for an indirect and wrong motive. . . . There are certain tests of malice. Malice does not mean malice in law, a term in pleading, but actual malice, that which is popularly called malice. If a man is proved to have stated that which he knew to be false, no one need enquire further. Everybody assumes thenceforth that he was malicious, that he did a wrong thing for some wrong motive. So if it be proved that out of anger, or for some other wrong motive, the defendant has stated as true that which he does not know to be true, and he stated it whether it is true or not, recklessly, by reason of his anger or other motive, the jury may infer that he used the occasion, not for the reason which justifies it, but for the gratification of his anger or other wrong motive."

13. "THE GREATER THE TRUTH, THE GREATER THE LIBEL" Necessarily, but briefly, this old and misleading maxim must be noticed. "In a civil trial," says Dr. Blake Odgers, "the truth of the matters contained in a libel is and always was a perfect answer to the action; the plaintiff was never allowed to recover damages for an injury done to a reputation to which he had no right. But in all criminal proceedings, the truth of the libel by the common law constituted no defence. The maxim used to be 'the greater the truth, the greater the libel,' meaning that the injudicious publication of the truth about A would be more likely to provoke him to a breach of the peace, than if some falsehood were invented about him, which he could easily and completely refute. Accordingly, on a criminal trial, whether of an indictment or an information, no evidence could be received of the truth of the matters charged, not even in mitigation of punishment." This rule has been modified by Lord Campbell's Act, 1843, under which it is a defence to a criminal action to show that the words published were true, if it can also be shown that it was for the public benefit they should be published. The statute does not apply to cases of blasphemous, obscene, or seditious words, and it is always necessary to raise the defence by a special plea of justification.

14. SLANDER OF TITLE AND SLANDER OF GOODS. False statements made maliciously for the purpose of injuring any person's title to property, or of disparaging his goods, are actionable if they cause him special damage. Special damage means any pecuniary loss or the loss of some temporal advantage, not a mere injury to the feelings.

FRAUD.

In considering contracts we have seen that fraud makes any agreement of no effect. We have now to see that fraud of itself gives a right of action against the person guilty of it. The jurist Pothier defined fraud as "any kind of artifice by which one deceives another," and Professor Holland says it is "the intentional determination of the will of another to a decision harmful to his interests, by means of a representation which is neither true nor believed to be true by the person making it." It may be said to be a false representation of an existing fact made with a knowledge of the falsehood, or without belief in its truth, or in reckless disregard whether it be true or false, with the intention that it should be acted upon by the complaining party. No action, however, lies unless damage is the gist of the action; that is to say, there must be fraud and actual damage, and this damage must be the natural and probable cause of plaintiff's action on the faith of the defendant's statement or representation.

1. PROOF OF FRAUD. Fraud is proved when it is shown that a false representation of an existing fact (not of something to be done in the future) has been made (1) knowingly, or (2) without belief in its truth, or (3) recklessly careless whether it be true or false. In the leading case of Derry *v.* Peek, Lord Herschell said, "in my opinion making a false statement through want of care falls far short of, and is a very different thing from fraud, and the same may be said of a false representation honestly believed though on insufficient grounds." Thus, in the case of Angus *v.* Clifford, it was held not to be fraud to make a false statement carelessly, though not recklessly. In this case the false statement relied on was inserted in a prospectus. It stated that the reports of certain engineers were "prepared for the directors," while as a matter of fact they were prepared for the vendors of the property with a view to the formation of the Company. There was, however no evidence that these reports were exaggerated or incorrect.

2. MISTAKE IS NOT FRAUD. A mere statement of opinion, though erroneous, does not constitute fraud. The fact, however, that the maker of a false statement had nothing to gain by it, is not a sufficient defence. There must be a misrepresentation of fact, false in itself, or misleading, because combined with a suppression of the truth. Thus an action of deceit lay where the vendor of a house knowing of a defect in the wall, plastered it up and papered it over, but it must be shown that the plaintiff was actually deceived by the defendant's conduct. If the plaintiff did not examine the wall which contained the crack, he could not be said to have been deceived by the defendant, and in that case an action would not lie. Again, an action will lie when it can be proved that the opinion was not held. Lord Justice Bowen once said, "that the state of a man's mind was as much a fact as the state of his indigestion." But where there is no duty to disclose, non-disclosure is not fraud. Defendant once let a house for a term of years, knowing it to be required for immediate occupation, without disclosing to plaintiff that it was in a ruinous condition. It was held that no action for fraud lay. A news agency once transmitted by mistake a piece of news which caused plaintiff to ship large quantities of corn, which resulted in heavy loss. The defendants were adjudged not liable, as they were unaware that the representation in their telegram was false. An action of deceit will not, therefore, lie for a representation which the defendant honestly believed to be true. It is important to bear this in mind. But it is believed that a defendant would be liable in an action of fraud if, after making a representation, he discovered previous to the plaintiff acting upon it that it was false, and yet did not apprise him of the fact.

3. MISREPRESENTATION TO A THIRD PARTY. He who knowingly makes a false statement, intending others to act upon it, is liable for any damage resulting to any one to whom it may have been intended to be communicated, and who has in fact acted upon it. So in the leading case of Langridge *v.* Levy. Levy sold a gun to the father of the plaintiff with this advertisement tied round its muzzle:—"Warranted, this elegant twist gun by Nock, with case complete, made for his late Majesty George IV., cost sixty guineas; can be had for twenty-five." Levy also represented that the gun was sound. The warranty was false to Levy's knowledge, and shortly after one of the sons (the plaintiff) used the gun in a fair manner, when it exploded and injured his hand. Levy was held liable. But in all cases the intended deceit must actually deceive. Thus, a person who discovers that an attempt has been made to defraud him has no right of action unless he has actually been deceived.

4. FRAUDS BY COMPANY PROMOTERS. Owing to the injury which the public suffered by reason of the insertion of untrue statements in the prospectuses of various companies, the *Directors Liability Act*, 1890, was passed, providing that where a prospectus or notice invites persons to subscribe for shares, debentures, or debenture stock of a company, every person who is, or has agreed to become a director of the company at the time of the issue of the prospectus or notice, and every promoter of the company, and every person who has authorised the issue of the prospectus or notice, is liable to pay compensation to all persons who subscribe for any shares, debentures, or debenture stock, on the faith of such prospectus or notice, for any loss or damage they may have thereby sustained, unless it is proved:

(1) That the statement was made on the authority of an expert, and that the defendant had reasonable ground for believing the expert to be competent; or (2) That the statement was made on the authority of a public official document or statement; or (3) That the defendant had reasonable ground to believe, and did up to the time of the allotment continue to believe, that the statement was true.

5. MISREPRESENTATION BY AGENTS. Agency plays such a large part in modern mercantile life that it is necessary to consider the liabilities of both principals and agents for the misrepresentation of frauds of agents. If an agent makes misrepresentations, the broad principle is that the principal is liable, except when both he and the agent believe the agent's misrepresentations to be the truth. It follows that the principal is liable when he authorises the making of a false representation. It does not affect the principal's liability whether the agent knows it to be false or thinks it to be true. The principal is also liable when the agent makes a representation knowing it to be false, if the false representation is made by the agent in the general course of his engagement, even without any specific authorisation from his principal, and if made in the interests of the principal; for if the agent made the false representation solely in his own interests, the principal would not be liable. If an agent makes a false representation thinking it to be true, the contract can be rescinded. If a principal knowingly keeps the knowledge from his agent, the principal is liable, but where the information is held back by the principal through inadvertence the liability of the principal must still be regarded as doubtful.

Formerly there was little doubt as to the principal's liability, but in view of the decision in Derry *v.* Peek the original view must be modified.

In Angus *v.* Clifford the Court of Appeal decided that there was no actionable fraud where the defendant carelessly made a false statement without appreciating the importance and significance of the words used, unless indifference to their truth were proved. With greater reason it must be supposed that a principal would not be liable for an inadvertent holding back of knowledge. The law, however, must be taken to be unsettled on this point, as the decisions are contradictory.

The fact that the principal is liable in many cases does not exculpate the agent. He, too, may be sued in all cases where he was a party to the fraud. (See also under *Principal and Agent.*)

NEGLIGENCE.

The great majority of cases arising in tort are based upon some alleged negligence of the party proceeded against. It is the duty of every man to exercise due care in his every act, and any damage arising from his neglect of this rule is a tort.

1. WHAT IS NEGLIGENCE? Negligence is defined by Mr. Justice Willes as "the absence of such care, skill and diligence as it is the duty of a person to bring to the performance of a work." If a person is guilty of negligence, and the natural and probable result of that negligence is that another person suffers damage, the injured party may bring an action for tort.

Thus, if A throw a lighted squib into a crowd, and the persons in the crowd, to avoid injury, throw it from hand to hand, and it finally injures C, the original thrower A is liable. On the other hand, when B's servant washed a van in the public street (which was in contravention of the *Metropolitan Police Act*) on a very frosty day, with the result that the water turned into ice and did not escape down the gully as it would have done on an ordinary day, and C's horse slipped on the ice and was injured, it was held that A was not liable, as the accident was not the natural consequence of his act.

"Where," said Chief Justice Bovill, "there is no knowledge in the person doing the wrongful act, that such a state of things exists as to render the damage probable, if injury does result to a third person, it is generally considered that the wrongful act is not the proximate cause of the injury, so as to render the wrong doer liable in an action."

2. WHAT THE PLAINTIFF MUST PROVE. The plaintiff must generally prove that the defendant has been negligent. Thus, if in crossing a road a person is run over by a hansom, the burden will in the first instance be on the plaintiff to prove that the defendant was driving recklessly, not on the defendant to prove that it was an accident. And this is the general rule, though in a few cases where the cause of the mischief is entirely under the defendant's control, his negligence will be presumed. Thus, if a workman is carrying some bricks on the top of a building and he lets one fall on the plaintiff's head, he will be presumed to have been carrying it negligently, and the burden of rebutting this presumption will be on him.

3. CONTRIBUTORY NEGLIGENCE. It sometimes happens that both a person suffering damage and the person causing it have been negligent. In such a case, the person suffering the damage is said to be guilty of contributory negligence. As a general rule, such a person cannot recover damages from the other party, but he may recover if the defendant, by the exercise of ordinary care, might have avoided the accident. Thus, where a plaintiff left his donkey lying in the public road, with its legs tied, and the defendant, driving carelessly, drove over the donkey and killed it, he was held to be liable.

"Although," said Baron Parke, "the ass may have been wrongfully there, still the defendant was bound to go along the road at such a pace as would be likely to prevent mischief. Were this not so, a man might justify the driving over goods left on a public highway, or even over a man lying asleep there, or the purposely running against a carriage going on the wrong side of the road."

In cases of contributory negligence of children it cannot be expected that they will exercise the same amount of care as persons of mature years. Yet if a child gets into mischief, by doing what he knows to be wrong, he will be guilty of contributory negligence. If the child is under the control of an adult and such adult is guilty of contributory negligence, the child will not be able to recover damages for an injury received through the defendant's negligence.

LIABILITIES OF CARRIERS AND OTHERS. Carriers of goods are insurers as well as carriers; railway companies in carrying passengers are not insurers, and their duty is only to take due care. They do not warrant the safety of their carriages, and are not responsible for a latent defect which it was impossible to discover. In the case of the sale of a chattel for a specific purpose, there is an implied warranty of its fitness, and the vendor is liable for an accident, though it be caused by a latent defect in the chattel.

Thus, if a person purchased a bun, and inside that bun there was a stone. If the purchaser broke a tooth in biting the bun, he could bring an action against the vendor even if the jury found that the latter had not been negligent. For the vendor must have known that the bun was sold to be eaten, and the law says that he therefore impliedly warranted that it was fit to be eaten, which it was not.

The law which makes carriers of goods responsible for any damage that may result thereto, even when not caused by any negligence on the part of the carrier or his servants is peculiar. At common law if goods were entrusted to a carrier there were only three defences that he could raise to an action brought in consequence of damage to or loss of the goods.

(1) That the loss or damage arose from an "Act of God"; that is to say, that the loss was sustained by lightning or other natural cause that no amount of human foresight or care could possibly have prevented it. (2) That the loss was due to the "King's Enemies," i.e., that they had been seized by an enemy to the Crown. (3) That the damage was due to "Proper Vice," or an inherent defect in the goods themselves, such as the natural deterioration of perishable articles, or the natural consequences of bad packing, or of the dangerous nature of the goods themselves.

This common law liability of a carrier has been somewhat narrowed by the provisions of the Land Carriers Act, 1830, which allows carriers to make special contracts with their customers relating to the carriage of their goods and which provides that land carriers are not to be held responsible for the loss of, or injury to, certain specified articles of a value exceeding £10, unless the customer, on delivering them to the carrier, declares their value and agrees to pay an enhanced price for their carriage.

The articles specified by the Act are gold or silver coin, gold or silver in a manufactured or unmanufactured state, precious stones, jewellery, watches, clocks or time-pieces of any description, trinkets, bills, bank notes, orders, notes or securities for the payment of money, English or foreign stamps, maps, writings, title-deeds, paintings, engravings, pictures, gold or silver plate, or plated articles, glass, china, silks in a manufactured or unmanufactured state, whether wrought up with other materials or not, furs, and real lace.

FALSE IMPRISONMENT is unlawful detention of the person, and this always gives right of action. It may be actual by laying hands on the person, or it may be constructive, that is to say, without actual application of force, e.g. by a bailiff telling some one that he is wanted and making him accompany him. If the party is under restraint, and the officer manifests an intention to make a caption, it is not necessary there should be actual contact. If there is a resignation of personal liberty induced by the exercise of another, it is imprisonment. There need not necessarily be incarceration. On the other hand, partial restraint is not sufficient; it must be total. "Imprisonment is a total restraint of liberty of person" (Patteson J.). A man is not imprisoned who has an escape opened to him, that is, Sir Frederick Pollock apprehends, a means of escape which a man of ordinary ability can use without peril of life or limb. The verge of a cliff, or the foot of an apparently impracticable wall of rock, would in law be a sufficient boundary, though peradventure not sufficient in fact to restrain an expert diver or mountaineer. All that plaintiff has to do is to prove the imprisonment. It is for defendant to justify it if he can.

MALICIOUS PROSECUTION. If a person takes criminal or bankruptcy proceedings against another, maliciously and without reasonable probable cause, and the case ends in the defendant's favour, his action may be treated as malicious prosecution. But the aggrieved person must prove that he has sustained damage in pocket or reputation or health.

MAINTENANCE AND CHAMPERTY. Both offences give the right of action for damages. *Maintenance* is the wrong of aiding a party in litigation without interest in the suit or lawful cause of kindred, affection or charity. Actions for maintenance in modern times are rare. That an action for maintenance can be brought successfully was proved in Alabaster and others *v.* Harness and others. *Champerty* is a species of maintenance. It is maintenance in consideration of an interest in the subject matter of the action to be maintained. Champertous bargains are forbidden and void. It is sufficient that the transaction should "savour of champerty," and accordingly be "against the policy of the law."

NUISANCES. It is a principle of the English Law that every person is bound to avoid using his property in such a way as to avoid injuring other person's, neither must he do anything to the hurt of the property of his neighbour. "Nuisance," says Sir Frederick Pollock, "is the wrong done to a man by unlawfully disturbing him in the enjoyment of his property, or in some cases in the exercise of a common right." A nuisance may be public or private. A public nuisance is an act affecting the public at large, or some considerable portion of them. A private nuisance is an act affecting some particular individual or individuals as distinguished from the public at large. In the case of a public nuisance, the remedy is by indictment or information. Where the public nuisance injures a private person more than it injures the public at large, the aggrieved person has also the remedies given in cases of private nuisance.

REMEDY FOR PRIVATE NUISANCE. The remedy in a private nuisance is an action for damages, or an injunction, or both, or by *abatement*. Abatement may be the removal of the nuisance by the injured party after notice to remove the same, if it be unsafe to wait for legal process. Where it is necessary to enter another's land to abate the nuisance, the removal must be peaceable, without danger to life or limb. A nuisance causing personal discomfort to maintain an action must interfere with "the physical comfort of human existence"; it is not sufficient if temporary annoyance be caused by the execution of lawful works. A nuisance causing damage to property will maintain an action for damages. In the case of St. Helen's Smelting Company *v.* Tipping, it was held that the fumes from plaintiff's works which killed plaintiff's shrubs were sufficient cause of action for nuisance against the defendants. Neither does it make any difference that the very nuisance complained of existed before the plaintiff became owner or occupier.

INJURY TO A MAN'S MODE OF LIVELIHOOD. It used to be held that a special cause of action existed "where a violent or malicious act is done to a man's occupation, profession or way of gaining a livelihood." There are now, however, several decisions going to prove that such actions to be maintained must be based on damage to the plaintiff by reason of trespass, nuisance, or some act of the defendant which is otherwise unlawful in itself, and that in no such case is the cause of action determined by "malice." In the famous action of Allen *v.* Flood the facts were as follows:—The defendants, Flood and Taylor, were shipwrights employed "for the job" on the repairs to the woodwork of a ship, but were liable to be discharged at any time. Some iron-workers who were employed on the iron-work of the ship objected to the respondents being employed, on the ground that the respondents had previously worked at iron-work on a ship for another firm, the practice of shipwrights working on iron-work being resisted by the trade union of which the iron-workers were members. The appellant, Allen, who was a delegate of the union, was sent for by the iron-workers and informed that they intended to leave off working. The appellant informed the employers that unless the respondents were discharged all iron-workers would be called out or knock off work (it was doubtful which expression was used); that the employers had no option; that the iron-workers were doing their best to put an end to the practice of shipwrights doing iron-work, and that wherever the respondents were employed the iron-workers would cease work. There was also some evidence that this act was done in order to punish the respondents, Flood and Taylor, for what they had done in the past. The employers, in fear of this threat being carried out, which, as they were aware, would have stopped their business, discharged the respondents and refused to employ them again.

The respondents brought an action against Allen, and

the jury found that he had maliciously induced the employers to discharge the respondents and not to engage them again and gave the respondents a verdict for damages. The Court of Appeal upheld this decision, but the House of Lords (Lord Halsbury and Lords Ashbourne and Morris dissenting) reversed the decision, holding that Allen had violated no legal right of Flood and Taylor, done no unlawful act, and used no unlawful means in procuring the respondents' dismissal; his conduct, therefore, was not actionable, however malicious his motive might be, and the appellant was entitled to judgment.

> The effect of this far-reaching judgment is therefore, that an act lawful in itself is not converted by a malicious or bad motive into an unlawful act so as to make the doer of the act liable to civil action.

In the later case of Quinn *v.* Leatham it was decided by the House of Lords that a combination of two or more, without justification or excuse, to injure a man in his trade by inducing his customers or servants to break their contracts with him or continue in his employment, is, if it results in damage to him, actionable. In this same case Lord Lindley said, "Coercion or threats, open or disguised, not only of bodily harm but of serious annoyance and damage, is *prima facie*, at all events, a wrong inflicted on the persons coerced; and in considering whether coercion has been applied or not, numbers cannot be disregarded." Lord Lindley, in fact, in the course of his judgment expressly said that the decision in Allen *v.* Flood "may be easily misunderstood and carried too far." These words illustrate the difficulty which many lawyers find in reconciling the decision in Quinn *v.* Leatham and Allen *v.* Flood.

ACTION FOR SEDUCTION. The action for seduction is brought by the plaintiff for the loss of the woman's services by the wrongful act of the defendant, her seducer. It must be brought by the woman's master or mistress. If she has no master or mistress, the action cannot be brought; but if she is living at home, assisting in the housework and generally making herself useful to her parents, they will be considered to be her masters, even though she receive no wages. It follows from this that a master cannot be sued for the seduction of his own servant. The only exception being where he has engaged her for the purpose of seducing her, and not *bona fide* to act as his servant. It is necessary that the woman should have been in the service of the same master both at the time of the seduction and at the time of her subsequent illness.

> For example, when a girl was seduced when in the service of A and proved pregnant during her service with B, it was held that the seducer was not liable. Nor can the plaintiff maintain an action if he has allowed profligate persons to obtain the society of the girl, or in other ways caused his own injury.

The damages recoverable are not merely for the actual damage sustained, but for the anxiety, distress of mind, loss of society and comfort, as well as dishonour suffered by plaintiff. "I am of opinion," says Lord Eldon, "that the jury may take into their consideration all she (the mother) can feel from the nature of the loss. They may look upon her as a parent losing the comfort as well as the service of her daughter, in whose virtue she can feel no consolation, and as the parent of other children whose morals may be corrupted by her example."

ENTICING AWAY A SERVANT. An action also lies for enticing away a servant, that is, for wilfully inducing a servant to commit a breach of his contract of service whereby his employer suffers damage. If there is a proof of a relationship of master and servant, any fraud whereby the servant is induced to absent himself or herself affords a ground of action, "when once the relation of master and servant at the time of the acts complained of is established." A married woman living apart from her husband in her father's house may for the purpose of this action be a servant, even though the relation might be determined by the will of the husband.

LIABILITY FOR THE WRONGS OF OTHERS. It is a peculiarity of English law that not only is a man always responsible for his own torts, but that he is also frequently responsible for torts committed by those in his employ. This subject is dealt with at greater length elsewhere in this work under *Principal and Agent*, and *Master and Servant*. It will be sufficient, therefore, to state here that in addition to the servant, the master will be responsible if the servant commits a tort in the course of his usual duties, and within the scope of his implied authority. If these two conditions have been fulfilled the master will not be allowed to excuse himself by proving that the servant had acted contrary to orders. Two examples will suffice:

> (1) In Limpus *v.* London General Omnibus Co. The defendants had forbidden their drivers to race with other busses. Nevertheless one did so, and the result was a catastrophe. It was held that the driver was acting in the course of his usual duties and that the defendants were liable.
>
> (2) In Storey *v.* Ashton. A servant of the defendant took a fellow servant out for a little private excursion of their own in one of the defendant's vans, but without the knowledge or consent of the defendant. The servant could have no implied authority to do such a thing, and the defendant was held not liable for the damage his servant did.

TORTS AND MARRIED WOMEN. For torts committed by or against a wife during marriage, she is sued or sues just as a single woman, and sums recovered against her are to be paid out of the separate estate. The husband may be joined to his wife in these actions, because the husband's old common law liability for his wife's torts committed during marriage is not interfered with by the Married Women's Property Act, 1882, and therefore a husband is liable for wrongs committed by his wife during marriage.

By the Married Women's Property Act, the wife is liable for her torts committed before marriage, but sums recovered against her are to be paid out of her separate property. By section 14 of the Act, however, it is provided that the husband is liable for his wife's torts committed before marriage to the extent that he has obtained property through her, and he may be sued jointly with her or alone. If a husband commits a tort against his wife, the wife may maintain an action against the husband, but only for the protection and security of her own separate property. Beyond that, neither husband nor wife can sue the other for a tort.

TORTS BY AGENTS OF CORPORATIONS. A corporation is liable for the torts committed by its agents, provided that the tort committed is within the scope of their authority and in the interests of the corporation.

INFANT'S TORTS. The rule that an infant cannot generally be made responsible for his contracts has no application in the case of torts. An infant is personally responsible for his torts, and may be sued for damage resulting from them. Some cases, however, may be treated as both torts and breaches of contract, and in these the infant is allowed to derive the benefit of treating them as contracts. Thus in a certain case an infant contracted for the hire of a horse, and rode it lame. This being a breach of contract, the defendant was held not liable. If he had taken the horse without permission, there would have been no contract, so in that case he would have been liable.

THE RULE OF THE ROAD. There is no law which compels a person to keep to any special side of the road; there is, however, a well-known custom which riders and drivers recognise, and which is so far recognised by the courts, that a man will be presumed to have been negligent who ignores it. The rules as to driving are, that in meeting other vehicles, each party shall keep to the left, and the left side is called the near side; that in passing another vehicle the driver shall keep to the right or off side; and that in crossing the driver coming transverse shall bear to the left hand, so as to pass behind the other carriage. It may be said to be the duty of every driver to keep to his near side of the road, but he is not bound to do so. If he were it would, for instance, be impossible for a cab to set down a passenger on the off side of the road, or for a van to draw up to deliver goods there. But if a driver departs from his usual side, he must exercise the utmost care. At night the rule ought to be adhered to as strictly

as possible. Where there are tramcars, it is sometimes impossible to observe the rule as to passing on the off side, and in Scotland this impossibility has been recognised. Foot passengers have a right to walk in the carriage way, though it would be very negligent for them to do so in some circumstances. A driver or cyclist can not excuse himself from the result of his negligence by saying that a foot passenger should have got out of the way. The rule for foot passengers on pavements is to keep to the right, the direct contrary to the rule for vehicles.

FEROCIOUS ANIMALS. The owner of a ferocious animal (e.g. a lion in captivity) is answerable for any damage or injury it may do, although he may have done his best to keep it in safety. He who keeps a ferocious animal, knowing it to be so, does it at his peril. But in the case of a dog or other domestic animal, it is necessary to prove that the owner knew of its ferocious disposition before damages can be recovered by a person who has been bitten by it. Such knowledge is called scienter. It is sometimes said that "every dog is entitled to a first bite," but this is not quite correct, as it is sufficient to prove that the owner knew the dog had evinced a savage disposition, though it had not bitten any other person before it bit the person suing. By statute scienter of a dog's ferocious disposition need not be proved, where injury has been done to sheep or cattle (including horses). If a person crossing a field over which there is a right of way, is attacked and injured by a ferocious bull, he would be entitled to bring an action for damages against the owner of the bull; but if there be no right of way, he would be a trespasser and, as such, disentitled to compensation.

DANGEROUS MACHINERY AND SUBSTANCES. It is the policy of the law to impose special duties in special cases. As Justice Blackburn said, Fletcher *v.* Rylands (L.R., 1866, i. Ex. 279), "the true rule of law is that the person who for his own purposes brings on his land and collects and keeps there anything likely to do mischief if it escapes, must keep it in at his peril, and, if he does not so, is *prima facie* answerable for all the damage which is the natural consequence of the escape." In this case the defendants constructed a reservoir on their own land adjoining land of the plaintiffs. There were certain old mine shafts on the land which were discovered and filled in unknown to the defendants. The water in the reservoir escaped through the shafts and injured plaintiff's colliery. Defendant was held liable, though defendants were not personally guilty of negligence. The defendant, however, is not liable for "an act of God," which could not have been prevented by any amount of foresight and pains and care reasonably to be expected. Nor is defendant liable for the consequences of an act due to the fault of the plaintiff, the wrongful act of a third party, or an act authorised by statute. It is to be presumed, of course, that the defendants had not contributed to it by a breach of duty. By section 86 of the Building Act of 1774, a man is not liable for damage caused by a fire which commenced in his house or on his land if it originated by accident and without negligence on the part of himself or his servants.

STEAM AND TRACTION ENGINES. One who runs a traction engine or a locomotive on a roadway does so at his peril. Should a spark be emitted from the engine and it damaged another person's property, the owner of the locomotive might be held liable. It used to be otherwise if the spark proceeded from the engine of a railway company running under statutory powers. In Rex *v.* Pease it was held that where the legislature has authorised a railway company to construct a railway alongside a public highway, it must be presumed to have contemplated the probability that the railway will be a nuisance to persons using the highway, and that such persons must submit to the inconvenience arising; and in the case of Vaughan *v.* Taff Vale Railway Company, the defendants were held not liable for damage caused by sparks from their engines setting fire to the adjoining property of the plaintiff, as they had adopted every precaution that science could suggest to prevent injury. In the case of Smith *v.* London and South Western Railway Company, however, the defendants' workmen left some cut grass lying for a fortnight in the hot weather. The grass caught fire from a spark from an engine, and spreading burnt down plaintiff's cottage. It was held that the defendants, being guilty of negligence in allowing the grass to remain so long in the hot weather, were liable. But when the defence depends on statutory powers, the statute must direct the thing to be done; it must not be merely a case of discretionary power, as where it was decided that the Metropolitan Asplum District Board could not successfully plead that a statute had given them power to erect a hospital which became a nuisance, so as to prevent an injunction issuing to restrain the Board from establishing the hospital. But though the defence that a nuisance was impliedly authorised by the statutory powers is still available in the case of most nuisances, it will shortly be abolished in respect of fires caused by cinders and sparks from railway engines. By the Railway Fires Act, 1905, which does not come into operation until the 1st January, 1908, it is provided that when after that date damage is caused to agricultural land or crops by fire from sparks or cinders emitted from a railway locomotive, the fact that the engine was used under statutory powers shall not affect the liability of the Railway Company.

CONSENT AND NECESSITY. No action is maintainable for damage arising from acts suffered by consent, if such acts were not likely nor intended to cause bodily harm. This would not apply to a surgical operation. A cricket match is lawful, and a football match is presumed not to be likely to result in injury, though a kicking match would. It is also believed that it would be an excusable act to pull down houses to prevent fire spreading.

DEATH OF ONE OF THE PARTIES IN TORT. The old rule of law was *actio personalis moritur cum persona* (a personal right of action ceases at death), but even in the old days it did not apply generally to contracts. It still applies, as we have seen, to contracts of personal service (master and servant), and it also applies with some exceptions in cases of tort. An ordinary action for breach of promise of marriage dies with the defendant, but it is otherwise if special damage has been caused to the property of the plaintiff. "The only cases," said Lord Justice Bowen, "in which, apart from questions of breach of contract, express or implied, a remedy for a wrongful act can be pursued against the estate of a deceased person, who has done the act, are those in which property, or the proceeds or value of property belonging to another, have been appropriated by the deceased person, and added to his own estate or moneys. In such cases the action, though arising out of a wrongful act, is in substance brought to recover property or its proceeds or value, and does not die with the person."

Where an injury has been done to the goods and chattels of a person who afterwards dies, his executors or administrators may sue the wrong-doer. Similarly, if an injury has been done to his real property, the executors or administrators may sue the wrong-doer, but in this case the injury must have been committed within six months prior to the owner's death, and the action must be brought within one year after death. Should the wrong-doer die within six months after committing the wrong, his executors or administrators can be sued at any time within six months after their appointment.

By Lord Campbell's Act, 1846, "where a person's death is caused by the wrongful act, neglect or default of another, and the injured person, if he had lived, could have maintained an action, and recovered damages in respect thereof, the person who would have been liable in such case shall be liable to an action for damages notwithstanding the death of the injured person, and although the death shall have been caused under such circumstances as amount in law to a felony." The action is for the benefit of the wife, husband, parent (which includes grandparent and step-parent), and child (which includes grandchild and step-child) of the person whose death has been caused, and the jury must apportion the damages awarded amongst those for whose benefit the action is brought. The action must be brought

by the executor or administrator within one year after death, and only one action can be brought for the same cause of complaint. The persons for whose benefit the action may be brought can themselves bring the action in case the executor or administrator does not bring the action within six months after death.

PERSONAL RIGHTS.

For a people to be free the law must be supreme, all must stand equal before the law, and the people themselves must have the right to legislate through their representatives. Such is the foundation on which rest our personal rights and liberties.

RIGHT TO PERSONAL LIBERTY. The liberty of the subject is one of the fundamental principles of our law. One of the clauses of Magna Charta itself declares that right and justice must not be delayed or denied to any one. Of course the law ordains imprisonment for certain offences, and it is sometimes necessary to keep alleged criminals in safe custody until their trial. To prevent any serious abuses arising from this state of affairs, the *Habeas Corpus* Act was passed in 1679, providing for applications being made on behalf of prisoners for a writ of *Habeas Corpus*, which entitles them to be brought before a judge within two days. Later statutes have extended the *Habeas Corpus* remedy to non-criminal charges.

In practice, prisoners in custody are always brought before a magistrate as soon as possible after arrest. The magistrate enquires into the charge, and if satisfied that there is a *prima facie* case against him, commits the prisoner for trial. If the investigation is not complete in a single hearing, the accused may be remanded for not more than eight days, after which he may be again remanded. If the magistrate thinks there is not sufficient evidence against the accused, he orders him to be discharged.

In certain minor cases the magistrate has power to deal with the offender summarily, but if he commits him for trial, he may either admit the accused to bail or commit him in custody. Bail is never granted in murder cases, and in other cases it generally lies in the magistrate's discretion. The Bill of Rights, 1689, provided that the bail must not be excessive.

A constable may arrest any person without a warrant on reasonable suspicion that a felony has been committed, or is about to be committed, but he may not arrest a person without a warrant for a misdemeanour, except to prevent a breach of the peace, or where the misdemeanour is committed in his presence. As for arrest by private persons, they are bound to arrest anyone whom they see committing a felony, and they are also bound to assist a constable if called upon. There are other cases in which a private person may arrest an offender, but it is a risky proceeding, as they may find themselves landed in an action for damages if the arrest turns out unjustifiable.

HABEAS CORPUS ACT. The right of the citizen to his personal liberty is protected by two safeguards, (1) by the writ of *Habeas Corpus*, and (2) by an action for damages for false imprisonment. Where a person is detained on a criminal charge without being brought to trial, or where he is unlawfully detained by private individuals, any one may on his behalf apply to a judge of the High Court praying the judge to issue a writ of *Habeas Corpus* commanding the governor of the gaol or the person detaining the individual on whose behalf the request is made to bring the body of such individual before the Court in order that the Court may investigate the reason why he is kept in custody, and if there be no sufficient reason, the Court will order him to be set at liberty, or if he is a child will order him to be given up to his lawful guardians. This writ or order *must* be issued by the judge on good reason being shown, and if the judge in that case refuses to issue the writ, such judge will forfeit to the aggrieved person a sum of £500.

The following is an example of the Writ of *Habeas Corpus* ("That you have the body.")

> Edward, by the Grace of God, of the United Kingdom of Great Britain and Ireland, King, Defender of the Faith.
>
> To John Smith, keeper of our gaol of Bedford, greeting. We command you that you have the body of William Styles, detained in our prison under your custody, as it is said, together with the day and cause of his being taken and detained, by whatsoever name he may be called or known, in our Court before us, at the Royal Courts of Justice, London, immediately after the receipt of this writ, to undergo and receive all and singular such matters and things which our said Court shall then and there consider of him in this behalf; and have then there this writ. Witness (here follows the judge's name with the date of the writ).

SUSPENSION OF THE HABEAS CORPUS ACT. At various times of national peril the *Habeas Corpus* Act has been suspended by Parliament. The effect of the suspension is that a person who is detained in custody has no means of procuring a speedy trial, because he cannot demand that a writ of *Habeas Corpus* should be issued on his behalf. A person might therefore be unjustly detained on mere suspicion for a considerable period. Of course, on his release, he could bring an action for false imprisonment. The same thing could occur where a person was detained on reasonable grounds of suspicion, but against whom no legal proof of criminality is available. To prevent the bringing of these actions after the period of suspension has expired, Parliament, before the expiration of the period, passes an Act of Indemnity protecting all officials and others who have acted under the powers given to the Government during the period of suspension. The effect of this Act of Indemnity is to deprive all those who have been imprisoned of their right to bring actions for false imprisonment.

RIGHT OF SELF-DEFENCE. Every British subject has the right, in defending his person and property, to use such an amount of force as is both necessary and reasonable for the purpose of attaining his object. He must not inflict on the attacker an injury out of all due proportion to the harm he himself is suffering. So that if a bigger man than himself punches his head, he is not entitled to shoot the aggressor. If his life is in imminent peril he is entitled to kill the attacker, but if he can protect himself by merely maiming him or by threatening to fire he must choose the milder course. The right of self-defence should be employed sparingly. The proper place for the punishment of an aggressor is a legal tribunal, and the courts will not be so prone as the injured party to regard the counter attack as necessary.

A person who by killing his aggressor takes a course which is unreasonable or unnecessary will be liable to be convicted of manslaughter. Cases sometimes arise where persons are shipwrecked, and in order to save themselves from starvation they draw lots to kill and eat one of their number. Persons who do this are guilty of murder, and it is no defence to show that the victim consented to the course.

LIBERTY OF SPEECH. People in England have the right of holding any opinions they please, and on any subject under the sun. They have also, subject to certain limitations which will be mentioned, the right of airing those opinions for the benefit or otherwise of all who care to listen. Persons are not, however, permitted to shock the ears of their hearers with outrageously obscene and blasphemous utterances, nor again must they act in such a way as to be a nuisance to others, as by causing crowds to gather and obstruct public highways. So, too, they must not make statements concerning any person which would expose him to hatred, ridicule, or contempt, or which would cause him to be shunned or avoided, for that would be slander. Again, they must not use expressions inciting their hearers to commit a crime.

LIBERTY OF THE PRESS. Closely akin to the right of free speech is the liberty of the press. There is no particular magic in the words "liberty of the press." All that the phrase means is that a man is at liberty to write

what he pleases, provided that he does not break the law of the land or infringe the legal rights of other people; he must not, for example, write blasphemous or seditious or treasonable matter or commit a libel on others. Whether he has committed any of these offences is decided by a jury of his countrymen. To put it shortly, "liberty of the press" is simply the right of the private individual to write or say what he pleases, provided that a jury comes to the conclusion that by so writing or speaking he has not broken the law of the land or infringed the rights of others. The press in England has not always been free to discuss all matters at will. Indeed, a system of press censorship and licensing existed until the year 1695, and down to nearly the middle of the last century a great check was placed on any political comment by prosecutions for seditious libel. But all this was practically swept away by Lord Campbell's Libel Act, 1843, which allowed a defendant indicted for criminal libel to urge as a sufficient defence that the libel was true and published for the benefit of the public. Even now, however, newspapers, etc., must not publish libels on individuals (subject to the above defence) or matters which are obscene or grossly blasphemous. They are, however, allowed the greatest latitude in discussing affairs of public interest, such as the conduct of the Government.

RIGHT OF PUBLIC MEETING. The so-called right of public meeting is simply the right of private individuals to assemble and meet together in any place they think fit, provided that they are not trespassing on other people's property or obstructing the public highway. While there assembled they may say what they please, provided they do not break the law of the land or infringe the rights of others, e.g. as by slandering a person or by stirring up riots or tumults or by inciting people to the commission of crimes. And in this case, also, the test of their so doing is the verdict of a jury.

RELIGIOUS LIBERTY. As the law now stands persons are entitled to hold whatever religious opinions they choose, and to observe whatever form of religious worship they like, provided they do not, in such observance, act so as to be a nuisance to others, or commit some offence against the Criminal Law. Thus a man may be a Mormon if he chooses, but if he marries more than one wife he will be punished for bigamy. At one time those who were not members of the Established Church were subject to all sorts of disabilities, and even to penalties; but nearly all these have now been swept away; indeed, the only civil offices which are now by law confined exclusively to members of the Established Church are those of Sovereign and Lord Chancellor.

ENFORCEMENT OF PERSONAL RIGHTS. Mention has been made above of the *habeas corpus* procedure, by which that most sacred of rights, the right to personal liberty, is safeguarded. But all other legal rights have likewise their remedies. It is a legal maxim that for the infringement of every legal right there exists a legal remedy; and indeed if this were not so the rights would be worthless.

> Thus in the famous Aylesbury election case an elector was held entitled to bring a civil action against the returning officer who wrongfully rejected his vote, even though the acceptance of the vote would not have affected the result of the election.

Most legal rights are enforceable by an action for damages against the person or persons who infringe them. Sometimes a claim for an injunction is a more appropriate remedy, as the injunction would restrain the wrongdoer from a further invasion of the right under pain of imprisonment for contempt of court. Where there has been an infringement of a legal right of a public nature, and no effectual relief can be obtained by an action for damages, or by a claim for an injunction, the evil may frequently be remedied by the issuing of a *mandamus* from the King's Bench Division requiring in the king's name the person, corporation or court, to whom it is addressed, to do some particular thing. Further information as to the methods of enforcing legal rights will be found under "Procedure in the Courts," p. 477.

CHURCH LAW.

ESTABLISHMENT. The Church of England is often spoken of as the "Established Church," a phrase commonly used to express in a general way the legal position of the Church in relation to the State, as being in some sense the *National Church*. As such it enables the nation to recognize on special occasions its obligations, as a nation, to Almighty God, and it entitles every man in the kingdom, if so minded, to the ministrations of the clergy, each in his own parish.

The prevalent idea that the establishment of the Church of England gives it exceptional advantages seems illusory. It is true that a certain number of bishops sit in the House of Lords as spiritual peers, but on the other hand the bishops thus privileged are nominated and practically appointed by the Crown, whilst the clergy are precluded from sitting as members of the House of Commons. So far from having exceptional advantages, the Church of England by her connection with the State is greatly restricted in her liberty of action. Take, for instance, the provincial synods of the Church, known as the *Convocations* of Canterbury and York, which are entitled to meet in London and York respectively on the assembling of Parliament. Convocation can only be assembled by the King's Writ; when assembled, it cannot proceed to make new Canons without a royal license; and when new Canons have been agreed to by Convocation, in each province, they have no legal force until confirmed by the sovereign. And even then they require the sanction of Parliament, if in any respect they depart from established law and custom.

At one time, indeed, the Church of England was a privileged body compared with the other religious bodies, who were subject to pains and penalties and laboured under many disabilities. But that unhappy time has passed, and now it is difficult to see that the phrase "as by law established" does not apply to the dissenting bodies as well as to the Church of England. Acts of Parliament recognize and legalise their existence as organised religious bodies, protect their property and their worship, and give the same privileges to their ministers and places of worship as to the clergy and the parish churches. The same exemptions from service on juries or in the militia apply to all alike, whether clergy or ministers, who are not engaged in secular business other than that of schoolmaster; the same exemptions from the payment of rates apply to all places of worship.

Again, all religious bodies, without distinction, are liable to State control. The king is the supreme ruler in all matters, ecclesiastical as well as civil. And the civil courts take cognizance of all matters of dispute relative to property and the rights of individuals, whether in connection with the Church of England or any other religious body in the kingdom.

THE CHURCH BUILDING. The freehold of the church building and that of the churchyard is vested in the incumbent, whether rector, vicar, or perpetual curate. It is the duty of the churchwardens to keep the building in good repair, and the churchyard in decent order. The ancient method of raising funds for this purpose was by a Church rate agreed upon by the parishioners at a vestry meeting. But as payment of a rate so made cannot be enforced since the passing of the Church Rates Abolition Act, 1868, the expense of keeping the fabric in repair is usually defrayed by voluntary subscriptions and church collections.

CHURCH FURNITURE AND ORNAMENTS. The furniture of the church is under the care of the churchwardens for the time being. They are enjoined to provide the church with a decent and convenient communion table. The same must be movable and made of wood, not a stone altar. Further, it must be covered during ordinary Divine Service with a covering of silk or other decent stuff, and at the time of Holy Communion with a fair white linen cloth without embroidery or lace of any kind.

Prefixed to the Order for Morning and Evening Prayer is a rubric, commonly called the "Ornaments Rubric." It reads—"And here it is to be noted that such Ornaments

of the Church and of the Ministers thereof, at all times of their ministration, shall be retained and be in use, as were in this Church of England, by the authority of Parliament, in the second year of the reign of King Edward the Sixth."

The word "ornaments," as here used, has not the modern meaning of articles for decorative purposes, but includes the articles used in the performance of Divine Service, such as the Communion Table, the Font, the Credence Table, the Surplice and other vestments worn by the officiating clergy. At different times various ornaments have been declared illegal, but there is great diversity of opinion as to the right interpretation of this famous rubric. According to decisions of the Court of Appeal in ecclesiastical cases, it appears that a cross is a legal decoration, but a crucifix (an image of Christ on the Cross) is not; that a cross may not be carried in procession; that images may be lawful if set up for the purpose of decoration only; and that a baldachino (or altar canopy) is illegal.

ALTERATIONS and **ADDITIONS** to the **CHURCH FABRIC** or **FURNITURE.** No alterations or additions may be made to the structure, furniture, and ornaments of a church without a faculty. A *faculty* is a licence made under the authority of the Bishop's Court. This rule applies to all alterations, however small, whether in the church or churchyard, but it is not enforced unless such alterations are of some importance.

An ornament in a church cannot be removed without a faculty even when, in the first instance, it has been illegally placed there. Where an ornament has been placed without legal authority in a church, a confirmatory faculty may sometimes be obtained for its retention. Faculties are occasionally granted on sanitary grounds for the removal of bodies buried in a church or churchyard; they are also granted for the sale of disused ornaments, as old church bells.

The opinion of the majority of the parishioners for or against any proposed alteration or addition is entitled to great weight, but the Court is not bound to respect and conform to the wishes of such a majority. The High Court of Justice has power to grant an injunction to restrain alterations in the fabric of churches unless and until a faculty is granted, and by the Public Worship Regulation Act, 1874, the archdeacon, a churchwarden, or any three parishioners may make a representation to the bishop in cases where an unauthorised alteration has been made in the fabric, ornaments, or furniture, and on such representation proceedings may be taken.

CHURCH PEWS. All pews in a church are *prima facie* at the disposal of the churchwardens, except the chief seat in the chancel, which by custom belongs to the rector, whether ecclesiastical or lay. But a faculty granted by the ordinary may give to persons inhabiting a particular house in the parish an exclusive right to sit in a particular pew. This right cannot be granted to a man and his heirs, but is one annexed to a house and passes with the house in the case of transfer. Saving these private rights the seats are at the disposal of the churchwardens, who can seat the worshippers at their (the churchwardens') discretion. If a man occupy a seat either by the direction or with the acquiescence of the churchwardens, he can claim and maintain the right to undisturbed possession against all comers other than the churchwardens themselves. They may at any time displace the occupant by revoking their leave to occupy, but in every case they should take care not to act unnecessarily or capriciously.

PEW RENTS. No pew rents can be legally charged in many churches, but in some, especially the newer ones, a charge for sittings may be made. The authority for such a charge is contained in various Church Building Acts. The duty of collecting and distributing the pew rents falls upon the churchwardens. The first schedule fixing the scale of rents has to be approved by the Ecclesiastical Commissioners, and no alteration in the scale must be made without their assent. Pew rents may be recovered by the churchwardens in the case of non-payment, and in the event of such rent being in arrear for a period of three months, the churchwardens may enter upon possession of the seat or pew and let it to another person.

CHURCHWARDENS. The mode of election of these officers is governed by the custom of the parish. In the majority of cases one is elected by the parishioners and the other appointed by the incumbent. If no recognised custom exist, then the joint consent of the incumbent and parishioners is required before an appointment can be made, and if they cannot agree, the incumbent is to choose one and the parishioners another. The election is annual, and should take place at Easter, but though chosen for one year only, the existing churchwardens may be re-elected. The persons elected are, on due summons, to attend a visitation of the Archdeacon, and before him take the oath of office, that they will serve the office faithfully. All parishioners are eligible, except aliens, Jews, minors, lunatics, and felons. It would appear that a woman is not ineligible, nor is a Roman Catholic. In many parishes there exists an immemorial custom to have but one churchwarden—a custom which has been recognised by the Courts. In the case, however, of a parish in which "custom" was pleaded as a reason for having no churchwarden, the custom was not upheld.

The powers and duties of these officers are many and various. The furniture and ornaments belonging to the church are in their care, and the fabric itself is in their special charge for them to maintain in good repair. It is their duty to see that everything required for the proper rendering of the service is provided and in proper order. They are responsible for maintaining order during the performance of Divine Service, and have the right to remove any disorderly person from the building. They have to arrange the distribution of seats in the church and to collect the alms during the reading of the offertory sentences. They have also to see that the churchyard is kept properly fenced and in suitable condition.

BRAWLING. By an Act passed in 1860, it is provided that summary proceedings before two justices of the peace may be taken against any person who shall be guilty of riotous, violent, or indecent behaviour in any cathedral, church, or chapel, whether during the celebration of Divine Service or at any other time, or in any churchyard or burial ground. Any offender under this section is made liable to a penalty of not more than £5 for every such offence, or to be committed to prison for any time not exceeding two months. Power to apprehend a brawler and to take him before the justices is given not only to any police constable but also to any churchwarden of the parish. It has been held that a clergyman who uses violent language in the pulpit is guilty of "brawling," and also if he preaches against individual members of the congregation. Another form of brawling is the publication by words during church time of any notices, if such publication is made by a private parishioner.

THE CLERGY.

HOLY ORDERS. There are in the Church officers of different degrees of dignity, such as archbishop, bishop, dean, archdeacon, rector, etc., but there are only three different orders—bishop, priest, and deacon. The canonical ages for admission into the three orders are—in the case of a deacon, twenty-three; of a priest, twenty-four; of a bishop, thirty. The rite of making a priest or deacon is called *ordination*, that of making a bishop *consecration*.

The following are the steps to be taken by anyone desiring to enter Holy Orders:—

(1) He must present to the bishop testimonials of good moral character and conduct from three beneficed clergymen; (2) He must publish in his parish church a notice (called a *Siquis*) of his intention to become a candidate for Holy Orders; (3) He must obtain a *title*, i.e. find some beneficed clergyman willing to accept him as a curate in his parish, and pay him a suitable stipend; for the bishop is forbidden by the canons (rules of the Church) to ordain any man unless he has such a title; (4) He must pass the bishop's examination.

It is only in recent years that it has been possible for a clergyman to relinquish orders. In 1870 the Clerical

Disabilities Act was passed with a view to allowing a priest or deacon to relieve himself from the disabilities attaching to him as a Clerk in Holy Orders. By this Act, it is provided that any clergyman may, after having resigned any preferment held by him, execute a deed of relinquishment. Six months after completing the necessary formalities, he becomes incapable of acting in any way as a minister of the Church of England, and is freed from all disabilities and disqualifications to which, as a Clerk in Holy Orders, he was subject.

DISABILITIES OF THE CLERGY. No clergyman of the Church of England can be a member of the House of Commons, nor is he eligible for election to the post of alderman or councillor of any borough outside the County of London, but he may be an alderman of a County Council or one of its members. The magistracy is also open to him. He cannot take, for farming purposes, any land exceeding 80 acres, unless he first obtains the written permission of his bishop. As to trading or dealing for gain or profit, he is absolutely withheld from doing so unless he is in partnership with at least six others. There is an exception to this rule if the business has devolved upon him as a bequest or by inheritance, a marriage settlement, or bankruptcy. He may also trade as a schoolmaster, may sell books to or through a publisher, and may be a director, manager, or partner in any life or fire insurance company, or in a benefit society. Disobedience to these rules involves liability to suspension, and in the case of a third offence, deprivation may be inflicted. The penalty for farming more than the specified number (80) of acres is 40s. per annum per acre.

PLURALITIES AND RESIDENCE. As a rule no clergyman can hold more than one benefice. An exception may be made where the two churches of the benefices are within four miles of each other and the annual value of one does not exceed £200. Further, if the population of one benefice is more than 3,000, another cannot be held with it unless the population of the second is 500 or less according to the last census.

Every incumbent (rector, vicar, or perpetual curate) must reside within his benefice and in the house of residence (if any) belonging thereto, unless the bishop has granted him a licence of non-residence. But he is permitted to be absent for three months in the course of the year, such absence being either continuous or not. The rules affecting residence do not apply to assistant curates.

RESIGNATIONS AND PENSIONS. If an incumbent has held a benefice for at least seven years, he may apply to the bishop for release from his duties on the ground of incapacity from old age or permanent illness. The bishop may then appoint a commission consisting of five persons to enquire into and report upon the matter, the selection of such persons being made as prescribed by the Incumbents Resignation Act, 1871. The Commissioners are empowered to allow a pension to the retiring clergyman out of the revenues of the benefice, with the limitation that it must not exceed one-third of the net annual value of the benefice. Every pensioned clergyman remains subject to Church discipline, and his pension becomes forfeited if he is found guilty of any offence which would have resulted in deprivation of his benefice had he remained in occupation.

ECCLESIASTICAL JURISDICTION.

The chief objects in view in the exercise of ecclesiastical authority may be summed up as the due maintenance of discipline, doctrine, and ritual. The person who has jurisdiction in ecclesiastical affairs is called the *Ordinary*, and in most cases this is the Bishop. The punishments (theoretically at least) at his command are suspension, deprivation, and degradation. *Suspension* is when a clergyman is forbidden to perform any of the duties of his office for a certain time, and is mulcted of such a proportion of the profits of his benefice as is necessary to pay a clergyman in his place. *Deprivation* means ejectment from his benefice, and his suspension from the performance of all clerical functions at the discretion of the bishop. *Degradation* is often called "unfrocking," and means the reducing of a clergyman to the status of a layman. This extreme course can only be taken after the clergyman has been convicted under the Clergy Discipline Act, 1892.

ECCLESIASTICAL COURTS. The Church once claimed exclusive jurisdiction over its clerks, and in many cases over the laity also. Thus it claimed and exercised jurisdiction in matrimonial causes, and in the administration and the testamentary disposition of property. It also claimed the right to try laymen for offences against religion and morality. Now, however, it has lost nearly all its jurisdiction over the laity as well as the exclusive right to try its own clerks. But it still exercises its right to try and punish its clerks for ecclesiastical offences. The three principal courts for the trial of such offences are the Bishop's Court, the Archbishop's Court, and the Judicial Committee of the Privy Council.

The Bishop's Consistory Court is presided over by the bishop or a chancellor appointed by him, who is variously called the Official Principal or the Vicar General. The Archbishop's Court or Provincial Court, called in Canterbury the Court of Arches, and in York the Chancery Court, is presided over by an Official Principal, Dean of Arches or Chancellor. In Canterbury it corresponds to the Bishop's Court, with the additional jurisdiction of being a court of appeal from the Consistory Court. The Judicial Committee of the Privy Council hears appeals under the Clergy Discipline Acts. It consists of the Lord Chancellor, certain high judicial officers, and two privy councillors, with three bishops as assessors.

THE CLERGY DISCIPLINE ACT, 1892. Under this Act if a clergyman is convicted of treason, felony, or grave misdemeanour by a temporal court, or if he has been found to have committed adultery, or if a bastardy order, or an order for judicial separation has been made against him, the bishop must declare his preferment vacant, and he becomes incapable of holding preferment unless he is pardoned by the Crown. Further, if a clergyman is found by a temporal court to have committed any act constituting an ecclesiastical offence, or if it is alleged that he has been guilty of immoral conduct or an offence against the laws ecclesiastical, not being a question of doctrine or ritual, he may be prosecuted in the Consistory Court of the diocese, by any of his parishioners, or by his bishop, or by any person approved by the bishop. If the complaint appears to the bishop to be too vague or frivolous to justify proceedings, he may veto the prosecution. Should he sanction the trial, it takes place in the Consistory Court of the diocese.

The Chancellor presides at the trial and decides all questions of law, but if facts are to be determined, and either party desires it, five assessors must be chosen, of whom three must be clergymen and two laymen. Questions of fact can only be determined either by the unanimous decision of the assessors or by the decision of the Chancellor, and at least a majority of the assessors. If no such decision is arrived at, either party may insist on a new trial with fresh assessors. If found guilty, the accused may be sentenced to deprivation or suspension. Appeals on questions of law may be made to the Provincial Court or to the Privy Council at the option of the appellant, but on questions of fact leave to appeal must first be obtained by petition to the appellate court, and the leave will not be granted unless the court is satisfied that there is a *prima facie* case for appeal. In addition to the sentence of the Consistory Court, the bishop may depose the convicted clergyman from Holy Orders.

CHURCH DISCIPLINE ACT, 1840. The Clergy Discipline Act, 1892, does not apply to questions of ritual or doctrine; these questions are dealt with under the Act of 1840. Under this Act, where the clergyman is charged with any offence against the laws ecclesiastical, the bishop may issue a commission of five persons to make enquiry as to the grounds of the charge. The accused may attend the meetings of the commission and examine the witnesses. At the close of their proceedings the commissioners must transmit to the bishop (1) the depositions of the witnesses,

and (2) a report of the opinion of the majority as to whether or not there is sufficient *prima facie* ground for instituting proceedings. The accused is allowed to have a copy of the report and depositions.

If both parties agree in writing to the course, the bishop may forthwith proceed to pass sentence; otherwise, if the commission has reported that there is sufficient *prima facie* evidence, articles must be drawn up and filed, and a copy of them must be served on the accused. A fortnight after the filing, the bishop may command the accused to appear before him and make answer to the articles. If the accused admits the truth of the articles, the bishop may forthwith proceed to pass sentence; but if he does not make an unqualified admission of them, or if he does not appear, the bishop must hear the cause with the assistance of three assessors. If the decision is unfavourable to the accused, the bishop passes sentence. Whilst the case is under investigation, the bishop has power to inhibit the accused from performing the services of the church, and the Act of 1892 gives the bishop a similar power when a clergyman is accused before a temporal court of any criminal or ecclesiastical offence.

Before the filing of the articles, the bishop may, if he thinks fit, send the case to the Provincial Court for trial. With regard to appeals, if the case has been first heard in the Bishop's Court, the appeal is heard in the Provincial Court, but if tried in the first instance in the Provincial Court, the appeal must be heard by the Judicial Committee of the Privy Council.

PUBLIC WORSHIP REGULATION ACT, 1874. This Act provides an alternative form of procedure for offences against doctrine and ritual, to the procedure under the Church Discipline Act, 1840. It provides that if the archdeacon, a churchwarden, or any three of the parishioners of a clergyman be of opinion:—

> (1) That any unauthorised alteration has been made in the fabric, ornaments, or furniture of the Church within the preceding five years, or (2) That the incumbent has within the preceding twelve months made use of unlawful ornaments, or neglected to use the prescribed ornaments, or (3) That the incumbent had within the preceding twelve months failed to observe the directions as to services, rites and ceremonies contained in the Prayer Book, or has made any unlawful addition to, alteration of, or omission from such services, etc.,

he or they may make a representation to the bishop, who, if he is of opinion that proceedings should be taken, must transmit a copy of the representation to the accused, and must ask both the parties to state in writing if they are willing to submit to his directions without appeal. If both parties agree to this course, the bishop proceeds to try the case and pronounce judgment; but if they do not, the bishop must transmit the representation to the Archbishop, and the case must be tried in the Provincial Court. Appeals are heard by the Judicial Committee of the Privy Council. Where the bishop is the patron of the incumbent's benefice, or if he is unable through illness to act, the Archbishop acts in his place.

CHURCH PROPERTY.

TITHES. These form a considerable portion of the so-called endowments of the Church. Originally they were a voluntary payment, being the tenth part of the yearly produce of land and stock. As time went on the State made them compulsory, but they are now commuted into rent charges, which vary from year to year according to the average price of corn. Tithes were originally intended to be the stipend of the clergy of the parish, but at the Reformation about one-third of the tithe, then in the possession of monasteries, was seized by the Crown and *impropriated*, that is, handed over to certain laymen, who are called, in consequence, lay rectors.

There were two kinds of tithes, great and small; the great tithes being the tithes on corn, hay, and wood, and the small tithes on various other products. The incumbents of parishes entitled to the payment of the great tithes are called *rectors*, those who have charge of other parishes are called *vicars*.

The tithe rent charge may be redeemed, usually at about twenty-five times its average annual value. Since the Tithe Act, 1891, tithes are in all cases payable by the owner of the land and not by the tenant. Any contract to the contrary cannot be enforced.

THE ECCLESIASTICAL COMMISSIONERS were constituted by an Act of Parliament in 1836 a perpetual corporation, for the purpose more particularly of seeing that the revenues of the Church were better administered and more wisely distributed. They have many and varied duties to perform, and extensive powers in connection with their performance, including the power to alter the boundaries of parishes in certain cases. One of their principal duties is the management and administration of episcopal and cathedral estates and revenues, the surplus revenues forming a fund which is applied to the endowment and augmentation of new and poor livings. As an example of the income at their disposal for this purpose, it may be mentioned that in 1905 it amounted to £250,000. By their benefactions they do a great and valuable work in promoting Church extension and Church building. Their usual method of procedure is to make annual grants on condition that churchmen also contribute an amount equal to or greater than the grant.

QUEEN ANNE'S BOUNTY is the name given to a fund which dates from the reign of that queen. Prior to the Reformation, the Pope had exacted from the higher dignitaries of the church certain dues called tenths and first fruits. After the Reformation these dues became payable to the Crown until Queen Anne restored them to the Church. The clergy still continue to pay the dues, but instead of being paid to the Crown they go to form a fund, which is administered by Governors, for various purposes useful to the Church, chief among which are loans for vicarages, etc., and the augmentation of poor benefices.

PATRONAGE. The right to make presentations to ecclesiastical benefices is a right of property. The perpetual right of making a presentation is called an *advowson*. When a benefice becomes vacant, the patron has the right of nominating a successor. If the person nominated is a fit and proper person, the bishop is bound to *institute* him to the cure of souls, and to *induct* him to the profits of the benefice.

The Legislature has from time to time made various enactments with a view to preventing such abuses as might arise from an unfettered system of patronage. Thus, by the Benefices Act, 1898, transfers of rights of patronage must be registered, and no transfer may be made less than a year after the last institution or admission to a benefice. Again, rights of patronage must not be sold by auction, except in the case of an advowson being sold in conjunction with a manor or large estate. Agreements for the exercise of a right of patronage in favour of any particular person are invalid in law. The bishop may refuse to institute or induct a presentee to a living on the ground that not more than a year has elapsed since the last transfer of the right of patronage, or that the presentee is unfit; but an appeal lies from this refusal to a court consisting of the Archbishop and a Judge of the High Court. An advowson may be sold during a vacancy, but not the right of making the next presentation. Such a sale constitutes the offence of *simony*. Further, a clergyman would be guilty of this offence if he entered into any contract by which he might obtain ecclesiastical preferment for valuable consideration, as by the purchase of the next presentation for himself. He may, however, purchase the advowson itself.

REAL PROPERTY.

Property in English law was originally divided into two great classes, "Realty" and "Personalty." The division did not depend on the nature of the property itself, but on the procedure employed in its recovery if it fell into the hands of someone who was not its true owner. If, under

the old law, the *thing itself* (Latin: *Res*) could be recovered, it was "Realty"; but if only *damages* were recoverable, it was "Personalty." Freehold estates in land are realty; whereas leaseholds are only personalty or chattels; but they are frequently called "chattels real," because they affect land. For convenience sake, the old divisions are still adhered to, though the reason for them is fast disappearing. Thus by the present law the thing itself may in many cases be recovered even if the property is personalty.

ESTATES IN LAND.

1. FEE SIMPLE (Freehold). The greatest estate in land which a person can hold is the fee simple, and it arises where land is given "to a person and his heirs." In the strict eye of the law, all land in England is held either directly or indirectly from the Crown; but the owner of the fee simple may be looked upon for all practical intents and purposes as the absolute owner of the property. He is entitled to hold it for ever, for it is a legal maxim that "there can be no reversion on a fee simple." In certain cases, the absolute owner of the land grants to another person the fee simple in that land, subject to the reservation to himself of a certain rent. These grants are called grants in "fee farm." This method is chiefly employed as being somewhat equivalent to a building lease.

As the owner of a fee simple is practically the absolute owner of the property, he may use it almost exactly as he pleases. He may build upon it, or destroy buildings already on it, he may sell it, or any part of it, outright, or he may lease it for a term of years to someone else, and he may mortgage it, or dispose of it by will at his death. There is one thing, however, which he may not do. He may not use the property in such a way as to be a nuisance to his neighbours. Thus he may not deprive his neighbours of their rights to light in those cases where they have acquired such rights (see below: *Easements*), nor may he carry on an offensive trade or an occupation which will endanger his neighbours' health or prosperity, or seriously interfere with their personal comfort.

2. ESTATE TAIL. Where land is granted "to a person and the heirs of his body," he does not obtain the fee simple in the property. The property passes on the grantee's death to the heirs of his body (i.e. his actual descendants) in perpetuity, so long as such heirs exist; but on the failure of such heirs, the property will revert, after the death of the grantee, to the grantor and his heirs, who need not necessarily be "heirs of the body." Where, therefore, an estate is granted with such a limitation, it is called an "estate tail," and the property is said to be "entailed."

Estates tail are of two kinds, general and special. An estate limited "to the grantee and the heirs of his body" is an estate tail general, whereas an estate limited "to the grantee and the heirs of his body by a particular named wife," would be an estate tail special. Other examples of special tail, are estates "in tail male," where the land can only devolve on males who are descended from the male line, and estates "in tail female," where the land devolves on females who trace their descent from females.

When such estates were first created, the intention probably was that the property should be given to the grantee absolutely, subject to the condition that if ever the property passed out of the hands of the grantee's family, it should revert to the grantor and his heirs. But though such might be the original intention, the practical result of the law as it now stands is that the grantee is a sort of tenant for life of the property, though he may generally "waste" the property by felling timber or otherwise.

There is a way, however, in which the entail may generally be barred so that a tenant in tail in possession or entitled to the reversion can frequently convert the estate tail into a fee simple. Thus by the Fines and Recoveries Act, 1833, the tenant in tail has power to change the fee tail into a fee simple by executing a disentailing deed, which he must have enrolled with the Court within six months of its execution. Where the tenant in tail is not in actual possession he must obtain the consent of a person called "the protector of the settlement," who is usually the person who is in possession of the land. If in such a case the tenant bars the entail without the consent of the protector, his own issue are barred, but not the heirs of the original grantor, so that the new estate created instead of being a fee simple will be what is called "a base fee." But by the Real Property Limitation Act, 1874, if a person holds a base fee for twelve years, the estate then becomes a fee simple. Where a tenant in tail is a "tenant in tail after possibility of issue extinct," he loses a great many of his powers over the estate. Thus he may not bar the entail. An example of a tenant in tail after possibility of issue extinct is where an estate has been given to a man and the heirs of his body by a particular wife, and such wife dies without leaving any issue. Here such a man is a tenant in tail after possibility of issue extinct, because any issue he might have by any other wife would not be capable of inheriting

3. ESTATE FOR LIFE. Another kind of freehold estate in land is an estate for life. Life estates are of two kinds: (1) estates to endure for the life of the grantee; (2) estates *pur autre vie*, which are to endure during the lifetime of someone else.

It should here be mentioned that where a person wishes to grant to another by deed an estate in fee simple, he must state in the deed that he is granting it to such a person *and his heirs* or to that person in *fee simple*. For if he merely grants it to such person without the additional words of limitation, the grantee would only take a life estate in the property. This rule, however, does not apply to a gift of the property by will, for if in a will words of limitation are not used, then the devisee will take the whole of the interest which the testator had power to dispose of. Sometimes an estate for life may be granted subject to a condition that it shall be terminated on the happening of an event which may never occur. Thus it is quite common to grant to a widow a life estate to terminate on her re-marriage.

Originally the powers and rights which a tenant for life could exercise over the property were not very great; but tenants for life have, in recent years, been given very extensive powers by a number of Acts known as the Settled Land Acts. Of course the grantor in creating an estate for life can grant in the terms of the deed any powers he likes to the tenant for life; but the powers given by the Settled Land Acts are additional powers given to all tenants for life, and no grantor is entitled to deprive a tenant for life of any of them.

The following are some of the principal powers given to tenants for life by the above Acts:—

(1) The power of selling the property or any part of it; but the tenant must not sell the mansion house without the consent of the trustees of the settlement.

(2) Power to exchange the property for other property.

(3) Power to grant leases of the property; but the building leases granted may not exceed ninety-nine years, or the mining leases sixty years, or ordinary leases twenty-one years, but if the locality is such that people won't accept leases on these terms, then the tenant for life may with the sanction of the Court grant leases for longer periods even in perpetuity.

(4) Power to cut timber ripe for cutting, provided he obtains the consent of the Court.

(5) Power to mortgage the property for certain specific purposes.

Before exercising any of these powers, the tenant for life must give a month's notice in writing to at least two of the trustees of the settlement and their solicitors. Moreover, tenants for life may only sell or exchange the property on the best terms that may reasonably be expected, for they are not allowed to exercise the powers given them by the Acts for their own personal benefit; they must have regard for the interests of other persons under the settlement. Whatever money the tenant for life may obtain from the exercise of these powers is called "capital money," and he must either pay it into Court or else hand it over to the trustees of the settlement. The

capital money is usually invested for the benefit of all the persons entitled under the settlement.

Apart from the Settled Land Acts, tenants for life were and are entitled to have the ordinary proper use and enjoyment of the property during their lives. They are entitled to the yearly produce of the fruits of the soil, but they may not destroy or "waste" the property by pulling down buildings or felling timber, or by opening mines on the property. They have even been held to be "wasting" the property if they have *improved* it by buildings or otherwise, in such a way as to alter the general character of the property.

4. ESTATE FOR A TERM OF YEARS (Leasehold). An estate for a definite period of time, or leasehold, is not strictly realty. The law, for historical reasons, regards such estates as personalty or chattels, but inasmuch as land is usually affected by leaseholds, they may be regarded as being in the nature of realty, and so they are called "chattels real." For the same historical reasons, the law does not regard a contract for the hire of land as conveying a legal estate in the land until the lessee has entered into possession. In one case, however, entry into possession is not necessary to complete the lessee's title. This case arises under the Statute of Uses, 1536, when the contract takes the form of a bargain and sale.

Tenancies for a term of years may be roughly divided into two kinds: (1) specific lettings; (2) general lettings.

A *specific letting* is a letting for a definite fixed time, and it therefore expires when that period of time has been accomplished. A *general letting* is also a letting for a definite period (e.g. a yearly tenancy), but when that period has been accomplished it does not cease, but continues until it has been terminated by the requisite amount of notice.

The requisite notice for a yearly tenancy is six months, expiring on the anniversary of the day on which the tenancy began, unless it be for a tenancy of agricultural land, in which case the notice has been fixed at one year by the Agricultural Holdings Act, 1883. Monthly and weekly tenancies are also general lettings, and can only be rightly determined by a month's or a week's notice respectively. The law further holds that even such a notice will not be valid unless it expires at the end of one of the definite periods of the tenancy. Thus where a tenant holds a weekly tenancy which has commenced on a Saturday morning, should he desire to terminate it, he should give a week's notice, expiring on a Friday night. He cannot leave on a Wednesday by giving a week's notice on the Tuesday or Wednesday of the previous week.

Specific lettings may be for any definite period of time, however long or short, but generally they are for a number of years, except in the case of hotels, where tenants frequently hire a room for one night only. There being no limit to the number of years for which a specific letting may be made, they are in practice sometimes made for a very long period indeed. Though a building lease is usually for ninety-nine years, it is sometimes granted for nine hundred and ninety-nine years. Such a long tenancy is practically equivalent to a freehold, and, indeed, a lease of over three hundred years, of which at least two hundred are unexpired, may be converted into a fee simple by the execution of a deed under the Conveyancing Acts, 1881 and 1882. The powers of a lessee are usually provided for in the terms of the lease; but in the absence of such terms, he may not alter the nature of the property or destroy it, though he may keep the yearly profit arising from its crops.

5. COPYHOLD TENURE. At the time of the Norman dominion in England, *villeins* used under the Feudal system to hold land at the will of their lords in return for the performance of certain services (see "Tenancies at Will," under *Landlord* and *Tenant*). As the *villeins* were merely tenants at will, their lords could turn them out at any moment, but in practice the lords did not often exercise their right, so that on the death of a *villein* tenant the property would generally pass to his family. Thus a custom gradually arose giving to the tenants a fixity of tenure, or a certain estate in the land, as long as they continued to perform the services required of them. The *amount* and the *kind* of these services were enrolled in the parchment rolls of the manor, and a *copy* of this entry was given to the tenant. This copy was in a sense the proof of the tenant's title to the land, and hence he came to be called a copyholder. The old manorial courts came to recognise this custom, and the Common Law Courts of the country have also finally recognised and enforced it.

Copyhold is, therefore, a customary tenure in which the copyholder is entitled to the property subject to the performance of certain duties. The rights and duties of copyholders vary according to the local custom of the particular manor to which they are attached. The owners can generally dispose of their property by will, and if they die intestate, it descends to the customary heir, who may or may not be the same as the heir at law.

> Thus, in those few places where the custom of *borough-english* still exists, the customary heir is the youngest son of the deceased and not the eldest son. Again, with the custom of *gavelkind*, all the sons of a deceased person are his customary heirs.

On the death of a copyholder intestate, and without heirs, the property *eschcats*, not to the Crown but to the lord of the manor. So also the property escheats or is forfeited to the lord of the manor if the copyholder wrongfully refuses or neglects to perform the customary duties.

Copyholders frequently have power to convert their copyholds into freeholds. There are two ways in which this may be done: (1) by extinguishment; (2) by enfranchisement. Where the copyhold and the freehold of the same land are held by the same person, the copyhold as the lesser estate becomes merged in or extinguished by the freehold. Enfranchisement (or freeing the tenure from all customary duties) may take place either by agreement between the copyholder and his lord, or by virtue of the Copyhold Act, 1894.

6. TENANCY BY MORE THAN ONE PERSON. So far we have dealt with tenancies in *severalty*, as they are called, that is to say, tenancies which are legally held by one person only. The law uses the word "person" in a wider sense than that in which it is popularly employed. Thus a corporation or a company may, and generally does, consist of a number of separate individuals, though legally it is only one person. There are, however, cases in which several distinct legal persons are entitled to the concurrent ownership of property. There are four principal cases in which such a concurrent ownership arises.

(*a*) **Joint Tenancy.** Property is frequently granted to two or more persons as joint tenants. They do not then each own a particular part of the property, for if they did they would be tenants in severalty of their respective parts. Joint tenants are all equally entitled to the whole of the property during their lives. Each joint tenant has an equal right with the others to the possession of the property, and by law all must have an identical interest in it. Legally no joint tenancy may be created unless the interests of all the joint tenants come into existence at the same time and under the same deed or other instrument.

The great characteristic of joint tenancies is the right of survivorship. When a joint tenant dies, his interest in the property goes to the surviving joint tenants until one only is left, who then becomes the owner in severalty. A joint tenant may alienate his interest in his own lifetime, or he may insist on a partition of the estate. If either of these things is done, the right of survivorship is extinguished so far as his interest is concerned.

(*b*) **Tenancy in Common.** Like joint tenancies, tenancies in common are created by deed or some other instrument. Tenants in common, too, like joint tenants, are during their lives all entitled to the whole of the property; but their common interests in the whole need not be equal, nor need their interests arise at the same time or under the same instrument. There is no right of survivorship for tenancies in common. If a tenant in common dies, his interest passes to his devisee or heir.

(*c*) **Tenancy by Entireties.** The common law doctrine of marriage is that a husband and wife must be regarded as

one person. Where, therefore, property is granted to a husband and wife, as joint tenants, they could not in law, before the Married Women's Property Act, 1882, be regarded as joint tenants. They were therefore regarded as tenants by entireties so long as the marriage lasted. Neither of the tenants by entireties can dispose of the property or any part thereof without the concurrence of the other. Such a tenancy cannot be created now.

(*d*) **Tenancy in Coparcenary.** The heir at law of a person is usually his eldest son, but as there is no rule of primogeniture for females, if he only leaves daughters, they all take the property as coparceners, their estate being a species of tenancy in common. All coparceners have a common right to the whole of the property, but the interests they hold in it need not be equal. Thus, if a man dies leaving a daughter surviving, and also a couple of grand-daughters, the children of a deceased daughter, the grand-daughters would only take their deceased mother's share in coparcenary with their surviving aunt.

7. DESCENT OF ESTATES. Prior to the Land Transfer Act, 1897, the technical difference between realty and personalty was of greater importance than it is to-day, though in the case of an intestacy, realty still descends to the heir at law, and personalty to the next of kin. Before the Act, the realty of a deceased person vested immediately in his heir, whereas his personalty vested in his executors and administrators. The Act puts realty and personalty on the same footing in this respect, so that now on the death of an owner his property vests in his executors and administrators, who transfer it to whoever is entitled to obtain it.

The owner of land in fee simple is entitled to do exactly what he likes with it, so that he may dispose of it by his will as he pleases. If he dies intestate, that is, without making a valid will, for invalid wills are of no effect, the person entitled to the property is his heir at law.

The owner of entailed property, property in fee tail, cannot dispose of it by his will. On his death, therefore, the person entitled to his property is his heir of the body begotten, or if it is entailed in tail special by a particular wife, the person entitled is the heir of his body begotten by that particular wife. If he has no such heirs, the property reverts to the original grantor and his heirs.

On the death of a tenant for life, the person entitled to the property is the person designated as holding the succeeding estate in the settlement which created the life estate.

Descent in copyholds is regulated by the custom of the particular manor to which the copyhold is attached. And here should be mentioned a peculiar customary tenure to be found chiefly in the county of Kent. It is called *gavelkind*. The customary heir to gavelkind land is not, as is usual, the eldest son. All the sons of the deceased tenant are entitled to the gavelkind property equally; in default of sons, all the daughters take the property equally; and in default of sons or daughters, the brothers of the deceased tenant take equally. Another peculiar customary tenure is that of *Borough English* whereby the property descends to the youngest son instead of the eldest.

Where property is held in joint tenancy, and one of the joint tenants dies, the property goes to the surviving joint tenants, and not to the heir of the deceased tenant. On the death, however, of a tenant in common, his interest in the common estate passes to the person to whom he has devised or bequeathed it by his will, and if he dies intestate, it goes to his heir at law if it is realty, and to his next of kin if it is personalty or a chattel real.

On the death of a tenant in coparcenary, or of one of the several persons owning a common interest in gavelkind, the interest does not go to the survivors as in joint tenancy, but it devolves on the deceased person's heir at law or customary heir if he dies intestate, and on his devisee if he leaves a valid will disposing of it.

The owner of a chattel real, as a leasehold, can dispose of it in his will, though, of course, he may not dispose of a greater interest in the property than he himself possesses. If he dies intestate, his interest does not pass to his heir at law, because strictly speaking the property is not realty but merely a chattel. The person, therefore, who would be entitled to claim the interest from the deceased's administrator would be his next of kin under the Statute of Distributions. (The rules for finding the heirs at law and next of kin are dealt with later in this work, under the head of *Executors* and *Administrators*. See p. 530.)

RIGHTS OVER PROPERTY.

1. UNDERLYING MINES AND MINERALS. Where a person owns the absolute fee simple in a property, he is nearly always entitled to not only the surface of the land but also to all mines and minerals lying beneath the surface. The maxim being that the owner of property in fee simple is entitled to everything both above and beneath it. Sometimes, however, a grant in fee simple is made of the surface alone. In such case the purchaser would not be entitled to the mines and minerals underlying the surface. There are two kinds of mines which, however, do not belong to the owner of the fee simple, they are gold mines and silver mines, which strictly belong to the Crown, but the owner is usually entitled to work them on payment of a royalty.

A tenant in tail after possibility of issue extinct, is practically in the position of a tenant for life; but an ordinary tenant in tail with power to bar the entail is in much the same position as an owner in fee simple with regard to the working of the mines and minerals underlying the property; but he must not sell or give to other persons the right of working such mines and minerals before he has barred the entail, for then he would be parting with a portion of the entailed property to the prejudice of the heirs of his body.

Apart from the powers given to tenants for life by the Settled Land Acts, such tenants have the right to work all such mines and minerals on the property as were originally opened and worked before the commencement of their life estate; but they are not allowed to open fresh mines or quarries on the property, for the law would regard such an opening as "waste." The Settled Land Acts, 1882–1890, have given tenants for life additional powers, so that under the provisions of these Acts, a tenant for life may grant rights and privileges over the property which would otherwise be regarded as "waste"; and they may even grant mining leases of sixty years. With the consent of the Court, such mining leases may sometimes be extended indefinitely.

The powers of a lessee, owner of a chattel real, over the mines and quarries situate in and under the leasehold property, almost always depend on the terms of his lease. If he has taken a lease of the surface only, he would not be entitled to the underlying minerals. Again, if he has acquired the right of working the minerals only without the use and occupation of the surface, he is entitled to use only so much of the surface as is absolutely necessary for the proper working of the mines and minerals. If his lease of the whole property is silent on the point, he is not entitled to open fresh mines, as that would be altering the nature of the property in such a way as to amount to "waste."

2. EASEMENTS. The owners of land or other property frequently own rights over the property of others, such rights are called easements, and arise in one of three ways: (1) by express or implied grant of the owner of the property over which they are held; (2) by virtue of the doctrine of lost grant, whereby if the right is exercised for such a long period, "that the memory of man runs not to the contrary," the law infers that the right has been granted, and that the grant has been lost; (3) by virtue of the Prescription Act, 1832.

(*a*) **Easements of Light.** By the Prescription Act, where a person has enjoyed a right to the free and uninterrupted flow of light over his neighbour's land for a period of twenty years, unless he has obtained the consent in writing of the owner of such property to the use and enjoyment of the light, he obtains a perpetual right to enjoy

that light, so that he can by injunction restrain his neighbour from building on his land in such a way as to seriously interfere with his use of the light, or he may bring an action for damages. Where a person having acquired an easement of light fears that the building operations of his neighbour will seriously interfere with his rights, he should apply promptly for an injunction. If he calmly waits till the structure is finished, he will not find the courts very eager to order its demolition. Moreover, merely hanging up a notice, bearing the words "Ancient Lights," will be of little service.

The law on this subject has very recently been laid down in a decision of the House of Lords, the effect of which is that the neighbour may build in such a way as to interfere with the free access of light, provided he leaves a reasonable amount of light for the proper use and enjoyment of the premises, having regard to the nature of the premises and the purposes for which they are used. Rights of light can, however, only be acquired in respect of buildings, they do not attach to open ground. Where a person wishes to prevent a neighbour from acquiring a right of light over his property, he should put up a hoarding or in some other manner interrupt the light during a full year before the twenty years has expired, or he will lose the right to make an interruption under the Act.

Easements of light may be acquired by implied grant. Thus, where a man sells a house and keeps the land adjoining, he impliedly grants to the purchaser the same rights of light to the house as it enjoyed when both the house and the land belonged to the same owner. The seller, therefore, cannot build on the land which he retains, so as to obstruct the access of light to the house, unless in the contract of sale he expressly stipulated that he should be allowed so to build. But had he kept the house and sold the land adjoining, he could not have prevented the purchaser from building so as to obstruct the access of light to the house, unless he the seller had stipulated in the contract of sale that the purchaser should not so build.

(*b*) **Easement of Way.** What are commonly known as "rights of way" over the property of others are also provided for by the Prescription Act. The period of uninterrupted enjoyment, without the consent in writing of the owner, is in such cases forty years. A certain right of way may, however, be acquired by only twenty years' uninterrupted enjoyment, though the right would in that case be liable to be defeated. The owner of the land would not, however, be entitled to defeat a twenty years' title by merely proving the date prior to that period on which the enjoyment of the right was first exercised.

There are certain other rights of way, sometimes called "private rights" and sometimes "rights of way of necessity." They arise in consequence of the legal doctrine that "a man is not entitled to derogate from his own grant." So that if a person grants to another the right to work a quarry on his property, the law infers that he has also granted him a right of access to the quarry. So, too, where a tenant hires a room in a house, he has a right of free access to his room, and also a right to use the necessary conveniences nearest to his room.

(*c*) **Rights of Support.** Every owner of land has a natural common law right to have that land supported and kept in its place by his neighbour's land; so that the neighbour must not dig in his land in such a way that the adjoining property caves in for want of support. So also, where a person has a right to excavate for minerals on his own land or on that of another, he must not exercise his right in such a way as to endanger the neighbouring property. Similarly, where a person takes a flat or a house in a terrace, the adjoining houses or flats must not be destroyed in such a manner as to endanger his property.

(*d*) **Rights of Air and Water.** Rights to the free and uninterrupted flow of air over a neighbour's land cannot be acquired under the Prescription Act. Indeed it is very difficult to establish such a right at all, unless it depends on an express grant. If, however, the air passes through a distinct channel, as a ventilating shaft opening in the neighbour's land, a right to the free flow of air may be acquired by the doctrine of lost grant.

Persons may acquire a prescriptive right to the free and uninterrupted flow over their neighbour's land into theirs, of water flowing in a defined permanent channel, even if it is underground; so that a neighbour may not divert such a stream; but there can be no prescriptive right to water percolating through undefined channels.

Lastly, the law does not admit that there is such a thing as a prescriptive "right of view," so that a person must not complain if a neighbour spoils his view by interfering with the landscape.

3. RIGHTS OF COMMON. There are four principal rights of common, called sometimes *profits a prendre*, because they are rights of taking some of the profits of property which does not belong to the owner of the rights.

They are:—(1) *the common of pasture* or the right of allowing one's sheep and cattle to graze on the common property; (2) *the common of piscary* or the right of angling for fish in the common waters; (3) *the common of turbary* or the right of taking turf or peat for fuel, sometimes called *firebote;* and (4) *the common of estovers* or the right to take timber or hay, etc., for the furnishing of the house with fuel and the cattle with fodder.

Commons were originally attached to all village communities. Each family owned its own plot of land, and there was in addition the common property which they were all entitled to participate in. They used it for grazing their sheep, cattle and horses, and for collecting *housebote*, i.e. fuel and such things as were necessary to keep their houses duly provided. With the advent, however, of the Norman rule in England, the freehold in commons gradually became vested in the lords of the manor of the various districts. They held it subject to whatever prescriptive rights the villagers may have obtained over it.

Of all the four rights of common, the common of pasture is the one most usually met with. Sometimes the number of cattle which may be allowed to pasture on the common land is regulated by custom, but generally it is the number *levant and couchant on the land*, which means the number which the land would be able to support in winter.

Rights of Common may be acquired by prescription. Such rights will become absolute where they have been enjoyed without interruption for sixty years, unless they have been exercised by the consent in writing of the owner of the land.

4. EMBLEMENTS. The right to emblements is the right to the yearly produce of the soil, as the right to reap and keep the crops which a tenant may have sown.

If a tenant for life dies between seed time and harvest, though his life estate terminates on his death, yet his executors and administrators are entitled to reap the crops at harvest; and for such purpose the law gives them a right of way of necessity, which will enable them to enter the land and take its yearly produce.

But if the tenant for life terminates the life estate by his own wilful deliberate act, he is not entitled to emblements. Thus, where a widow has a lite estate to determine on her re-marriage. If she marries she forfeits the right to emblements.

Similarly in the case of a tenancy *par autre vie*, if the "other life" determines between seed time and harvest, the original tenant for life is entitled to emblements.

In the case of sub-tenants of a tenant for life, the Emblements Act, 1851, provides that if they hold the property at a rack-rent (i.e. a rent equal to the full annual value of the property), and the tenant for life dies between seed time and harvest, then they shall continue in their tenancy, paying to the new landlord the same rent as they paid to the old, until the end of the year, when the tenancy expires without notice. Thus they have plenty of time to collect the harvest and do not suffer by the death of the tenant for life.

5. FISHING RIGHTS. The public generally has the right of fishing in the sea and in such rivers as are tidal to the extent to which they are tidal, but there is no such right in the case of rivers, whether navigable or not, which

are not tidal. In these cases the right of fishing belongs to the owners of the bed of the rivers or to such persons as have been granted the right by them. The public has the right to use a highway only for the purpose of passing along it. A person has no right, therefore, to fish in a private fishery from a bridge or other public highway.

6. TITLE BY POSSESSION. It is a well-known saying, that "possession is nine points of the law." The meaning of this saying is that the mere possession of land confers a certain qualified title on the possessor. He can bring an action for trespass against anyone who wrongfully does an injury to his property, or who infringes his proprietory rights, for actual damage to the property is not needed to found an action for trespass. Where a person commits a trespass to land in the possession of another, it is no defence in law for him to show merely that the possessor is not the real owner. He must go further than that by also showing either that he himself is the true owner, or that the person on whose authority he acts is the true owner. He must rely on the strength of his own title, not on the weakness of the possessor's. If a person, therefore, has possession of a property, he has a good title as against everyone except the true owner. He may even acquire a good title against the true owner by continuing in the possession of the property during the period of limitation (see below) without paying rent or doing anything else which might be taken as a recognition that someone else has a better title than himself; provided that during the same period the true owner does not actively assert his right to the property by claiming rent or otherwise.

The periods fixed by the various Limitation Acts for the recovery of land are not the same as those for goods. Land being in the eyes of the law of more importance than goods or chattels, requires a longer period of limitation. It is generally twelve years, though in some cases it may be extended for a further period of six years. If, however, the land belongs to the Crown or to the Royal Duchy of Cornwall, the period of limitation set to an action for its recovery is sixty years.

The person who holds land for twelve years without acknowledging any other person's right to the land becomes its absolute owner, but he must have taken possession of the land in some lawful manner, and not by fraud or violence, for if he does so, no length of time will make him the owner of the land. Thus, if a person enters into possession with the consent of the owner, as for example under a tenancy, or if he enters into possession in pursuance of his lawful rights, as where a mortgagee enters into possession, then if the person entering does not acknowledge his landlord's right in the one case (as by paying him rent) or the mortgagor's right in the other case (as by accounting to him for the rents and profits), such person becomes the absolute owner of the land. The rights of the landlord or of the mortgagor are completely extinguished.

7. THE LAW OF BOUNDARIES AND FENCES. Questions frequently arise as to which of two owners of adjoining plots of land is the owner of the fence, hedge, wall, or ditch which separates them. If the fence is wholly on the ground of one of them, it clearly belongs to him, but it is often hard to say exactly where the boundary comes. The title deeds of property frequently do, and always ought to, show whether the fence is included in the property. If land is separated from the adjoining property by both a hedge and a ditch, in the absence of any direct evidence to the contrary, there is generally in law a presumption that they both belong to the same person.

Sometimes a wall or fence belongs to both the owners of the adjoining properties; and this is especially the case where their properties originally formed part of a single estate. Such a wall is called a party-wall, and it may be owned in severalty or in common. Thus it may be divided longitudinally into halves, each of the proprietors owning one-half, either absolutely or subject to an easement or support in favour of his neighbour, or they may both own the whole wall as tenants in common.

A person is not always bound to see that his land is properly fenced in; but if he owns animals, he is bound to prevent them straying off his land and doing damage to his neighbour's property. If, owing to his not keeping his land properly fenced, his cattle break into and damage his neighbour's land, he is liable to pay for the damage they do; but he is not so liable, in the absence of negligence, if he is driving his beasts along a highroad and, getting out of control, they escape into, and do damage to, someone else's property.

By the Quarries Fencing Act, 1887, the owners of quarries in unenclosed land, within fifty yards of a public highway, are bound to surround them with proper fencing to prevent accidents. Apart from this Act, the owner in possession of any land containing unfenced holes and other dangers will be liable if any person coming on lawful business (i.e. not a mere trespasser) sustains an injury in consequence of their unguarded condition. By the Barbed Wire Act, 1893, local authorities may require the owner of land adjoining a highway to remove barbed wire fences which are a nuisance to the highway.

8. OVERHANGING TREES, ETC. A person who owns the surface of a piece of property is *prima facie* presumed in law to be entitled to the space above it as well as to the earth beneath it; so that if the branches of his neighbour's trees overhang his property, he may regard it as a trespass and take steps to remove it, by cutting down the offending portion or otherwise. He must not, however, himself commit a trespass by going into his neighbour's land for the purpose. Similarly, if the eaves of a neighbour's house overhang his property in such a way that the rain-water flows off on to his property, this would constitute a trespass and a nuisance. He should not, however, in this case take the law into his own hands. The best course for him to pursue is to bring an action for an injunction to restrain or remove the nuisance, and for any damages that may have been incurred thereby. If the fruit, etc., from a person's trees falls on to his neighbour's land, the neighbour is not entitled to keep it, he must give it up on the owner demanding it; and if he refuses to do so, an action for damages for conversion would lie against him.

THE TRANSFER OF LAND.

1. FORMALITIES PRIOR TO CONVEYANCE. The law has always regarded land as of much greater importance than goods; indeed, at one time an alien could not hold land in England, though this is no longer the case. Much more formality is, therefore, required in the case of a sale of land than is necessary for the sale of goods. In the case of a sale of goods, the ownership is usually transferred by simple delivery of the goods, whereas the ownership of land must be transferred by a deed, called a conveyance.

Before a conveyance of land is executed, there is usually an agreement to purchase and convey the property entered into between the parties. This agreement must be made for a valuable consideration, and it must be in writing and signed by the party to be charged. Therefore both parties should sign it.

Again, before the conveyance is executed, the purchaser has a right to inquire into the title of the vendor, to assure himself that the title is a good one. He can, therefore, demand an "abstract of title" from the vendor, which is a document setting forth all the deeds and wills affecting the title to the property for a number of years. The Vendor and Purchaser Act, 1874, provides that in the absence of any stipulation to the contrary in the agreement or contract of sale, the purchaser can demand that the abstract shall show all the dealings with the property for the previous forty years. In practice, however, a twenty years' title is usually sufficient to protect the purchaser's right.

To further protect him, the purchaser usually has a right to insist on the inclusion in the conveyance of certain "covenants of title," which will enable him to sue the vendor for damages if they are broken. These covenants need not always be expressly set forth; for by the Con-

veyancing Act, 1881, if the vendor expresses that he is conveying in the capacity of beneficial owner, he impliedly covenants:—

(1) That he has a right to convey the property.
(2) That the purchaser shall have the quiet and undisturbed enjoyment of the property conveyed.
(3) That the property is not subject to any mortgage or other charge, other than those which have been disclosed to the purchaser in the abstract of title.
(4) That the vendor will execute any further deeds and instruments, in addition to the conveyance, which may prove to be reasonably necessary for the further assuring to the purchaser of the land conveyed.
(5) That, if the property conveyed is leasehold, the lease is a valid one.

If, however, the vendor does not sell in the capacity of beneficial owner, but as a mortgagee or trustee, the only implied covenant that can be inferred against him is that there are no undisclosed mortgages or other encumbrances of his own creation. And if he sells in the capacity of a "settlor" (i.e. the creator of a settlement; e.g. a marriage settlement), the only implied covenant against him is number (4) above.

2. THE CONVEYANCE OF LAND. There were several ways in which freehold land might be conveyed, but since the Real Property Act, 1845, the usual method is the conveyance by deed of grant. The deed must be "signed, sealed, and delivered" by the parties to the conveyance. The "seal" is frequently nothing more than a wafer stuck on to the deed; and to effect "delivery," all a party need do is to touch the seal with one of his fingers, and say, "I deliver this as my act and deed." Witnesses are not absolutely necessary to attest the signatures of the parties, but it is generally better to have them. The deed must bear a stamp in accordance with the provisions of the Stamp Act, 1891. The value of the stamp will vary in accordance with the price or other consideration given for the property.

The deed itself is a very important and formal document, and under no circumstances can a layman be advised to draw it up. It is usually divided into several parts, setting forth:—

(1) The date of delivery, for a deed becomes effective only on "delivery;" (2) the names and addresses of the respective parties; (3) the consideration or sum paid for the purchase; (4) the acknowledgment by the vendor of the receipt of the purchase money or other consideration; (5) the capacity in which the vendor acts (e.g. as beneficial owner); (6) words importing that the property is conveyed to the purchaser; (7) a description of the property; (8) words setting forth the interest in the property which the purchaser thereafter shall hold (e.g. an estate in fee simple); (9) the express covenants which the respective parties bind themselves to perform.

If the property transferred is leasehold, it should also generally be conveyed by deed, but in this case the deed is called a "lease" or an "assignment of lease," according to the circumstances. No layman ought to try to draw up any lease or assignment without legal assistance. (For further remarks on Leases see *Landlord and Tenant*)

The mode of transferring copyhold property depends on the custom of the manor to which the particular copyhold is attached. It is usually by *surrender and admittance*, whereby the copyholder surrenders the property to the lord, who is bound to admit the purchaser to the property on the payment of a fine.

3. REGISTRATION OF TITLE. The Land Transfer Acts, 1875 and 1897, have been passed with a view to the simplification of the process of transferring land in England. The Acts have established registers in which particulars of the ownership of freehold and long leasehold property in England may, and in the County of London must, be entered. The Acts do not apply to copyholds. The leases which require registration are leases for forty years and upwards. The owner of property wishing to register his title to it should take his title deeds (it is generally better to employ a solicitor for the purpose) to the Land Registry. Particulars of the property and the ownership of it will there be entered in the register, his deeds will be stamped with a record of the registration, and he will be given a *land certificate*, which is a copy of the entry in the register. When once the property has been registered, all subsequent dealings with it must be registered. Generally, the person who is entitled to register the property is the person who is entitled to the possession thereof, though he may not be the absolute owner of the property in fee simple. Thus he may be a tenant for life or a mortgagee.

There are two kinds of title, the registration of which may be applied for: (1) absolute titles; (2) possessory titles. The Registrar will generally allow the second of these forms of registration on the production by the owner of a conveyance of the property to him, or on a statutory declaration by the owner that he is the owner in possession. But the Registrar will not permit the registration of an absolute title until he has satisfied himself that the title is a good one. If he is not absolutely satisfied that the title is without defect, he may allow the registration of a qualified title, that is, a good title subject to certain express reservations. Again, there are a great many restrictions, cautions, and inhibitions which may be imposed by the Registrar with a view to making the registered title safe.

The great object the legislature had in view in passing the Land Transfer Acts was to ultimately do away with the necessity imposed on purchasers of making minute enquiries into the vendor's title. Whether or not this object has been attained is a matter on which opinions may differ. The Act of 1897 provides that a purchaser of land registered with an absolute title shall not require any further evidence than is contained in the register, *plus* a statutory declaration by the owner. If a qualified or a possessory title is registered, the purchaser may require additional evidence.

4. MORTMAIN. Where land is held by a corporation, it is said to be held in *mortmain* (literally "dead hand"). In feudal times such ownership was looked upon with great disfavour, because when land was held by individuals, the feudal lords obtained dues on the death or marriage of the tenants, whereas such dues could not be collected from a corporation, which cannot die or marry. Therefore, from the Statute of Mortmain in the reign of Edward I. to the latter part of the reign of Queen Victoria, many mortmain Acts were passed with a view to restricting the holding of land by corporations. Most of the law on the subject is now contained in the Mortmain and Charitable Uses Act, 1888. By this Act the Crown has power to give to a corporation a licence in mortmain to hold land subject to the terms and conditions contained in the licence.

If land is conveyed to a corporation which has no authority to hold it, the land is forfeited to the superior lord, if there is one, and if not, to the Crown. Authority to hold land may be given to a corporation either by the aforesaid licence from the Crown, or by an Act of Parliament. Nearly all important corporations established by Act of Parliament have been given by their incorporating Act the power to hold such land as is necessary for the purposes for which they were incorporated. By the Companies Acts, 1862, registered companies established for purposes of gain are empowered to hold land, but if they are formed for the purpose of promoting art, science, or any other object not involving the acquisition of gain, they cannot without the sanction of the Board of Trade hold more than two acres. If they wish to hold more, they must obtain the sanction of the Board of Trade.

The law relating to the holding of land by Charities and other similar institutions is contained in the Mortmain and Charitable Uses Acts, 1888 to 1892, which provide that land may be validly left by will for charitable uses, provided it is sold within a year of the death of the testator.

Where land is granted to a charitable use, it must generally be executed in the presence of two attesting witnesses. To be effective it must have been executed at least a year before the grantor's death, and it must be registered in the High Court within six months of its execution. The Acts, however, place certain semi-charitable institutions on a slightly different footing; these include parks, schools, colleges, museums, etc.

MORTGAGES.

WHAT IS A MORTGAGE? A mortgage arises when a person transfers the general property in his land or goods to another as security for a loan. As a rule, the man who borrows the money—the mortgagor—does not hand over the possession of the land or goods to the man who lends—the mortgagee—but remains in possession himself. A mortgage, therefore, differs from a pledge, in which the possession of the property is always handed over to the pledgee. Moreover, there cannot be a pledge of land, but a mortgage may be either of land or goods. Mortgages of chattels are termed conditional bills of sale, and are treated of in another section of this book [see section on Bills of Sale]. It has been stated above that the mortgagor transfers the "general property" in the land or goods to the mortgagee. This term requires explanation, and the matter can best be made clear by a reference to the two forms of mortgage—*legal* and *equitable*.

A LEGAL MORTGAGE. A legal mortgage arises when a person who has himself the legal ownership of property transfers that ownership to the mortgagee as security for the loan. Legal ownership means that form of ownership recognised by the common law, as distinguished from equitable ownership, which was, at one time, recognised only by the Court of Equity or Chancery. A legal mortgage must be by *deed;* and the effect of the mortgage is that the mortgagee becomes the legal owner of the property subject to the mortgagor's right to redeem the land, i.e. to have it reconveyed to him, on payment off of the loan, with interest agreed upon, on the exact date fixed in the mortgage deed. This date is, by custom, usually six months after the date of the execution of the deed. Up to that time the mortgagor has a *right of redemption*. After that period has elapsed, he has *an equity of redemption*, i.e. a claim, formerly recognised only by the Court of Chancery, to get his property back by payment of loan and interest. According to the old doctrines of the common law, the mortgagor forfeited all his rights in the land if he did not pay off the loan on the exact day fixed in the deed; but the Court of Equity, looking to the intention rather than the form of the deed, allowed him to redeem at a later date, and since the Judicature Act, 1873, the rules of equity, where they conflict with those of common law, prevail in all the Courts. It is, however, still necessary to remember this old distinction between the views of common law and equity, for otherwise it is impossible to understand the meaning of an *equitable mortgage*.

AN EQUITABLE MORTGAGE. An equitable mortgage may be created in any one of three ways. (1) The mortgagor may have already conveyed property by way of legal mortgage to A. He is now desirous of borrowing further moneys on the same security from B. There can, however, be only one legal mortgage on any one piece of property, for, as has been stated, the legal ownership in the property is transferred to the mortgagee when a legal mortgage is executed. In the eyes of equity, notwithstanding, the mortgagor, even if the period fixed in the mortgage deed for redemption has passed, is looked upon as the equitable owner of the property, subject, of course, to the charge he has created. He can, therefore, mortgage the property to others, who thereby acquire equitable mortgages. (2) The mortgagor may not have executed a legal mortgage, and yet he may be only an equitable owner. For instance, land, or money, or goods may have been granted to trustees in trust for A. In this case, A has the equitable ownership only, and any mortgage by him of his property is an equitable mortgage. (3) A legal mortgage is a conveyance by the mortgagor of the legal estate in the property to the mortgagee, and a deed is required. If the mortgagor merely executes a memorandum in writing, charging his property with repayment of a loan, or if he deposits his title deeds, with or without a memorandum in writing, with the mortgagee, he creates only an equitable mortgage. If it is desired to raise money quickly, without the time and formality requisite for the preparation of a deed, such a mode of mortgaging one's property is very convenient. It will be shown later, however, that an equitable mortgage is, in many respects, not a really satisfactory security, and those who are about to lend money on mortgage should, if possible, obtain a legal mortgage.

FORM OF A MORTGAGE OF LAND. The form of a mortgage of land differs according to the nature of the property mortgaged, and according to whether the mortgage is legal or equitable. A legal mortgage of freehold is by deed and contains a covenant by the mortgagor to repay the money lent, with interest, on a fixed date, and in default of repayment on that day to continue to pay interest at the rate agreed, by equal half-yearly payments. Then in the same deed follows the conveyance of the land to the mortgagee, with a proviso that if the money with interest be paid off on the fixed date, the mortgagee shall reconvey the property to the mortgagor. A legal mortgage of copyhold is by *conditional surrender*, i.e. the mortgagor surrenders the copyhold to the mortgagee on the condition that if the mortgage is paid off on the date fixed, the surrender shall be void. This conditional surrender is entered on the rolls of the Manor Court. In the case of a mortgage of copyhold, it is usual also to have a separate deed, termed a *covenant to surrender*, executed before the conditional surrender. This is because a conditional surrender is not, technically, a deed, and therefore, but for the covenant to surrender, the mortgagee would not have the benefits which, as will be shown later, are conferred by Statute on mortgagees whose mortgages are by deed. A legal mortgage of leasehold is either by *assignment*, in which the lessee conveys the whole lease to the mortgagee, or by *sub-lease*, in which he conveys all the remainder of the lease, save one day, to the mortgagee. In one respect a sub-lease is more advantageous to the mortgagee than an assignment, for in a mortgage by sub-lease the mortgagee is not directly liable to the landlord of the mortgagor on the covenants in the lease, e.g. covenants to pay rent, to repair, and to insure. Equitable mortgages of freehold, copyhold, or leasehold may be by deed (i.e. when the mortgagor has not the legal estate), by mere memorandum, or by deposit of title deeds. If the land is registered in the County of London, the land certificate, and not the title deeds, should be deposited.

REMEDIES OF A MORTGAGEE OF LAND.

If a mortgagee is not repaid his loan with due interest thereon, he has certain remedies. The most important of these are: (1) he can take possession of the property; (2) he can foreclose; (3) he can sell the mortgaged property; (4) he can sue on the covenant, if the mortgage is by deed and contains, as would almost certainly be the case, a covenant to pay the debt; (5) He can appoint a receiver.

1. TAKING POSSESSION. A legal mortgagee has, in theory, a right to take possession of the property at once, unless the mortgage deed forbids him to do so; but as, after all, what the mortgagee wants is a security for his money and not the management of an estate, he would not, in practice, take possession unless his interest is in arrear, or he has not been repaid his capital after notice given to the mortgagor. An equitable mortgagee can only take possession with leave of the Court. A mortgagee taking possession is under certain disadvantages, for he must account for all rents and profits, must collect rents, and is liable for occupation rent for any house on the land he himself occupies, and he cannot charge for his time and trouble in managing the property. He should keep the premises in repair out of any surplus rents and profits there may be after paying his interest. Moreover, a mortgagee who goes into possession cannot quit without the consent of the mortgagor. If he does so, he may be liable for any damages that may ensue.

2. FORECLOSURE. At any time after the mortgagor has made default in paying off the mortgage debt, the mortgagee can apply to the Court of Chancery for a *foreclosure decree*. This decree orders an account to be taken before a Master (i.e. an official of the Court of Chancery), of the amount due to the mortgagee, and

directs that if the amount found due is not paid within six months of the taking of the account, the mortgagor is to be "foreclosed of his equity of redemption," or, in other words, the mortgagee is to become the absolute owner of the property. In foreclosure proceedings, the mortgagee coming to the Court must make parties to his action not only the mortgagor but also any mortgagees subsequent to himself, and he usually makes parties to the action any prior mortgagees, and offers to redeem them, i.e. to pay off their charges. Hence a well-known saying, "Redeem up, foreclose down," i.e. a person can redeem any mortgagee prior, and foreclose any mortgagee subsequent, to himself. The foreclosure must be asked for within twelve years since the mortgagor's last payment of interest or written acknowledgment of the mortgage debt. It should be noted that there is not much chance that the mortgagee, by foreclosure, will secure a property worth more than his debt and interest, for, if the mortgagor in the course of the foreclosure proceedings can find any one else to lend him the money, he can compel the mortgagee to transfer the mortgage to such person. Moreover, if there are mortgages, subsequent to the mortgagee applying for a foreclosure, they would presumably pay him off before the foreclosure became absolute, which takes place six months after the Master has made a Certificate of the result of the account. It is also specially provided by Statute, that any one interested in the mortgage money or in the equity of redemption may apply to the Court to direct a sale of the property instead of a foreclosure.

3. **SALE.** A mortgagee can sell the mortgaged property (1) if there is an express agreement in the mortgage allowing him to do so; or (2) if the Court gives him leave to sell; or (3) if his mortgage is by deed, and three months have elapsed since a notice given by him for repayment of his principal, or the interest is two months in arrear, or there has been a breach by the mortgagor of some covenant in the mortgage deed other than a covenant to pay the principal debt and interest. In case (3) the power of sale is implied and is given by the Conveyancing Act, 1881. On a sale, the purchase money is used to pay off prior charges, if any, the costs of the sale, and the mortgage debt and interest of the seller. The surplus is held by the mortgagee who sells in trust for subsequent mortgagees and the mortgagor. The persons entitled to the surplus must take steps to recover it within six years of the sale, otherwise their claims will be barred.

4. **ACTION ON THE COVENANT.** If the mortgage does not contain an express covenant to pay the mortgage debt, a promise on the part of the mortgagor is nevertheless implied. But the action on this implied promise will be barred by the lapse of six years from the last payment of interest, or from any acknowledgment in writing of the debt. If there is a covenant to pay in the deed, an action can be brought upon it until twelve years have elapsed since the last payment of interest or written acknowledgment of the debt.

5. **APPOINTMENT OF RECEIVER.** The mortgagee, if his mortgage is by deed and if his power to sell has arisen (see above), has an implied power, by virtue of the Conveyancing Act, 1881, to appoint a receiver. Such receiver collects the rents and profits of the land, and thereout, after paying outgoings, interest on prior mortgages, if any, and his own commission, pays the interest due on the mortgage of the person appointing him, and holds the surplus for the benefit of the person entitled to the land subject to the mortgage. Although the receiver is appointed by the mortgagee, he is considered to be the agent of the mortgagor, and therefore the mortgagee is not responsible for his negligence. It will be seen, therefore, that it is more advantageous for a mortgagee, in this respect, to appoint a receiver than to go into possession himself.

CONVEYANCING ACT, 1881. This Act conferred numerous powers on mortgagees of land, whose mortgages are by deed. The powers are implied, and need not be set out in the mortgage deed. The right to sell and the right to appoint a receiver have been already referred to. The mortgagee was also given a power to insure the mortgaged property up to two-thirds of its value. By the same Act, a mortgagor in possession or a mortgagee in possession (whether the mortgage was by deed or not), unless the mortgage deed or agreement expressly excludes the power, can grant leases which will be binding on the mortgagee or mortgagor respectively. The Statute declares that an agricultural or occupation lease can be granted for a period not exceeding twenty-one years, and a building lease for a term not exceeding ninety-nine years, but not mining leases. The Conveyancing Act, 1881, also provides that, on the death of a mortgagee, his estate in freehold land is to go, as personalty, to his executor or administrator, who, if the mortgage debt is paid off, would be the proper person to reconvey the land to the mortgagor.

HOW MORTGAGEE MAY PURSUE HIS REMEDIES. A mortgagee may pursue all his remedies concurrently, i.e. he may sue on the covenant and foreclose for the balance, if any, left due; or sell the property and sue on the covenant if the land does not realise the amount of his loan. But if he forecloses and then sues on the covenant, the foreclosure is "re-opened," i.e. the mortgagor has once more the right to redeem the property by paying off the loan and interest. It follows, therefore, that if the mortgagee has foreclosed and has then sold the property, he cannot sue for any deficiency, for, having parted with the land, he cannot reconvey it to the mortgagor, and, therefore, the foreclosure cannot be re-opened.

PRIORITIES. If there are several mortgages on the same property, the question of priority arises. If the mortgages are on land, the general rule is that the mortgages rank in order of date, but that a legal mortgagee has priority if at the time of his mortgage he had no notice of any prior equitable mortgages. It has been stated above that there can only be one legal mortgage on any one estate. If, therefore, X mortgages his land to A by equitable mortgage, and then to B by legal mortgage, and B had no notice of A's mortgage when he lent his money, B has priority over A. As regards equitable mortgages on the same estate, they rank in order of date, subject to the possible operation of the doctrine of *tacking*.

TACKING. This doctrine is based upon the priority which is given to the holder of the legal estate. Put shortly, it is the right of a mortgagee who holds a legal mortgage, together with other charges on the same property, to tack them together and squeeze out any intermediate mortgages of whose charges he had no notice when he advanced his money. It may arise in two ways.

(1) A advances money to B, and gets a legal mortgage on B's land; afterwards B raises further sums by equitable mortgages from C and D, etc. B then raises another advance from A on the same security. If A had no knowledge of the charges of C and D when he made his further advance, he can tack his further advance to his legal mortgage, and claim to be paid off both before C and D. If, however, A knew of the prior charges of C and D when he made his second advance, he cannot tack even though his original mortgage was expressly declared to extend to any further advances.

(2) B borrows money from A by legal mortgage, and afterwards from C and D successively by equitable mortgages on the same land. If D, when he lent his money, did not know of C's charge, he can by buying up A's legal mortgage tack his equitable mortgage to it and get priority for both mortgages over C. It does not matter that D knew of C's charge when he acquired the legal mortgage, so long as he did not know of it when he made his original advance.

It will be shown later that an equitable mortgagee has a right to redeem any prior mortgage if he is prepared to pay off the capital sum and interest. Of course, in the case given, C might have gone to A before D did so, and redeemed A's mortgage, and then he would have been safe.

NEGLIGENCE OR FRAUD OF MORTGAGEE. It should be stated that a mortgagee may lose the priority he otherwise would enjoy if he is guilty of fraud or negligence.

Thus, if B deposits his title deeds with A by way of equitable mortgage, and A afterwards allows B to take

back the title deeds, and B deposits them with C as security for an allowance, C, if he did not know of A's charge at the time, will have priority over A.

A *legal* mortgagee, however, will not lose his priority merely on the ground of carelessness, but only on the ground of fraud or gross negligence.

Thus, where B executed a legal mortgage in favour of A, but made excuses for non-production of the title deeds (which are usually handed over to the legal mortgagee), and afterwards executed a mortgage in favour of C, and deposited the title deeds with C, it was held that A was not postponed to C.

EQUITY OF REDEMPTION. It has been stated above that, after the period for redemption fixed in the mortgage deed has elapsed, the mortgagor has left in him an "equity of redemption." It has been decided that an equity of redemption is an estate in the property and therefore can itself be mortgaged. If the mortgage is on real property, the equity of redemption, on the death of the mortgagee, will descend like real property. Any clause in the mortgage deed, or any contract made between the mortgagor and the mortgagee, which would have the effect of depriving the mortgagor of this equity of redemption, is void. Any attempt even to "clog" or fetter its exercise has been held to be void. Thus, where a publican mortgaged the lease of his public-house to a brewer, and agreed to buy beer only of that brewer during the continuance of the lease, it was held that, on payment off of the mortgage, his obligation to buy beer of that brewer came to an end. A mortgagor may, however, lawfully bind himself not to redeem for a certain period, say for five years. In this case, of course, the mortgagee cannot foreclose or sell during the same period so long as interest is paid. The equity of redemption can be exercised not only by the mortgagor, but also by any subsequent mortgagee on the same property, or by a purchaser of the equity of redemption, or, in fact, by any one interested in the equity of redemption. It may be well to add that any advantage secured to a mortgagee over and above his principal and interest is called a "collateral" advantage. Where a collateral advantage affects the value of the property mortgaged it cannot be enforced after the mortgage is paid off; but if it affects the mortgagor personally it can be enforced, provided it is not oppressive or unconscionable.

TIME FOR REDEMPTION. A mortgagor can redeem on the date fixed in the mortgage deed without giving notice of his intention to do so, but if he exercises his equity of redemption after that date has passed, he must give six months' notice or pay six months' interest in lieu of notice. This, however, does not apply where the mortgagee has demanded repayment or taken possession of the property; nor does it apply to an equitable mortgage by deposit of title deeds. In such cases the mortgagor can redeem without notice. If the mortgagee refuses to reconvey the property when the mortgagor offers to redeem, the mortgagor should bring an action in Chancery.

HOW IS EQUITY OF REDEMPTION LOST? The mortgagor will lose his equity of redemption if the mortgagee forecloses (see above); or if he sells (but in this case the mortgagor will be entitled to any surplus); or if the mortgagee enters into possession of the land and holds it for twelve years without acknowledging in writing the mortgagor's right to redeem; or if the mortgagor executes a second mortgage by deed and fraudulently conceals the first mortgage. Hence the statement "Once a mortgage always a mortgage" is not to be taken quite literally.

CONSOLIDATION. If a mortgagor mortgaged different properties by separate mortgages, and the period fixed in the different mortgages for repayment had elapsed, and the mortgages had all got into the hands of one person, that person was entitled to refuse to allow the mortgagor, or any subsequent assignee of the equity of redemption, to redeem one of the mortgages without redeeming the other or others at the same time. By the Conveyancing Act, 1881, sec. 17, this right of consolidation, as it is termed, was abolished, unless the mortgage deeds or one of them expressly excludes the operation of section 17.

REAL ESTATE CHARGES ACTS. By a series of Acts known by this name, if an owner of freehold, copyhold, or leasehold property, which is subject to a mortgage, dies, the person who gets the land takes it subject to the mortgage; i.e. he cannot call on the deceased person's executor or administrator to pay off the mortgage out of the general personal estate of the deceased.

MORTGAGES OF REGISTERED LAND. In Yorkshire, registered charges take priority according to date of registration, except in case of actual fraud, and the doctrine of tacking does not apply. In the County of London compulsory registration of certain interests in land applies, and, subject to any entry on the register to the contrary, registered charges rank according to the order in which they are entered on the register, and not according to the order in which they are created.

WILLS.

WHAT MAY BE LEFT BY WILL. A Will or Testament is the declaration by a person of his wishes with regard to the disposal of his property after death. A *Codicil* is a supplement to a Will. The person who makes a Will or Codicil is called a testator, or, if a woman, a testatrix. Originally, valid Wills could be made by word of mouth, but this can no longer be done, except in the case of soldiers' and sailors' Wills. With this exception, all Wills and Codicils must now be written or printed, signed by the testator, and attested by two witnesses.

A person can now dispose of by Will all the property to which he is entitled at the time of his death. But of course he cannot give away more than he is entitled to. Where, for instance, he possesses property which is mortgaged, and he disposes of it by his Will, the beneficiary will have to take it subject to the mortgage, unless the testator has provided for the clearing off of the mortgage in some other way, as by directing that it shall be paid off out of the residue of his personal estate.

In former times, property disposed of by Will was divided under two heads, *real* property and *personal* property. Until the Wills Act, 1837, the number of witnesses and other formalities to be observed in the execution of Wills varied according as the property was Realty or Personalty. Again, until the Land Transfer Act, 1897, real and personal property did not pass in the same way. Now, however, this distinction between Real and Personal property is not of great importance to laymen, though it still accounts for the use of certain technical expressions. Thus "real property" is *devised*, and goes to a *devisee*, whilst "personal property" is *bequeathed*, and goes to a *legatee*. *Gift* is a word which covers both devises and bequests, and the word *beneficiary* covers both devisees and legatees.

WHO CAN MAKE A VALID WILL. The general rule is that all adult persons can make a valid Will, but that infants (persons under twenty-one years of age) cannot dispose of their property by Will. Soldiers, however, in actual military service, and seamen at sea may make valid Wills even when they are infants.

Whether or not a married woman can make a valid Will depends on the date of her marriage. If she was married since the 31st December, 1882, she can make a Will disposing of her property as she likes. If she was married before that date she can validly dispose of by Will all the property which she has acquired since that date, and also such property as has been settled to her separate use or made her property by the Married Women's Property Act, 1870. But she cannot make a valid Will disposing of any other property, except by merely exercising a power of appointment, without the express permission of her husband. Furthermore, the husband in such cases can withdraw his permission at any time before the Will is proved. Again, if the wife in such a case survives her husband, she must re-execute the Will or it will become invalid.

Outlaws cannot make a valid Will. This is partly because they have no property to leave, their property having been forfeited by the Crown, and also because they have no legal rights whatever. Nor can the subjects of countries at war with Great Britain make valid Wills disposing of any of their property in this country.

With regard to idiots and other insane persons, they cannot generally make valid Wills whilst they are insane, but they can make them during a lucid interval. So, also, they can make valid Wills if the insanity is of such a nature that it does not prevent them properly transacting their business or controlling their general affairs. In other words, the Courts are always loth to upset a Will, nor will they do so merely because the testator happened to be eccentric, even if his eccentricity took such an abnormal form that it would be regarded by ordinary persons as insanity. If a person makes a Will whilst perfectly sane, it is not rendered invalid by his subsequently becoming insane.

N.B.—When a person executes a Will without approving of its contents, whether he has been induced to do so by the state of his mind, drunkenness, force, or undue influence the Will is invalid.

HOW A WILL IS MADE.

1. SIGNATURE. With the exception of certain soldiers and sailors' Wills, which will be dealt with later, all Wills must be in writing and signed by the testator at the foot or end. It is not absolutely necessary for him to sign it himself. It will be sufficient if someone else signs it in his presence and by his direction. But it is better that he should himself sign it unless he is too ill to do so. If he cannot sign his name he may make his mark. If the signature is not at the foot or end of the Will, the part that follows the signature will not be valid. The Will need not all be contained on a single sheet of paper; but if on several sheets it is highly desirable that they should be connected together in some way. No alterations must be made in a Will after signature, and those made before signature must be initialled by the testator and by both witnesses.

2. ATTESTATION. No Will will be valid unless the testator's signature is attested by two witnesses in his presence and in the presence of each other. The witnesses must sign their names to the Will. It is usual to insert between the testator's signature and the signatures of the witnesses a short clause to the effect that the latter have attested the testator's signature in his presence, and in the presence of each other. It is not absolutely necessary that this clause should be inserted, but its presence makes it very much easier for the executors to obtain probate of the Will. The witnesses should not be persons who in any way benefit by the Will, nor the wives or husbands of such persons. For though the Will will in all other respects be valid, the witnesses and their consorts will not be able to derive any benefit from it; but if a codicil is subsequently executed, and attested by other witnesses, the witnesses to the will are entitled to their gifts.

Any person who is competent to give evidence is a good witness to a will, even though such person be under age. Of course it is best to have witnesses of manifest understanding and of good credibility.

3. SOLDIERS' AND SAILORS' WILLS. Under the Wills Act, 1837, soldiers in actual military service and sailors actually at sea are not bound by the formalities which other testators have to observe. They may even, subject to the following exceptions, make Wills without writing, by merely informing witnesses of their testamentary wishes. Under the Navy and Marines (Wills) Acts, 1865 and 1897, which apply to petty officers, seamen, marines, and non-commissioned officers of marines belonging to the Royal Navy, the Wills of such persons to pass wages, prize-money and effects in the possession of the Admiralty must be written and executed in the ordinary way. The Acts further require that one of the witnesses shall be, if possible, a superior officer or chaplain, and where this is impossible, that he should be some responsible person, as a British Consul or the surgeon of a naval hospital. There is a somewhat similar provision in the Merchant Shipping Act, 1894, as to the disposal of a seaman's property in the possession of the Board of Trade, except that if the Will is made on board ship only one witness is required, but this one must be either the master or the first mate.

4. WILLS MADE ABROAD. Where land is disposed of by Will, the Will must be executed in accordance with the law of the place where the land is situated; but where goods are so disposed of, the Will is generally construed in accordance with the laws of the place where the testator is domiciled. A person is said to be domiciled in a particular country when he has made his *permanent* home there. Thus a person may acquire a foreign domicile whilst still remaining a British subject. It is frequently a difficult matter to ascertain a testator's domicile. To obviate these difficulties, Lord Kingsdown's Act was passed in 1861 (24 & 25 Vict., c. 114). By this Act, where a British subject makes in a foreign country a Will disposing of his personal property, it is to be considered a valid Will if executed either according to the law of that foreign country, or according to the law of the place where the testator was domiciled, or according to the law of that part of the British Empire from which he originally came.

5. HINTS ON WILL-MAKING. When a person desires to make his Will, he ought first to go to two or three of his friends and get their consent to act as executors. He is not bound to do so, but if their consent has previously been obtained they are less likely to renounce probate. He should then make a schedule of all his property. This will be useful to his solicitor or to himself in the preparation of the Will, and it will also be of great service to his executors after he is dead. Having done this, he should instruct a solicitor to prepare the Will. It would be very unwise of him to prepare it himself, but if he prefers to take the risk the following hints may be of service to him.

He should avoid all attempts at technical expressions and state his intention in the plainest and simplest language possible. He should not attempt to qualify the gifts in any way, and he should avoid the creation of any trust, as such creation requires technical skill of a high order.

The following directions should be carefully followed:—

(1) Begin with a declaration that it is your last Will, giving your full name and permanent address and date of the Will.

(2) Expressly revoke all previous Wills and Codicils, if any. [If this is not done they will remain in force so far as they are consistent with the later Will, and be a probable cause of litigation.]

(3) Appoint executors, two being the most convenient number.

(4) Direct the executors to immediately pay a certain sum out of the estate to the widow or some other suitable person so as to obviate pecuniary difficulties while the executors are winding up the estate.

(5) Set forth such gifts as you intend to make, stating clearly who the recipients are to be, and if the gifts are to be free from legacy duty, say so clearly.

(6) Lastly, designate the person to whom you desire to leave the residue of your property.

Having completed the Will, summon two persons who not only do not derive any benefit from the Will, but whose wives or husbands do not derive any benefit either.

You must then sign your name at the foot or end of the Will (and not anywhere else) in the presence of both the witnesses, who must then sign in your presence and in the presence of each other, a clause being inserted to this effect between your signature and theirs.

N.B.—If any words are scratched out, or inserted between the lines, or if there are any other alterations in the Will, both the testator and the witnesses must initial them.

6. SOME RULES OF CONSTRUCTION. Courts of law in construing a Will will interpret it according to the intention of the testator as expressed by the Will. Thus, if the Will says: "I leave my property in Kent to John Brown," when the testator has no property in Kent, evidence will

not be admitted to show that the word "Kent" has been inadvertently substituted for "Sussex." But where the Will says, "I leave my property to my friend Brown," and he has two friends named Brown, evidence will be admitted to enable the Court to draw an inference as to which Brown was meant. But evidence will not be admitted to explain what are called *patent* ambiguities, as where a blank has been left in place of the name of a beneficiary.

Wills are generally construed as speaking from the death of the testator, especially when the gifts are described in general terms. Thus, "I leave all my money at Lloyd's Bank to my son," will mean all the money the testator has at that Bank at the time of his death, not merely such money as he had there at the date of his Will. But where a contrary intention is expressed by the Will, the Courts are bound by the intention. Thus, "the land I *now* own in Somerset," would mean the land owned at the date of the Will.

Where a general gift made by Will has lapsed or become void, the gift goes to the person entitled to the residue of the estate. Gifts lapse when the beneficiary dies before the testator; but in the case of gifts to children, or other issue of the testator, the gifts would go to the person entitled to the dead child's property, provided that such child or other issue left issue living at the testator's death. And there is a similar exception where the testator has given property "in fee tail" to a person who dies before him. The property would then go to the person entitled to succeed under the entail.

As Wills, unlike deeds, are not infrequently drawn by persons without an exact knowledge of the effect of technical expressions, it is only right that they should not be construed with the same strictness as deeds. Therefore, when a testator makes a gift of certain lands to a person, without attaching to the gift "words of limitation," as they are called, that is to say, words indicating the nature of the estate which the testator means to pass (as whether it is to be the fee simple or merely an estate for life), the beneficiary will get the greatest estate in those lands that it is in the power of the testator to give.

7. IMPORTANCE OF TECHNICAL WORDS. Testators desiring to make a gift to a person would do well to add the word "absolutely," in case any litigation should afterwards ensue as to whether a trust has been created. A testator is advised to trust to the integrity of the beneficiary in disposing of the property, and not to express the hope, in his Will, that the property will be dealt with in a particular way, unless he wishes a trust to be created.

As for technical expressions he should eschew them, but it would be well for him to bear in mind that apparently every-day expressions often have in law a highly technical meaning. Thus "brother" includes a half-brother, but not a step-brother or brother-in-law, for these are not blood relations. Again, "children" means legitimate children only. So if a testator desires by his Will to confer a benefit on illegitimate children, he should be careful to specify them by name. As marriages with a deceased wife's sister and bigamous marriages are not legal, the children of such marriages are illegitimate. Again, a divorced wife would not come under the description "my wife." She is no longer the testator's wife, though she has the right to use his name. Questions do not now arise as to whether a gift "to my wife" would apply to a wife whom the testator has married after making his Will, for the marriage would revoke the Will.

As "worldly goods" does not include *real* property, unless a contrary intention appears on the face of the Will, it is better to say "All my property whatsoever," than "all my worldly goods."

The word "money" includes all the money in the possession of the testator at the time of his death, whether in the bank or in the house, and also all money to which he is actually entitled at the time of his death, but it does not include money due on notes of hand or other debts due to the testator. "Cash" is not in law such a comprehensive term as "money," but it includes Bank of England notes. The words "my family" only apply to the testator's children, not to his wife or grand-children. "Furniture" includes pictures and plate, but not wines or a library of books.

N.B.—There are hundreds of other technical expressions differing widely from the ordinary acceptation of the terms; but perhaps enough has been said to persuade an untrained person not to venture to prepare his own Will, or at any rate to convince him of the risk he runs in so venturing.

8. FORM OF A SIMPLE WILL. A Will need not assume any particular form. Any writing duly signed and attested by two witnesses is sufficient. But the following form of a very simple Will creating no trusts may prove of assistance to those unwise and reckless enough to attempt to write a Will without the assistance of a lawyer.

I, John Jones, of 103, Alpha Road, Whitechapel, make and execute this my last Will and Testament on the third day of April, 1905. I hereby revoke all my former Wills, Codicils and Testamentary Dispositions. I appoint my brother Alfred Jones and my brother-in-law James Smith executors of this my Will, and I give to each of them who shall accept the office the sum of fifty pounds for their trouble. I give to my dear wife Elizabeth Jones the sum of one hundred pounds for her immediate use, and I direct my executors to pay the same to her out of the first monies that come into their hands. I give to my said wife all the liquors, wines, fuel, house-keeping stores and provisions in my house at the time of my death. I give to each of my daughters, Mary Jones and Janet Jones, the sum of two hundred pounds. I give to my son Robert Jones, the sum of three hundred pounds. I give to my old nurse and foster-mother, Sarah Jenkins, of 43, Purbeck Road, Fulham, the sum of thirty pounds free of legacy duty. I give to my sister Maria Smith, the wife of James Smith, the sum of fifty pounds. I give the residue of all my property whatsoever to my said dear wife Elizabeth Jones absolutely. In witness whereof I the above-named testator have hereunto set my hand the day and year first above written.

John Jones.

Signed by the testator as his last Will and Testament in the presence of us, who both being present at the same time, in his presence and in the presence of each other have hereunto subscribed our names as witnesses.

Caroline White,
Housemaid,
103, Alpha Road, Whitechapel.

Samuel Squeers,
Accountant,
7, Alpha Road, Whitechapel.

REVOCATION OF WILLS. A testator can always revoke a previous Will, sometimes even unconsciously. Thus, where a Will is made by a person who is single (whether bachelor, spinster, widow, or widower) if the person subsequently marries, the Will is automatically revoked.

Again, where a testator has bequeathed certain property to a person and has afterwards parted with the property before his death, the bequest becomes void. So where he parts with all the property disposed of by the Will, the whole Will becomes ineffectual.

But with the above exceptions no person can, in law, be presumed to have altered his intentions as expressed in his Will merely by the lapse of time or by any alteration in the circumstances of the testator between the date of his Will and the date of his death.

Where a testator having made a Will subsequently makes another Will or Codicil which is not consistent with it, but which does not expressly revoke it, the first Will is valid in so far as it is consistent with the later Will or Codicil, but the later Will is alone valid as to the parts where they are not consistent.

In addition to the above there are only three ways in which a testator may deliberately revoke a Will:

(1) He may make a subsequent Will or Codicil which expressly revokes the former Will. (2) He may execute some writing which declares the Will to be revoked. But such writing must be executed with all the formalities (two witnesses, etc.,) of a Will: or (3) He may burn, tear, or otherwise destroy the Will with the intention of revoking it.

These rules are strictly adhered to by the Courts when they come to consider whether or not a Will has been revoked. The testator cannot therefore revoke a Will by declaring to a number of witnesses that he considers it revoked. Nor can he cancel it by striking it through with a pen, or by writing the word "cancelled" across its face, or by crossing out his own signature and those of the witnesses. But where he completely obliterates the signature the Will will be invalid, as also will those parts of the Will be which have been so completely obliterated that the words cannot be read. If he "burns, tears, or otherwise destroys" the Will without intending to revoke it, it will still be valid.

REVIVAL OF WILLS. A Will which has been revoked is not revived by revoking the Will or other instrument by which it was revoked. Nor can a revoked Will be revived by destroying the subsequent Will which revoked it, or by mere implication in any other way. There are indeed only two ways in which a Will may be revived after it has been revoked. The first is by re-execution of the Will itself, and the second is by the due execution of a Codicil expressing the intention of reviving the Will.

The Codicil must be executed with all the formalities of a Will, and the intention of reviving the Will must be clearly expressed on the face of it. Merely describing it as a Codicil to the revoked Will would not be sufficient to revive the Will. Again, where a Will has been partially revoked and then wholly revoked, if a Codicil to revive it has subsequently been executed, the revival will not extend to the partial revocation unless the Codicil expressly declares that it shall extend to such revocation.

Where a testator revives a Will by re-execution, he should remember to put the date of the re-execution on the Will, and also to execute it in the presence of two attesting witnesses in the same way as he executed the original Will.

Sometimes a Will is invalid because it has not been duly executed. For instance, the two witnesses may not both have been present together at its execution. Such Wills can be made valid by re-executing them with all the due formalities, or by duly executing a Codicil to make them good.

Again, as has been already seen, a perfectly valid Will becomes invalid on the subsequent marriage of the testator. These invalid Wills may also be rendered valid by re-execution or by a Codicil expressing the intention to revive them.

Though a testator is thus enabled by Codicil or by re-execution to revive a Will which is invalid, by reason of its revocation or otherwise, he is not advised to do so. By far the best thing he can do is to write and execute an entirely new Will expressing fully his testamentary intentions, even when the new Will is merely an exact copy of the old Will. Codicils are sometimes lost or mislaid, and even when they are present the intention to revive the former Will is frequently not expressed with sufficient clearness to prevent disputes.

EXECUTORS & ADMINISTRATORS

WHO MAY BE APPOINTED. An *executor* is the person whom a testator appoints by his Will to wind up his estate and to distribute the assets in accordance with the terms of the Will. Where the deceased has left no Will there can be no executors and no probate. The property, if *realty*, will go to his heir-at-law, and if *personalty* to his next of kin. But as it is desirable that some one should wind up the estate and distribute it among those entitled to it, the Court will appoint a person called an *Administrator*, and grant him "Letters of Administration." If the testator has named no executor in his Will, no Probate will be granted, but an administrator will be appointed with a grant of "Letters of Administration with the Will annexed." He will be in practically the same position as an executor.

When an executor dies, the office is continued by the surviving executor; but when a sole or last executor dies, the executorship goes to that executor's executor. If he has not named an executor, the Court appoints an Administrator to carry on the work.

The general rule is that anyone may be appointed and act as an executor; but infants, lunatics, and bankrupts (where the testator has not been aware of the bankruptcy), cannot as a rule personally act as such whilst they are under disability. The Court may also relieve of his duties an executor resident abroad. The person whom the Court appoints as administrator is usually the husband, wife, or one of the next-of-kin of the deceased, or some person interested in the estate, as the residuary legatee or a creditor. But a creditor would not generally be appointed if one of the next-of-kin is prepared to act.

HOW APPOINTED AND REMUNERATED. Generally speaking, an executor can only be appointed by a Will or Codicil. He can be appointed either expressly or by implication. But if appointed by implication, the intention to appoint him must be gathered from the terms of the Will. There are two ways in which a person not appointed an executor by a Will may be appointed an executor. (1) The Will may give power to a surviving executor to appoint a new one in place of his deceased co-executor. (2) When a sole or last surviving executor dies, his executor becomes the executor of the original Will.

An Administrator is appointed by the Court, and his rights date from the appointment. A person desiring to be made an administrator should apply to the Court (The word "Court" here includes the Probate Registry at Somerset House and the various District Registries.) The Court will appoint the husband or wife of the deceased, in preference to others. If there is no husband or wife, one of the next-of-kin is generally appointed, preference being usually given to that one of the next-of-kin who is entitled to most of the property.

There is another kind of executor called an "executor *de son tort*." Thus if a person who is not an executor meddles with the deceased's property, as by demanding the payment of debts due to the estate, he will be regarded as an executor and incur the duties and liabilities of one. But he will not be so regarded if he merely provides out of the estate for the funeral of the deceased or for supplying the deceased's family with the necessaries of life.

Executors and Administrators are not entitled to any remuneration for their trouble or loss of time, unless the Will provides for their remuneration. But they are entitled to their reasonable out-of-pocket expenses incurred in the course of their duties. They can re-imburse themselves for the fees paid in obtaining Probate or Letters of Administration, before they pay taxes or debts, but not before they have paid the funeral expenses.

DUTIES OF THE EXECUTOR.

1. FIRST DUTIES. The property of a testator vests in his executors immediately after his death, and it is their duty to wind up the estate. First of all they must give the deceased a decent burial, according to his wealth and station, and pay the funeral expenses. They must next proceed to prove the Will, that is, obtain Probate.

2. HOW TO PROVE THE WILL. Probate cannot be taken out till a week after the testator's death; but it must be taken out within six months, or the executors will be liable to penalties. An executor may always renounce probate, that is to say, he may decline to act as executor, provided he do so before dealing with the testator's property.

There are two ways in which the Will may be proved—in common form and in solemn form. Where the Will is not likely to be disputed, it is simpler and cheaper to prove it in common form at Somerset House. Proving it in common form will not prevent it from being afterwards proved in solemn form in open Court, if it is found necessary to do so. To prove the Will in solemn form legal assistance is indispensable, but to do so in common form such assistance is not essential, though very desirable.

The following is the way an executor should proceed in order to prove the Will without employing a solicitor:—

(1) Obtain from a law stationer or from Somerset House the forms of affidavit for estate duty and also a form of

affidavit declaring that you are the executor of the Will and prepared to carry out your duties as such, and stating the value of the estate.

(2) Attach the executor's affidavit to the Will and take it with the other affidavits duly filled up, but not sworn, to a Registrar at Somerset House and swear them before him.

(3) When the affidavits have been sworn all the papers will be returned to you, together with a parchment form, which you must not fill up or meddle with.

(4) Take all these documents to the "Personal Application Department" in the same building and pay the fees.

(5) If the officials are satisfied that the Will is genuine they will proceed to have it engrossed, and when this is done you will obtain a document (not the original Will) from the seal office. This document is the *probate*.

If the deceased at the time of his death had a fixed place of abode in a place to which a District Registry is attached, the executor may find it more convenient to apply there instead of at Somerset House. The form of procedure at a District Registry is practically the same as at Somerset House.

3. COLLECTING AND PAYING DEBTS. After proving the Will, the executors should collect the deceased's property, calling in all debts due to the estate. But the Trustee Act, 1893, enables them to compound or compromise such debts or allow time for their payment. Then, if the testator is at all likely to have incurred debts, they should advertise for creditors in one London and two local papers. For if this is done, they are protected by the Law of Property Amendment Act (22 and 23 Vict., c. 35) from an action by a creditor, if they distribute the property a reasonable stated time (usually about six weeks) after the appearance of the advertisement.

Executors should pay the testator's debts in the following order, in cases where the estate is not likely to be large enough to pay them in full: first, the funeral expenses, then taxes, then rates, then Judgment debts, and lastly all other debts. The general rule is that all the debts of any one of the above classes are to be paid in full before the payment of any of the debts in the succeeding classes; and if there are not sufficient assets to pay the debts of a particular class in full, the creditors of that class usually take a percentage; but the executor has the right to give any creditor a preference over other creditors of the same class. This usually happens when the executor is himself a creditor, he then exercises his right to payment in full in priority to other creditors of the same class. This right is called the executor's right of retainer. Executors have also the right of paying a debt which is barred by the Statute of Limitations; but no executor is justified in paying any debt in priority to the debts of a preceding class.

4. FURTHER DUTIES OF EXECUTORS. Having buried the testator, proved the Will, paid the testator's debts, and called in the moneys owing to the estate, the executors' next duty is to distribute the assets among the beneficiaries according to the directions given in the Will.

As it sometimes happens that the testator has not left sufficient property to pay the legacies in full, after the payment of the debts, it is necessary to know what legacies have priority. And in order to see this it will be necessary to divide them into two classes, specific and general. A specific legacy is the gift of a certain specified thing, as "my gold watch," whereas a general legacy is one which can be satisfied out of any part of the personal estate, as "a legacy of £100."

Now, debts should first be paid out of the residuary personal estate and out of that part of the *real* property charged with the payment of debts; but if not enough is obtained from these sources, the executors must look to the gifts in the following order:—

Try to pay it out of that part of the property which goes in general legacies; (2) Then out of the specific legacies; (3) Then out of the devises, that is to say, gifts of *real* property; (4) After that out of property appointed under a general power of appointment; (5) And, last of all, out of the widow's paraphernalia—the jewels and personal ornaments given her by the Will.

Those entitled to property in any one of the above classes are entitled to their gifts in full if the property passing under the preceding classes is sufficient to pay the debts, but as between members of the same class their gifts abate rateably. After the debts have been paid in full, the executors should proceed to hand over the devises and bequests, or so much of them as remains after the payment of the debts. But the executors have a year's grace before they can be compelled to hand them over.

LAPSED AND VOID LEGACIES. Executors cannot always carry out the terms of a Will as they stand. As we have seen, the value of the gifts may have been considerably diminished by the time the debts have been paid in full. Again, gifts for certain purposes are void in law and must not be carried out. And, lastly, the testator may, in his life-time, have parted with the subject-matter of the gift so that it cannot be carried out.

Gifts that the law regards as void naturally fall into three classes, according as they are illegal, immoral, or contrary to public policy. All gifts for an illegal or criminal purpose are, of course, absolutely void. As to gifts relating to immorality, if given for an immoral purpose they are void; but not if given where the immorality is past. Thus, a gift "to anyone who will become the mistress of B," would be void as setting a premium on immorality; but a man may provide in his Will for a gift to his mistress, as the immorality would be past, and so far from being an encouragement to immorality, the gift, if substantial, would probably check it.

It is contrary to public policy that a person who attests the testator's signature should be a beneficiary under the Will. The attesting witness is often called upon to prove the due execution of the Will. Is it likely, then, that his evidence would be impartial if his pocket would suffer through the upsetting of the Will? So the law provides that if such a person attests the Will, the Will remains valid in other respects, but the gift to the attesting witness is void. It is also contrary to public policy that a foreigner should have a share in a British ship; such gifts are, therefore, void.

LETTERS OF ADMINISTRATION. When a person dies intestate or leaves a Will without having appointed any executors, it is the duty of the husband, wife, or one of the next-of-kin, or of some other person interested in the estate, as a creditor, to apply for Letters of Administration, or for Letters of Administration with the Will annexed. An Administrator with the Will annexed has practically the same duties as an executor—he must carry out the directions given in the Will. But an ordinary Administrator must distribute the property among those entitled to an intestate's estate.

The method of applying for Letters of Administration is very similar to that of applying for probate. The applicant must make an Affidavit stating that he is entitled and prepared to act, and setting forth the value of the estate to the best of his knowledge, information, and belief. He must also fill up an Inland Revenue Affidavit which he will get at Somerset House. He must give a bond to double the value of the estate with two sureties for the due performance of his duties. He must swear the Affidavit, and sign and seal the bond in the presence of the Registrar at Somerset House. He must then leave these documents at the Registry; and in due course he will receive a document called the "Letters of Administration," and this document is his authority to act.

His office dates from the grant, not as in the case of an executor from the date of the death, though before getting it he may provide for the funeral. Having obtained this authority, it is his duty to collect the property and pay the funeral expenses and debts, as in the case of an executor. He should then distribute the residue among those entitled to an intestate's estate. These will be shown in the next section, but, shortly, the *real* property goes to the heir-at-law, and the *personal* property is divided among the next-of-kin. For the distinction between the two kinds of property, see under *Law of Real Property*, p. 516.

POOR PERSONS DYING INTESTATE. By the Intestates Acts, 1873, and 1875, where the whole estate and effects of a poor person dying, without having made a will, do not exceed in value the sum of one hundred pounds, the widow or any of the children of such person, provided such widow or children reside at a distance exceeding 3 miles from the Registry of the Probate Court having jurisdiction in the matter, may apply to the registrar of the County Court within the district of which the intestate had his fixed place of abode at the time of his death. The Registrar will give the applicant assistance in filling up the usual papers required by the Court of Probate before the grant of Letters of Administration, will send these papers to the Court of Probate, and will in due course supply the applicant with the sealed letters of administration.

THE HEIR-AT-LAW AND THE NEXT-OF-KIN. To find the heir-at-law (who is entitled to the *real* property of the estate), the following rules should be remembered:

(1) Descent is traced from the last person entitled to the property otherwise than by inheritance. (2) If such person has no heirs, descent is traced from the last person entitled to the property. (3) The property descends to the issue of such person *ad infinitum*. (4) In default of issue it goes to his nearest lineal ancestor, and thence back to *his* descendants. (5) Males are preferred to females of the same degree. (6) Elder males are preferred to younger males of the same degree; but females of the same degree take equally. (7) Where the common ancestor is male, relatives of the half-blood inherit after relatives of the whole blood of the same degree; but where the common ancestor is female they inherit after the common ancestor. (8) Among ancestors the paternal line is preferred to the maternal.

As for the *personal* property:

(1) If a husband survives he takes it all. (2) If a wife and no descendants, she takes it all if the value is under £500; if over that value she takes £500 with interest at four per cent. and half the residue, the other half going to the next of kin. (3) If a wife and descendants, she takes a third and the descendants two-thirds. (4) If there is no wife or husband the property goes to the next of kin, and if there are none to the Crown, which is the *ultimus hæres*, the last or remotest heir to everyone. (5) Children take before grand-children, but the children of a deceased child and the children of deceased brothers and sisters are entitled to their parents' share. (6) In default of descendants the property will go to the father of the intestate. (7) Except for the father as above, there is no preference for the male over the female or the elder over the younger, they all take equally, if of the same degree. In other words, failing a husband, wife or descendants surviving, the property would be divided among the members of any one of the following classes on the failure of the class preceding it and to the exclusion of the class that follows it: (1) Father. (2) Mother, brothers, sisters and the children of deceased brothers and sisters (taking their parent's share). (3) Grandfathers and Grandmothers. (4) Uncles, aunts, nephews, nieces and great grand parents. (5) First cousins; and so forth.

HOTCHPOT. By the Statute of Distributions, 1670, it is provided that in case any child (other than the heir-at-law) of an intestate (1) shall have any estate by settlement from the said intestate; or (2) shall have had advanced to him, by the said intestate during his lifetime, a portion or advancement; then, instead of an equal division of the intestate's effects being made among his children, the administrator is to take the advancement or settlement into consideration, and must only give to such child a sum sufficient to make his total share equal to that of the other children. This is called bringing an advancement or settlement into *hotchpot*. Of course if the advancement obtained by the lucky child is greater than what he would get by bringing it into hotchpot, he need not bring it in; but in that case he would not be entitled to a share in the intestate's effects. But as regards the heir-at-law, the fact that he obtains land by descent or otherwise from the intestate does not bar him in any way from claiming an equal share with his brothers and sisters in the intestate's *personal* property.

Many wills and settlements contain a "Hotchpot clause" providing for the bringing of property into hotchpot under circumstances of a like nature.

LIABILITIES OF EXECUTORS AND ADMINISTRATORS. An executor is bound to pay the just debts of the testator before he distributes the property according to the instructions contained in the Will. He will, therefore, be liable, even after his year of office, for not paying the debts in priority to the legacies unless he has duly advertised for creditors according to the provisions of the Law of Property Amendment Act (22 and 23 Vict., c. 35). The protection afforded by this Act to executors does not prevent the creditors following the assets and suing the beneficiaries. Where the assets are not sufficient to pay the debts, the executors incur no personal liability for the deficiency. Executors should not carry on the testator's business except under the protection of the Court, for if they do so they must personally bear the loss if it does not pay, whereas if it does pay they reap no benefit.

Under the Trustee Act, 1893, executors are in the position of trustees for the purpose of carrying out their duties, they are, therefore, liable as trustees for breaches of their trust. They must not waste or squander the assets of the testator by selling property at a considerable undervaluation, or by providing for any unduly costly funeral. But the Judicial Trustees Act, 1897, gives the Court power to relieve them of personal liability where they have acted in good faith and with reasonable prudence in the discharge of their duties.

Generally speaking, executors must not make any payment they are not bound to make, though they may pay Statute-barred debts, and are not themselves bound to plead the Statute of Limitations. They are not responsible if the assets are lost or stolen, unless they have been guilty of some wilful default or neglect. These remarks about executors apply also to administrators. Where executors and administrators find it difficult to carry out their duties, they ought to pay the assets into Court and act as the Court directs them.

FURTHER LIABILITIES OF EXECUTORS AND ADMINISTRATORS. An executor is not generally responsible for the defaults of his co-executor unless he has contributed to them in some way. If he sees his co-executor commit a breach of trust, he must stop it at once, or he will be held personally liable. He must not wilfully and grossly neglect the discharge of his duties, and thus let his co-executor commit breaches of trust, for he would then be personally responsible.

Executors and administrators are bound to carry out the contracts entered into by the deceased; except, of course, contracts of a purely personal nature, as a contract to sing at a certain concert. They cannot, as a rule, be held responsible for the torts of the deceased; but where the deceased has committed some injury to property within six months of his death, his executors or administrators may be sued for damages within six months of the commencement of their term of office. Any damages that are recovered are looked upon not as judgment debts, but as simple contract debts, so they would not have to be paid until after the judgment debts.

Where the deceased has been killed in consequence of the wrongful act of another, under circumstances which would have enabled him to bring an action for damages if he had lived, the executors or administrators may bring the action, within a year of the death, on behalf of the wife, husband, parent, or child of the deceased.

NOTE.—When executors and administrators have fulfilled their duties they are generally given a formal release by the persons interested in the estate.

TRUSTS AND TRUSTEES.

CREATION OF A TRUST. Trusts may be created either expressly or by implication, and there is a third kind of trust known as a constructive trust, which is created by Courts of Equity to meet the justice of particular cases. A trustee is the person whose duty it is to carry out a trust. Trusts of personal property may be created by word of mouth; but by the Statute of Frauds trusts of land or of

interests in land must be created by writing, unless they are constructive trusts.

There is no particular form required by the law; but anyone desiring to create a trust without legal assistance should be careful to state clearly in writing who the trustees are to be, what property they are to deal with, how they are to deal with it, and for whose benefit they are to act.

VOID TRUSTS. Certain trusts are void in law. Thus the carrying out of a trust must not involve any breach of the law, nor tend to the promotion of immorality. Again, trusts which are not made for some valuable consideration—*voluntary* trusts as they are called—may be set aside under certain circumstances. Thus, trusts or settlements are by ancient statute (13 Eliz., c. 5) void as against creditors unless they are made *bona fide* for valuable consideration to persons having no notice of any intention to defraud the creditors.

Again, by the Bankruptcy Act, 1883, voluntary settlements are void against the trustee in Bankruptcy if made less than two years before the Bankruptcy, and even within ten years of the making, unless the parties claiming under it can prove that the settlor was solvent at the date of the settlement without the aid of the property comprised in the settlement, and that the settlor ceased to have any pecuniary interest in the property. (It should be noticed that a settlement made in consideration of marriage is not a *voluntary* settlement.) Lastly, superstitious trusts, as trusts for saying masses for the dead, are void in England.

CY PRÈS. As a gift to superstitious uses is illegal, so a gift for benevolent and philanthropic purposes is void for uncertainty. If, however, the donor indicates in a general way the charitable object of his gift, although the object specified cannot be carried out, the gift does not fail, but is applied *cy près*, i.e., "as nearly as possible" to give effect to the intention of the donor. *Cy près* is, therefore, an equitable doctrine by which the Courts of Chancery, where it is impossible to carry out exactly the terms of a trust, make an order whereby it is to be carried out as nearly as possible.

APPOINTMENT OF TRUSTEES. Trustees are usually appointed by the instrument which creates the trust; but where there has been an omission to appoint trustees, the Court will always appoint them. (It is the Chancery division which controls trust matters, therefore in this article the word Court means a Chancery Court.) The Court will also appoint trustees where those originally appointed have refused to act, or desire to be discharged, or have become unfit to act or incapable of acting. Again, the instrument which creates the trust may give to the trustees it appoints the power to appoint other trustees in certain cases, as for instance, a surviving trustee may be given power to appoint a person in the place of his deceased co-trustee.

A person appointed a trustee may refuse to accept the position; but he must refuse it before he takes up his duties or he will not be able to escape unless he can obtain a release, which frequently involves an application to the Court, the cost of which he is sometimes called upon to bear. There is no limit to the number of trustees that may be appointed, but in cases where the control and disposal of money is concerned, it is seldom safe to appoint only one. Two is the usual number, but three, or even more, may be appointed.

The Court will sometimes order the removal of a trustee if he becomes unfit or incapable, or if he remains out of the United Kingdom for more than a year.

REMUNERATION OF TRUSTEES. The only remuneration which a trustee, other than a Judicial trustee, is entitled to receive, is such as has been expressly awarded to him by the instrument creating the trust. Even a solicitor trustee is not entitled to charge for the profits of non-contentious work done by him. Judicial trustees (see below) receive such remuneration as the Court which appoints them may see fit to order.

A trustee is entitled to the actual out-of-pocket expenses properly incurred by him in carrying out his duties. He is not only not entitled to any remuneration, he cannot even keep any profit that has been made through his skill and diligence whilst he has the control of the trust property. Though he cannot keep the profits, he may sometimes be called on to personally bear the losses. Indeed his office is one not lightly to be undertaken, the hardships it involves are numerous, and there are no compensating advantages. It is, therefore, very seldom that a person who is not a relation or great friend of the settlor and beneficiaries can be induced to undertake the position of trustee unless some provision for reasonable remuneration is made by the instrument creating the trust.

As an illustration of the rule that a trustee cannot derive any personal advantage from the property under his control, it may be said that he may not either directly or indirectly purchase the trust property from himself or from his co-trustees, even if the transaction is perfectly fair and above-board, and the price paid adequate or more than adequate, unless the settlement expressly allows it or the permission of the Court is obtained.

DUTIES OF TRUSTEES. It is the duty of trustees to carry out the directions given them by the instrument which creates the trust, and also any directions which may be given by the Court. Their first duty is to get control of all the property which is subject to the trust. This involves the calling in of all debts that may be owing. Unless expressly forbidden by the instrument creating the trust, they may, in dealing with the debtors, compound or allow time for the payment of debts, or abandon, submit to arbitration, or otherwise settle any debt, account, or claim relating to the trust if they think it expedient to do so. But a trustee must not shirk his duties by compounding or abandoning debts which an ordinary reasonable man would have sought to recover. In fact, he is generally expected to act as an ordinary prudent man would have acted under similar circumstances. Having called in the debts, he should proceed to invest the trust property in some authorised security (see below under *Investments*).

Where the trust is to be of long duration, it is generally the duty of trustees to convert such part of the trust property as is of a wasting nature, as property held on a short lease, and convert it into property of a more permanent character. And lastly, it is the duty of trustees to keep careful accounts and to give the beneficiaries full information of all their transactions.

DEATH OF A TRUSTEE. NEW TRUSTEES. When a trustee dies, his duties are performed by his surviving co-trustees, if there are any. On the death of a sole or last surviving trustee, the obligations imposed by the trust must be discharged by that trustee's executors, if he has appointed any, and if he has not, then by his administrator. It frequently happens that provisions are contained in trust deeds which give power to surviving trustees to appoint new trustees in the place of those who have died or become unfit to discharge their duties. And now, by the Trustee Act, 1893, even where there is no such provision in the instrument creating the trust, the surviving or continuing trustees may by writing appoint new trustees in the place of any who have died, or who have remained out of the United Kingdom for more than twelve months, or who desire to be discharged, or who have refused to carry out their duties, or who have become unfit or incapable of acting. It will thus be seen that, where it is desirable to appoint a new trustee, it is seldom necessary to secure the intervention of the Court. Where, however, it is expedient to obtain the assistance of the Court, proceedings are generally taken on what is called an "originating summons."

As has been seen above, a new trustee may be appointed in place of one desiring to be discharged. If, however, the other parties do not concur in the discharge, this person can only be relieved of his duties by making an application to the Court, and unless he gives good reason for wishing to be discharged, he will probably fail in his application and have also to bear the costs.

LIABILITIES OF TRUSTEES. A trustee is not liable for the wrongful acts of his co-trustees; but he must not be negligent and allow his co-trustees to do things which he ought to do himself, or he will be held liable. He is, indeed, expected to take the same amount of care of the trust property that he would, as a reasonably prudent man, take of his own property.

As a general rule, a mere majority of the trustees cannot give valid receipts or carry out any important transaction; it is necessary for them all to join. Is a trustee, then, liable for the wrongful acts of a co-trustee when he has only joined in the transaction as a matter of form? The answer is that he is not liable in such a case, unless the loss resulting to the trust property has been occasioned by his own wilful default.

A trustee is expected to make use of his own skill and judgment in carrying out a trust and not to employ anyone else to carry it out for him. He may, however, employ an agent in a proper case. Thus he may employ a solicitor or banker as his agent to receive or give a discharge for trust money, by permitting the agent to have the custody of the necessary documents. But he must not leave the money in the agent's control for longer than is absolutely necessary. The fact that he has acted on the advice of counsel or a solicitor will not excuse the trustee, if the act turns out to be a breach of trust.

A trustee is not liable for the loss of money *temporarily* left at a bank pending investment; but he must not leave it there longer than is necessary, nor may he invest it in other than authorised investments. Where a trustee is in doubt or difficulty as to how best to carry out his trust, he may apply by originating summons, on a written statement signed by counsel, to a judge in chambers, for advice.

INVESTMENTS. Where the instrument which creates a trust gives express directions as to how a trustee is to invest the property, he must carry out the directions given; but where he has not been so directed, the legislature has come to his aid by giving a list of investments in which he may safely place the property. The principal list is contained in section one of the Trustees Act, 1893, and comprises—

> (1) All the parliamentary stocks, public funds, and Government securities in the United Kingdom. (2) *Real* or heritable securities in Great Britain or Ireland (this means that trustees may invest on first mortgages; but they may not invest in the purchase of land). (3) Bank of England or Bank of Ireland stock. (4) India 3 °/₀ and India 3½ °/₀ stock. (5) Any security the interest on which is guaranteed by Parliament. (6) Metropolitan Board of Works' or London County Council's consolidated stock, or Metropolitan Police District debenture stock. (7) Debenture, guaranteed, or preference stock of such British or Irish Railways, incorporated by special Act of Parliament, as have paid at least 3 °/₀ annual dividend on their ordinary stock for ten years previously. (8) The stock of any Railway or Canal Company which is leased for a term of not less than 200 years to any such company as is mentioned in the last sub-section. (9) Debenture stock of Indian Railways guaranteed by the Secretary of State in Council. (10) Certain other specified Indian Railway stock. (11) Debenture, guaranteed, or preference stock of such water-supply companies, incorporated by Royal Charter or by special Act of Parliament, as have paid at least 5 °/₀ annual dividend for ten years previously. (12) Nominal or inscribed stock issued by the Municipal Corporations of towns with over 50,000 inhabitants at the last census, or nominal or inscribed stock issued by any County Council under the authority of an Act of Parliament or a Provisional Order. (13) Nominal or inscribed stock of such Water-Supply Commissioners, incorporated by Act of Parliament, as have compulsory power to levy rates over an area with a population of over 50,000; provided that the rates levied for each of the previous ten years have not exceeded 80 °/₀ of the full authorised rate. And (14) such other stocks, funds, and other securities as may be authorised for the investment of monies under the control of the Court.

In regard to mortgages, a trustee should lend money only on a first legal mortgage of freehold or copyhold land which is not of a wasting character (e.g. neither brick fields nor mines). He should never join with others, not being his co-trustees, in lending money on mortgage. Lastly, he should obtain a report on the value of the property from a competent surveyor acting independently of the owner, and should not advance more than two-thirds of the amount stated in the report.

It is impossible in the space at our command to give further particulars as to what investments a trustee may safely make; but, as has been already said, he can always apply by "originating summons" to a judge for advice whenever he is in doubt or difficulty.

FRAUDS AND BREACHES OF TRUST. By section 80 of the Larceny Act, 1861, which replaced the Fraudulent Trustees Act of 1857, if a trustee fraudulently converts and appropriates to his own use or benefit, or to the use or benefit of any other person, any trust property, or if he fraudulently disposes of or destroys such property, he is guilty of a misdemeanour and liable to seven years' penal servitude or to imprisonment, with or without hard labour, for two years. But no prosecution may be commenced under this section without the sanction of the Attorney-General, or without the consent of the judge before whom civil proceedings have been taken, if indeed they have been taken. So much for the Criminal Law.

But there are many breaches of trust which a trustee may commit without any intent to defraud. Under section three of the Judicial Trustees Act, 1896, a trustee will not be held liable for a breach of trust in cases where he has acted honestly and reasonably, and ought fairly to be excused. But except for such protection as is afforded by this Act, a trustee would be personally liable to a civil action for any breach of trust he may commit; for example, the making of an improper investment, and this even where he has acted with the concurrence of, and under pressure from, the beneficiaries. In all cases of breach of trust, except where the trustee has been guilty of fraud, or has misappropriated the property to his own use, or where he still retains the trust property, time runs in favour of the trustee. In other words he cannot after a certain period of time be sued for an innocent or honest breach of trust. The period is six years where the property is personal property, and twelve years where the property consists of land. Where a trustee has wrongfully disposed of trust property, the beneficiaries may recover the property from the person into whose hands the property has passed, unless such person has purchased it *bona fide* for value and without notice of the breach of trust.

Where a trustee has committed a breach of trust he is bound to make good the loss, and in some cases he will in addition have to pay interest, e.g. where he committed the breach for his own personal advantage he will be liable to pay three per cent. simple interest. Where he has traded or speculated with trust property he will be liable to pay five per cent. compound interest or to account for all the profits. Where a breach of trust not amounting to actual fraud has been committed, the trustees must bear an equal share of the loss. But where one of the trustees has been guilty of fraud and the others are innocent, or where he is the confidential solicitor of his co-trustees, he may have to bear the whole loss himself. When a breach of trust is committed with the *consent in writing*, or at the instigation or the request of a beneficiary, the Court may compel such beneficiary to surrender his share of the trust property to indemnify the trustee.

JUDICIAL TRUSTEES. The Judicial Trustees Act, 1896, gives the Court the power to appoint a person called a "judicial trustee" either to act as a sole trustee or to act jointly with any existing trustee. His office differs from that of an ordinary trustee in that he generally receives remuneration for his time and trouble. The Act makes it possible for any person creating or intending to create a trust, or for any trustee or beneficiary to a trust, to apply to the Court to appoint as a Judicial Trustee any fit and proper person nominated for the purpose in the application. In the absence of such nomination, or if the Court is not satisfied of the fitness of the person

so nominated, an official of the Court may be appointed. The judicial trustee, whether he be an official or not, is subject to the control and supervision of the Court, and once a year his accounts must be audited and reported on to the Court.

TERMINATION OF THE TRUST. When a trustee has done all required by the instrument creating the trust, he should present his accounts to the beneficiaries (indeed he should allow them to inspect his accounts at all times during the continuance of the trust), and then distribute the property among those who are entitled to it. Great care is necessary in doing this, for the trustee is held personally responsible if payment be made to a wrong person, but if he pays the fund to the beneficiary and some one else is really entitled, the trustee is not personally liable, e.g. if the beneficiary had mortgaged his rights and the mortgagee had not given notice of the mortgage to the trustee, the trustee would not be liable if he paid the money to the beneficiary. It is wise, therefore, to ask the persons to whom he hands over the property to give him an indemnity to protect him against a possible claim by some one else. It is possible that the individual entitled to the whole or part of the property may have gone abroad, and given a power of attorney to some person to receive monies on his behalf. If a trustee hands over the money to such a person in good faith he is protected, by section 23 of the Trustee Act, 1893, from liability if it should turn out that the giver of the power of attorney had died or revoked the power. Where, however, a trustee is in doubt as to whom to hand the money or other property, the best plan is to pay it into Court and leave it to the Court to dispose of it.

Trustees on relinquishing the trust should generally obtain a formal release from the beneficiaries, as this would protect them from possible actions for small breaches of trust during their term of office, as for instance, for a wrong investment.

SOLICITOR AND CLIENT.

SOLICITORS AND THEIR QUALIFICATIONS. In order to practice as a solicitor, a person must (1) serve a term as articled clerk with a practising solicitor; (2) pass certain examinations; (3) be duly admitted and enrolled as a solicitor; (4) obtain a certificate to practise. A solicitor, though admitted, cannot practise unless he takes out from the Registrar of Solicitors an annual stamped certificate. The stamp duty varies in the case of London and Country certificates; the maximum duty is £9. (See under "Certificate" p. 683 and "Solicitors" p. 752.)

UNQUALIFIED PRACTITIONERS. By various Acts, persons who act as solicitors, when not duly admitted and enrolled and otherwise qualified to act, are guilty of contempt of court, cannot recover fees for any work done, and are liable to a penalty of £50 for every offence in an action brought by the Law Society with the sanction of the Attorney General. If a qualified solicitor wilfully and knowingly acts as agent for an unqualified person, he will be struck off the Rolls and cannot be re-admitted, and the unqualified person may be committed to prison for a term not exceeding one year. It has been held that these Statutes do not prevent a solicitor acting for a corporation at a fixed salary. Unqualified persons who pretend to be solicitors are liable to a penalty of £10. Thus a debt collector who demands payment of a debt in terms which would lead the person he addresses to suppose he is a solicitor, is liable to a penalty under this law. There are certain exemptions from these penalties, e.g. local authorities may appear before any court by their clerks or authorised officers. The rules stated above do not, speaking generally, prevent a person bringing or defending an action in person; but there are some cases where employment of a solicitor and counsel is necessary, e.g. an application for a writ of *habeas corpus* must generally be made by counsel.

SOLICITOR'S DUTY TO HIS CLIENT. A solicitor, when retained by a client, impliedly undertakes to exercise due diligence on his behalf, and, if he fails to show such diligence, he will be liable to an action for negligence. It is a question of fact in each particular case whether the solicitor has been guilty of negligence or not. Tindal, C. J., stated the general rule to be that a solicitor would be liable for the consequences of ignorance on his part of the rules of practice, or want of due care in preparation of a cause for trial, or mismanaging so much of the conduct of a cause as is usually allotted to his branch of the legal profession; but that a solicitor would not be answerable for an error in judgment on some new or difficult point of law, or on some point such as is usually entrusted to a barrister.

In regard to contentious business, i.e. actions brought in court, a solicitor would be liable—

(1) If he allowed his client to bring a case that had no chance of success, unless he warned him beforehand; (2) if he abandoned a cause without reasonable notice; (3) if he took proceedings in the wrong Court; (4) if he failed to give proper instructions to counsel; (5) if he did not prepare the case properly for trial, e.g. if he failed to subpœna witnesses; (6) if he compromised an action against the directions of his client.

In regard to non-contentious business, such as the drawing up of legal documents, advice on legal points, and so forth, a solicitor would be liable for any loss caused by ignorance of the ordinary law, e.g. if he advised trustees to invest trust money in unauthorised securities.

A solicitor is not always protected because he has acted under advice of counsel, for the case may not have been properly laid before counsel. A solicitor who is guilty of negligence cannot recover his costs from his client. Moreover, the client can, as has been stated, sue his solicitor for damages; but the action will be barred in six years, unless there has been fraud on the solicitor's part.

In the course of their business, solicitors often receive money from their clients. Such money should not be mixed by the solicitor with money of his own at his bank. If the money is retained after it ought to be paid over, the solicitor is liable to pay interest at five per cent. Sometimes a solicitor will be held to be a trustee of money entrusted to him by his client; but as a rule he holds such money as agent only, and an action against him for its recovery must be brought within six years from the receipt of the money, or from the last written acknowledgment by him in part payment. A solicitor, under various Acts, such as the Larceny Act, 1901, may be prosecuted and imprisoned for misappropriation of money entrusted to him by his client. He may also be struck off the Rolls for the same offence.

SOLICITOR'S COSTS. It is provided by Statute that a solicitor cannot sue for his costs unless he had a certificate to practise during the period within which the work was done. The amount of a solicitor's remuneration may either be fixed by special agreement or by the usual charges included in a signed bill of costs. By the Solicitor's Act, 1870, solicitors may make agreements in writing as to their remuneration for contentious business, but the agreement must be submitted to a Taxing Master for approval before anything can be received under it. By an Act of 1881, solicitors may also make written agreements as to their remuneration in conveyancing and other non-contentious business, but if the client afterwards objects that the agreement is not fair and reasonable, the Taxing Master may enquire into it and certify the Court, who can then reduce the amount or cancel the agreement.

A written agreement may provide that the solicitor shall be remunerated by a gross sum, a percentage (in the case of non-contentious business), or a salary. An agreement for payment only in the event of success in an action is void. If there is no special agreement, the solicitor's charges must, in contentious business, be made out according to a scale fixed by Rules of Court, and must, in non-contentious business, conform to the scale laid down in the Solicitor's Remuneration Order, made under the Solicitor's Remuneration Act, 1881. In contentious business, if the opponent is ordered to pay the costs of the action, the solicitor will

receive a great part of his bill from the opponent, but the balance, in any case, and all if the opponent is not ordered to pay costs, is payable by the client.

TAXATION OF BILL OF COSTS. An action cannot be brought by a solicitor for the recovery of his charges or disbursements until the expiration of one month after the delivery of a properly signed bill. The bill must show whom it is desired to charge, specify the items, and state when and where the work was done. Within a month of the delivery of the bill, the client may obtain an order of the Court for taxation as a matter of course. If no application to tax be made within the month, the bill may still be taxed, except after payment or after the solicitor has recovered a verdict for the amount claimed. But after twelve months, or after payment, the client can only obtain an order to tax on showing special circumstances, e.g. fraud or gross overcharge. If on taxation less than one-sixth is taxed off, the client has to pay the costs of the taxation; if one-sixth is taxed off, the solicitor has to pay such costs.

ACTION FOR COSTS. If a solicitor sues on his bill and succeeds, the judgment is for such amount as may be shown to be due after taxation by the Taxing Master. A solicitor may sometimes, on the ground of gross negligence or misconduct, be ordered by the Court to repay to his client costs which the latter has been compelled to pay to his opponent. A solicitor who, without good cause or reasonable notice to his client, declines to act further in an action for him, is not entitled to sue for his costs. Good cause for discontinuance would be the refusal of the client to provide the necessary funds for disbursements.

LAWYER'S LETTER (Demands for payment with costs). It sometimes happens that after a person has been dunned persistently by a tradesman anxious to secure the settlement of an account, he receives a letter from a solicitor demanding the payment of the debt *plus* a further sum to cover the solicitor's costs. The debtor should pay the debt, but he need not pay the solicitor's costs; these would have to be borne by the creditor who employed him. If, however, a writ or summons has been issued in the action, all costs properly incurred subsequent to the issue must be paid by the debtor.

SOLICITOR'S LIEN. A solicitor has a general lien on the papers of his client for all costs for the time being due to him. The lien entitles the solicitor to retain the papers till payment of his bill. The lien attaches to all deeds and papers which come into the solicitor's possession in the course of his employment in his professional character, but a solicitor has no lien on his client's will, and the lien does not extend beyond the client's interest; e.g. if a tenant for life of land leaves title deeds with his solicitor, the latter could not claim a lien as against those entitled to the land on the death of the tenant for life.

If a town agent of a country solicitor is in possession of papers of a client of the latter, he has a lien to the extent to which the client is indebted to the country solicitor, but no further. The solicitor must produce the documents over which he has a lien in certain cases, e.g. if the client receives a subpœna from a third party calling on him to produce the document in an action. A lien is discharged if the solicitor takes a security from his client for the amount due to him, or if he gives up possession of the papers to his client. A solicitor has also a particular lien on property recovered by him on behalf of his client, and the Court, by Statute, has power to order the solicitor's costs to be made a charge on and be raised and paid out of such property.

GIFTS BETWEEN SOLICITOR AND CLIENT. A solicitor is said to be in a "fiduciary position," i.e. one of trust, towards his client, and he must not take advantage of that influence over his client which his position naturally affords him. Thus when a solicitor buys property from his client, or sells his own property to his client, it is for the solicitor to show the transaction was for the client's advantage. In regard to gifts by a client to his solicitor the rule is more strict. The gift, unless of trifling importance, can be set aside and the money reclaimed by the client, or by his personal representatives after his death. The rule is the same in the case of gifts made by the client to the solicitor's wife. If, after the relationship of solicitor and client has ceased, the gift is confirmed, the gift will hold good. If a client leaves property to his solicitor by will, the solicitor can take the benefit if the will was drawn up by another solicitor; but if the solicitor who benefits draws up the will, that fact may give rise to a suspicion that undue influence was used and the will may be set aside on that ground.

LANDLORD AND TENANT.

VARIETIES OF TENANCY. The word "tenancy" is usually understood to mean the holding of a property for a certain limited period, subject, *inter alia*, to the payment of rent. There are various kinds of tenancy.

(*a*) **A tenancy at will** is a tenancy which either the landlord or the tenant may terminate at any moment without notice. They are not very common. Where a tenant enters into possession in pursuance of an invalid lease, he is in the position of a tenant at will until he pays rent.

(*b*) **A tenancy at sufferance** arises where a tenant continues in possession after the expiration of his tenancy. He cannot be regarded as a trespasser; but he is liable to be turned out by the landlord at any moment. If he retains possession after receiving from the landlord a proper notice, in writing, to quit, he is liable to be sued for double the yearly value of the property for the time he so remains in possession; and if he holds over after himself giving notice of his intention to quit, he may be sued for double rent.

(*c*) **A tenancy from year to year.** The law does not look with favour on tenancies at will; therefore when a tenant at will has paid rent or done anything else which may be fairly taken to show an intention to create a yearly tenancy, the tenancy becomes automatically a tenancy from year to year. Tenants ought, therefore, before entering into their tenancies, if they wish the tenancy to be for less than a year, to make the agreement quite clear with the landlord; for though if no term is specified the tenancy will in the first instance be a tenancy at will, the mere payment of rent will convert it into a yearly tenancy, but this does not apply to weekly tenants.

HOW A TENANCY IS CREATED. At Common Law leases could be created by word of mouth; but the Statute of Frauds, passed in the reign of Charles II., altered this by providing that all leases must be in writing, unless they were leases for a term not exceeding three years, and that at least two-thirds of the full rent is agreed to be paid.

Even this was not found sufficient to satisfy the legislature, for by the Real Property Act, 1845, it is provided that leases which previously had to be in writing must now be by deed. Therefore, if a tenancy of more than three years is created otherwise than by deed, the lease will be void and the tenancy will only be a tenancy at will, which may, however, be changed into a yearly tenancy by the payment of rent.

People often prefer to have an agreement instead of a more formal lease in the case of tenancies for less than three years; but, except for very short terms, it is generally better to have a lease stating clearly all the conditions under which the tenancy is held. By the Statute of Frauds, no action may be brought upon any contract for the sale of any interest in lands, tenements and hereditaments, unless the agreement upon which such action is brought, or some note or memorandum thereof, is in writing, signed by the party to be charged or his authorised agent.

COVENANTS. All leases contain a number of covenants or conditions which the landlord and tenant respectively bind themselves to observe. The very employment in

a lease of certain technical expressions implies the creation of certain covenants. Thus the use of the word "demise" implies a covenant on the part of the landlord that the tenant shall be entitled to the quiet and undisturbed enjoyment of the premises, unless there is any express covenant in the lease with a contrary effect.

There are in most leases what are called "usual covenants," being covenants on which the landlord can insist when there is nothing to the contrary in the agreement for the lease. They are four in number:—

(1) Tenant to pay rent. (2) Tenant to pay rates and taxes, except the landlord's property tax and tithe rent-charge. (3) Tenant to allow the landlord to enter the premises from time to time to see that they are in a proper state of repair. (4) Tenant to keep the premises in a proper state of repair throughout the tenancy, and to deliver them up in such a state at the end of the term.

In addition to the usual covenants there are a large number of special covenants to be found in all leases; for the respective landlords and tenants can always agree to whatever additional covenants they please. These additional covenants fall into two general classes—(1) personal covenants; (2) covenants "running with the land." The latter kind are binding on all those to whom the tenant assigns the property, whereas the former are, in general, only operative between the respective parties to the lease.

RENT. The principal duty of every tenant is to pay rent, whether there is a covenant to pay it or not; for if there is no agreement between the parties stipulating as to the exact sum payable, the tenant is bound to pay a reasonable sum for the use and occupation of the premises; unless, of course, there is an agreement that the tenant shall have the premises rent free, as might well happen if he is in the employment of the landlord and having the right to occupy the premises as part of his remuneration.

The amount of rent payable in any particular case is usually arranged for in the lease or agreement, which may also appoint times for the payment of the rent. But in the cases where there is no stipulation as to when the payment is to be made, the law presumes that it is due on the last day of the year of the tenancy, if the tenancy be for a year or more, and on the last day of the tenancy if it be for less than a year.

Though the rent becomes due on the morning of the day on which it ought to be paid, it cannot legally be considered in arrear until midnight on that day; so that the landlord would not be entitled to distrain till the next day. Where no place of payment is agreed upon, the rent is payable on the premises let; but where the tenant has expressly bound himself to pay rent he must seek out his landlord and pay him. The rent should be paid in cash or Bank of England notes, unless the landlord agrees to accept payment by cheque or otherwise.

VARIETIES OF RENT. There are several different kinds of rent mentioned in legal documents, and some explanation of their meaning may be of interest to the layman.

A **rack rent** is a rent equal to the full annual value of the property demised. A **royalty** is a term usually found in mining leases, and denotes a proportionate part of the profits of working the mine to be paid as rent. If a fixed minimum rent is reserved in such leases it is called a **dead rent.** In building leases it is customary to reserve a nominal rent to be paid while the buildings are in course of erection, such nominal rent is called a **peppercorn rent.** A **ground rent** is the rent paid to the owner of the freehold in the ground. **Net rent** is the rent payable to the landlord clear of all deductions. In feudal times, when land was granted in fee simple by a lord to his tenant, a small rent called a **quit rent** was frequently reserved to the lord, which would entitle the tenant to be quit or free from rendering the usual services to the lord. By the Conveyancing Act, 1881, quit rents, where they exist, may be compulsorily redeemed by the tenant.

DISTRESS. This is a very common remedy employed by landlords when rent is in arrear, as it saves them the expense of legal proceedings. The right to distrain is a right peculiar to the law of landlord and tenant, and it is one which enables a landlord, when the rent is in arrear, to seize a sufficient quantity of the tenant's goods to satisfy the debt. There are, however, certain of the tenant's goods which may not be distrained at all, and others which may only be distrained under certain circumstances. Thus the following things are absolutely privileged from distress:—

(1) Things in actual use at the time. (2) All fixtures except growing crops which are ripe for reaping. (3) Goods delivered to the tenant in the course of his trade, including agricultural machinery and live stock which is not the property of the tenant. (4) The property of the ambassador of a foreign power. (5) Wild animals. (6) Loose coin of the realm. (7) Perishable goods. (8) Property in the custody of the law. (9) Looms used in silk, cotton, and woollen manufactures. (10) Gas meters. (11) Railway rolling stock not belonging to the tenant. (12) The goods of a lodger, where the lodger has complied with the terms of the Lodger's Goods Protection Act (vide infra), and (12) The wearing apparel, bedding, and trade implements of the tenant if under £5 in value.

Whereas the above goods are absolutely privileged from distress, certain other goods are privileged only if there are other goods on the premises sufficient to satisfy the debt. They comprise sheep and beasts of the plough belonging to the tenant, and the tools and implements of the tenant's trade.

If the landlord distrains where no rent is due, the owner may sue him for double the value of the goods. The better remedy for the tenant is the action of replevin, for the tenant gets his goods back, or prevents their being taken away, and also recovers damages for any loss or inconvenience to which he may have been put in consequence of the distress. If any rent whatever is in arrear, and of which no tender has been made, the action cannot be brought, nor can it be brought to recover fixtures or to get damages for their seizure. The action must be brought within five days of the levying of the distress, or at any time before the goods have been sold.

If a tenant fraudulently and clandestinely removes goods after the rent is due, the landlord may follow them during the next thirty days, but he cannot recover them from a *bona-fide* purchaser for value without knowledge of their being distrainable. No distress may be legally levied at night (i.e. between sunset and sunrise), or on any Sunday, Christmas Day, Good Friday, or any day appointed for a public thanksgiving.

SCALE OF FEES FOR LEVYING DISTRESS.

(*a*) Where the rent demanded and due exceeds £20.

(1) Three per cent. on any sum exceeding £20 and not exceeding £50. Two and a half per cent. on any sum exceeding £50 and not exceeding £200; and one per cent. on any additional sum.

(2) For man in possession, 5s. per day, to provide his own board and lodging.

(3) For advertisements, the sum actually and properly paid.

(4) Auctioneer's commission—seven and a half per cent. on the sum realised not exceeding £100; five per cent. on the next £200; four per cent. on the next £200; three per cent. on any sum exceeding £500 and not exceeding £1,000; and two and a half per cent. on any sum exceeding £1,000.

(*b*) Where the rent demanded and due does not exceed £20.

For levying the distress—3s.; for man in possession, 4s. 6d. per day, to provide his own board. Expenses of advertisement (if any). 10s. Auctioneer's fees 1s. in the pound on the net proceeds of the sale.

RATES AND TAXES. Income tax on the annual value of the property is in the first instance usually paid by the tenant; but he is entitled to deduct the amount so paid from the rent, so that it eventually always falls on the landlord. Similarly the tithe rent charge must in all cases eventually be paid by the landlord. There are also certain other rates and taxes which the landlord will have to pay, unless there is a special agreement by which the tenant binds himself to pay them. They include the sewers rate for permanent improvements to the sewers, the land tax and the poor rates on property let for less than three months. Whenever the tenant is called upon to pay any of these rates or taxes he must do so, but, unless he has agreed to pay them, he may deduct the amount so paid from the rent.

There are, however, certain rates and taxes which, in the absence of any agreement to the contrary between the landlord and the tenant, must be borne by the tenant. They include the water rate, the county, borough, highway, and general district rates, poor rates on property let for more than three months (unless the tenant is merely a lodger), and the ordinary assessed taxes.

The owners of unoccupied houses are not liable for the payment of the poor rate; but if a tenant comes into possession after the levying of the rate he may be called upon to pay a proportionate part of it, according to the length of the period of his occupation.

REPAIRS. As a general rule, the landlord cannot be called upon to execute repairs unless he has agreed to execute them. As for the tenant, where there is no express agreement as to repairs, he is bound to use the premises in a tenantlike manner. Thus he must not do damage to the premises, and he can generally be compelled to do such repairs as are necessary to keep the premises wind and water tight; but unless he has agreed to do so, a yearly tenant cannot be called upon to execute any substantial repairs, though a tenant under a lease would in such a case be compelled to execute substantial repairs.

In many cases it happens that the respective landlords and tenants agree together that each will be responsible for a certain portion of the repairs. Thus it is by no means uncommon for the landlord to agree to execute all repairs to the outside of the premises, whilst the tenant agrees to repair the inside. But the amount of repairs to be done and the person to pay for them is generally a matter of arrangement between the parties at the time of the execution of the lease or agreement.

As will be seen later, the landlord is bound in letting furnished premises to see that they are in a proper state for habitation; but in the case of *unfurnished* premises, he can only be made liable under the Housing of Working Classes Act, 1885, in respect of premises let at a low rental to persons of the working class. As regards all other kinds of unfurnished premises the landlord, apart from any agreement to the contrary with his tenant, is under no obligation to put the premises in a state of repair or even into an inhabitable condition before the tenancy commences; and further, he cannot, apart from agreement, be called upon to rebuild the premises if they are destroyed by fire during the tenancy, though the tenant can be compelled to pay the rent during the period in which the premises remain uninhabitable. It is advisable, therefore, for tenants about to take unfurnished premises to see that the landlord agrees to put them into a thorough state of repair before the commencement of the tenancy, and to insist on a covenant being inserted in the lease or agreement to the effect that the payment of rent shall cease if the premises are rendered uninhabitable by fire.

ASSIGNMENT. The property which is subject to a lease frequently passes out of the hands of the original landlord or original tenant. Thus, when either of them dies, it generally passes to his executors and administrators. It can also pass during the lifetime of either party by assignment to someone else. In order that an assignment may be valid it must be made by deed; but where an assignee under an invalid assignment enters into possession and pays rent, a valid yearly tenancy is automatically created in his favour.

Generally where the original tenant has assigned his lease, he still remains liable to his landlord if the assignee makes default; this is because there is no privity of contract between the landlord and the assignee. The assignee, however, is liable only during the time he is in possession, and his liability ceases when he assigns to another. Of course the original tenant may have bound himself by the terms of the lease either not to assign at all or only to assign under certain conditions. Thus it is extremely common to find in leases a covenant to the effect that the tenant will not under-let or assign without the written consent of the landlord. The main difference between an underlease and an assignment is that the latter is for the whole of the remainder of the term, whereas the former would only be for part of the term.

Where tenants agree not to under-let or assign without the consent of the landlord, it is advisable that they should insist on the following additional words being added to the covenant: "but such consent is not to be unreasonably withheld in the case of a respectable and responsible person." If then the consent is unreasonably refused, the tenant may assign without incurring the forfeiture of the lease.

FIXTURES. There are two kinds of fixtures, landlord's fixtures and tenant's fixtures. The tenant's fixtures are those which a tenant is entitled to remove and take away with him on giving up the tenancy, unless, of course, they did not originally belong to him; whereas the fixtures he must leave behind, whether he has put them up himself or not, are called landlord's fixtures. The law with regard to fixtures has been changed considerably during recent years, the principal effect of these changes being that many things may now be regarded as tenant's fixtures which were formerly landlord's fixtures.

(*a*) **Agricultural Fixtures.** By the Agricultural Holdings Acts, 1883 and 1900, and the Market Gardener's Compensation Act, 1895, if a tenant of any agricultural land or market garden affixes to the property any machinery, fencing, or other fixture, he may remove it at the end of the tenancy, unless the landlord agrees to take it at a valuation; but before removing it he must do two things: (1) He must pay all the rent due and fulfil all the other obligations of his tenancy. (2) He must give his landlord a calendar month's notice of his intention to remove the fixture.

(*b*) **Garden Fixtures.** Can a tenant, on giving up possession of the demised premises, take away with him rose bushes, trees, box-borders and other shrubs planted by himself? If he is a market gardener or nurseryman and has complied with the terms of the Agricultural Holdings Acts and the Market Gardener's Compensation Act he can. But if he is an ordinary tenant of a house and garden, however attached he may be to his horticultural embellishments, he cannot remove them without the consent of the landlord; for by law they have become the landlord's property, in consequence of the legal maxim, "*quicquid plantatur solo, solo cedit*" (Whatever has been firmly affixed to the ground becomes part of the ground). Nor can he demand compensation from the landlord for the improvements he has made to the property.

(*c*) **Trade Fixtures.** With regard to general *trade* fixtures, such as machinery, looms, etc., the rule is that they belong to (if he originally put them up) and are removable by the tenant, unless they are so affixed to the soil that they cannot be removed except by the destruction of the buildings in which they are placed.

(*d*) **Domestic Fixtures.** Lastly, with regard to those fixtures which the tenants have affixed to the property for their own convenience. The old rule was that everything attached to the property belonged to the landlord, but this has been altered slightly. The practical effect of the present rule, which is deduced from a large number of cases, is that the landlord may claim all buildings and other permanent improvements to the property; but the tenant may remove ornamental and purely domestic fixtures belonging to him, as such things as tapestries and gas brackets merely fixed in order that he may the more readily enjoy their use. But he is only entitled to them if they can be easily removed without material injury to the property.

TERMINATION OF THE TENANCY. A tenancy may come to an end in a number of ways. If it is for a definite fixed period it terminates naturally at the end of that period. But there are some cases in which it may be terminated before the fixed period is completed. The following are some of the principal instances:—

(*a*) **By surrender.** Where both parties agree to put an end to the tenancy before the completion of the term, the tenant must make a surrender to the landlord, which must in all cases be in writing and generally by deed.

(*b*) **By forfeiture.** Most leases give the landlord the

right to re-enter the premises and terminate the lease on the breach by the tenant of any one of the important covenants of the lease. Where such a right of re-entry is reserved to the landlord he may, nevertheless, waive the right; and he will be presumed by law to have waived it if he accepts the payment of rent after he has gained knowledge of the breach of the covenant.

(c) **By notice.** Where the tenancy is held for a definite fixed period of time, no notice is required to terminate it. Similarly, no notice is required to terminate a tenancy at will or at sufferance. But where the tenancy is a yearly tenancy, or a monthly or quarterly one, notice is required. For a yearly tenancy does not mean a tenancy for one year, but a continuing tenancy from year to year.

Where the parties have not come to any special agreement, the amount of notice proper for a yearly tenancy is half a year (except in the case of agricultural land, when it is a year), and for a quarterly, monthly, or weekly tenancy it is a quarter, or a month, or a week respectively.

The law further provides that a yearly, quarterly, monthly or weekly tenancy can only be properly determined at the *end* of the year, quarter, month, or week of the tenancy; so that the tenant must give his notice the requisite amount of months or weeks before the *end* of the period of the tenancy. Thus he cannot terminate a yearly tenancy at any time by merely giving six months' notice. A yearly tenancy commencing on the 1st of January can only be legally terminated on the 31st December, so that the half year's notice should be given by the 1st of July. The tenant may not, by giving the notice at the end of August, terminate it at the end of the following February.

N.B. The half year's notice required to terminate a yearly tenancy does not necessarily mean six *calendar* months. The notice should be for at least half-a-year, that is, 183 days.

FORM OF NOTICE TO QUIT. Unless the lease or agreement requires the notice to quit to be in writing, it need not be so; but it is generally better to give it in writing as this will save possible disputes and litigation. If in writing the notice should be signed by the party giving it. There is no magic in the form of the notice, but the following forms may prove of service.

(*a*) **From the Landlord.**

To John Doe, Esq.

Sir,—I hereby give you notice to quit and deliver up to me, or to my authorised agents, on the 1st day of January next, the house and premises situate at 7 Alpha Road, Whitechapel, which you now hold of me as tenant.

RICHARD ROE.

Dated this 30th day of June, 1906.

(*b*) **From the Tenant.**

To Richard Roe, Esq.

Sir,—I hereby give you notice of my intention to quit and deliver up to you the house and premises situate at 7 Alpha Road, Whitechapel, on the 1st day of January next.

JOHN DOE.

Dated this 30th day of June, 1906.

RECOVERY OF THE PREMISES. When a tenancy has come to an end the landlord has a right to enter the property; but he ought never to do so by force. If, therefore, his right of entry is contested, he should take proceedings for the recovery of the property.

(*a*) **By action.** If the annual value of the property claimed or the rent payable is over £100, the proceedings must be taken in the High Court. But if neither the annual value of the property nor the rent payable exceeds that amount, then, by the County Courts Acts, 1888 and 1903, the action may be brought in the County Court of the district in which the property is situate. But if questions of title affecting lands of a greater total annual value than £100 are likely to be raised, the action may be removed into the High Court for trial.

Landlords usually prefer to bring the action in the County Court, as the expense is less than in the High Court; but if the action is improperly brought in the County Court, when either the reasonable annual value or the actual rent, including ground rent (if any), exceeds £100, the action will completely fail unless the defendant agrees to submit to the jurisdiction of the County Court. Appeals from the County Court are heard by the Divisional Court; but appeals are only permissible on questions of law, not on questions of fact.

(*b*) **By summary proceedings.** In certain cases it is not necessary that the proceedings should be brought either in the High Court or in the County Court. By the Small Tenements Recovery Act, 1838, which applies only to tenancies at will and to tenancies for seven years or less at an annual rent not exceeding £20, if the tenant on the termination of the tenancy refuses to deliver up possession after receiving from the landlord seven clear days' notice in writing of his intention to proceed under the Act, the landlord may apply to a Petty Sessional Court of the district in which the premises are situate for a warrant to empower its constables to forcibly enter the premises and give possession to the landlord.

Again, by the Distress for Rent Act, 1737, as amended by the Deserted Tenements Act, 1817, if a tenant of property let at a rent of fully three-fourths its yearly value, deserts the premises, leaving half a year's rent in arrear and no sufficient distrainable property, the landlord may apply to two or more local justices to view the premises and to affix thereto a notice. After a fortnight has passed, the magistrates must take a second view of the premises, and if no one has appeared to pay the rent due, and if there is not sufficient distrainable property on the premises, the magistrates have power to put the landlord into possession and declare the lease void.

FURNISHED HOUSES AND LODGINGS. Where a tenant takes a furnished house or lodging there is an implied warranty in law on the part of the landlord that the premises are reasonably fit for human occupation. So if by reason of bad drains or by reason of the premises being infested with bugs, the furnished property let is rendered unfit for habitation, the tenant is entitled to terminate the tenancy forthwith and without notice. If, however, the landlord has covenanted to keep the premises in a state of repair, he is entitled to notice of want of repair and an opportunity to put it right before the tenant is justified in leaving.

N.B.—This implied warranty as to fitness for human occupation only exists where the property is let *furnished*. If the property is let unfurnished, the tenant is not entitled to terminate the tenancy on finding the drains in a bad state, or the house unfit for occupation.

As has been seen, the goods of a lodger are protected from a distress levied on his immediate landlord if he observes the conditions of the Lodger's Goods Protection Act, 1871. By this Act, if the superior landlord of the lodger's immediate landlord endeavours to distrain on the lodger's property for rent due from the immediate landlord the lodger must:

(1) Serve on the superior landlord or his bailiff a written declaration that the property is his, and also setting forth what rent, if any, is due from him to the superior landlord. The superior landlord can demand that such rent, or so much of it as may be required to satisfy the distress, must be paid to him. (2) Annex to such declaration a correct inventory of the property.

If, when he has done this, the superior landlord or his bailiffs proceed to distrain on the lodger's property, the latter should apply to two justices or a stipendiary magistrate for an order for the recovery of the goods.

FORM OF DECLARATION AND INVENTORY. The following form may prove of service to lodgers who have reason to fear the results of a distress levied by the superior landlord for the non-payment of rent by their immediate landlord.

To Richard Roe, Esq., to his bailiff, and to all others whom it may concern.

Sir,—I hereby give you notice and declare that I am a lodger occupying the two front rooms on the first floor of No. 7 Alpha Road, Whitechapel, and that Mr. John Doe, the tenant of this house, has no right of property or beneficial interest in any of the furniture, goods, or chattels, a correct inventory whereof is hereunto appended, contained in the said rooms, which you have distrained upon

(or threatened to distrain upon). I hereby declare that the said furniture, goods, and chattels are my property, or in my lawful possession. I hereby further declare that there is due from me to the said John Doe the sum of —, and no more, being — week's rent for the said rooms.

Inventory.

A Brass Bedstead.
A Mahogany Wardrobe.
A Mahogany and Marble Wash-hand Stand.
. . . . . .

[The Inventory must be complete and correct]

JOHN STYLES.

Dated this 5th day of March, 1906.

LIABILITY OF THE LANDLORD OR THE TENANT TO THIRD PARTIES. *Prima facie*, the tenant is liable for injuries to third parties caused by the dangerous condition of the premises. There is a statutory duty imposed on the owner or the occupier to fence in or cover over all dangerous places or holes abutting on the highway, e.g. to keep in good repair the area railings and coal-cellar covers on the pavement. When, therefore, a passer-by is injured by reason of these things being in a dangerous condition, he has usually a right of action against the tenant and not against the landlord. The same is the case when the condition of the premises themselves is the cause of injury to other people or to their property. The landlord and not the tenant will, however, be liable (1) where he (the landlord) has agreed to keep the premises in repair, or (2) where he has let the premises in a dilapidated condition. Of course if the injured party is a trespasser he has no remedy whatever.

MASTER AND SERVANT.

CONTRACT OF SERVICE.

1. THE PARTIES. Generally speaking, anyone may be a master and anyone a servant; but this is a rule which requires some qualification:

(*a*) **Infants.** In the case of infants, the law will not permit them to be bound by contracts of service which are not for their benefit or in the nature of necessaries. But if a contract is on the whole for the benefit of an infant party, as a reasonable contract of apprenticeship would be, he will be bound by it. Although an infant party may avoid a contract which is not necessary or to his advantage, yet if he is prepared to carry it out he can make it binding on the other party.

(*b*) **Lunatics** are generally incapable of contracting; but if they have entered into a reasonably fair contract and the other party has performed his part of it without knowing of the lunacy, the lunatic would not be able to escape from the obligation incurred unless the parties could in some way be restored to their original position.

(*c*) **Married Women** can now, since the Married Women's Property Act, 1882, as amended by the Married Women's Property Act, 1893, be bound by all contracts entered into by them otherwise than as agents for someone else. Where they act as agents, the person who expressly or impliedly authorises them to enter into the contract would be liable. Where a husband and wife are living together and she keeps house for him, there is a *prima facie* presumption that she has authority to pledge his credit for the hire of such servants as may be reasonably necessary for people of their station in life; but such a presumption may be rebutted by proof that the wife has been forbidden to hire servants or that she has been given a sufficient allowance for that purpose.

(*d*) **Corporations** cannot as a rule be bound by contracts of service which are not made under the corporate seal; but there are exceptions to this rule. Thus the corporation would be bound by a simple contract for the performance of trifling matters or matters of daily occurrence, such as engaging a porter, or in cases which are urgent, especially if the other party has performed his part of the contract.

(*e*) **Partners** generally are not only bound by their own contracts, they are also bound by such contracts of their co-partners as are entered into for partnership purposes; therefore any partner has a right to dismiss a servant of the firm, engaged by another partner, unless the other partner authorises him to remain.

2. FORMALITIES. If a contract of service is by its terms incapable of being wholly performed by either party within a year from the date on which it was made, the Statute of Frauds requires that it shall be in writing, or, if not in writing, that at any rate there shall be a note or memorandum of it in writing, signed by the party against whom it is sought to be enforced, or by his authorised agent. Such a note or memorandum need not be in any particular form, nor need it contain all the terms and conditions of the contract of service, but it must contain the essential terms, such as the names of the parties, the salary to be paid, and the nature of the employment. It is not necessary that the note or memorandum should be intended as such, nor need it be made before the contract of service is entered into. The Statute does not say that if these formalities are not observed the contract will be illegal or void. It merely declares that in the absence of these formalities such a contract cannot be enforced in a court of law. Contracts of service which can be completed by either party within a year, even if they are not in fact completed within that time, are not affected by the Statute. They may therefore be made by word of mouth or in any other manner. Where in a contract for general service nothing is said about the time of its duration, there is a presumption in law that it is to endure for a year, unless there is a well known custom to the contrary.

Whether or not a contract or agreement of service requires a stamp, depends mainly on the provisions of the Stamp Act, 1891. By this Act most agreements, or memoranda of agreements, for service require a sixpenny stamp, unless

> (1) They are for the hire of any labourer, artificer, manufacturer, or menial servant, or (2) made between the master and mariners of any ship or vessel for wages on any voyage coastwise from port to port in the United Kingdom.

But the same Act provides that in the case of an instrument of apprenticeship, a stamp of two shillings and sixpence is required; unless the apprentice is a poor child apprenticed at the sole charge of any parish, township, or public charity, or pursuant to any Act for the regulation of parish apprentices. (See "Stamp Duties," p. 682.)

DUTIES OF THE MASTER.

1. FOOD, CLOTHING, AND MEDICINE. By the Offences against the Person Act, 1861, if a master is liable to provide necessary food, clothing, or lodging for a servant, and wilfully and without lawful excuse refuses or neglects to provide the same, so that the life of the servant is endangered, or his health permanently injured, the master is guilty of a misdemeanour, and liable on conviction to three years' penal servitude. If the servant died in such a case, the master would be guilty of manslaughter. The Conspiracy and Protection of Property Act, 1875, has a similar provision, but it goes further; for under it the master would be liable if the health of the servant is "seriously" injured, not necessarily "permanently." The proceedings taken under this last Act would be before a Court of Summary Jurisdiction, and the maximum punishment would be £20 fine or six months' hard labour. Neither Act compels masters to supply food for their servants. They merely make it an offence to fail to supply it in those cases where they are legally bound. A master is legally bound to supply an apprentice or servant of tender years with food and necessaries; but in other cases it entirely depends on the contract between the parties and the custom applying to the particular kind of service. With regard to medical attendance and medicine, the master is bound to supply it for an apprentice, but not for a servant, unless he sends for the doctor or medicine without the concurrence of the servant.

2. WAGES. Whether or not it is the duty of a master to pay wages to a servant generally depends on whether

there is a contract, express or implied, to pay them. If there has been no such contract, the mere fact that services have been performed will not entitle the servant to wages. Whether or not in any case such a contract may be implied from the circumstances, will be a question of fact for the jury to decide. There is no legal limit to the amount of wages which the parties may agree between them. Wages are payable during temporary illness.

By the Truck Acts, 1831 to 1896, in cases of contracts for the hire of "artificers," their wages must be paid in the current coin of the realm, and there must not be any restrictions as to the manner in which the wages are to be expended. Neither the whole nor any part of the wages may be paid in goods. These Acts do not apply to domestic or menial servants. The expression "artificer" includes labourers, servants in husbandry, journeymen, handicraftsmen, miners, and persons otherwise engaged in manual labour. By the Metalliferous Mines Regulation Act, 1872, the Payment of Wages in Public Houses Act, 1883, and the Coal Mines Regulation Act, 1887, wages must not be paid in public houses to miners or workmen.

3. CHARACTER. A master is not legally bound to give a character to a servant; but if he gives one it must be true. If a master makes a statement without malice in a character he is protected, in an action for libel, by the plea of privilege. And the plea of privilege will protect the master even where the words complained of are untrue, provided that the master wrote them without malice, reasonably believing that they were true. If the words are defamatory and were written maliciously, the plea of privilege is no defence.

By the Servants' Characters Act, 1792, criminal proceedings may be taken against persons personating the masters of servants and giving them false characters, and also against servants who give false characters or who, having been in service before, pretend that they have not been in service.

Moreover, civil proceedings may be taken against a master for damages for deceit if he knowingly gives a false character respecting a servant to a person about to employ that servant.

4. EMPLOYMENT OF WOMEN AND YOUNG PERSONS. By the *Shops Regulation Acts*, 1892 to 1904, no young person under the age of eighteen may be employed in or about a shop for more than seventy-four hours, including meal times, in any one week. Moreover, in all retail shops where female assistants are employed the employer must provide seats for the use of such assistants in the proportion of at least one seat to every three assistants.

By the *Dangerous Performances Acts*, 1879 and 1897, any person who causes any male person under the age of sixteen, or female under eighteen, to take part in any public performance, whereby in the opinion of a Court of Summary Jurisdiction the life or limbs of such young person may be endangered, shall be liable to a penalty not exceeding ten pounds. And if the young person actually has an accident causing bodily harm, the employer will be liable to proceedings for assault as well as having to pay compensation.

By the *Employment of Children Act*, 1903, power is given to local authorities to make bye-laws regulating the employment of children in any and all occupations. The same Act also provides that

(1) No child under eleven may be employed in street hawking. (2) No child under fourteen may be employed between the hours of 9 p.m. and 6 a.m., unless there is a bye-law permitting it. (3) No child under fourteen may be employed in any occupation likely to be injurious to his life, limb, health, or education.

By the *Prevention of Cruelty to Children Act*, 1904, penalties are imposed on those who employ children under sixteen to be trained as acrobats, etc., or children under eleven to perform in public. But petty sessional courts may grant licences for the above in cases where the child is over ten.

By the *Metalliferous Mines Regulation Act*, 1872, the Coal Mines Regulation Act, 1887, and the Mines (Prohibition of Child Labour Underground) Act, 1900, restrictions are placed on the employment of women and children in mines.

The *Factory and Workshop Act*, 1901, contains a large number of provisions regulating the employment of women, children under fourteen, and young persons under eighteen in such establishments. Thus they may not be employed in cleaning the dangerous parts of machinery in motion, nor indeed may a *child* be employed at all in the cleaning of machinery.

The hours also are fixed during which women, children, and young persons may be employed in textile and non-textile factories, in print works and bleaching and dyeing works, in women's workshops, in lace factories, in bake-houses, in laundries, and indeed in many other trades and employments. Meal times and holidays are likewise fixed and overtime and night work are provided for. In no case must the work continue after ten o'clock at night. Overtime is not allowed in textile factories, and the number of working hours must not exceed 56 per week.

An employer must not knowingly permit a woman or girl to be employed in a factory or workshop within four weeks after she has given birth to a child; and children and young persons must not be employed in certain trades injurious to health, as in the manufacture of white lead or the process of silvering mirrors.

DUTIES OF THE SERVANT.

1. TO BE HONEST AND OBEDIENT. A servant must act with honesty in his employment. He must not steal or embezzle his master's property, nor indeed may he receive any secret commission or secret profit on any transaction performed by him in the course of his duty. If he makes such a commission or profit he must hand it over to his master. In case of suspected theft by a servant, the master should not take it upon himself to search his or her boxes, but put the matter into the hands of the police or apply to a magistrate for a search warrant.

It is the duty of all servants to obey all lawful orders of their masters, the carrying out of which would come within the ordinary scope of the duties they have expressly or impliedly contracted to perform. But they must not obey orders which require them to perform some unlawful act. Where a servant commits an unlawful act, he will be personally responsible for it whether he has been ordered to do it or not; but if he did it in obedience to orders which he believed to be lawful, he can call upon the master to indemnify him for any damage he may sustain.

The servant must treat his master with the deference and respect due to his position; he must not be impertinent nor behave in an unseemly fashion.

2. TO SERVE WELL AND FAITHFULLY. It is the duty of a servant to continue in his master's service during the whole of the time he has contracted for. Where the contract does not express or imply any time for its duration, the law will infer that it is a yearly hiring, and as such it can only be properly determined at the end of the year of service, except where a custom exists regulating the termination of the service by notice, or where the master or servant is justified in terminating the contract (see below).

A servant must not abuse the confidence imposed on him by his master, and there is in law an implied term or condition in contracts of service whereby the servant or employee is forbidden to reveal trade secrets learnt by him in the course of his employment.

It is the duty of every servant to take care of the property of his master, and he will be held personally liable for any loss or damage to property entrusted to his keeping, occasioned through his own gross and culpable negligence. The master, however, is not entitled to deduct from the wages of a servant the cost of any article that has been accidentally broken by such servant. It should also be noted that the law expects a man employed in a certain capacity to display the skill that may reasonably be expected from a person in that capacity. Thus a driver will be expected to know how to drive, and a farrier to know how to shoe horses. But a groom will not be

expected to know how to drive a motor car unless he holds himself out as a qualified chauffeur.

3. DUTIES OF THIRD PERSONS TO THE MASTER. The master has an action against third persons who entice his servant away or induce the servant to break his contract with his master, or who harbours or continues to employ *after notice* his servant, even though the second master at the time of engaging the servant did not know that he was hiring another man's servant; and where the servant has been enticed away the master may sue for the earnings of his servant in the new employment instead of suing for damages.

The master may sue for personal injuries to his servant, but he has no right of action should the servant die. The same rule applies to cases where a maidservant has been seduced; the master can sue for the loss of her service during her illness and for the expenses to which he may have been put.

TERMINATION OF THE CONTRACT.

1. WHEN CONTRACT UNCOMPLETED. Generally speaking, a contract of service can only be rightfully terminated by the death of one of the parties, by mutual consent, or on completion. If a servant is employed to do any particular piece of work he must complete it, and if he wrongfully terminates the contract before completion he will generally not only have to pay damages to his master for wrongfully terminating the contract, but he may also have to go without payment for the part of the contract which he has performed.

> Thus in the leading case of Cutter *v.* Powell, a person was engaged as mate of a ship for the whole of a voyage from Jamaica to Liverpool. He was to be paid in a lump sum on the completion of the voyage; but, unfortunately, he died when about two-thirds of the voyage was accomplished. It was held that, inasmuch as it was an *entire* contract and one which could not be apportioned, his executors could not recover anything from his employers, even for the work he had done.

If, on the other hand, the employment is one which falls naturally into sections, arrears of wages can be recovered on all those sections which have been completed; but nothing can be recovered for work already done on an incomplete section, unless the servant has been prevented from completing the section or the remainder of the contract by the wrongful act of the master. The same rule applies in time contracts.

> Thus if a servant is engaged quarterly or monthly, he can always recover arrears on every completed quarter or month, as the case may be; but he cannot recover arrears on a quarter or month which is incomplete, unless he has been wrongfully dismissed.

If the master *wrongfully* prevents the servant completing the term, the servant may recover damages for the loss he has thereby sustained. The measure of damages in such a case is frequently regulated by custom.

2. DISMISSAL WITHOUT NOTICE. There are many circumstances under which a master may *rightfully* dismiss a servant without notice before the term is completed. Thus a master would be justified in discharging a servant who wilfully disobeyed, or refused to obey, a lawful order to do, or refrain from doing, anything which comes within the scope of his duties as servant. A mere casual neglect, brought about by forgetfulness, to obey a *general* order would not, however, as a rule, justify instant dismissal in the middle of the term; but a servant may be instantly dismissed for refusing to obey a *specific* lawful order. Thus where a servant asks for permission to go and see a friend who is about to emigrate, and on receiving a refusal of leave of absence, nevertheless goes, he may be instantly dismissed. Again, a master may rightfully dismiss a servant for gross misconduct or dishonesty. But whether the misconduct is in any case sufficiently gross to justify instant dismissal will depend largely on the nature of the employment.

> An unmarried female domestic servant may be dismissed for being with child; so, too, may a manservant be dismissed for seducing a fellow-servant. Indeed, a master can recover damages for loss of service from any person who seduces one of his female servants, if the consequent illness takes place whilst she is still in his service.

A servant may also be rightfully dismissed for conduct which might reasonably be calculated to cause serious injury to his master's business; or if he fails to give proper attention to his duties; or if he does not possess the skill reasonably necessary for a person in his position.

3. DISMISSAL WITH NOTICE. There is no rule of law as to the termination of a contract by notice. The parties may, of course, agree to any terms as to notice that they may think fit. Apart from such agreement, where notice can be rightfully claimed it depends on custom. The general rule is that where a contract has been terminated, without justification, before it is completed, the person injured may claim damages for the loss sustained by reason of the failure to complete it, which frequently would mean the payment of wages until the end of the term. But custom has modified this rule. Where a custom as to notice exists, a contract of service may be terminated by either party on giving the customary notice, or by the master, on the payment of wages in lieu of the customary notice.

In the case of domestic or menial servants, custom ordains that either party may terminate the contract at any time by giving a calendar month's notice. If the master chooses to discharge the servant without notice, he must, unless the dismissal is justifiable (see above), pay to the servant a calendar month's wages in addition to the wages up to the day of dismissal. The wages payable in such a case would be the actual money wages, and no allowance need be made for board and lodging. There is no corresponding right on the part of the servant which entitles him to terminate the contract by giving a month's wages in lieu of notice.

If the servant wrongfully departs without notice, the master may recover damages for the breach of the contract, up to the end of the term, and also the servant would be disentitled to any arrears of wages for work already done on the uncompleted contract. If the servant is not a domestic or menial servant, and it has been held that a tutor or governess is not such a servant, the question will arise as to whether there is any custom as to notice applicable to the particular case. If not, damages to the end of the term may be recovered for the wrongful breach of the contract. Weekly servants would never be entitled to more than a week's notice; but the mere fact that wages are paid weekly, monthly, or quarterly does not necessarily constitute the employee a weekly, monthly, or quarterly servant.

LIABILITY OF MASTER.

1. FOR THE NEGLIGENCE OF HIS SERVANTS. Masters are responsible for the injuries caused to other persons by the wrongful or negligent acts of their servants, if such servants are acting within the scope of their ordinary duties and within the general scope of their authority. In other words, masters are expected to employ competent servants. The above rule places the master in the same position as if he himself and not the servant had caused the injury. But it does not make the master liable in cases where he would not have been liable if he himself had been the negligent one. For it must be clearly understood that where a person is injured through the negligence of another, it does not necessarily follow that he would have any remedy.

Negligence alone is not a sufficient cause of action; there must also be a breach of a legal duty to take care. Again, in cases where there has been a breach of the legal duty to take care as well as negligence, the master may raise the plea of "contributory negligence," if indeed there has been any on the part of the plaintiff, and he can also plead "inevitable accident."

> The rule that makes the master liable does not exculpate the servant; the action may be brought against either of them.

2. EMPLOYERS' LIABILITY ACT, 1880. At common law a master owes a duty to his servants to employ reason-

ably competent fellow servants, and to provide reasonably safe machinery in his works. If he had done this, and an employee was nevertheless injured through the negligence of a fellow servant, such employee could not formerly recover damages from the master; because by reason of the doctrine of "common employment," a servant entering any employment was presumed by law to have contemplated risk of injury by the negligence of a fellow, and to have voluntarily incurred the risk.

This rule worked considerable hardship on the employee, so the Employer's Liability Act, 1880, was passed to modify it. The Act does not apply to domestic or menial servants, nor to seamen or marine apprentices; but it does apply to railway servants, labourers, servants in husbandry, journeymen, artificers, handicraftsmen, miners, and others *engaged in manual labour*. It has been held not to apply to a railway guard or to an omnibus driver or conductor.

The Act enables an injured employee to obtain redress from his employer if the injury is caused by reason of—

(1) Any defect in the condition of the ways, works, machinery, or plant; if such defect arose or remained undiscovered through the negligence of the employer or of some person entrusted by him to look after such matters.
(2) The negligence of a person superintending the work.
(3) The negligence of any person to whose directions the employee would be bound to conform.
(4) Anything done in obedience to defective rules, instructions, or bye-laws of the employer; unless they are bye-laws approved by the Board of Trade or other Government Department.
(5) The negligence of the person in charge of the signal, points, locomotive, or train, on any railway.

But even in these five cases the employee will not recover anything if he knew of the defect or negligence and voluntarily took the risk without complaint. The maximum amount of damages recoverable under the act would be a sum equal to the estimated earnings of a person in the employee's position during the three years preceding the injury. Actions under this Act must be brought in the County Court within six months of the injury; or if the employee is killed, then within a year of his death. No action may be brought if notice in writing giving particulars of the injury has not been given to the employer within six weeks of the injury, unless the judge thinks fit to excuse the want of notice. Lastly, an employee may deprive himself of his right under this Act by entering into a special contract with his employer.

3. THE WORKMEN'S COMPENSATION ACT, 1906. Radical changes in the law affecting a master's liability for injuries to his servants, were made by the Workmen's Compensation Acts of 1897 and 1900, which have been superseded by the Workmen's Compensation Act, 1906. The master is placed thereby virtually in the position of an insurer against accident; so that he will be liable to pay compensation for injuries to his workmen, by any accident arising out of, and in the course of, the employment, unless such injury does not disable the workmen for at least a week from earning full wages, or unless the injury is attributable to the serious and wilful misconduct of the workman in question. Even in this latter case compensation will have to be paid if the injury results in death or permanent disablement.

Under the Act of 1906, the term "workmen" includes, with certain definite exceptions, any person who works under a contract of service or apprenticeship with an employer, whether by way of manual labour, clerical work, or otherwise and whether the contract is express or implied. It does *not* include (1) a person employed otherwise than at manual labour whose remuneration exceeds £250 per annum; or (2) a person whose employment is of a casual nature and who is employed otherwise than for the purposes of the employer's trade or business; or (3) a member of a police force; or (4) an outworker; or (5) a member of the employer's family dwelling in his house; or (6) a person in the naval or military service of the Crown. Therefore, under this Act the term does apply to domestic servants and to merchant seamen, marine apprentices, railway guards and omnibus conductors.

An injured workman may not recover both damages under the Employer's Liability Act and compensation under the Workmen's Compensation Acts; but he may choose either remedy. Moreover, if he claims damages and the judge decides that he can only recover on a claim for compensation, the judge may award him the compensation.

Claims for compensation must be made within six months of the accident, or, if the workman dies, within six months of the death. In the latter case the claim is brought by the dependents of the dead employee.

Notice of the accident must be given as soon as practicable after the happening thereof, and before the workman has voluntarily left the employment. An employee cannot by agreement with his master deprive himself of any compensation which may be claimed under the Act, unless the Registrar of Friendly Societies approves the agreement after ascertaining the views of the employer and workmen concerned. The amount of the compensation must be settled by agreement or arbitration in the manner prescribed by the Acts, and is calculated on the employee's weekly earnings; but in no case may it exceed £300, in the case of death, or £1 per week, for disablement. Where the workman leaves no one depending on him, the compensation for his death does not exceed £10.

DISPUTES BETWEEN EMPLOYERS AND EMPLOYED.

MODES OF ADJUSTMENT. Disputes between masters and domestic servants generally arise over questions of dismissal without notice, or wages in lieu thereof. Such actions are usually brought in the County Court, which now, since the County Court Act, 1903, has jurisdiction to try cases in contract up to £100. If the amount in dispute exceeds that sum, action must be brought in the High Court.

Under the Employers and Workmen Act, 1875, disputes between employers and workmen arising out of the contract of service may be heard and determined in a court of summary jurisdiction, if the amount claimed and recoverable does not exceed £10. If it exceeds that amount, proceedings should be taken in the County Court or High Court, as the case may be. This Act applies to disputes between masters and their apprentices where the premium (if any) paid does not exceed £25; but it does not apply to domestic or menial servants. The word "workmen" used in the Act includes a labourer, servant in husbandry, journeyman artificer, handicraftsman, miner, or person otherwise engaged in manual labour.

By the Conspiracy and Protection of Property Act, 1875, an agreement or combination of two or more persons to do or procure to be done any act in contemplation or furtherance of a trade dispute between employers and workmen, will not be indictable as a conspiracy if such act committed by one person would not be punishable as a crime.

There is a further provision of this Act by which if a servant of a gas or water company wilfully and maliciously breaks his contract of service, knowing that the probable consequences will be to deprive the community of gas or water, he may be dealt with in a court of summary jurisdiction, and is liable to three months' hard labour. Similarly, *any* servant may be punished in like manner if he knows that the probable consequences of his breach of the contract would be to endanger human life or to cause serious injury to persons or property.

By the Conciliation Act, 1896, Conciliation Boards may be established, and registered with the Board of Trade, for the purpose of settling disputes between employers and workmen by conciliation or arbitration. Where differences exist or are apprehended, the Board of Trade has power to enquire into the circumstances and to take steps for bringing together the representatives of either party with a view to the amicable settlement of the dispute. Moreover, if either party desires it, the Board of Trade may appoint a Conciliation Board; and if both parties desire it, an arbitrator may be appointed.

HUSBAND AND WIFE.

BREACH OF PROMISE OF MARRIAGE. Either a man or woman can bring an action for breach of promise of marriage provided he or she has entered into a valid contract to marry. The offer must have been made by one of the parties and definitely accepted by the other, and the acceptance must have been within a reasonable time of the offer. Baron Bramwell laid it down that "to constitute a contract of marriage it must be mutual, and bind both parties. It was not enough that the defendant was willing and desirous to marry the lady unless she had bound herself to marry him. . . . . and if the jury thought there had been no such final assent until so long after the defendant's offer, that he might fairly be deemed to have retracted, and if she had held back, in fact, until then, she was too late . . . . A man was not to be bound for ever, and the lady to have him or not at any future time. It was not necessary that the mutual assent should be concurrent, but it must at all events be within a reasonable time."

It should be remembered that a promise to marry may be made without words. The conduct, demeanour, and behaviour of persons towards each other may constitute proof of the contract; but stronger evidence of the promise by the man would be required than of that by the woman, and the inference of a promise on his part will not, in an equal degree, be deduced from conduct only.

The action cannot be brought against a person under full age, though an infant may sue an adult. Nor will an action lie against one who has ratified a promise made during infancy. It would be otherwise if it were a new and independent promise quite apart from the one made during infancy, but this would require conclusive proof, as it is the policy of the legislature to protect infants as much as possible from the consequences of inexperience.

The damages which the law will allow a successful plaintiff to recover are much greater than those recoverable for most breaches of contract. They include what are known as "sentimental damages," such as compensation for wounded pride, injury to the affections and feelings. Loss of a home and a share in the defendant's wealth and position are also taken into consideration; and, where seduction is averred, a claim can be joined for special damages.

WHAT IS MARRIAGE? Marriage has been variously regarded as a contract, a status, and from the point of view of the Divorce Court as "the voluntary union for life of one man and one woman to the exclusion of all others." By marriage, husband and wife, in the eye of the law, are regarded as one person, hence marriage is sometimes regarded as a status in that the personality of the wife is merged in that of her husband, e.g. should the wife assist her husband in the perpetration of some minor crime she is regarded as acting under his coercion, and as we point out in the law of libel, a statement made orally or in writing by a husband to his wife, defamatory of X, is not libel or slander, as there is no publication. The policy of modern statutory enactment, however, is to look upon the wife, as regards her property and legal obligations, in the light of a *femme sole* or single woman.

MARRIAGE AS A CONTRACT. From the perusal of the rules laid down with regard to the completion and discharge of an ordinary contract, it will be at once apparent that marriage differs in many ways from the usual contractual relationship. In the first place it is entered into for life and cannot be rescinded at the will of either party; it partakes of the nature of a sacrament and can only be dissolved under circumstances and with formalities hereafter to be explained. Again, minors can legally enter into the bonds of matrimony at 14 years for males and 12 years for females; nor does the absence of the parents' consent void the marriage, though the parents may publicly forbid the banns, in which event the publication is void, and therefore the marriage will be void if it takes place and if both parties acted knowingly and wilfully with an intention to defeat the law. The clergyman usually makes enquiry as to the parents' assent as a matter of duty, but in the absence of dissent the assent of the parents may be presumed.

At one time it was a felony punishable by being burnt alive for Jews to marry Christians, nor could an Englishman marry a Welshwoman, but these disabilities are now removed, and the only incapacity for marriage lies with members of the Royal Family, who must obtain the consent of the King in Council before their marriage can be recognised. By the Act of Settlement (12 & 13 Will. III. c. 2.), if a member of the Royal Family marries a Roman Catholic he is thereby excluded from succeeding to the Throne.

MODES OF CELEBRATION OF MARRIAGE.

The Marriage Act, 1823, which does not apply to Scotland and Ireland, or to Jews and Quakers, or to marriages of the Royal Family, enacts: "that if any persons shall knowingly and wilfully intermarry in any other place than a church or such public chapel wherein banns may be lawfully published, unless by special licence . . . . or without due publication of banns or licence from a person or persons having authority to grant the same . . . . or shall knowingly and wilfully consent to acquiesce in the solemnization of such marriage by any person not being in holy orders, the marriages of such persons shall be null and void to all intents and purposes whatsoever." A marriage in the Church of England is a public ceremony in accordance with the rubric in the Book of Common Prayer and is preceded by the publication of banns, or the obtaining of the bishop's or the archbishop's licence, or certificate from a registrar, or special licence from the archbishop.

1. MARRIAGE IN CHURCH AFTER BANNS. The banns must be published in the parish where the parties about to be married reside, or where they have resided at least 15 days prior to such publication. The banns may be published on any three consecutive Sundays before the solemnization of the marriage, which must take place within three months of such publication, or republication will be necessary. If the parties reside in different parishes the banns must be published in both parishes. The names of the parties are entered in the banns book, and should the names of the parties be misstated to the knowledge of them both, the marriage is void, but is not void if one only of the parties knew of the misstatement. It is a good publication if a person enters himself in the name he is best known by, as in the case of authors and public entertainers. If one of the parties, as usually happens, puts up the banns for both, and knowingly misstates the name of the other party, then that other party adopts the fraud if he signs the register in the wrong name after hearing himself misdescribed in the marriage ceremony.

> Neither the rubric nor the Act requires a statement of occupation or condition, so that it is immaterial if a widow should be described as a spinster, but the parties must state their places of residence correctly.

In the case of a minor, the parent or guardian can publicly forbid the banns, and then the publication of the banns is void.

The marriage must be solemnized in one of the churches where the banns were published, and the clergyman of the other church must give a certificate of such publication to be delivered to the clergyman about to perform the ceremony.

2. IN CHURCH BY ORDINARY LICENCE. The ancient right of the bishops to grant licences for marriage is confirmed by a Statute of Henry VIII. Marriage by licence is a convenient alternative to the publication of banns. In London application should be made by one of the parties to be married at the Vicar General's Office at the Court of Faculties, or at the Bishop of London's Registry. In the country it is usual to apply to a clergyman, who is also a surrogate, and he will obtain the licence by return post from the Bishop's Registrar. The fee in London is £2 2s. 6d. inclusive of Stamp Duty, and varies in the country from £1 15s. to £2 12s. 6d., according to

the diocese. The licence is granted without previous notice, and is available as soon as issued, but one of the parties must declare on oath that there is no legal impediment to the marriage; and also that one of such parties has had his or her usual place of abode for the space of fifteen days immediately preceding the issuing of the licence within the boundary of the parish church in which the marriage is to be solemnized.

3. MARRIAGE BY SPECIAL LICENCE. A special licence can be obtained at an average cost of £29 8s. by approval of the Archbishop of Canterbury, and is available at any time or place without residential qualification.

4. MARRIAGE BY THE REGISTRAR. The Registrar of Marriages in any district will grant certificates or licences to marry twenty-one days after the time of entry of notice. The full names, condition, rank, age, and address of the parties is required. A declaration must also be made that they have resided for not less than seven days within the district of the Superintendent Registrar, or if the parties dwell in different districts notice must be given to the Superintendent Registrar of each district. The fee for entry of the notice is 1s., and for issue of the certificate 1s. The fee for performing the marriage ceremony is 5s. 0d.

In the case of a licence, fifteen days previous residence is necessary on the part of one of the parties only, and the licence, with its accompanying certificate, is granted on the expiration of one whole day next after the day of entry of such notice of the marriage, and need not be suspended in the office of the registrar, as is the case when a certificate is applied for. The cost of a licence is £1 10s., and besides small fees for entries and certificate of notice, 10s. stamp duty. The fee for performing the marriage ceremony is 10s.

5. IN CHURCH BY REGISTRAR'S CERTIFICATE. By permission of the minister of the church, the marriage can be solemnized by a clergyman of the Church of England, the registrar's certificate, which takes the place of banns, being handed to the officiating minister. But a marriage by licence of the Registrar cannot be solemnized according to the Church of England.

6. IN ANY REGISTERED BUILDING WITH THE REGISTRAR'S CERTIFICATE. The parties can be married in a registered place of worship according to Nonconformist rites by permission of the minister or one of the trustees or other person in authority in either of two ways:

(1) In the presence of the Registrar. If the presence of the Registrar is desired, the certificate or licence is handed to him, and he is entitled to a fee of ten shillings for marriage by licence, and five shillings for marriage by certificate.

(2) The Marriage Act, 1898, provides for the presence of an "authorised person" at the ceremony, instead of the Registrar if the parties do not specially desire his attendance. The "authorised person" is a person certified as having been duly authorised by the trustees of the building to attend marriages in that capacity. It is under this provision that marriage can now be legally solemnized by a Nonconformist minister.

7. OF MEMBERS OF THE SOCIETY OF FRIENDS. After notice has been given in the manner already described, the parties may be married in a Friends' Meeting House, and the registering officer of the Society must register the marriage as soon as possible after its celebration. The presence of the registrar is not necessary, and the provisions of the Marriage Act, 1898, do not apply (See 10 and 11 Vict. c. 58).

8. OF JEWS. Parties of the Jewish persuasion can be married in a Synagogue or in a private dwelling house, and at any hour of the day, provided notice is given as prescribed. The provisions of the Marriage Act, 1898, do not apply, the presence of the registrar not being required. The marriage must be registered by the Secretary of the Synagogue to which the husband belongs.

9. OF BRITISH SUBJECTS ABROAD. British subjects can be married at an embassy, legation, or consulate on complying with the provisions of the Foreign Marriage Act, 1892, with regard to residential qualification, payment of fees and notice. The presence of the Marriage Officer authorised by the Act is necessary, but a religious ceremony may be dispensed with, though the marriage can be celebrated in accordance with the creed of the parties.

10. ON MAN OF WAR. The Foreign Marriage Act, 1892, also provides for the solemnization of marriage before the commanding officers of any of His Majesty's ships on a foreign station.

11. TIME OF SOLEMNIZATION OF MARRIAGES. With the exception of Jewish marriages, all marriages in England must be celebrated between the hours of eight in the forenoon and three in the afternoon.

12. MARRIAGES WITH FOREIGNERS. The legality of a marriage usually depends on whether it was celebrated in accordance with the law of the husband's domicile, so that girls marrying foreigners, even in England, should be careful to ascertain beforehand from the consul of the country to which the particular foreigner belongs whether all the requirements of the foreign law have been fulfilled; as otherwise they may find that the husband may repudiate the marriage when he returns home. Many unfortunate English girls are trapped and ruined in this way.

PROCEEDINGS IN DIVORCE COURT.

Before the Matrimonial Causes Act, 1857, divorces were of two kinds: (1) from "bed and board," *à mensâ et thoro*, as it was called, and which was really a judicial separation granted by the Ecclesiastical Courts. (2) A dissolution of marriage, termed a divorce, *à vinculo matrimonii*, which could only be obtained by the tedious and costly method of an Act of Parliament. The consequence was that only persons of affluence could obtain a divorce in the true sense, and so the Divorce Act was passed to place a Court for the trial of matrimonial causes within the reach of all.

The most important work carried on in reference to matrimonial suits in the Probate and Divorce Division of the High Court is with regard to decrees for Divorce, Judicial Separation, Nullity of Marriage, and Restitution of Conjugal Rights. Other work of the Court deals with the custody, access, maintenance, and education of the children of suitors. Also the allotment of alimony, the settlement of property and application of damages. The Court also hears Appeals from the decisions of Justices under the Matrimonial Causes Act, 1895.

1. DIVORCE. The following are the grounds on which persons may apply to the Court for dissolution of marriage: The husband may present a petition on account of his wife's adultery. The wife may present a petition on any of the following grounds:

That since the celebration of the marriage, her husband has been guilty (1) of incestuous adultery, that is, adultery by the husband with a woman with whom, if his wife were dead, he could not lawfully contract marriage, by reason of her being within the prohibited degrees of consanguinity, or (2) of bigamy with adultery, or (3) of certain criminal offences, or (4) of adultery and cruelty, or (5) of adultery with desertion, without reasonable excuse, for two years and upwards.

On the pronouncement of a decree absolute (the nature of which is explained below), the parties are at liberty to marry again. A clergyman of the Church of England and Ireland cannot be compelled to solemnize the marriage of any person whose former marriage may have been dissolved on the ground of his or her adultery. Divorced wives may keep their married names if they wish.

2. JUDICIAL SEPARATION. This is the modern form of the old separation granted by the Ecclesiastical Courts, already mentioned under the name of *divorce à mensâ et thoro*. A decree of judicial separation does not entitle either party to marry any one else. A decree is granted to either husband or wife on the ground of adultery, or cruelty, or desertion without cause for two years or upwards.

(*a*) WHAT IS CRUELTY? Legal cruelty, as defined

by Lord Justice Lopes in Russell *v.* Russell, is such that "there must be danger to life, limb, or health, bodily or mental, or a reasonable apprehension of it." The surrounding circumstances are always taken into account, and in certain cases the following have been deemed acts of cruelty: Insanity of the husband, drunkenness, threats, enforcing the wife's prostitution, communication of a venereal or of a cutaneous disease, and insults and violent temper causing mental anguish.

(*b*) WHAT IS DESERTION? A wife who can prove desertion and adultery is entitled to a dissolution of marriage, but if she can only prove desertion a judicial separation is her remedy. To constitute desertion the wife must show that her husband has wilfully absented himself from her society and in spite of her wish, she not being a consenting party. It is not desertion for a husband to leave his wife to follow some occupation or calling, e.g. if he goes long voyages as a sailor, or if his position as a soldier calls him abroad. But it would be otherwise if at the end of his duty he wilfully stayed away from his country and his wife.

If a wife is obliged to leave the home owing to her husband's misconduct, she may nevertheless make out a case of desertion against him if he continues his improper conduct so that she cannot live with him.

A wife who deserted her husband before he had committed adultery, but which she subsequently proved against him, was successful in obtaining a judicial separation.

3. SEPARATION ORDER. Under the Summary Jurisdiction (Married Women) Act, 1895 and the Licensing Act, 1902, Courts of Summary Jurisdiction have power to make in favour of a married woman an order equivalent to a judicial separation:—

(1) On the conviction of a husband for aggravated assault on his wife; or (2) on the conviction of a husband upon indictment for an assault on the wife involving a fine of over £5 or over two months' imprisonment; or (3) on the desertion of a wife by her husband; or (4) after the husband's persistent cruelty; or (5) after his wilful neglect to maintain her, causing her to live apart from him; or (6) where the husband is a habitual drunkard.

As to the reality of the desertion, this is a question of fact for the justices. If the conduct of the husband be such that the wife is compelled to leave him, it is nevertheless held to be desertion on his part. Before the order would be granted for wilful neglect to maintain the wife, some evidence must be given that the husband has means to maintain her or that he has refused work. A habitual drunkard is a person, who, not being amenable to any jurisdiction in lunacy, is, by reason of habitual intemperate drinking of intoxicating liquor, at times dangerous to himself or to others, or incapable of managing himself or his affairs.

4. NULLITY OF MARRIAGE. Suits for nullity may be brought on four grounds:—

(1) **Impotence.** The incapacity must have arisen before the marriage, and have continued permanently. (2) **Absence of Consent.** This arises where there has been duress or fraud in obtaining consent, or from the insanity of one of the parties at the time of the marriage, and who, on regaining his or her reason, may have the marriage set aside. (3) **Breach of Statute.** Cases under this head arise where persons marry within the prohibited degrees of consanguinity, or by a party to a divorce suit marrying after the *decree nisi* but before the *decree absolute*, or some breach of the Marriage Acts. (4) **Bigamy.** To obtain relief, the complaining party of the second marriage must prove the validity of the first.

5. RESTITUTION OF CONJUGAL RIGHTS. Where one of the parties has withdrawn from cohabitation without lawful cause, the other may petition for the "restitution of conjugal rights." If the Court grants a decree and the respondent disobeys it, the petitioner can then obtain a decree of judical separation on the ground of desertion.

6. PETITION IN FORMA PAUPERIS. A poor person who can show to the satisfaction of the Court that he or she has neither means nor credit will be allowed to sue *in formâ pauperis*, that is, without the payment of fees. Counsel's opinion should first be obtained through a solicitor to satisfy the Court that petitioner has a good ground to sue. This is annexed to an affidavit stating that petitioner is not worth £25, exclusive of wearing apparel, after payment of his debts.

7. CUSTODY OF THE CHILDREN. In all divorce proceedings the Court may make an order, before or after the decree, relating to the custody, access, maintenance, and education of the children of the marriage. The jurisdiction of the Court lasts until the children attain the age of 21 years, and, in its discretion, it may give them the protection of the Court of Chancery. Pending a suit, the father usually has the custody of his children, but the order may be varied in favour of the mother if they are very young and her health suffers in consequence of their absence from her.

8. ABSOLUTE BARS TO DIVORCE. Bars to divorce are either Absolute or Discretionary. Absolute bars include (1) ADULTERY NOT PROVED (2) CONNIVANCE, which means that the petitioner actually knew that adultery was going on and took no means to stop it. There is no connivance where the injured party discovers past adultery and takes no notice of the matter or lets it go unpunished; but otherwise, if the adultery is allowed to continue with his or her knowledge. (3) CONDONATION. Adultery is said to be condoned, when, with a full knowledge of all the adulterous connection, the guilty party is forgiven. If a condition is attached that the adultery shall not be repeated, the condonation comes to an end on the breaking of the condition.

> Lord Justice Lopes laid it down in Bernstein *v.* Bernstein, p. 1893, p. 303, that condonation "means the complete forgiveness and blotting out of a conjugal offence, followed by cohabitation, the whole being done with full knowledge of all the circumstances of the particular offence forgiven . . . . *it does not operate as a forgiveness of other unknown adulteries.*"

(4) COLLUSION. This occurs where the petitioner and respondent or co-respondent arrange between themselves that no obstacle shall be placed in the way of petitioner's suit, so that the whole of the facts are not placed before the Court, as where the respondent for a money consideration promises not to disclose anything adverse to the petitioner's case. Another instance is where the parties arrange that one of them shall commit adultery, or appear to commit adultery, in order to present a false case to the Court, or the arranging of evidence for this purpose.

9. DISCRETIONARY BARS TO DIVORCE. The following bars to a divorce suit are called "discretionary," because when proved the Court may, in its discretion, dismiss the petition: adultery or cruelty of the petitioner, desertion without reasonable excuses before the adultery complained of, wilful neglect or misconduct conducing to adultery, and unreasonable delay in presenting the petition.

10. THE DECREE NISI AND THE DECREE ABSOLUTE. When the petitioner has proved his case, the Court grants a *decree nisi*. That is, a dissolution of the marriage provisional upon his or her good conduct for a period, usually six months, to be fixed by the Court, and also that no person in the meantime shows that the decree was obtained by collusion or the withholding of any material fact. At any time during the cause or before the *decree absolute* any person may give information to the King's Proctor of any fact material to the case. The Attorney-General is then consulted as to what steps should be taken in the matter. On good cause being shown, the *decree nisi* may be reversed, or further enquiry may be required. Otherwise, at the end of the six months, or other period, the decree is made *absolute*. Between the *decree nisi* and the *decree absolute* the marriage is not actually dissolved, and any adultery by the parties in the meantime is matter for the cognisance of the Court. Neither party is entitled to marry during the period before the decree is made absolute. If either does so, the decree will be rescinded and the party doing so is guilty of bigamy.

11. COSTS IN A DIVORCE SUIT. The question of costs is in the absolute discretion of the Court, an order being made after all the circumstances of the case have

been considered. To enable a wife who is without separate estate to place her case fully before the Court, she is always entitled to costs provided by the husband up to an amount fixed by the registrar, and this whether she is innocent or guilty. The co-respondent is never condemned in costs if he did not know the respondent was a married woman, but he will not escape if the circumstances were such as ought to have aroused his suspicions and caused him to make enquiries. Otherwise, on the adultery being proved, the co-respondent may be ordered to pay the whole or part of the costs.

12. EFFECT OF THE DECREE UPON SETTLED PROPERTY. After pronouncement of the decree absolute, the Court can by Statutory power inquire into the existence of any *ante-nuptial* or *post-nuptial* Settlement made on the parties to the divorce, and may make such orders as it deems fit, with regard to the application of the whole or a portion of the settled property, either for the benefit of the children of the marriage, or of the parents. In a decree for judicial separation the Court has not the power to vary a settlement, but it can make a settlement of the wife's property if she is in the wrong, and can order the payment of alimony.

13. ALIMONY. On the commencement of divorce proceedings, it is usual for the wife to apply for an order on her husband for maintenance during and after the suit. The former is called *alimony pendente lite*, and continues until the *decree absolute*, the latter *permanent alimony*. An order will not be made where the husband has little or no means, and if he is destitute and his wife has means, he may apply for an order on her.

WIFE'S RIGHTS IN RESPECT TO PROPERTY.

1. WIFE'S RIGHTS IN HER OWN PROPERTY. The practical effect of the Married Women's Property Act, 1882, has been to place a woman married after the passing of the Act as regards her own property in the position of a *femme sole* or unmarried woman. That is to say, any real or personal property belonging to her at the time the Act came into operation—January 1, 1883—or acquired after that date, is her own to hold and dispose of in any manner she likes. A woman married prior to the commencement of the Act is in the same position as she was before as regards property belonging to her at the time of her marriage or acquired prior to the commencement of the Act; but as regards property acquired after January 1, 1883, she is in the position of a *femme sole*. All these provisions include any wages, earnings, money, and property gained by her in the course of any employment, trade, or occupation in which she is engaged, or by the exercise of any literary, artistic, or scientific skill. An Act of 1893 provides that any contract entered into by a married woman binds her separate estate acquired after the making of the contract, although she possessed none at the time the contract was made.

2. WIFE'S RIGHTS IN HUSBAND'S PROPERTY. (*a*) DOWER. At Common Law, a wife was entitled on her husband's death to an estate for life in one-third of his lands, provided the estate of the husband is a legal estate of inheritance, and that the husband has been solely seized at any time during coverture. Further, that issue of the wife by the husband might by possibility have inherited, actual birth of issue not being necessary. By the Dower Act, 3 and 4 Will. IV., c. 105, the right of the wife to dower is extended to equitable estates and estates to which the husband had only a right of action. Provision is also made for dower to be barred by the husband.

(*b*) PERSONAL ESTATE. Under the Intestates' Estate Act, 1890, the real and personal estates of a husband dying intestate after the 1st of September, 1890, leaving a widow, but no issue, shall, if it does not exceed £500 in net value, belong to her absolutely. If it exceeds that amount, it is subject to a charge in her favour of £500, with interest at four per cent. from the date of death until the money is paid to her. If there are issue of the marriage, the share of the wife is reduced to one-third, the other two-thirds being divided amongst the issue.

HUSBAND'S RIGHTS IN WIFE'S PROPERTY.

1. REAL ESTATE. At Common Law, the husband on marriage became entitled to the rents and profits derived from his wife's lands and acquired a freehold estate therein during coverture. Since the passing of the Married Women's Property Act, 1882, a married woman is capable of holding and disposing of real property as if she were a *femme sole*, and every woman married after the Act is to hold as her separate property all her property which belongs to her at the time of marriage or devolves on her subsequently. Every woman married before the Act is to hold as her separate property, all property to which her title shall accrue after the Act.

2. PERSONAL CHATTELS. At Common Law, the husband acquired an absolute property in the chattels, personal or movable goods, belonging to his wife. He could dispose of them during his life or by his will, and if he died intestate his wife had no claim to them.

3. CHOSES IN ACTION. These were of two kinds: (1) LEGAL CHOSES IN ACTION. The husband had a right to receive payment of any debts due to his wife, and he could sue on them in the joint names of himself and wife. If they accrued after the marriage he could sue either in their joint names or in his name alone; but if the wife died and left outstanding debts due to her, they belonged to her personal estate, and before her husband could recover them he had to take out letters of administration to her effects. (2) EQUITABLE CHOSES IN ACTION. Legacies, money in the funds, personal property vested in trustees, and other equitable choses in action were recoverable only in the Court of Chancery, and the husband was not allowed to bring an action with regard to them unless he settled a proportion—usually one half—on his wife and children. This provision made by the Court was called the *Wife's Equity for a Settlement*.

4. AFTER WIFE'S DEATH. At Common Law the husband was entitled to a life estate, called *curtesy*, in the freehold lands of his wife, of which she had been solely seized in possession, provided he survived her and that issue of the marriage had been born alive during the marriage and capable of inheriting. We have seen how the Married Women's Property Act, 1882, has affected the position of the husband with regard to his wife's estate, but on the death of his wife intestate the husband is entitled to the whole of her effects, including any personal property to which she had acquired a title under the Act of 1882, and is still entitled to *curtesy* in her freehold lands of inheritance.

MARRIAGE SETTLEMENT (Provision in). The wife being subject to the influence of the husband, has sometimes lost the whole of her property in an effort to pay his creditors; consequently, in order that she may continue through life to enjoy the benefit of income settled upon her at marriage unrestrained by any interference on the part of her husband, it is usual to insert a clause in the settlement called a restraint upon anticipation. Not only does this provision protect the wife from the influence of her husband, but it is also a safeguard against extravagance on her own part, for she is deprived of the power of selling, mortgaging, or charging her property in any way.

GIFTS BETWEEN HUSBAND AND WIFE. Husband and wife could not make valid gifts at Common Law, but were subsequently allowed to do so owing to the more favourable way in which they were regarded in equity. Eventually the Conveyancing Act, 1881, gave husband and wife power to convey real property and things in action to each other, and now by the Married Women's Property Act, 1882, a wife may give to and receive from her husband property of every description. If necessary evidence should be forthcoming that there has actually been a gift between them, and this mostly occurs when the gift has never left the possession of the donor and the donee has subsequently died, or where a thing has been delivered for the convenience of one of the parties. The uncorroborated word of the donee would no doubt be accepted in such a case, though the Court would closely

examine the evidence before it was accepted, and make a searching enquiry into all the circumstances of the case. Where money is deposited or stock is purchased and allowed to remain in the name of one of the parties, there is a presumption that a gift is intended, but this may be rebutted, as for instance, where a wife who had paid money into her husband's banking account showed after his death that it was merely paid in for her convenience, and she was held entitled to recover the sum from his executors as her separate property.

HUSBAND'S LIABILITY FOR WIFE'S CONTRACTS AND TORTS. (1) ANTE-NUPTIAL. Prior to the Married Women's Property Act, 1870, the husband was jointly liable with his wife for debts owing by her at the time of the marriage. A further Act of 1874, the provisions of which under this head have been re-enacted by the Act of 1882, provides that the husband is only liable for his wife's debts contracted before marriage to the extent of the assets he receives with her. And this is the extent of his liability as regards any tort committed by his wife before marriage. (2) AFTER MARRIAGE. It is a principle of law that a wife can only pledge her husband's credit in so far as she is acting as his agent for the purpose. The liability of the husband for the debts of his wife in this respect vary according to whether they are cohabiting or not. If husband and wife are living together, and the wife is in the habit of ordering goods for which the husband pays, he will be considered as holding her out as his agent to pledge his credit, and will be bound to pay debts incurred by her. If, however, he warns the tradesmen not to supply her with goods, or if he gives her a sufficient allowance with which to pay the bills, he will not be liable. If they are living apart owing to his misconduct, the wife can pledge his credit for the supply of necessaries to herself.

In respect of torts committed by the wife after marriage, the husband is liable, *e.g.* if the wife publishes a libel upon a person, the injured party may sue the wife alone, or the husband and wife jointly, or the husband alone.

PARENT AND CHILD.

PARENTAL POSITION. The parents of a child are said to be its natural guardians, that is to say they have the right to control it until such time as the child attains the age of twenty-one or marries, if the ceremony takes place before that age is reached. The primary right as guardian resides in the father, and he may by his will appoint a testamentary guardian for his children. Should he do so, this delegated guardianship will override the rights of the mother. If, however, no such guardian is appointed, the mother, who during the father's lifetime is not strictly entitled to any power over the child, but only, as Blackstone said, "to reverence and respect," takes the father's place as regards the guardianship of her children. She may, however, be removed should her conduct, in the opinion of the Court, unfit her to act as guardian, and a substitute may be appointed in her place.

CUSTODY OF CHILDREN. Apart from Statute, a father is entitled to the custody of his infant children as against all persons, not excluding their mother, but various Acts of Parliament have modified this absolute right on his part, and by the provisions of the Divorce Acts, The Infants' Custody Act, 1873, and the Guardianship of Infants Act, 1866, the Court is empowered to grant the custody and control of a child to its mother when it is clearly of opinion that it is for the interests of the child that this should be done.

INFRINGEMENT OF RIGHT OF CUSTODY. If the right of the father, mother, or properly appointed guardian to the custody of a child is infringed, two remedies are open to the person alleging a legal right to the control of the child: (1) A writ of *habeas corpus* may be sued out calling upon the person detaining the child to produce it, and the Court will decide who is entitled to the custody, or (2) application may be made to the Court of Chancery, either by a writ of *habeas corpus* or by petition. The Court of Chancery has also under its general and statutory jurisdiction wide powers to interfere with the control and custody of children, more especially so when they are wards of the Court, and in deciding questions relating to them will have regard entirely to the interests of the children. The right to the custody of the children of parents between whom proceedings for divorce, judicial separation, or restitution of conjugal rights are pending, is provided for by the various Divorce Acts, and under these the Court is empowered to make such orders as it may deem just and proper for the custody, maintenance, and education of the children.

ILLEGITIMATE CHILDREN. Children born out of lawful wedlock stand in a different position in many respects from those lawfully begotten. For instance, the mother of a bastard child is entitled to its care and custody while it is of tender years, and if a pauper until it is sixteen, or if a female until married. During this period, if the mother is unmarried, or a widow, she must maintain the child as part of her family, the liability in case of her own marriage devolving upon her husband. If the father of an illegitimate child obtains the custody of it by force or fraud, the Courts may deprive him of its possession upon *habeas corpus*, but apart from these circumstances they will not do so, particularly if it appears that it is in the child's interest to be with its father. Upon the death of the mother, the putative father will usually be entitled to the custody of the child. The obligation of the father for the support of his illegitimate children is not a direct obligation to the latter, but he is compelled to afford relief to the mother until the child is thirteen years old, a period which is occasionally extended to sixteen years. Even if the father pays a lump sum to the mother for the support of the child, and in satisfaction of all claims upon him, he can still be sued, by means of an affiliation summons in a court of summary jurisdiction, for the weekly payments for the child's maintenance. The maximum amount is five shillings per week. If a father expressly or impliedly contracts to support his illegitimate children, the contract will be enforceable at law. The domicile of origin of an illegitimate child follows the domicile of its mother at the time of its birth, and a subsequent change in the domicile of the mother will alter the domicile of the child.

MAINTENANCE OF CHILDREN. The duty of a father to maintain his children until such time as they can support themselves is a natural one, and unless the neglect to do so would bring the case within the criminal law, there is no legal obligation upon him. A number of statutes, however, deal with the subject. First of these was the Poor Law Act of 43 Elizabeth, c. 2, which cast upon parents "of sufficient ability" the duty of maintaining their children under a penalty, and this was extended by a later Act to the case of a man's stepchildren. The Act of 57 and 58 Vict., c. 41, imposes on parents the duty of providing adequate food, clothing, medical aid, and lodging for children in their custody until the boys attain 14 years and the girls 16. The liability on the parents under the first statute ceases when the children attain the age of sixteen, unless they are from infirmity incapable of supporting themselves; but if the parents retain the children in their custody, they are liable for their maintenance until they come of age.

LIABILITY OF PARENTS FOR NECESSARIES. The law on this point is well summed up by Lord Abinger in the case of Mortimore *v.* Wright, 6 M & W, 482, where he says: "In point of law, a father who gives no authority, and enters into no contract, is no more liable for goods supplied to his son than a brother or an uncle or a mere stranger would be . . . . if a father does any specific act from which it may reasonably be inferred that he has authorized his son to contract a debt, he may be liable in

respect of a debt so contracted, but the mere moral obligation on the father to maintain his child affords no inference of a legal promise to pay his debts."

LIABILITY FOR TORTS. A father will be liable for torts committed by his child only in those cases where (1) he has authorized the tort, (2) has ratified it after it was done, or (3) he has employed his child and the tort was committed by the child in the course of that employment.

EDUCATION OF CHILDREN.

1. SECULAR. Originally a moral obligation only, this important duty on the part of a child's parents is now regulated by the various Elementary Education Acts, and in the terms of the Act of 1876 "it shall be the duty of the parent of every child to cause such child to receive efficient elementary education in reading, writing, and arithmetic." Non-compliance with this provision exposes the parents to the penalties provided by the Act. The child whose education is not provided for at home must remain at school from the age of five to fourteen, unless he fulfils the conditions for earlier release from compulsory attendance. (See under *Education Law.*) Apart from this elementary instruction there is no obligation upon a parent to provide his child with an education suitable to his rank; but the case is otherwise where a child is under the care of guardians, for they are compelled to educate their wards in a proper manner, according to their condition in life. The Court of Chancery exercises control over the education of its wards, and though as a rule it will leave the decision of the question to the guardians of the child, it may, if it think fit, decline to be guided by their wishes.

2. RELIGIOUS. The law allows to parents a perfectly free hand with regard to the religious education of their children, and they are at liberty to inculcate in them the principles of any faith they like, or to leave them without religious instruction at all. Where, however, the parents have a religious belief of their own, and particularly in cases where the father and mother are adherents of different faiths, questions of difficulty occur for the decision of the Court. The guiding principle is that the father has the right to choose his children's religion. Upon his death, he cannot indeed by will direct that his children are to be brought up in a particular belief, but he may secure the accomplishment of the same object by appointing as guardian an adherent of the views he wishes the children to be taught. If the father dies without giving any instructions as to the matter, or without appointing a suitable guardian, the Court will presume that the children are to be brought up in his own faith, but if he has forfeited and abandoned openly his right of control over the religious education of his children, and the latter have been reared in a different faith from his own, the Court in deciding the question will be guided only by the spiritual interests of the children. In such cases the Court may, if necessary, examine each child as to his beliefs, and if he is of an age to have intelligent views on the subject, it will take these into consideration.

3. RIGHT TO INFLICT CHASTISEMENT. For the benefit of his child, and in order to inculcate habits of order and obedience, a parent is entitled to apply a moderate amount of physical correction to his children, provided they are under age and the punishment inflicted is a reasonable one. Any excess or cruelty on his part will be severely dealt with by the Courts, and should the death of the child result from excessive punishment, the parent would run the risk of being tried for murder. The reasonableness of the punishment inflicted would be a question for the Court, after considering all the circumstances of the case, and would vary with the sex, age, and condition of health of the child.

RIGHTS OF PARENTS OVER CHILDREN'S PROPERTY.

1. REAL PROPERTY. The father, as the natural guardian of his child, will usually control and manage real property belonging to the latter, but he does not enjoy any personal benefit from such management. He is regarded as entering upon the land in the capacity of a bailiff, and must account for the profits when the child comes of age. Should a child possessed of real estate die intestate and without children during the lifetime of his father, the latter will inherit the property. With regard to real estate, a mother entering upon the infant's land would be in the same position as a father; but in case of the death of the child in the circumstances mentioned above, she would only inherit the property in the absence of any paternal heirs.

2. PERSONAL PROPERTY. Generally speaking, a parent has no rights in his children's personal property, the latter belonging to the child, unless it has been made over to guardians for him, and a parent who holds possession of such property will be in the position of a trustee, and subject to the rules ordinarily applicable to that relationship. Some doubt exists as to the rights of parents to money earned by their children, but it is clear that a father cannot claim their earnings after the child is sixteen years old. Before that age he may be entitled to do so, as he is bound to maintain them; and the same rule would apply to the case of a widowed mother with children of a similar age. When a child dies, whatever his or her age, if unmarried and intestate, the father takes the whole of its property. The rights of a mother in such a case are provided for by the Statute of Distributions, and are of a somewhat complicated character. (See *Executors and Administrators.*)

REGISTRATION OF BIRTH. In view of the important consequences which may ensue from a person being unable to state accurately the date and place of his birth, the law casts upon parents the obligation of registering the birth of their children, and imposes penalties for non-compliance with this provision. Personal notification of the birth must be made to the Registrar within forty-two days by the father or mother of the child, or if not by them, then by the occupier of the house where the birth occurred, a person present at the birth, or a person having charge of the child, and the register must be signed in the Registrar's presence by the person giving the notification. If the birth is not registered within three months, additional formalities and fees are imposed, and after twelve months a birth can only be registered by the Registrar General's express authority.

LEGITIMACY OF CHILD. According to English law, legitimacy on the part of a child can only be acquired by its birth in lawful wedlock. The law presumes that the child of a married woman is legitimate. This presumption, however, is not what is called a presumption "juris et de jure," that is to say, one which cannot be rebutted, but it is a presumption of fact rebuttable by the production of clear evidence to the effect that it was impossible on physical grounds, or because of lack of access to the mother, that the husband could be father of the child. Evidence which merely raises doubts on the point will not be sufficient for this, and the onus of proof is upon the person contesting the legitimacy. The lawgivers of England have steadily, from the earliest times, refused to recognize the practice in vogue in many countries of the legitimation of a child born before wedlock by the subsequent marriage of its parents, as far at least as succession on an intestacy to real property in this country is concerned. As regards personal property, however, the rule is not so absolute, the law recognizing the effect of the subsequent marriage to legitimise the children or not according as the laws of the country in which the parents have their domicile of origin sanction or forbid the practice.

LIABILITY FOR MAINTENANCE OF PARENT. Children are not bound by law to support their parents, except under the obligation imposed by the Act of 43 Elizabeth, which provides that the children of every poor, old, blind, and impotent person, being of sufficient ability, shall at their own charges relieve and maintain every such poor person. This obligation, however, does not arise until an order has

been made upon the children by the justices, until which time there is nothing to prevent a millionaire son leaving his parents to starve, nor would he commit any legal offence in doing so. The failure of a child to support his parents is, except under the Act of Elizabeth, not punishable; but parents who fail to support and maintain children under their charge render themselves liable to a prosecution, whether an order for the support of the children has been made against them by the justices under the Poor Law or not.

HOTELS, RESTAURANTS AND BOARDING-HOUSES.

DEFINITIONS. Hotels are for the most part *Inns* in the legal sense of the word, an "Inn" being defined as "a house, the owner of which holds out that he will receive all travellers and sojourners who are willing to pay a price adequate to the sort of accommodation provided." It differs from an alehouse or tavern, which is a mere drinking or refreshment house. Again, a fully-licensed public-house need not, necessarily, be an inn. Further, an inn must be distinguished from a boarding-house. The keeper of the latter receives his boarders by special agreement, making such bargain with them as he chooses. Coffee-houses and Restaurants also have been held not to be "Inns."

> The importance of these distinctions will be appreciated when the duties and responsibilities of an innkeeper are compared with those of the proprietors of boarding establishments, taverns, and restaurants.

INNKEEPER'S DUTY TO HIS GUESTS. The keeper of an inn, as distinguished from the keepers of the other establishments mentioned above, and apart from his duties as a licence holder, is bound by law to receive and afford proper entertainment to every one who offers himself as a guest, if there be sufficient room for him in the inn and no good reason for refusing him, as there would be if he were in such a condition or to conduct himself in such a manner as to be offensive to the other guests. The innkeeper must, also, if he has room, put up the guest's horse and take in his luggage, if the latter is of such a kind as is usually taken in by innkeepers. But the guest must conform to the general rules and regulations of the hotel. He cannot compel the landlord to give him any particular room, nor indeed, if all the rooms are full, can he insist on being allowed to sleep on a sofa in the coffee room. The intending guest must also tender prepayment if required by the landlord to do so. Should the guest have cause to complain of neglect or non-fulfilment of duty on the part of the innkeeper, proceedings should be taken against the person who is, in point of fact, the keeper of the inn, even though the inn may be in the charge of a fully licensed manager whose name is written over the door. The innkeeper's liability in this respect is criminal as well as civil.

INNKEEPER'S RESPONSIBILITY FOR HIS GUEST'S PROPERTY. Apart altogether from his duties as a licence-holder, an innkeeper—in the strict legal sense of the term—is to a certain extent the assurer of his guest's property. His position in this respect was at common law an extremely unpleasant one; but it has been somewhat improved by statute.

(*a*) AT COMMON LAW. The innkeeper is responsible for any loss or damage that may happen to the goods of his guest, whether he has been guilty of negligence or not. But this only happens where the relationship of an innkeeper and guest exists. Thus an innkeeper would not be liable, apart from negligence, for loss or damage to goods that had been left at his inn to wait till called for. However, to establish the legal relationship of innkeeper and guest, it is not necessary for the latter to be staying the night. Thus, if a traveller goes to an hotel for breakfast and is allowed the use of a bedroom to wash in, he would be able to sue the proprietor for the loss of his overcoat. The only defence that would be open to the innkeeper in such an action at common law would be that the loss or damage was caused by the Act of God, or of the King's enemies, or of the guest himself.

(*b*) BY STATUTE. But by the Innkeeper's Liability Act, 1863, the innkeeper's common law liability has, in certain circumstances, been limited to £30, but only if he exhibits in a conspicuous part of the hall or entrance of the inn a complete copy, printed in plain type, of section 1 of the Act.

INNKEEPER'S LIABILITY ACT (Sec. 1), 1863. "No innkeeper shall, after the passing of this Act, be liable to make good to any guest of such innkeeper any loss of or injury to goods or property brought to his inn, not being a horse or other live animal, or any gear appertaining thereto, or any carriage, to a greater amount than the sum of thirty pounds, except in the following cases (that is to say):—

> (1) Where such goods or property shall have been stolen, lost, or injured through the wilful act, default, or neglect of such innkeeper or any servant in his employ.
>
> (2) Where such goods or property shall have been deposited expressly for safe custody with such innkeeper.

Provided always that in the case of such deposit it shall be lawful for such innkeeper, if he think fit, to require as a condition of the liability, that such goods or property shall be deposited in a box or other receptacle, fastened and sealed by the person depositing the same."

RESPONSIBILITY OF A BOARDING-HOUSE KEEPER. The proprietor of a boarding establishment is in a much better position than the innkeeper. He is not an assurer of his guest's property. He would not be responsible unless the loss or damage were occasioned by his own gross negligence or wilful wrong-doing. For instance, if he wilfully engaged as servant a notorious ex-convict with predilections towards theft, and that servant walked off with the property of a guest, the proprietor would, undoubtedly, be liable. He is not, however, bound to take active steps to protect his guest's property. He is not bound to keep his guest's goods continually guarded.

INNKEEPER'S LIEN. The keeper of an inn has one great advantage over the proprietors of boarding-houses and restaurants, inasmuch as he has a *lien* on the property of his guest until his charges have been paid. This lien gives him the power of detaining his guest's luggage or goods until his account has been settled, but it does not extend to the person of the guest, nor to the clothes on his back, nor to the goods in his hands, nor, indeed, to such goods as have been sent by a third party for the convenience of the guest.

> Thus in the case of Broadwood and others *v.* Granara, the plaintiffs lent a grand piano to a professional pianist staying as a guest at the defendant's hotel. The defendant knew that the piano belonged to the plaintiffs, yet he sought to detain it, his bill not having been paid. It was, however, held that he could not do so.

But if the guest has brought the property with him to the hotel, the landlord has a right to detain it, even if it does in fact belong to some one else. Moreover, the *lien* or right of detention is not lost if the guest leaves temporarily meaning to return. If, however, the guest departs with his goods, but without paying his bill, and afterwards comes to the hotel with his goods, on a second visit, the landlord cannot claim to exercise his right of detention in respect of the bill for the first visit.

RIGHT OF SALE. At Common Law the innkeeper had no right to sell his guest's goods to defray his expenses; but this has been altered by the Innkeeper's Act, 1878, which provides that:—

> "The landlord, proprietor, keeper, or manager of any hotel, inn, or licensed public-house shall, in addition to his ordinary lien, have the right absolutely to sell and dispose by public auction of any goods, chattels, carriages, horses, wares, or merchandise, which may have been deposited with him, or left in the house he keeps, or in the coach-house, stable-yard or other premises appurtenant or belonging thereunto, where the person depositing or leaving such goods, chattels, carriages, horses, wares, or merchandise shall be or become indebted to the said innkeeper, either for any board or lodging, or for the keep and expenses

of any horse or other animals left with or standing at livery in the stables or fields occupied by such innkeeper."

But this power of sale is not absolute; before he can exercise it, the landlord has to fulfil the following conditions: (1) He cannot sell until the said goods, etc., have been in his custody six weeks without the debt being paid or satisfied. (2) The debt for the payment of which a sale is made shall not be any other or greater debt than the debt for which the goods or other articles could have been retained by the innkeeper under his *lien*. (3) At least one month before the sale the landlord must insert in one London and in one local newspaper a notice of the intended sale, with a description of the goods and the name of the owner, if known. If the innkeeper finds, after paying the debt with costs and expenses, that there is anything left over from the proceeds of the sale, he must, on demand, hand over such surplus to the owner or depositor of the goods.

PROPRIETOR'S DUTY IN THE INTERESTS OF PUBLIC HEALTH. Under the Public Health Act, 1875, any person who knowingly lets for hire any house, room, or part of a house, in which any person has been suffering from any dangerous disorder, without having such house, room, or part of a house, and all the articles therein liable to retain infection, disinfected to the satisfaction of a legally qualified medical practitioner, as testified by a certificate signed by him, shall be liable to a penalty not exceeding £20. There is a similar provision in the Public Health (London) Act, 1891. It should be noted that these provisions apply equally to innkeepers, boarding-house proprietors, restaurateurs, publicans, and others.

BILLETING TROOPS. Billeting, only legal when exercised in conformity with certain Acts of Parliament, is now rarely resorted to except when His Majesty's forces are actually moving. Under the Army Act the Secretary of State for War is empowered to issue statements specifying the routes over which troops will march, the forces to be moved and the number of officers, soldiers, and horses requiring quarters. On production of this statement (or "route" as it is called) by the commanding officer, the constable in charge at any place mentioned in the route must billet the forces on the occupiers of victualling houses in that place. The term "victualling houses" used in the Act includes all inns, hotels, livery stables, alehouses, the houses of retail sellers of wine, *to be drunk on the premises*, and all houses of persons selling brandy, spirits, strong waters, cider, or metheglin by retail. The keepers of victualling houses, as thus defined, are bound to receive all officers, soldiers, and their horses, and to furnish the officers with lodging and attendance, the men with lodging, attendance, and food, and the horses with stable room and forage. Where the keeper of the victualling house has not sufficient accommodation in his own house, he may provide such accommodation in the immediate neighbourhood as may be approved by the constable issuing the billets. If the keeper of the victualling house attempts to shirk his liability by refusing to take in the officers, troops, or horses billeted on him, or by bribing the constable or any of the officers or men, he is liable on summary conviction to a fine of not less than forty shillings, or more than £5.

The charges for billeting soldiers must not exceed the following amounts:—

Lodging and attendance for each soldier where hot meal is furnished	4d. per night.
Hot meal as specified in the Army Act . .	1/3½ each.
Breakfast " " " . .	1½d. each.
Where no hot meal furnished, lodgings and attendance, candles and vinegar, salt and use of fire and necessary utensils for dressing and eating his meat	4d. per day.
Ten pounds oats, twelve pounds hay and eight pounds straw per day for each horse	1/9 per day.
Lodging and attendance for officer . . .	2/ per night.

NOTE.—An officer pays for his food.

INTOXICATING LIQUORS NOT TO BE SOLD WITHOUT A LICENCE. Any person selling or exposing for sale by retail any intoxicating liquor without being duly licenced to sell the same, or at any place where he is not authorised by his licence to sell the same, is, under the Licensing Act, 1872, liable to a penalty of £50 or to imprisonment (with or without hard labour) for one month; and, in addition, if the court thinks fit, all intoxicating liquor found in his possession may be forfeited. In the case of a second or subsequent offence, the penalties and imprisonment are substantially increased, and the offender may be disqualified for a number of years from holding a licence.

DUTIES OF LICENCE HOLDERS.

1. DISORDERLY CONDUCT. Thus far we have dealt with those duties of hotel proprietors and others which are quite unconnected with their licences. There are, however, a considerable number of duties which devolve upon them as licence-holders. One of these duties is to take steps to prevent drunkenness on the premises. The licence holder must not permit any one to behave in a violent, quarrelsome, or riotous manner, nor may he sell any intoxicating liquor to any drunken person. He must not allow women of questionable character to remain longer on the premises than is necessary for the purpose of obtaining reasonable refreshment, nor may he permit his premises to be used as a house of ill fame.

He can refuse to admit to his premises any person who is drunken, violent, quarrelsome, or disorderly, and, indeed, any person whose presence would subject him to penalties under the Licensing Acts. If such person refuses or fails to quit the premises, when requested to do so, it is the duty of the licence-holder, or his servants, to call a constable to expel him. It is also his duty to refuse to serve or to supply with intoxicating liquor any person on "the black list" within three years after the date of his conviction; but as a person cannot be put on the "black list" without his own consent, this provision is a dead letter.

2. SALE OF DRINK TO CHILDREN. The Legislature has recently taken steps to prevent children and young persons succumbing to the temptations of public-houses. Thus, under the Licensing Act, 1872, every holder of a licence who sells or allows any person to sell, to be consumed on the premises, any description of spirits to any person apparently under the age of sixteen years, shall be liable to a penalty not exceeding twenty shillings for the first offence, and not exceeding forty shillings for the second and any subsequent offence. Again, under the Intoxicating Liquors (Sale to Children) Act, 1901, every holder of a licence who knowingly sells or delivers or allows any person to sell or deliver, save at the residence or working place of the purchaser, any description of intoxicating liquor to any person under the age of fourteen years, for consumption by any person on or off the premises, is liable to a penalty of forty shillings for the first offence, and £5 for a subsequent offence, unless the liquor is sold or delivered in corked and sealed vessels in quantities not less than one reputed pint for consumption off the premises.

The term "corked" used in the Act means closed with a plug or stopper, whether made of cork or wood or glass or some other material. The expression "sealed" means secured with any substance without the destruction of which the cork, plug or stopper cannot be withdrawn.

The provisions of the Act as to delivering the liquor to a child under fourteen do not apply when the child is merely a servant of the licence-holder employed as a messenger to deliver the intoxicating liquor.

3. CLOSING HOURS. There are in the Licensing Acts stringent regulations with regard to the times when the sale of intoxicating liquors may be carried on. The principal Act dealing with the subject is the Licensing Act, 1874. The times at which premises licensed for the sale of intoxicating liquors by retail shall be closed are as follows:—

(1) If the premises are within the Metropolitan district.

On Sunday: All day, except from 1 p.m. till 3 p.m., and from 6 p.m. till 11 p.m.

On Saturday night: midnight.

Other days: From half an hour after midnight till 5 a.m.

(2) If the premises are situate beyond the Metropolitan district, but in the Metropolitan *police* district, or in any

town or "populous place" with a population of over one thousand.

On Sunday: All day, except from 12.30 p.m. till 2.30 p.m., and from 6 p.m. till 10 p.m.

On Saturday night: 11 p.m.

On other days: from 11 p.m. till 6 a.m.

(3) If the premises are situated elsewhere.

On Sunday: All day except from 12.30 p.m. till 2.30 p.m., and from 6 p.m. till 10 p.m.

On Saturday night: 10 p.m.

On other days from 10 p.m. till 6 a.m.

Except where Christmas Day immediately precedes or succeeds Sunday, Christmas Day and Good Friday are looked upon as Sundays, and Christmas Eve and the Thursday before Good Friday as Saturday. It is the duty of the licence holder and his servants, during these hours, to keep his premises closed, to refrain from selling or exposing for sale any intoxicating liquor, and to prevent any such liquor being consumed on the premises, even when actually sold before closing time. The penalty for the first offence is a sum not exceeding £10, and for a subsequent offence £20. But the law as to the sale of drink after closing hours does not apply if the liquor be supplied to a *bona fide* traveller, or to persons lodging in the house, or (in the case of a Railway Station) to persons arriving at or departing from such station by rail.

A *bona fide* traveller is defined by the Act to be one who has lodged during the preceding night at a place at least three miles distant (by road, not as the crow flies) from the place where he demands to be supplied with the liquor. In the case of persons arriving at or departing from a railway station, the distance which they have travelled or are about to travel is immaterial.

4. GAMING AND BETTING ON LICENSED PREMISES. Under the Licensing Act, 1872, if any licensed person (1) suffers any gaming or any unlawful game to be carried on on his premises, or (2) opens, keeps, or uses, or suffers his house to be opened, kept, or used in contravention of the Betting Act, 1853, he shall be liable to a penalty not exceeding £10 for the first offence and £20 for any subsequent offence.

The expression "gaming" means the playing at any game for money or money's worth. Therefore, a licensed person may be convicted for allowing his own private friends to play cards for money on his licensed premises. Again, the playing of dominoes for money, or of skittles or "shove-halfpenny" for beer is equally illegal.

An "unlawful game" is one which has been declared by statute to be unlawful. At Common Law no game is in itself unlawful. The unlawful games now are: Ace of Hearts, Pharoah, Basset, Hazard, Passage, Roulet, every game of dice (except Backgammon), and every game of cards which is not a game of mere skill; and, in fact, all other games of mere chance, of which Baccarat is certainly one.

The Betting Act, 1853, forbids that any house, office, room, or other place shall be opened, kept, or used for the purpose of any person betting with other persons resorting thereto; it forbids the exhibiting or publishing of any placard, hand bill, or advertisement announcing that any house, office, room, or other place is opened, kept, or used for the purpose of making bets or wagers; and it also forbids any person, on behalf of the owner of any such place, inviting other persons to resort thereto for the purpose of making bets or wagers.

5. SALE TO BE BY STANDARD MEASURE. The retailer of intoxicating liquor selling it in quantities of half a pint or more, except when it is being sold by the cask or bottle, is bound by law to sell it in measures marked according to the Imperial Standards. The penalty for the first offence is a fine not exceeding £10, and for a second or any subsequent offence £20.

6. INTERNAL COMMUNICATION between licensed premises and houses of public resort. Under the Licensing Act, 1872, every person who makes or uses, or allows to be made or used, any internal communication between any licensed premises and any unlicensed premises which are used for public entertainment or resort, or as a refreshment house, shall be liable to a penalty not exceeding £10 for every day during which such communication remains open, and, in addition to the penalty, if the person convicted is the holder of a licence, he will forfeit his licence.

7 HARBOURING THIEVES. Licence-holders must take care not to harbour thieves on their premises, for under the Prevention of Crimes Act, 1871, every person who occupies or keeps any lodging-house, beer-house, public-house, or other house or place where intoxicating liquors are sold, or any place of public entertainment or public resort, and knowingly lodges or harbours thieves or reputed thieves, or knowingly permits them to meet therein, or knowingly allows the deposit of goods therein, having reasonable cause for believing them to be stolen, shall be guilty of an offence, and be liable to a penalty not exceeding £10, or in default four months' imprisonment, with or without hard labour. He will also be liable to have his licence forfeited.

8. HARBOURING OR BRIBING CONSTABLES. Constables on duty are forbidden to enter licensed premises or to obtain refreshment there unless they do so for the purpose of keeping or restoring order, or in the execution of their duty. If any licensed person knowingly harbours any such constable, or knowingly suffers him to remain on the premises, or supplies him with any liquor or refreshment, whether by way of gift or sale (except by the authority of a superior officer of the constable), the said licensed person commits an offence, and is liable for the first offence to a penalty not exceeding £10, and for a subsequent offence to a penalty not exceeding £20.

9. NAMES OF LICENSED PERSONS TO BE AFFIXED TO PREMISES. Every licensed person must cause his name with the word "licensed" following it to be painted or fixed on his licensed premises, in a conspicuous place, and in such form and manner as the licensing justices may direct. He must also add words sufficient to explain the kind of license he holds. Thus, if he is licensed to sell intoxicating liquors, it must be stated clearly whether the liquor is to be consumed on or off the premises.

LAW RELATING TO CLUBS.

REGISTRATION OF CLUBS. By the Licensing Act, 1902, the secretary of every club which occupies a house, or part of a house, or other premises which are habitually used for the purposes of a club, and in which any intoxicating liquor is supplied to members or their guests, must cause the club to be registered annually in the following manner. Every January the secretary must furnish to the clerk to the justices a return signed by himself giving the following particulars of the Club:—

(1) The name and objects of the club; (2) the address of the club; (3) the name of the secretary; (4) the number of members; and (5) the rules of the club relating to:—

(*a*) The election of members and the admission of temporary and honorary members and guests.

(*b*) The terms of subscription and entrance fee, if any.

(*c*) The cessation of membership.

(*d*) The hours of opening and closing.

(*e*) The mode of altering the rules.

The secretary must at the same time also furnish the clerk to the justices with a signed statement to the effect that there is kept upon the club premises a register of the names and addresses of the club members and a record of the latest payment of their subscriptions. In the case of a new club about to be opened, the secretary must not wait till the following January, but must furnish the return before it is opened.

The fee payable by the secretary on each return is five shillings; and any person may inspect the register on payment of a fee not exceeding one shilling. Police officers and inland revenue officers may inspect it without fee.

PENALTY FOR FALSE RETURNS. The secretary (or, if there is no secretary, the proprietor or any other person performing the duties of secretary) must take care to make

his returns accurate and complete. If he omits to make any return required by the Act he is liable on summary conviction to a fine not exceeding £20, and in case of a second or subsequent offence, to imprisonment with or without hard labour, for a term not exceeding one month, or to a fine not exceeding £50, or to both the imprisonment and the fine. Moreover if the secretary knowingly makes a return which is false in any material particular, he is liable on summary conviction to imprisonment with or without hard labour, for a term not exceeding three months, or to a fine not exceeding £50, or to both.

STRIKING A CLUB OFF THE REGISTER. Where a club has been duly registered, a Court of Summary Jurisdiction has power, on the written complaint of any person, to make an order directing the club to be struck off the register on all or any of the following grounds:—

(1) That the club has ceased to exist, or that the number of its members is less than twenty-five.

(2) That it is not conducted *bonâ fide* as a club, or that it is kept or habitually used for any unlawful purpose.

(3) That there is frequent drunkenness on the club premises.

(4) That illegal sales of intoxicating liquor have taken place on the club premises.

(5) That persons who are not members are habitually admitted to the club merely for the purpose of obtaining intoxicating liquor.

(6) That persons are habitually admitted as members without an interval of at least forty-eight hours between their nomination and admission.

(7) That the supply of intoxicating liquor to the club is not under the control of the members or the committee appointed by the members.

VARIETIES OF CLUBS. Ordinary clubs are of two kinds, proprietary clubs and members' clubs. The members of a "Members'" Club are co-owners therein; not so the members of a proprietary club, who are merely the paying guests (or *licensees* as they are legally called) of the proprietors. Both kinds of clubs may be incorporated in the same manner as an ordinary company under the Companies Acts, and if the profits of the club are to be devoted to promoting the objects of the club and not for the purpose of paying dividends to shareholders the word "Limited" may be dispensed with, and the words "Club," "Association," or "Society" may be used instead of "Company." As for Working Men's Clubs formed for the purpose of social intercourse, mutual helpfulness, moral improvement, or rational recreation, these are treated as Friendly Societies under the Friendly Societies Act, 1896, and are subject to the laws regulating such societies. (Refer to "Friendly Societies" in *Index*.)

EXPULSION OF MEMBERS. Nearly every club is constituted, regulated and governed by rules, which provide for the admission of members, the subscriptions payable, the conduct of the club, and the provisions for the retirement or expulsion of members. No person should be expelled from a club, otherwise than in accordance with the rules, unless a majority of the club has passed a resolution requiring his expulsion. Even then every opportunity should be given to the offender to answer the charges brought against him; and he should on no account be expelled on trivial grounds. Otherwise, the members who have brought about his expulsion may be called upon to defend in an action for damages for wrongful expulsion.

SUPPLY OF INTOXICATING LIQUORS. Where liquor is sold to members of a proprietary club a licence for its sale is required. But this is not the case in a members' club, the members of which are regarded in law not as retail purchasers of the liquor, but as co-owners of all the club's stock of liquors. But, as has been seen above, a club may be struck off the register if it is not conducted in a *bonâ fide* manner, but merely as a place where intoxicating liquor may be had at all times and without a licence.

By the Licensing Act, 1902, it is provided that intoxicating liquor must not be supplied in a club for consumption off the premises, except to a member on the premises, under penalty of £10. A member is therefore entitled to purchase intoxicating drink at his club and to carry it away for consumption at home.

Of course the supply or sale of intoxicating liquor in an *unregistered* club is attended by serious consequences, the offender being liable on summary conviction to imprisonment with or without hard labour, for a term not exceeding a month, or to a fine not exceeding £50, or to both fine and imprisonment

---

LAW RELATING TO GAME.

The Game Laws are a series of Statutes which have been passed from time to time for the purpose of modifying the old rule of the Common Law which did not recognize any property in wild animals and birds until they had been reduced into possession by being taken or reclaimed, although it recognized the exclusive right of the owner of land to reduce the animals and birds upon it into possession. The Statutes passed have not had the effect of giving the landlord property in the animals and birds on his land whilst they are still *ferae naturae* (in their wild state), and his property in them is still dependent upon their reduction into his possession. Hence a person who unlawfully takes game on the land of another cannot be indicted for larceny, but can only be prosecuted for an offence against the game laws. At the same time the law recognises his exclusive right to kill animals upon his land by imposing penalties upon trespassers in pursuit of game. The Acts also restrict the killing of game by the landlord or any one else during certain seasons of the year, and forbids the destruction of game by improper means and by unlicensed persons.

DEFINITION OF GAME. It is not an easy matter to give a definition of game which will prove satisfactory, for not only does the definition vary in England, Scotland, and Ireland, but it also varies in the Acts relating to different offences in connection with game. It may be convenient to state in a concise way what animals and birds constitute game under the various Acts in force for England and Wales, without attempting to deal with the law applicable in Scotland and Ireland, for which a fuller treatise than the present should be consulted. Briefly put, as defined in the Night Poaching Act of 1828 and the Game Act of 1831, game includes hares, pheasants, partridges, grouse, heath or moor game, black game, and bustards. The Poaching Prevention Act, 1862, includes, in addition to the above, woodcocks, snipe, and rabbits, and the eggs of pheasants, partridges, grouse, and black or moor game. The Game Licence Act, 1860, requires a licence to be obtained for killing the birds and beasts defined as game in the Game Act, 1831, and extends the definition by including deer, woodcock, snipe, quail, landrail, and rabbits.

CLOSE TIME. The sportsman, though possessed of every requisite qualification in the way of licence or permission to shoot, is not entitled to kill or take game at all times. Firstly, he may not do so either upon Sundays throughout the year, or upon Christmas Day, under a penalty of £5; and, secondly, the law has set apart certain periods of the year when game is not to be taken. These latter provisions, so far as relate to England and Wales, are contained in the Game Act, 1831, and, slightly abbreviated, are as follows:—

And if any person whatsoever shall kill or take any partridge between the 1st day of February and the 1st day of September in any year, or any pheasant between the 1st day of February and the 1st day of October in any year, or any black game (except in the county of Somerset or Devon, or in the New Forest in the county of Southampton) between the 10th day of December in any year and the 20th day of August in the succeeding year, or in the excepted district between the 10th day of December and the 1st day of September; or any grouse between the 10th day of December and the 12th day of August; or any bustard between March 1st and September 1st, every such person shall, on conviction, pay for every head of game so taken such sum of money, not exceeding one pound, as to the justices seems meet, together with the costs of the conviction.

There is no close time for hares except Sunday and Christmas Day, and rabbits may be killed all the year round. Hares, however, under the terms of the Hares Preservation Act, 1892, may not be sold in March, April, May, June, or July. Rabbits and hares may not be killed on moorlands and unenclosed lands between March 31st and December 11th. This does not apply to arable lands.

CLOSE TIME FOR WILD BIRDS. The various Wild Birds Protection Acts contain provisions for the purpose of preventing the slaughter or sale of birds between March 1st and August 1st. The original Act of 1880 contains the names of a large number of birds in a schedule attached to it, and if the offence is committed in relation to a bird, the name of which appears in the schedule, a penalty not exceeding £1 is imposed. In the case of any other wild bird, the offender on a first offence is to be reprimanded and discharged on payment of costs, and for every subsequent offence he is to forfeit 5s. for every bird and costs. An owner or occupier of land, or a person authorized by the owner or occupier, is not affected by this provision so far as it relates to birds not included in the schedule.

Upon the application of a County Council, or the Council of a County Borough, the Secretary of State may extend or vary the time during which the killing of wild birds is prohibited, and may also, on a proper representation being made, extend the provisions of the Act to any bird not mentioned in the Schedule, and may further restrict as regards time, place, and species, the taking of wild birds' eggs, under a penalty of a sum not exceeding £1 for every egg taken.

SHOOTING RIGHTS OF LANDLORD AND OCCUPIER. If a landlord who has let his land to a tenant desires to reserve the right to kill the game upon the land, he must expressly reserve it to himself in the deed creating the tenancy. If this has been done, he is entitled to take proceedings against the occupier or any person claiming permission from him if they destroy the game on the land. Although the shooting may be reserved by the landlord, the Ground Game Act, 1880, gives to the occupier of land, and persons authorized by him, the right to shoot hares and rabbits upon the land, concurrently with the right of the landlord.

NIGHT POACHING. A series of Acts of Parliament, commencing with the Night Poaching Act of 1829, have constituted a number of offences in connection with the unauthorized taking of game. These may be summarized as follows:—

1. It is an offence (punishable on summary conviction by a fine, and if committed three times, a misdemeanour, punishable by seven years' penal servitude) for any person by night (i.e. from the expiration of the first hour after sunset until the beginning of the last hour before sunrise) to take or destroy any game (see definition under Game Act above) or rabbits in any land open or enclosed, or on any public road, highway, or path, or the sides thereof, or at the openings, outlets, or gates from any such land into any such public road, highway, or path.

2. It is an offence similarly punishable to enter or be in any of the above mentioned places with any gun, net, engine, or other instrument for the purpose of taking or destroying game. The owner or occupier of the land, or a person in the possession of a right of free warren, or free chase, or the lord of the manor, or the gamekeeper or the servants of the persons mentioned, or anybody assisting them is entitled to arrest a person committing the above mentioned offences. Violent resistance by a poacher using a weapon of offence is a misdemeanour punishable with seven years' penal servitude.

3. It is a misdemeanour punishable with fourteen years' penal servitude for three or more persons at night to enter or be in any land as above described for the purpose of taking or destroying game or rabbits, if any of them is armed with any gun, cross-bow, firearm, bludgeon, or other offensive weapon. The arrest in this case may be made by any one.

4. It is a misdemeanour unlawfully and wilfully at night to take or kill any hare or rabbit in any warren or ground lawfully used for keeping or breeding hares or rabbits, whether the same be enclosed or not. The punishment for a first offence is three months hard labour, for a second offence six months, and in default of sureties not to offend again, to twelve months additional. For the third offence the punishment may be seven years' penal servitude. If committed by day, this is an offence punishable on summary conviction with a fine of £5. Setting or using a snare or engine for taking hares or rabbits in such a place *at any time* is an offence punishable in the same way as that last mentioned.

TRESPASS BY DAY IN PURSUIT OF GAME OR RABBITS. Any person committing a trespass by entering or being in the day time upon any land in search or pursuit of game, or woodcocks, snipes, quails, landrails, or conies, is liable on summary conviction to a fine not exceeding £2. If five or more persons together commit the offence, they are each liable to a fine of £5.

If any person is found on any land in search or pursuit of game, etc., he may be directed by the owner of the shooting, the occupier of the land, or their gamekeepers or servants, to quit the land, and also to give his Christian name, surname, and place of abode. If he fails to comply with this direction and request he may be arrested and brought before a justice of the peace, who may impose a penalty of £5 and costs. If the offender cannot be brought before the magistrate within twelve hours of arrest he must be discharged, but may be proceeded against upon a summons or warrant. Where any persons to the number of five or more are upon land for the purpose of committing the offence mentioned above, any of them being armed with a gun, and any of them by violence, intimidation, or menace prevents or attempts to prevent any authorized person from requiring them to quit the land or to give their names and addresses, every person so offending and every person aiding or abetting such offender is liable to a penalty of £5.

TAKING EGGS. If any person, not having the right of killing the game on any land, nor having permission from the person having such right, wilfully takes out of the nest, or destroys in the nest upon such land the eggs of any bird of game, or of any swan, wild duck, teal, or widgeon, or knowingly has such eggs in his possession, he is liable to a penalty of 5s. for each egg.

USE OF TRAPS. To protect his land and game an owner or occupier may adopt reasonable and innocent means, but it is an offence punishable with five years' penal servitude to set spring guns or mantraps or similar engines calculated to kill or injure.

USE OF POISON. The Game Act, 1831, prohibits, under a penalty of £10, the putting of any poison on any ground where game usually resort, or on a highway. Any person, including the proprietor of the game or the occupier of the ground, may be proceeded against for the offence.

LICENCES. The licences which must be taken out before game can be killed or sold are regulated, not by the Game Laws, but by the Revenue Laws. [Refer to "Game and Gun Licences" in *Index*.]

FISHING RIGHTS AND PENALTIES.

WHERE THE PUBLIC MAY FISH. The right of fishing in the territorial seas (that is, within three miles of the shore), in creeks, in arms of the sea, and in tidal rivers belongs in general to the Crown as owner of the soil covered with water. In ancient times the Crown occasionally made grants of the exclusive right to fish in certain waters; but by Magna Charta the further making of such grants to the exclusion of the public was declared illegal. Therefore in nearly every tidal river, and in the sea generally, the public has a right to fish. In non-tidal rivers and

lakes the right to fish generally belongs to the owners of the land on each side thereof. Where the land is leased, the right passes to the tenant unless the fishing rights have been leased separately, or are expressly reserved. If the right is leased separately from the land it must be by deed, or the lease will not be binding. In many cases, public highways and bridges pass over private rivers. The public have no right to fish therefrom.

PENALTIES. For the protection of fish and fisheries a large number of Acts have been passed by the legislature, many of them being local Acts which have application to certain rivers only (as the Thames, the Severn, and the Medway), whilst others, as the Salmon Acts and the Freshwater Fish Acts apply to the whole country. These Acts provide for a close time for freshwater fish (Refer to *Close Times* in *Index*), and provide for the infliction on offenders of a fine not exceeding £2 (£5 on a subsequent conviction), and forfeiture of all the fish caught and of the tackle used in catching it.

By the Larceny Act, 1861, the unlawful or wilful taking or destroying of any fish in any water running through or situate in any land adjoining or belonging to the dwelling house of any person being the owner of such water, or having a right of fishery therein, constitutes a misdemeanour punishable by two years imprisonment with or without hard labour if committed at night-time, or to a penalty of £5 if done in the day-time. The taking or destroying of fish on private property other than as above, involves a fine of £5 over and above the value of the fish if done at night, and £2 if done by day.

If the owner of any private fishery or his servant finds an unauthorised person fishing in the private waters he is entitled to seize his tackle; but if this is done, in the case of an unauthorised angler fishing by day-time, then the angler will not have to submit to the further penalty. The stealing or dredging for Oysters in Oyster Fisheries is a felony punishable with penal servitude for five years.

By the Malicious Injuries to Property Act, 1861, whosoever unlawfully and maliciously cuts through, breaks down, or otherwise destroys the dam, floodgate, or sluice of any fishpond, or of any private fishery, with intent thereby to take or destroy any of the fish; or who unlawfully and maliciously puts any lime or other noxious material in any such place with intent to destroy fish, is guilty of a misdemeanour and liable to seven years' penal servitude.

FISHERY BOARDS. Various Acts provide for the establishment of Boards of Conservators having jurisdiction over various rivers with powers to make bye-laws regulating the modes of fishing in such places. Such bye-laws provide for the methods to be employed in the catching of fish, the instruments and tackle to be used, the size of the mesh in nets, and the return to the water of fish below a certain minimum size. Penalties not exceeding £5 and the forfeiture of the tackle may be imposed for the breach of these bye-laws.

LAW RELATING TO DOGS.

Every owner of a dog over the age of six months, with certain exceptions mentioned below, is required by Act of Parliament to obtain from the Commissioners of Inland Revenue a licence authorizing him to keep it, and in default of obtaining such licence, or having such licence and refusing to produce it for inspection when called upon to do so by a proper authority, he renders himself liable to a fine of £5. The duty payable in respect of each dog kept is 7s. 6d. The licence cannot be transferred to any person to whom the dog is transferred.

DURATION OF LICENCE. The prescribed licence (which may be obtained from the Post Office) commences to run on the day upon which it is granted, and expires upon the 31st day of December following. A dog owner, who when visited by an excise officer has no licence in his possession, cannot escape the penalty imposed by taking out a licence later in the day, because the licence only operates from the hour at which it was granted.

DOGS EXCEPTED FROM PAYMENT OF DUTY. No licence is necessary in the case of a dog kept and used solely by a blind person for his or her guidance, and, consequently, such person cannot be rendered liable to any penalty for not having a licence. Dogs which are kept and solely used for the purpose of tending sheep or cattle on a farm or in the exercise or occupation of a shepherd may, to the number of two, be exempted from duty. But a certificate of exemption cannot be granted by the Commissioners of Inland Revenue until the applicant has obtained the consent of a Petty Sessional Court (Dogs Act, 1906). Upon very large sheep farms a further exemption may be obtained for additional dogs according to the number of sheep kept, provided that in no circumstances can exemption be obtained for more than eight dogs on the farm.

LIABILITY OF OWNER FOR ACTS OF DOG. The most important question with regard to dogs, and that which most frequently brings their doings before a court of justice, is concerned with the responsibility attaching to an owner for acts committed by his pet. The rule of law applicable to such a case used to be summarized in popular form by saying that a dog was allowed one bite. This statement, though not entirely accurate, gives a rough idea of the principles upon which the Courts have acted. In order to make an owner liable for the assault committed by a dog upon a person, the law demands that there shall be some evidence of what is called *scienter* on the part of its master, that is to say, it must be proved that he was aware that the dog had a disposition to bite people, although it may not actually have bitten any one.

But such previous knowledge is not required in the case of an attack upon cattle. By the Dogs Act, 1906, it is enacted that the owner of a dog shall be liable in damages for injury done to any cattle by that dog, whether he was aware of the mischievous propensity of the dog or not. And the expression "cattle" in the Act includes horses, mules, asses, sheep, goats, and swine.

DAMAGE TO DOGS. A person is entitled to kill a dog in self defence, and in certain circumstances in defence of his property. Thus, a landowner may kill a dog which is actually chasing sheep or rabbits in a warren, if the act is necessary for the safety of his property, but not otherwise; and a dog in pursuit of game may also be shot by the owner of the game, but not if the bird or animal pursued is out of danger. "All dogs will be shot" is therefore a threatening notice that requires considerable limitation in practice.

DOGS, STRAY AND LOOSE. The Board of Agriculture may prescribe the wearing by dogs, while in a highway or place of public resort, of a collar with the name and address of the owner inscribed on it. Where a police officer has reason to believe that any dog found in a highway or place of public resort is a stray dog, he may seize the dog and retain it until the owner has claimed it and paid all expenses incurred by reason of its detention. But the owner, if known, is entitled to a notice that the dog has been so seized and will be liable to be sold or destroyed if not claimed within seven clear days after the service of the notice.

RAILWAY COMPANIES AND DOGS. Questions of some nicety occasionally arise between Railway Companies and dog owners, particularly when dogs are sent from one place to another unaccompanied by their masters. At Common Law Railway Companies are not common carriers of dogs, which means that unless disposed to do so they could not be compelled to carry them, and if they did so they would not be liable for loss or injury, unless such injury arose from the negligence or misconduct of the company's servants. By Statute, however, a railway company is bound to carry dogs if it has facilities for doing so. The law, nevertheless, does not impose on the company the obligation of an insurer with regard to the animals, and as a consequence the company will only be liable to the owner when a dog is killed or injured as a

result of the negligence or default of the servants of the company.

The latter is, in addition, permitted to make conditions limiting the liability it is prepared to assume; but in order to make them binding upon the public it is necessary, first, that the conditions should be reasonable; and, secondly, there must be a memorandum of the contract between the parties, signed by the consignor of the dog or an agent acting for him. A very usual form of such condition is one which limits the liability of the company to a small fixed sum in respect of the dog, unless the full value of the dog is declared and a certain percentage paid upon the excess value over the sum fixed. If the railway company's officials are so unwary as to allow the dog to be despatched without the condition being signed, the owner can recover the whole amount of his loss, whether he has paid an additional percentage or not.

LAW RELATING TO HORSES.

There is no doubt that the horse has provided more employment for lawyers than any other quadruped. The majority of the questions which come before the Court arise in connection with the sale of horses, and usually arise from the disparity between the dealer's description and the purchaser's experience of the horse's merits.

SALE OF HORSES. The regulations governing the contract for the sale of a horse are comprised in the Sale of Goods Act, 1893, and may be briefly summarized as follows: If the value of the horse is under £10 and the sale is completed at the time, the contract may be made verbally. If the horse is of the value of £10 or upwards, then to make the contract binding the buyer must either actually receive and accept it; give something in earnest to bind the bargain or in part payment of the price; or the parties to be charged under the contract must either themselves, or by their agents, make and sign some note or memorandum in writing.

Where the vendor of a horse has done all that has to be done between himself and the purchaser, and the contract is for an immediate sale, the property in the animal at once vests in the vendee, the consequence being that if the horse is destroyed or injured without the fault of the vendor, the loss falls upon the purchaser.

WARRANTIES ON THE SALE OF A HORSE. A common incident in a contract for the sale of a horse is the giving of a warranty by the vendor as to its health, character, age, and the like; and it is in connection with such warranties that questions of some difficulty frequently arise. In law, there is an implied condition on the part of the seller that he has a right to sell the goods he is offering for sale; but in the case of a horse there is, in default of arrangement between the parties, no other warranty implied. It may be stated as a wise general principle that it is inadvisable for the seller of a horse to make any warranty regarding it at all if he can avoid doing so. This is not an easy matter as a rule, because a prudent purchaser will do his best to extract from the vendor a definite warranty, the breach of which will give him a cause of action. Perhaps the most satisfactory arrangement is for the vendor to refrain from giving a warranty and for the purchaser to have the horse examined by a veterinary surgeon before he agrees to accept him. Of course, if the purchaser can secure a warranty with the animal it is so much the better for him, for as a learned authority says: "A man should have a much more perfect knowledge of horses than falls to the lot of the most of men, and a perfect knowledge of the vendor too, who ventures to buy a horse without a warranty." A vendor who desires to protect himself should definitely profess not to warrant, and should not be betrayed, in his desire to bring about a bargain, into making statements which may be construed into a warranty. A verbal warranty will be good unless the contract is reduced to writing, but if this is done, nothing which is not found in the contract will be held to be a part of it.

WARRANTY OF SOUNDNESS AND FREEDOM FROM VICE. This is the most common form of warranty on the sale of a horse, and many hundreds of cases have been decided on the questions of what constitutes unsoundness and vice respectively. A minute examination of these decisions is impossible in a limited space, but the principle upon which the Courts have proceeded is admirably summed up by Baron Parke in an old case. With regard to unsoundness, he says:

> "The rule as to unsoundness is that if at the time of the sale the horse has any disease which either actually does diminish the natural usefulness of the animal, so as to make him less capable of work of any description, or which in its ordinary progress will diminish the natural usefulness of the animal; or if the horse has either from disease or accident undergone any alteration of structure that either actually does at the time, or in its ordinary effects, will diminish the natural usefulness of the horse, such a horse is unsound."

The same learned judge in discussing the question of vice in a horse said that vice might either be shown in the temper of the animal (e.g. biting or kicking), or might be a habit decidedly injurious to its health (e.g. crib biting) and tending to impair its usefulness. Whether a particular horse is sound and free from vice is a question for the decision of the jury under the direction of the judge. (See "Warranty" under *Sale*.)

HIRING OF HORSES. In connection with the hiring of horses certain liabilities are incurred:—

(*a*) **Liability of Owner to Hirer.** If a person hires a horse from its owner, the latter impliedly warrants that it is fit for the purpose for which it is required, e.g. a horse hired to make a particular journey is warranted by the owner to be fit and competent to undertake it.

(*b*) **Liability of Hirer to Owner.** The general principle may be stated as follows: A hirer of a horse who treats the animal and manages it as a man of ordinary prudence would treat and manage his own horse will not be responsible for any damage which the horse may suffer. If, however, a person who hires a horse for a particular purpose uses it without the owner's consent for some other purpose, and injury to the horse ensues, he will be liable; and the same applies if he hires it for a particular time and keeps it beyond that period and the horse is injured. If a horse is stolen when in the hirer's possession, and owing to his negligence, he will be liable for its value to the owner. The latter, however, must bear the loss occasioned by any accident to the horse while it is being properly used by the hirer.

(*c*) **Liability of Owner to Third Parties.** Cases of difficulty frequently arise as to the incidence of liability when injury is done to third parties by a horse or horse and carriage let by its owner to some one else. In such cases it is always a question for the jury whether the driver of the carriage is acting as the servant of the hirer or of the owner. If, for instance, the owner of a carriage hires horses from a jobmaster, who also provides a driver, the jobmaster would be liable for any accidents resulting from the driver's negligence, because he is the jobmaster's servant; but if the driver were the servant of the hirer, then the hirer would be liable.

BORROWING HORSES. The contract of borrowing being usually entered into for the exclusive benefit of the borrower, an extraordinary degree of care is exacted from him by the law, and, consequently, he is responsible if injury results from a very slight amount of negligence on his part. The contract is personal to the borrower, and so he is not permitted to allow any one else to use the thing lent. If loss ensue when the thing lent is being used in the way contemplated when the loan was made, the owner must bear the loss; but if the borrower uses it in a different way, he is responsible. If a borrowed horse dies of disease, the borrower is not liable.

STOLEN HORSES. Horse stealing is a felony punishable by penal servitude for a period not exceeding 14 years. As a general rule, the purchaser of stolen goods acquires a good title to them if they were purchased in market overt, but in the case of a stolen horse a somewhat stricter practice prevails. A *bona fide* purchaser for value of a

stolen horse sold at a fair or in market overt will not acquire property in the horse unless certain statutory formalities have been complied with. The horse must be exposed in open market for one hour between 10 a.m. and sunset, and an accurate description of the vendor, buyer, horse, and terms of the contract must be entered in the book of the bookkeeper of the market. Even if these formalities are complied with, the owner is not divested of his right of possession, and upon proof that the horse has been stolen, he can recover it within six months by proceedings before a magistrate, and after tendering to the person in whose possession it is the price he paid for it in market overt. If the horse has been sold not in market overt, the owner may resume possession of it wherever he finds it.

ILL-TREATING HORSES. The offence of killing, maiming, or wounding a horse, if maliciously committed, constitutes a felony punishable by not more than 14 years' penal servitude. The administering of poisonous drugs to a horse by unqualified persons without the knowledge or consent of the owner is an offence punishable by fine or imprisonment. By the Cruelty to Animals Act, 1849, any person cruelly beating, ill-treating, over-driving, over-riding, abusing, or torturing a horse or other animal, is liable to a fine not exceeding £5 or imprisonment.

SLAUGHTERING HORSES. It is provided by the Act last mentioned that a horse brought to a knacker's yard to be slaughtered must be killed within three days, and in the meantime must be provided with sufficient food and water under a penalty of £5. Any person keeping or using or acting in the management of such yard who uses such a horse, or allows it to be used for any work, or any person found using it, or in possession of it while being worked, is liable to a penalty of 40s. a day.

N.B.—No person licensed to slaughter horses is permitted to be a dealer.

MOTOR CARS AND MOTOR CYCLES.

The law relating to motor cars and motor cycles is governed by the Motor Car Acts, 1896 and 1903. The latter Act is of peculiar interest to motorists, and expires at the end of 1908, unless renewed by Parliament.

SPEED LIMITS. Any person driving a motor car to the public danger is liable for the first offence to a fine not exceeding £20, and for a subsequent offence to a fine not exceeding £50, or to imprisonment not exceeding three months. If a person so driving refuses to give his name and address, or gives a false name and address, he is liable to the same punishment.

In no case must the speed on a highway exceed 20 miles an hour, and in certain specified places 10 miles an hour. The penalty for a first offence is a fine not exceeding £20, and for a subsequent offence not exceeding £50. A person cannot on the evidence of one witness be convicted for exceeding 20 miles an hour. At the time of committing the offence, or within twenty-one days afterwards, the offender must be notified that it is intended to prosecute him, otherwise he cannot be convicted.

DUTY IN CASE OF ACCIDENT. If a motor car causes an accident to any person, or to any horse or vehicle, the driver of the motor car must stop, and, if required, give his name and address, and the name and address of the owner. Failure to do this involves for the first offence a penalty not exceeding £10, for a second offence a fine not exceeding £20, and for a subsequent offence a fine not exceeding £20 or a month's imprisonment.

REGISTRATION OF MOTOR CARS AND MOTOR CYCLES. Every car must be registered, and must bear a mark indicating its number and the County Council with which it is registered. The fee for registration is £1, but in the case of motor cycles it is five shillings. The penalty for using a car without being registered, or using a car the mark on which is obscured or defaced, is for a first offence a fine not exceeding £20, and for a subsequent offence a penalty not exceeding £50 or three months' imprisonment. It is a good defence to prove that the defendant has taken all steps reasonably practicable to prevent the mark being obscured.

LICENCE OF DRIVERS. Every person driving a motor car must have a licence, the fee for which is five shillings. The licence is good for twelve months, and must be produced by the driver when demanded by a police constable, otherwise the driver is liable to a fine not exceeding £5. No person under the age of seventeen years can obtain a licence, but in the case of motor cycles the age limit is fourteen years.

Any person who, without being licensed, drives a motor car, is liable to a fine not exceeding £20 for a first offence, and for a subsequent offence to a penalty not exceeding £50 or three months' imprisonment.

For any offence for which the punishment may be three months' imprisonment, a driver may have his licence suspended for such time as the Court thinks fit, and if the driver does not hold a licence, may declare him disqualified for obtaining a licence. The same rule applies to any offence in connection with the driving of a motor car, except where it is a first or second offence in exceeding the speed limits. If any person applies for or obtains a licence during the period of his disqualification, he is liable for the first offence to a fine not exceeding £20, and for a subsequent offence to a penalty not exceeding £50 or three months' imprisonment. Any person whose licence has been suspended must within a reasonable time produce his licence to have that fact indorsed on it, otherwise he shall be liable to the penalties mentioned in the preceding paragraph.

REGULATIONS AS TO LIGHTS, BELLS AND HORNS. During the period between one hour after sunset and one hour before sunrise, the person in charge of a motor car must carry attached thereto lamps so constructed and placed as to exhibit lights in accordance with the regulations of the Local Government Board. Moreover, all motor cars must carry bells or other instruments capable of giving audible and sufficient warning of their approach. The penalty is a fine not exceeding £10.

FORGERY OF IDENTIFICATION MARK OR OF LICENCE. For the first offence a fine not exceeding £20, and for a subsequent offence a penalty not exceeding £50 or three months' imprisonment.

APPEALS. A person who has been fined more than twenty shillings, or who has been declared disqualified for obtaining a licence, may appeal against the conviction to the Court of Quarter Sessions.

EXCISE DUTIES. A person employed to drive a motor car is a "male servant," and the employer is liable to an annual duty of ten shillings in respect of such driver.

The duty on motor cars exceeding one ton in weight, but not exceeding two tons, with four or more wheels, is £4 4s.; with less than four wheels the duty is £2 17s. Where the car exceeds two tons, but is under five tons, the duty is £5 5s., where there are four or more wheels; and where there are less than four wheels the duty is £3 18s. The duty on motor cycles is fifteen shillings. (For "Registration Letters" refer to "Motor Cars" in *Index*).

TAXES, DUTIES AND LICENCES.

1.—DEATH DUTIES.

In dealing with these duties, it should be remembered that the same property does not pay both succession duty and legacy duty. The succession duty was created to meet cases where legacy duty could not be levied. In some cases it is a very difficult question as to when succession duty is payable. Estate duty is payable when property passes on the death of a person, but where under a settlement of property estate duty has been once paid, that duty

cannot be again levied until the property comes into the hands of a person who is competent to dispose of it as he pleases, a power which a person taking under the settlement does not possess. Of course, succession duty will be paid on the succession of every person taking under the settlement.

This duty, since 1894, is leviable on both real and personal property, and so far as personal property is concerned, it takes the place of the old probate duty. It is levied on all property in which some person's interest ceases on that person's death, or on the death of some other person. In the case of a person domiciled in this country, all his personal property, wherever situate, is liable to estate duty, but his realty and leaseholds situated abroad are not liable to the duty. Where a person is domiciled abroad, all his realty and personalty in this country is liable to estate duty.

PROPERTY LIABLE TO ESTATE DUTY. The property of the deceased which is liable to duty consists of (1) property of which he had full power to dispose, and (2) property over which he had no power of disposition, of which the best example is settled estates. In order to prevent evasions of estate duty, gifts made by the deceased within a year before his death will be liable to the duty; thus, if a person gave a cheque for £10,000, or a horse, or jewels, or an estate of landed property, such gifts would have to pay the duty. In the case of gifts made more than twelve months before death, they will also be liable to duty if the giver retained any interest or benefit out of the property given. Thus, where a man transfers his business to his son, on condition that the son pays him an annual sum out of, or an annual percentage on the value of the business, such business will be liable to the duty. Again, where a person has insured his life, and has given the policy to some person, but continued to pay the premiums, the policy money will be liable to the duty. If he pays part only of the premiums, the insurance money will be liable for a proportionate part of the duty. The same applies to where the deceased had taken out a policy on his own life in another person's name, but continued to pay the premiums. Further, property belonging to the deceased, which he had placed in his own and some other person's name, will be liable; and the same applies where a man has rendered services in return for an annuity to be paid to his wife or children, duty will be paid on the value of such annuity.

EXEMPTIONS FROM ESTATE DUTY. In the case of settled property, if the duty has once been paid, then no further estate duty is payable until the property comes into the hands of a person who is competent to dispose of it. Suppose A, by his will, settles property on B for life, then to C for his life, and then on the death of C the whole property is to go to D. Here estate duty will be paid on A's death, and will not again be payable until D's death. There is also exemption from estate duty in the following cases:—

(1) Where the deceased held the property as trustee.
(2) Property which has been sold by the deceased for a full money consideration.
(3) Property of common seamen, soldiers, and marines dying in the King's service.
(4) Estates under £100.
(5) Advowsons and church patronage.
(6) Annuities not exceeding £25 purchased by the deceased, and payable on his death to some other person.
(7) Pensions payable by the Indian Government to the widows and children of persons in the Civil Service of India.
(8) Property settled by a husband on his wife, or *vice versa*, which reverts to the donor for his or her life, on the death of the person to whom the property was given.
(9) Pictures, prints, books, manuscripts, works of art or scientific collections as appear to the Treasury to be of national, scientific, or historic interest, and to be given or bequeathed for national purposes, or to any university, or to any county council or municipal corporation. This exemption holds good only so long as the property remains unsold, or until it comes into the hands of a person competent to dispose of it.

VALUATION FOR PURPOSE OF DUTY. The value at which the property is valued is its market value; but in the case of agricultural property, the value is not to exceed twenty-five years' purchase. From this value may be deducted a reasonable amount for funeral expenses, and if the personal property is situate abroad, the expenses of administering it, or realising it up to five per cent., may be deducted. Again, if duty on the property has been paid in a foreign country, such duty may be deducted.

For the purpose of determining the rate at which the property will be charged, the value of the different kinds of property will be aggregated or added up. Thus, suppose the deceased had a life interest worth £5,000, freeholds worth £40,000, and personalty worth £50,000, a duty of 5½ per cent. will be levied on the value (£95,000) of the property. Where, however, the net value of the real and personal property in respect of which estate duty is payable (exclusive of property settled otherwise than by the will of the deceased) does not exceed £1,000, that real and personal property is not aggregated with the settled property.

RATE OF DUTY. Where the gross value of the property in respect of which estate duty is payable does not exceed £300, a *fixed* duty of 30 shillings is payable; where it exceeds £300 but does not exceed £500 the *fixed* duty is 50 shillings.

The rate at which estate duty is charged is a rate increasing according to the *aggregate* value of the whole estate, and is as follows. Where the principal value of the estate exceeds

£100	and does not exceed		£500	the rate is 1 per cent.
£500	,,	,,	£1,000	2 ,,
£1,000	,,	,,	£10,000	3 ,,
£10,000	,,	,,	£25,000	4 ,,
£25,000	,,	,,	£50,000	4½ ,,
£50,000	,,	,,	£75,000	5 ,,
£75,000	,,	,,	£100,000	5½ ,,
£100,000	,,	,,	£150,000	6 ,,
£150,000	,,	,,	£250,000	6½ ,,
£250,000	,,	,,	£500,000	7 ,,
£500,000	,,	,,	£1,000,000	7½ ,,
£1,000,000				8 ,,

It will be seen from the above that where the estate does not exceed £300, an *ad valorem* duty, or a *fixed* duty, of 30 shillings is payable, and where the estate exceeds £300, but does not exceed £500, an *ad valorem* duty, or a fixed duty, of 50 shillings is payable. If the estate has been valued at £500 or less, and it turns out that the true value exceeds £500, then an *ad valorem* duty is charged; and if the fixed duty has been already charged, no allowance will be made, so that in cases where there is a doubt about the property exceeding £500 in value, it is better to pay the *ad valorem* duty. The fixed duty of 30 shillings or 50 shillings is paid by stamps, but in all other cases the duty is paid in money.

BY WHOM THE DUTY IS PAYABLE. In regard to personal property, the duty must be paid by the legal personal representative, i.e. by the executor, where there is a will, or if the deceased has died intestate, by his administrator. The executor may pay duty on any property which by the will is under his control, and as all freehold property now comes into the hands of the legal personal representative (i.e. the executor or the administrator), the duty on freeholds may be paid by him. The legal personal representative may also pay duty on property not under his control where the persons responsible for payment of the duty ask him to do so. The duty on the personal estate is payable out of the residuary personal estate, but in the case of lands left by will, though the duty may be paid out of the residuary personal estate as a matter of convenience, yet the amount so paid is recoverable out of the lands.

The legal personal representative of the deceased has to pay the duty for which he is accountable when he has delivered his accounts with the affidavit to the Inland Revenue Authorities, or at the expiration of six months from the death of the deceased, whichever happens first. Until the duty is paid interest at the rate of three per cent. will be charged on the amount of the duty. In the

case of real property, the duty may be paid in eight equal yearly instalments, or sixteen half-yearly instalments, with interest at three per cent. per annum from the date at which the first instalment is due, *less income tax.* The first instalment is due at the expiration of twelve months from the death.

In cases where the legal personal representative is not responsible for payment of the duty, e.g. where the property is not personal property of which the deceased had power to dispose, the persons responsible for payment of the duty are the persons to whom the beneficial interest in the property passes; or trustees of such property, or others who have an interest in or who manage the property; but a person who has purchased the property for value will not be responsible for the duty.

PROPERTY LIABLE TO LEGACY DUTY. This duty is only leviable on property coming to a legatee claiming under a will, or on the share of the personal property which goes to the next of kin where the deceased has died intestate. Legacy duty is also payable on a *donatio mortis causa*, i.e. a gift made by the deceased in contemplation of his death. Legacy duty is payable only in regard to personal property, and not even on all kinds of personal property. The personal property which is subject to legacy duty comprises the following:—

(1) Money, chattels, investments, and the like.
(2) Real property, which at the time of death is regarded by equity as personal property, e.g. real property belonging to a partnership in which the deceased had an interest.
(3) Money directed to be applied in the purchase of real property, until such purchase is actually made.

PROPERTY NOT LIABLE TO LEGACY DUTY. In the two following cases, personal property will not pay legacy duty, but will be subject to succession duty: (1) Leaseholds, (2) Moneys arising from a sale of the real property where the sale is ordered by the will, or moneys charged by will upon real estate, but only where the testator died on or after 1st July, 1888.

RATE OF LEGACY DUTY. The duty is a percentage on the value of the legacy given under the will, or on the amount coming to the next-of-kin in case the deceased died intestate. The percentage depends on the relationship existing between the deceased and the person who takes as his legatee or as his next-of-kin.

(1)	Where the legatee or the next of kin is a lineal ancestor or descendant of the deceased	1 per cent.
(2)	Where the legatee or the next of kin is a brother or a sister, or a descendant of a brother or sister	3 „ „
(3)	Uncles and aunts of the deceased, or their descendants	5 „ „
(4)	Great-uncles and great-aunts of the deceased, and their descendants ..	6 „ „
(5)	All other persons	10 „ „

Where a legatee has before the testator's death married a person whose relationship to the deceased is nearer than his or her own, the rate is reduced to that which the person of such nearer relationship would have been charged had he or she been the legatee.

EXEMPTIONS. In the following cases no legacy duty is payable:—

(1) Legacies to the husband or the wife of the deceased.
(2) Legacies for the benefit of the Royal Family.
(3) Legacies of books, prints, and other specific articles, given to a public body for preservation and not for sale.
(4) Specific legacies (e.g. a horse, a ring, a chair, and the like, but not money) under the value of £20.
(5) Where the value of the personalty does not amount to £100.
(6) Plate, furniture, pictures, and the like, not yielding income, given to different persons in succession, are not liable to duty until they come into the hands of a person who has power to dispose of them.
(7) Legacies to lineal ancestors or descendants, if the property is such that it is liable for estate duty. Nor is legacy duty payable in respect of settled property which has paid estate duty since the date of the settlement.
(8) Where the net value of the real and personal property of the deceased (exclusive of property settled otherwise than by will) does not exceed £1,000, if the property is such that it is liable for estate duty.

DUTY, WHEN PAYABLE. The duty is due at death, but is payable on the value of the gift at the time when the duty is paid; thus, a legacy of shares in a company which are worth £4 per share on the death of the testator, if they rise, say to £5 per share at the time the duty is actually paid, such duty will be paid on the increased value. Where the legatee is absolutely and immediately entitled to the legacy, the duty is paid by the executors prior to paying the legatee, and is deducted from the legacy.

MISCELLANEOUS POINTS. The executor is primarily liable for the duty, except in the cases where a legacy is settled on certain persons in succession, so that the legacy passes out of the control of the executor. In these and in some other cases the legacy duty is paid by the trustees to whom the legacy is transferred.

It should be remembered that personal property, devolving under a will, will be liable to legacy duty if it comes to the person receiving it as an act of bounty on the part of the testator. Thus, if a testator by his will releases a debt due to him, such debtor is liable to legacy duty on the amount of the debt.

Where through mistake the proper amount of duty has not been paid, the executor must pay the proper amount with interest, and will receive in return the amount originally paid as duty. If too much duty has been paid, the Revenue Authorities will repay the difference between the amount paid and the amount actually due.

PROPERTY LIABLE TO SUCCESSION DUTY. This is a duty payable by a person who gratuitously acquires property by reason of the death of another person. Such property includes real and leasehold property situate in the United Kingdom, and personal property which is not subject to legacy duty.

RATE OF SUCCESSION DUTY.

(1)	Succession of lineal ancestors or descendants of the predecessor ..	1 per cent.
(2)	Succession of a brother or sister of the predecessor, or their descendants ..	3 „ „
(3)	Where the successor is an uncle or aunt of the predecessor, or is the descendant of such uncle or aunt	5 „ „
(4)	Where the successor is a great-uncle or great-aunt of the predecessor, or their descendant	6 „ „
(5)	Succession of other people	10 „ „

The predecessor means the settlor, testator or donor who gives the property, or the ancestor or other person from whom the interest of the successor is derived, *not* the person whose death caused the transfer of the property to the successor. The successor is the person to whom the beneficial interest in the property is given.

EXEMPTIONS. No succession duty is payable under the following circumstances:—

(1) Where lineal ascendants or descendants succeed.
(2) Where the whole value of the property does not exceed £100.
(3) Where the net value of the property does not exceed £1,000, and the estate duty or the legacy duty has been paid.
(4) Policies of life insurance.
(5) Where legacy duty has been paid.

2. LAND TAX.

ITS NATURE AND INCIDENCE. The Land Tax in its present form dates from 1689. It was imposed in place of a number of ancient taxes which have become obsolete. It is levied on manors, houses, land, quarries, mines, ironworks, parks, woods, fishings, tithes, tolls, annuities, etc.

In the case of houses let to tenants, the tenant pays the tax in the first instance; but he is entitled to deduct the amount so paid from his rent, unless he has, by the terms of his lease or agreement, agreed to bear the charge himself, or unless he has agreed to pay "all rates and taxes" without excepting the land-tax. The tenant should remember to deduct the tax from the very

next payment of his rent; for he will not be entitled to deduct it from any rent other than the current rent. If the tenant by paying a premium gets the property at less than a rack-rent (i.e. a rent equal to the full annual value of the property), he will have to bear a portion of the tax with his landlord. Where there is a dispute between the landlord and tenant as to the amount of the deduction, or as to the share of the tax to be borne by each, the matter should be referred to the Land Tax Commissioners. The Finance Act, 1896, provides that the tax shall be at a rate not exceeding one shilling in the pound on the annual value of the property. There exist certain exemptions from the payment of Land Tax: Thus by the Finance Act, 1898, persons whose incomes do not exceed £160 are exempt from the whole of the tax, and those whose incomes do not exceed £400 are exempt to the extent of one-half. Again, Crown property, universities, and certain schools, hospitals, and charities are also exempt from the payment of land tax.

REDEMPTION OF LAND TAX. Several Acts provide for the redemption of the Land Tax by the owner of the property which is subject to the tax. Tenants holding at a rack-rent and tenants holding under the Crown, may not redeem the tax, but all other persons who have a legal estate or interest in the property may contract for its redemption.

The price which a person who wishes to redeem the Land Tax will generally have to pay is a sum equal to thirty years' purchase of the amount assessed at the last assessment. The Commissioners of Inland Revenue will sometimes allow the payment to be made by instalments; but in that case interest on the unpaid balance is usually charged. The Redemptioner can claim from the Inland Revenue Commissioners a certificate charging the land with the price paid, and this certificate, when duly registered, has the effect of a mortgage deed giving the redemptioner a priority over all other incumbrances. Instructions and forms for the guidance of those desirous of redeeming the Land Tax are issued by the Inland Revenue Commissioners. It need only be stated here that the applicant should attend before the clerk to the Inland Revenue Commissioners of his district, with a plan and a full description of the property. The clerk will supply him with the necessary documents and instructions as to how to proceed further.

3. INCOME TAX.

ITS ORIGIN AND NATURE. This tax was first imposed in 1798, and affects a much larger number of persons than any other direct tax. The Act of Parliament which instituted the tax was entitled "An Act for granting to his Majesty an aid and contribution to the prosecution of the war." Thus it is clear that it was the intention of that Parliament that the new levy was to be regarded as a War Tax and not as a permanent source of revenue. Even now the tax depends for its continued existence upon an annual statute. Failing the passing of a new Act in any year, the Income Tax payer would escape for that year. From 1798 to 1816 (with the exception of one year) the tax was levied annually, but in that year it ceased and was not re-imposed until 1842. At that time Parliament did not regard it as a War Tax, but for the purpose of making up the revenue necessary to meet the expenditure of the government on reforms, which were initiated with a view to benefiting the commerce and manufactures of the kingdom. In 1853 a more comprehensive view of the financial question involved was taken, and Parliament imposed the tax for seven years, the rate during this period to be decreased from 7d. to 5d. in the £, and then to cease altogether. But in 1854 war with Russia broke out and the tax was doubled, so that when 1860 came (the year in which it was proposed to abolish the tax) a charge of 10d. in the £ was made. Since that year the tax has been annually levied, the rates and incidence varying from time to time. The following table gives statistics respecting this tax in more recent years.

From and to April 5th.	Rate in £	Produce.
		£
1893—1894	7d.	15,300,000
1894—1895	8d.	15,600,000
1895—1896	8d.	15,980,000
1896—1897	8d.	16,900,000
1897—1898	8d.	17,170,000
1898—1899	8d.	18,040,000
1899—1900	8d.	18,860,000
1900—1901	1s.	27,560,000
1901—1902	1s. 2d.	35,370,000
1902—1903	1s. 3d.	38,660,000
1903—1904	11d.	30,500,000
1904—1905	1s.	31,260,000
1905—1906	1s.	31,295,000

THE INCIDENCE OF THE TAX. One of the judges of the High Court referring to this Tax said that it was "a net large enough to include every description of property," and he might have added, "and with meshes small enough to prevent the escape from taxation of any description of property, provided it produces an annual income and profit." For the purposes of the Income Tax Acts the various kinds of profits are classified under Schedules, and these Schedules are distinguished one from the other by the letters A, B, C, D, and E. What is commonly known as "Property Tax" is really Income Tax, levied under the authority of the Income Tax Acts on incomes arising from lands and houses, and assessed in accordance with the provisions of Schedules A and B.

SCHEDULE A.—LANDS AND HOUSES.—A LANDLORD'S TAX. Under this Schedule the *owner* of land or houses is taxed. Ownership, irrespective of occupation, is the test of liability, so far as this part of the Act is concerned. The occupier of the property (unless the annual value is less than £10) is liable to pay the tax in the first instance; but if the occupier is not the owner, then the tax can be recovered from the owner by the occupier, who is authorised by law to deduct the amount paid as tax from the next rent which falls due to the owner. The basis of the assessment for the purposes of this Schedule is the gross annual value, but deductions are allowed from this value to the extent of one-sixth in the case of tenements and houses, and to the extent of one-eighth in the case of lands. Owners can obtain entire relief from the payment of this tax if the taxable property (land or tenements) is untenanted. Further, it is permitted to grant to an owner an abatement in respect of tax, if he has for any period abated a portion of the rent. Crown property, landed property in the occupation of servants of the Crown for the purposes of the Crown, buildings used as Courts of Justice, property held in trust for charitable purposes, hospitals, public schools, almshouses, literary and scientific institutions, public libraries, University buildings, and property belonging to registered Trade Unions are not taxable under the provisions of this Schedule.

SCHEDULE B.—OCCUPATION OF LANDS.—AN OCCUPIER'S TAX. For the Tax under Schedule A, the landlord is eventually liable, although in the first instance it is paid by the occupier, but the tax levied under this Schedule (B) is an occupier's tax, and is a charge made upon any profits accruing to him and arising out of his occupation of the land. Thus the same person, if he own as well as occupy a farm, will be liable to pay tax in connection with that farm under this Schedule as well as under Schedule A. The profits made by a nurseryman or market gardener are assessed in the ordinary way on the actual profits made, and in the case of farms, the tax *may* be assessed in the same way, provided the farmer gives notice to the Surveyor of Taxes on or before the 5th of June. Else the gross annual value of the land is ascertained, and one-third of that value is regarded as the amount of profit, and upon this the tax is levied. If the occupier's profits fall below one-third of the annual value, he can appeal (for the method, see *Appeals* below) and pay only on the profits actually realised.

SCHEDULE C.—INTEREST, DIVIDENDS, ETC. Under this Schedule, Income Tax is claimed upon all profits

arising from interest, dividends, annuities, and shares of annuities payable to any person, body, corporation, company, or society out of any public revenue. This includes any sum payable out of the revenue of any colonial or foreign government. The mode of assessing and collecting this tax differs from that under the other Schedules. Instead of being collected from the taxpayer, it is deducted from the amount payable by the person or body whose duty it is to pay the interest, dividend or annuity. That person or body pays to the Exchequer the amount so deducted.

Take the common instance of Consols, interest on which is paid (quarterly) by the Bank of England. The ordinary holder of consols is never paid a full year's interest, but always less the tax, except when the half-yearly dividend does not amount to 50s. Many a small holder pays this tax unnecessarily, for if his income is below £160, he can obtain repayment of the amount deducted by the Bank of England, and in any case he should reckon the amount of tax paid on his dividends, and deduct it from the amount payable on the total income.

SCHEDULE D.—SALARIES, WAGES, AND ALL OTHER PROFITS. This Schedule is most comprehensive in its terms and effect. The amount upon which tax is leviable is ascertained in the first instance by a return made by the taxpayer. This return has to be made annually, and default in so doing renders the defaulter liable to a penalty of £20 and treble the duty chargeable, or to be surcharged. In the case of ordinary trades and professions, the average profits for the last three years form the basis of the assessment; if the business is new, then the average yearly profit since its commencement, or the calculated profit for the year. Mining profits are based on a five-yearly average. Allowance can be claimed for repairs of premises, bad debts actually written off, cost of renewing tools, and diminished value of plant, and for the rent of premises in which the business is carried on, but if the person making the return lives on the premises then at most only two-thirds of the rent would be allowed.

SCHEDULE E.—SALARIES OF PUBLIC SERVANTS. This tax is deducted from salaries, pensions, or annuities payable in respect of all public offices or employments. It includes the salaries paid to Civil Servants, Army and Navy Officials, Officials of Limited Companies, Municipal and other public officers.

EXEMPTIONS AND ABATEMENTS. Charities pay no income tax. At present (1906) all persons whose income does not exceed £160 are entirely exempted from payment, and persons whose income does exceed £160 but not £700 are entitled to abatement of tax equal to:—

(1) The amount of tax upon £160 if the income does not exceed £400. (2) The amount of tax upon £150 if the income exceeds £400 and does not exceed £500. (3) The amount of tax upon £120 if the income exceeds £500 and does not exceed £600. (4) The amount of the tax upon £70 if the income exceeds £600 and does not exceed £700. If the amount of the income exceeds £700, then the tax is payable on the full income.

INCOME OF HUSBAND AND WIFE. For the purpose of this tax, and despite the effect of the Married Women's Property Act, the profits of any married woman living with her husband are deemed the profits of the husband. (This involves a great hardship. Suppose the wife's income is £360 and the husband's £380. Their joint income exceeds £700, and no abatement is allowed. Had they been assessed separately, the wife would pay income tax on £360 less £160, that is, £200, and the husband similarly would pay tax on £220. In that case the two would pay tax on £420 instead of £740). There is an exception to the general rule when the total joint income of husband and wife does not exceed £500 per annum.

Then if the Income Tax Authorities are satisfied that "such total income includes profits of the wife from any business carried on or exercised by means of her own personal labour, and that the rest of the total income, or any part thereof, arises or accrues from profits or a business carried on or exercised by means of the husband's own personal labour, and unconnected with the business of the wife, they shall deal with such claim as if it were a claim in respect of the said profits of the wife, and a separate claim on the part of the husband in respect of the rest of the total income, but they shall deal with any income of the husband arising or accruing from the business of his wife or from any source connected therewith as if it were part of the income of the wife. In this section 'business' means any profession, trade, employment, or vocation, or any office or employment of profit, and the 'profits of a business' means any profits, gains, or remuneration arising or accruing from the business, and chargeable under Schedule D or Schedule E in the Income Tax Act, 1853." (Section 5 (1) and (2), 60 & 61 Vict., c. 24.)

INSURANCE PREMIUMS. In computing Tax under Schedules D and E, premiums of life insurance or deferred annuities are deducted, whether the insurance be on the life of the taxpayer or his wife. But a deduction cannot be made on this account for a sum greater than one-sixth of the income.

ASSESSMENT AND COLLECTION OF TAX. The general supervision of the assessing and collecting of this tax is entrusted to the Board of Inland Revenue. The chief officers appointed to deal with this work are called Surveyors of Taxes, and they act under the direct instruction of the Board. The assessments are made by General Commissioners, who are persons of good local standing, and are chosen from the Land Tax Commissioners. These General Commissioners are divided into groups, each group attached to a district and given the name of District Commissioners. The Commissioners appoint Assessors and Collectors (except in London, where the Surveyors are the Assessors). The duties of the asssessors and collectors are indicated by their names. The final assessment is in all cases made by the Commissioners, but it is the duty of the assessors to submit to the Commissioners a Schedule of Assessments with such information as may be necessary in order to enable the Commissioners to arrive at a decision.

SPECIAL COMMISSIONERS. These officials are appointed by the Treasury, and if a taxpayer so desire, he may claim that his profits under Schedule D be assessed by the Special Commissioners instead of by the General Commissioners. Appeals from assessments may also be heard by them, if the appellant wishes. These facilities enable assessments to be made and appeals heard without the necessity for revealing trade accounts, etc., to persons resident in the locality, and who might possibly use the information thus obtained to the detriment of the taxpayer.

ENFORCEMENT OF PAYMENT. Rigorous measures can be taken to enforce payment. If the collector meets with a refusal to pay, distraint and sale may follow. Such a distraint takes priority of the landlord's rent. If distraint reveals the fact that there are not sufficient goods to meet the claim, then the General Commissioners can commit the defaulter to prison until bail is obtained or security to pay not only the tax but the cost incurred by his apprehension.

APPEALS. Any person who thinks his assessment is too high may appeal. He must first give ten days' notice of objection in writing to the Surveyor of Taxes within the time limited for hearing appeals. He is then entitled to appeal either to the District or Special Commissioners (if assessed by the latter to them only) against the assessment. The Commissioners fix a day for hearing appeals, notice of which is given to the appellant. At the hearing of the appeal, the surveyor and assessor may attend and give reasons in support of the assessment. Until recently no lawyer could appear before the Commissioners on behalf of any party, but the prohibition has been removed by a recent Act (61 & 62 Vict., c. 10, Sec. 16). The decision of the Commissioners on appeal is final, and no alteration can be made except by the High Court, when a "case upon a point of law" has been stated by the Commissioners and heard and determined by such High Court.

TO CLAIM REPAYMENT OF INCOME TAX. Over-paid tax, whether paid direct by the taxpayer or by way of deduction from his rents, interest, or annuity, can be recovered if the claim for recovery is made within three years. Forms upon which claims for repayment must be made are supplied (on application by post) by the Secretary

to the Inland Revenue Commissioners, whose official address is Somerset House, London, W.C. If the applicant claims total exemption, then his claim must be made on Form 40, if the claim be for abatement on Form 40(a). The forms give full directions as to the mode of making the claim. As soon as the authorities are satisfied that the claim is genuine, an amount equal to that overpaid is sent to the applicant.

4. HOUSE DUTY.

ON WHAT PROPERTY IS IT LEVIED. This charge is known by the names House Tax, House Duty, and Inhabited House Duty. The last name indicates the nature of the property in respect of which this Duty is chargeable. All inhabited dwelling houses of an annual value of £20 and upwards are taxable. In calculating the annual value, every coach house, dairy, stable, laundry, and out-house, as well as yards, gardens, and pleasure grounds are included. The general test as to whether or not a house is liable to this tax is the answer to the question, Does anyone sleep on the premises? If the reply is in the affirmative, then the tax may be levied, but if in the negative, no tax is payable. This is the general rule, which is subject, however, to the exceptions stated hereafter. Shops attached to a dwelling house, or communicating with the dwelling house, are included in the valuation. The same rule applies to premises used for any business, such as Banking, Insurance, or that of an Auctioneer and Estate Agent.

WHO PAYS THE TAX? Liability to pay this tax falls upon the occupier and not the owner. It is restricted to properties in Great Britain. The tax is payable on January 1st of each year, and the demand for payment is usually made at the same time as that for the payment of the Income or Property Tax on the same house.

If a dwelling house is inhabited by two or more families, the landlord is regarded as the occupier, even although he may not live in the house. Should he reside out of the district, then the tax is collected from the residents, who are by law entitled to deduct the amount paid from the next payment of their rent. This must be regarded as a special case, for in no other case is the resident entitled to deduct the amount paid from the rent unless it is specially provided in the tenancy agreement that such deduction may be made.

HOUSES NOT ASSESSABLE. (*a*) Royal palaces and houses belonging to the Monarch or any of the Royal Family. (*b*) Buildings used as Government Offices. (*c*) Hospitals, unless entirely maintained by the fees of patients. (*d*) Charity Schools, but not such as are partly maintained by fees. If, however, any premises are used *solely* for the purposes of education (no person sleeping on such premises), then the tax is not payable. (*e*) Dwelling houses of a less annual value than £20. (*f*) Houses used solely for business or trade purposes, provided that no person sleeps on the premises other than a mere caretaker. (*g*) Unoccupied dwelling houses.

N.B.—Of course places of public worship are exempt, not being inhabited houses.

THE DUTY PAYABLE. The rate of duty varies with the annual value of the house as well as with the use to which the house is put, as is shown by the following table, which sets out the existing statutory scale.

Kind of House.	Annual Value.	Rate.
Farm-houses, public-houses, coffee-houses, lodging-houses, warehouses and shops.	£20 and not exceeding £40 ..	2d. in the £
	exceeding £40 but not £60	4d. „ „
	exceeding £60 ..	6d. „ „
Ordinary dwelling-houses.	£20 and not exceeding £40 ..	3d. in the £
	exceeding £40 but not £60	6d. „ „
	exceeding £60 ..	9d. „ „

5. CUSTOMS DUTIES.

CUSTOMS—WHAT ARE THEY? "Customs" is the name given to those charges and duties which become payable to the Government of the country in connection with the exportation and importation of goods. The amount of these charges varies considerably from year to year, and not only the amount but to some extent also the articles which become chargeable. At the beginning of the 19th century our customs tariff included 1500 articles, a century later only between 20 and 30. The customs duty is now levied only on imported articles, and these fall into two classess: (1) articles which cannot be produced in this country, (2) articles which are produced here, but upon the manufacture of which excise duties are imposed. The total amount realized by customs is always well over £30,000,000 and in 1904 reached a total of £35,730,000. This included an export duty on coal of 1s. per ton, which has since been removed. The following imported articles are dutiable: Beer, chicory, cocoa, coffee, currants, dried plums, figs, prunes, molasses, raisins, spirits, sugar, tea, tobacco, and wine. (Refer to "Customs Tariff" in *Index*.)

COLLECTION OF CUSTOMS. It is illegal to land or ship any goods except at certain specified places and within certain specified hours. This must be carried out under official supervision. The usual places for lading and landing are the wharves, quays, and docks authorized by the Commissioners of Customs. There are other places which have prescriptive rights or have been specially authorized by Act of Parliament. The powers of the Custom House officers in the matter of search (both as to vessels and houses) are very drastic. Any "Customs" officer in uniform has the right to enter upon and search a vessel at any time, but with regard to houses he must obtain a warrant from a justice of the peace or an authority from the High Court before making a search. Vehicles of any kind may be stopped and searched by any officer, provided he has reasonable cause for suspicion that the articles in the vehicle have not been "customed."

PENALTIES. Offences against the Customs Laws are dealt with by the ordinary magistrates. They decide upon the amount of the penalty to be paid by an offender, and the length of the term of imprisonment he is to undergo in default of payment or distress. In "Customs" cases the magistrates' powers respecting imprisonment are extended beyond those which they possess in ordinary cases, for where the penalty exceeds £50, the magistrates may sentence to imprisonment for a period not exceeding six months, the limit in ordinary cases being three months. In very serious cases, another process is adopted, and the High Court passes judgment. The High Court has the power to imprison until the penalty is paid, or during the pleasure of the Crown.

GOODS IN BOND. "Goods in Bond" or "Bonded Goods," are those deposited in approved warehouses until the "Customs" duties thereon are paid. The payment of duties on goods thus bonded is not enforced on landing, but only before the goods are taken "out of bond" for home consumption. If taken out of the warehouse and re-exported, then the duty is not payable. All these bonded warehouses are under supervision at all times, such supervision being exercised by the Custom House officers. Before "bonding" was permitted, difficulties and delay occurred in connection with the repayment of duty on articles which were re-exported. This repayment of duty was known as "draw back." Even now "draw back" is paid, but mainly in cases where a dutiable raw material has paid duty on importation into the United Kingdom and that same material in a manufactured state is exported. (Refer to "Customs Tariff of United Kingdom" in *Index*.)

6. EXCISE LICENCES.

MALE SERVANT. Every person who employs male servants must obtain a licence, paying for such licence 15s. for each servant employed. The licence is annual

and expires on December 31st of each year. The term "servant" in this connection applies only to what may be described as a personal servant, not to a workman or a labourer employed in any handicraft or trade. But if a farm labourer is employed daily to drive a pony carriage, then a licence is necessary. It is also necessary in the case of a tradesman who employs a man to attend to a vehicle solely used for the purposes of pleasure. A gardener employed at a weekly wage, and who works for his employer a number of hours each day (in the particular case decided the number was "seven"), but is at liberty to work for others, cannot be employed without a licence, but a gardener's labourer is not a servant. Trade servants, including those engaged in hotels and refreshment houses, game watchers and persons not residing in employer's house engaged for a portion only of each day, are not servants in this sense.

It is the duty of any person liable to a duty to deliver a declaration to the Inland Revenue Authorities in the month of January each year. The penalty for neglecting to deliver or refusing to deliver such declaration is £20, and for employing a male servant without a proper licence, or employing more male servants than authorized by the licence, is also £20.

ARMORIAL BEARINGS. The general regulations and penalties affecting the use of Armorial Bearings are the same as those which apply in the case of "Male Servants." The licence must be taken out annually, and the duty payable is £1 1s., but if used on any carriage the amount is increased to £2 2s. Any person wearing or using armorial bearings, even as an ornament, is bound to take out a licence. The wearing of a signet ring with a lion rampant engraved thereon renders the wearer liable to duty, so is the user of note-paper with a similar device printed on his note-paper.

Certain persons are exempted from making declarations, or taking out licences, either for the employment of male servants or the use of armorial bearings. These are:—

(1) Members of the Royal Family. (2) Sheriffs and Mayors of Corporations serving an annual office therein in respect of any servants or carriages kept for the purposes of office during the year of service. (3) Persons wearing by right of office any arms or insignia of members of the Royal Family, or of any corporation or royal burgh in respect of the use of any such arms or insignia. (4) Any person ordinarily resident in Ireland, who is representative peer on the part of Ireland or a member of the House of Commons, and not residing in Great Britain longer than forty days before and forty days after such session.

CARRIAGES AND MOTORS. For every carriage, if such carriage has four or more wheels, and shall be fitted to be drawn by two or more horses or mules, or drawn or propelled by mechanical power, a licence must be taken out by the owner, the cost of such licence being £2 2s. It will be noted that this applies to motor cars, for which also other licences are required. (Refer to "Motor Cars" in *Index*.) If a four-wheeled carriage is fitted to be drawn by one horse only, then the cost of the licence is £1 1s. This amount is reduced to 15s. if the one-horse carriage has less than four wheels. The cost of the licence for all kinds of hackney carriages is 15s. The statutory definition of a "hackney carriage" is one standing or plying for hire, and includes any carriage let for hire by a coach-maker or other person whose trade or business it is to sell carriages or let them for hire. A wagon, cart, or other vehicle constructed and used solely for conveyance of goods of trade or husbandry, and whereon the Christian name and surname and address of the owner is painted in letters of not less than one inch in length, does not require to be licensed; nor do any carriages which are kept but not used at any time within the year. But if a tradesman uses his trade vehicle for the purpose of giving his friends or his family pleasurable jaunts, and not solely for the purposes of his trade, he will be required to take out a licence. Moreover, the vehicle must be solely *constructed or adapted* for trade purposes. It is not enough that it is in fact used solely for such purposes if it is constructed or adapted for other purposes also. Therefore a wardrobe dealer cannot avoid the duty if he conveys goods in a governess cart; even if he has his name and address properly painted thereon, and does not use it for pleasure or for any purpose other than in the legitimate exercise of his calling.

KEEPING DOGS. No person, with the exceptions given below, is entitled to keep dogs unless he has obtained an annual licence for each dog. The cost of such licence is 7s. 6d. These licences are issued by the Inland Revenue Department, who use as their agents for the purposes of issue the postmasters at the various post offices. A register of the persons licensed, and the number of dogs in respect whereof they are licensed, is kept, and is open to the inspection of police constables and justices of the peace. All dog licences expire on December 31st, irrespective of the date of issue. No rebate is allowed if the licence is operative for less than a year. The licence does not apply to a particular dog, it is the owner who is licensed to keep a dog, and he cannot transfer the licence to another person, even if that other person should become the owner of the dog.

In the following cases no licence is required:—

(1) Dogs under six months old. (2) Hound puppies under twelve months old not entered in or used with a pack of hounds. (3) One dog kept and used solely by a blind person for his guidance. (4) Dogs kept and used solely for the purpose of tending sheep or cattle. This last exemption is only allowed on a certificate issued by the Inland Revenue, and is limited to two dogs unless the farmer owns over 400 sheep, in which case a third dog is allowed; a fourth if the sheep amount to 1,000; and an additional dog up to eight dogs for every 500 above 1,000.

PENALTIES. A person keeping a dog without a licence, or keeping more dogs than he is licensed to keep, or refusing to produce a licence on the demand of an Excise officer or constable, renders himself liable to a penalty not exceeding £5, or to imprisonment in default of distress. The magistrates have power to mitigate the penalty, and in the case of a first offence the amount imposed may be less than one-fourth of the full penalty. The person in whose possession the dog is, or on whose premises it is found, is deemed the owner, unless he can prove the contrary. (Refer to "Excise Licences" in *Index*.)

GAME AND GUN LICENCES.

1. **WHAT IS GAME?** Two forms of licence are granted in respect of game, the one is a licence to kill and the other to deal. The statutory definitions of game includes hares, pheasants, partridges, grouse, heath or moor game, black game, bustards, deer, woodcock, snipe, quail, landrail, and rabbits.

2. **LICENCE TO KILL GAME.** By an Act passed in 1860, it is made unlawful for any person to kill or take game unless he has a licence to do so. It should be noted that this does not apply only to the shooting of game, but also to killing or capturing it by any method. Licences may be obtained from the local officers of the Inland Revenue Department.

The cost of the licence if taken out after July 31st and before Nov. 1st, to expire on July 31st following, is £3: If taken out after July 31st to expire Oct. 31st, £2: if taken out after Oct. 31st to expire July 31st, £2. Game-keepers' licences are annual, expiring on July 31st, and are issued at £2. For a short period of fourteen days, a licence may be obtained for £1.

Beaters and other assistants are not required to hold a licence, nor are persons who are authorized to kill hares under the Hares Act, 1842. The same Act exempts from the necessity for a licence any person coursing hares with greyhounds or hunting them with beagles. Taking hares or rabbits is permitted by an Act of 1880 to the tenant of lands or persons acting under his direction or permission. The penalty for killing or taking game without a licence is £5. The possession of a game licence gives no authority to trespass in pursuit of game, or to kill or take game if the licencee is not otherwise entitled to kill or take; nor may he use a gun without a gun licence.

3. **LICENCE TO DEAL IN GAME.** Before any person can deal in game, he must possess two licences (one granted by the Local Authority, District or Town Council) and the other by the Inland Revenue Authorities. The latter is granted only on production of the former and costs £2. No person can obtain a licence unless he is a householder,

shopkeeper or stallkeeper within the district. Only a licencee can deal in hares, pheasants, grouse, partridges, and black game whether alive or dead, or whether killed in a foreign country or at home. The licencee must have a board fixed up on the licensed premises with the words "Licensed to Deal in Game" inscribed thereon, or incur a penalty of £10. For selling game without an excise licence the penalty is £20, and for buying game except from a licensed dealer the penalty is £1 per head of the game bought.

4. GUN LICENCE. An Act passed in 1870 provides that every person using or carrying a gun, except in a house or the curtilage thereof, is liable to a penalty of £10 unless he possesses a licence issued by the officers of the Inland Revenue. The cost of such licence is ten shillings, and it expires on the 31st July next following the date of issue. Rifles, pistols, revolvers, and air guns fall within the same provision. A licence is not required by any person in the Naval, Military, or Police Service, provided the weapon is neither used nor carried except in the performance of duty or when on target practice. Other exemptions are—Gunsmiths and their servants, common carriers (where carrying a gun in the course of their ordinary business), persons holding game certificates and occupiers of land who use the weapon only for the purpose of killing vermin or scaring birds. [Refer to "Excise Licences" in *Index*].

TOBACCO LICENCE.

1. LICENCE FOR MANUFACTURING TOBACCO. It is an offence to grow tobacco within the British Isles, but the manufacture and sale of tobacco and snuff is permitted by a licence granted by the Inland Revenue authority. The licence gives permission to manufacture tobacco in specified premises which must be open at all times to the excise officers, and no manufactured tobacco can be removed from the premises without their permission. The amount of the licence duty varies with the amount of tobacco manufactured upon the particular premises for which the licence is granted. The following table shows the scale of duty which is at present in force:—

	£	s.	d.
Not exceeding 20,000 lbs.	5	5	0
Exceeding 20,000 lbs. and not exceeding 40,000 lbs.	10	10	0
Exceeding 40,000 lbs. and not exceeding 60,000 lbs.	15	15	0
Exceeding 60,000 lbs. and not exceeding 80,000 lbs.	21	0	0
Exceeding 80,000 lbs. and not exceeding 100,000 lbs.	26	5	0
Exceeding 100,000 lbs.	31	10	0

2. LICENCE FOR SELLING TOBACCO. No person is permitted to sell tobacco in any form (including snuff, cigars, cigarettes), unless the place of sale is licensed. The only exceptions are sale in bond and in a customs warehouse. A traveller for a licence holder may solicit orders, but no other person can legally solicit orders for tobacco unless duly licensed. The licencee must notify by a sign over his doorway the fact that he possesses a licence, and he must permit entrance to excise officers. The cost of a licence is 5s. 3d.

LICENCES RELATING TO INTOXICANTS.

The licences granted in connection with the manufacture and sale of intoxicating liquors are many and various. To give a detailed list would occupy much space, hence we can here only deal with the more important.

1. BREWING OF BEER FOR SALE. No person may brew beer without a licence under a penalty of £100 and forfeiture of all brewing plant and materials which may be found in his possession. The cost of a licence to brew beer for sale is £1.

2. HOME BREWED BEER. Beer may be brewed for private consumption by persons who have obtained a licence, the cost of such licence being 4s. if the annual value of the premises in which the brewing is done exceeds £8 but does not exceed £10. Should such annual value exceed £10 but not exceed £15, then the cost of the licence is 9s. If above £15 the cost of the licence is only 4s.; but a duty is charged upon all beer brewed in premises above the annual value of £15, and this duty is payable in addition to the cost of the licence (see table of "Excise Duties" p. 682). Persons who brew beer for home consumption must apply to the Inland Revenue Office for a form upon which must be entered the quantities of the materials intended to be used. This must be done before beginning to brew.

3. SALE OF INTOXICATING LIQUORS.—"ON" AND "OFF" LICENCES. One class of licencees includes those who are permitted to sell liquors for consumption on the premises, and another those who are permitted to sell liquors but for consumption off the premises.

In nearly every case the licencee has to obtain a certificate from the Justices before he can take out an excise licence. The cost of a full licence varies considerably and increases with the annual value of the premises. If the annual value is less than £10, then the licence costs £4 10s., and the figure increases until it reaches £60, which is the cost when the annual value is £700 and upwards.

4. PENALTIES. The penalties for selling or exposing for sale by retail any intoxicating liquor without being duly licensed are extremely severe. And even if the person possesses a licence and he sells or exposes for sale in a place not authorized by his licence (say in a tent in a field), he is penalized. For a first offence the penalty may be £50 or imprisonment with or without hard labour for a month; for a second offence a sum not exceeding £100 or three months' imprisonment; for a third or subsequent offence a penalty of like amount, or six months' imprisonment.

In addition to the above-named punishments, all intoxicating liquor found in the possession of the offender and the vessel containing such liquor may be forfeited on a second or any subsequent conviction.

N.B.—Licences are necessary in many instances before a particular trade or calling can be entered upon. For the cost of each licence see table of "Excise Licences," p. 681.

7. STAMP DUTIES.

STAMP DUTIES are taxes levied on deeds and other written instruments by means of affixing stamps to the paper or parchment, or by having the paper or parchment impressed with stamps of the proper value. Unstamped documents, which are required by law to be stamped, are in some cases void, e.g. policy of sea insurance, and in any case cannot be given in evidence in any lawsuit regarding a matter to which the documents refer, and in which, had they been stamped, they could have been given in evidence. Provision, however, is made for the admission of unstamped documents in evidence on payment of the unpaid stamp duty, and the penalty for not having had it stamped, with a further sum of £1; but this provision only applies to such documents as may legally be stamped after the execution thereof.

Further, apart from lawsuits, in many cases an unstamped or insufficiently stamped document may be stamped after the execution thereof on payment of the unpaid duty and a penalty of £10, and in cases where the unpaid duty exceeds £10, there must be paid, as a further penalty, interest on the duty at five per cent. per annum. But the amount of interest must not exceed the amount of the unpaid duty.

The following documents cannot be stamped after execution: Inland bills of exchange (but foreign bills may be stamped after execution), bills of lading, policies of marine insurance executed in the United Kingdom, and proxies. There are two cases in which a policy of marine insurance may be stamped after execution: (1) Where a mutual policy already bears an impressed stamp, and an additional stamp is required for an increase in the amount insured, provided that at the time when the additional stamp is required the impressed stamp covered the amount originally insured. (2) A policy executed out of the United Kingdom, but which is enforceable in the

United Kingdom may be stamped within ten days after it has been received in the United Kingdom, on payment of the duty only.

ADHESIVE STAMPS. Adhesive stamps may be used on the following instruments, but in all other cases an impressed stamp is necessary :—

(1) Agreements liable only to a duty of 6d. (2) Bills of Exchange payable on demand, and foreign bills of exchange. (3) Bills of Lading. (4) Certified copies or extracts from registers of births, etc. (5) Charter-parties. (6) Cheques. (7) Contract notes liable to the duty of one shilling. (8) Contract notes where the amount is less than £100. (9) Delivery orders. (10) Dock Warrants. (11) Leases of dwelling-houses or parts thereof for a period not exceeding a year, where the rent does not exceed £10 a year. (12) Leases of furnished houses or apartments for a period less than a year. (13) Letters of renunciation. (14) Notarial Acts. (15) Policies of insurance where the duty is one penny, but not policies of marine or of life insurance. (16) Protests of bills of exchange and promissory notes. (17) Proxies where the duty is one penny only. (18) Receipts. (19) Voting papers where the duty is one penny only. (20) Warrants for goods.

CANCELLATION OF STAMPS. The person required by law to cancel an adhesive stamp must do so by writing his name or initials across it with the true date of his so doing. In the case of impressed stamps, the person selling the document containing the document, will cancel it in like manner.

SPOILED OR MIS-USED STAMPS. An allowance is made in the following cases: (1) Where a stamp on an instrument has been inadvertently spoiled before the instrument is executed. (2) An adhesive stamp spoiled or rendered unfit for use, provided it has not been affixed. (3) A stamp on a bill of exchange, or a promissory note, which has not been accepted or made use of in any manner whatever. (4) A stamp used on an instrument which is void or becomes void, or which through an error or mistake is unfit for the purpose originally intended, or which has not been made use of for any purpose, and which is incomplete for the purpose for which it was intended, or which has been inadvertently spoiled or has become useless and in lieu whereof another instrument duly stamped has to be executed. (5) Where a stamp of greater value than is necessary is inadvertently used, or where an instrument that requires no stamp is stamped. (6) The allowance for all such stamps may take the form of other stamps of the same value, or their value in money less a discount. But the application for the allowance must be made within two years after the stamp has been spoiled or become useless, or within two years of the date of the execution of the instrument, if such instrument has been executed. (7) When a person has an unused stamp which he does not want, the Commissioners of Inland Revenue repurchase it from him. (See table of "Stamp Duties" p. 682.)

SUPPLEMENTARY.

BABY FARMING. A person receiving or retaining for hire more than one infant under the age of five, for the purpose of nursing or maintaining such infants apart from their parents for more than 48 hours must, within that time, give notice thereof to the local authority, stating among other particulars the names and addresses of the persons from whom they have been received, under a penalty of £5.

BLACK LIST (Habitual Drunkards). By the Inebriates Act 1892 and the Licensing Act 1902, a publican is prohibited from supplying with intoxicating liquor any person on the "Black List" within three years after the date of his conviction. But the Act has been so interpreted in the Divisional Court as to render necessary the consent of the defendant to be tried summarily before a magistrate can make an order for his name to be placed on the black list. Accordingly, the provision of the Acts relating to the black list is a dead letter.

BUILDING LEASES Owners of land wishing to develop their property not infrequently lease the land for long periods, usually 99 years, to speculative builders, at a certain ground rent, on condition that the lessee shall undertake to erect, and maintain thereon in good condition, buildings of a certain specified type. Under the Settled Land Acts tenants for life of settled land are given power to grant building leases thereof upon certain conditions.

CHANGE OF NAME. A divorced woman has a right to retain the name of her husband should she desire to do so. And generally, any person is entitled to call himself by any name he pleases, and he need not adopt any formality in making a change. Of course he must not adopt another person's name as a cloak to fraud or even make use of his own name in such a way that other persons are thereby defrauded. But the mere fact that a person claims to be the only person in the world bearing a particular name will not of itself entitle him to restrain any one else from adopting that name.

Though no formality need necessarily be observed in changing one's name, it is usually desirable to do some public act, as confusion might arise. (Thus the Probate authorities might require some one to make a statutory declaration that a person who claimed a legacy under the name of Melville was the same person as one Moses to whom the legacy had been bequeathed). The most usual way of changing one's name is to execute a deed poll (stamp duty 10s.), and to publicly advertise the change of name. Another and more costly way is to apply for a Royal Licence to adopt a particular name. If the licence is applied for in consequence of the fact that the terms of some Will or Settlement require the applicant to adopt the name, the stamp duty is £50; but if the Licence is applied for merely voluntarily, then the duty is only £10.

COLONIAL MARRIAGES. The Colonial Marriages (Deceased Wife's Sister) Act, 1906, renders valid for all purposes marriages with a deceased wife's sister performed in any part of the British Empire, where such marriages are legal and between parties domiciled therein. So that the issue of such marriages have now the right to succeed to real property and to honours and dignities within the United Kingdom.

COMMON CARRIER. A common carrier is a person who is engaged in carrying goods as his regular business, and who undertakes to carry for any one who wishes to employ him; but the term does not include a person or company that conveys passengers only. He is bound to take any goods brought to him by any person, provided he has room, and that they are of a class which he undertakes to carry, and are not of such a nature as to subject him to unusual risks. He must charge a reasonable rate, and must not impose unreasonable conditions. For his liabilities, &c., refer to "Common Carrier" in *Index*.

JUSTICES OF THE PEACE ACT, 1906. This Act abolishes the qualification by estate previously required for county justices, and allows persons who reside within seven miles of a county to be appointed justices for that county if they are qualified in other respects. The Act also allows solicitors to be appointed county justices providing neither they nor their partners practise directly or indirectly before the justices of that county or of any borough within the county.

REMOVAL OF FURNITURE. Persons who for hire undertake the removal of furniture from one house to another are under the same general liability as a common carrier, and are therefore liable for any loss, breakage or damage occurring in the course of removal, unless a special contract be entered into by both parties relieving the furniture remover of his liability or setting a limit to his pecuniary risk.

UNIFORM. It is illegal for any person, other than a soldier, except when taking part in a performance at a theatre, music-hall, or circus to wear a military uniform, under a penalty of £5. And any person, other than a soldier or sailor, who wears a naval or military uniform, or the semblance of one, so as "to be likely to bring contempt" upon such uniform is liable to a fine of £10 or a month's imprisonment.

PART IV.

COMMERCIAL LAW.

NEGOTIABLE INSTRUMENTS.

NEGOTIABILITY. A negotiable instrument is such that whoever takes it in good faith, and gives value for it, becomes its absolute owner, and can enforce payment of it, provided the instrument was in such a condition that the true owner could, by simple delivery, transfer the ownership of it. Such instruments are exactly on the footing of coined money. If money is stolen by a thief, and the thief subsequently parts with the money to a person who takes the money not knowing that it was stolen, and gives value for it, such person becomes the absolute owner of the money, and the person from whom the money was stolen cannot recover it from him. Among the most familiar examples of negotiable instruments are bills of exchange, cheques, promissory notes, bank-notes, exchequer bills, dividend warrants, East India bonds, and in some cases foreign bonds. But if a foreign bond shows on the face of it that the transferee is not by mere delivery to become the owner until some further act is done, e.g., a railroad bond which states that the transferee does not become the owner of the bond until his name is registered on the Company's books, such bond is not negotiable. And it must be remembered with regard to bills of exchange, cheques, promissory notes and bonds, that in order to be negotiable they must be in such a condition that the true owner could by simple delivery transfer the ownership of them. For example, the ownership of a bill of exchange, payable to bearer, can without further formality be transferred by simple delivery. Such a bill, if stolen, and transferred by the thief to a person who takes it in good faith and who gives value for it, becomes the absolute property of that person. He can enforce payment of it, though the thief from whom he took it had no title to it, and could not enforce payment of it. But a bill or a cheque payable to order is not in a negotiable condition until it has been indorsed by the person to whom it is payable, and until it is indorsed, the ownership of it cannot be transferred by simple delivery. Hence, if a bill or cheque payable to order is obtained by fraud, and the person so obtaining it transfers it without indorsing it to a person who takes it in good faith and who gives value for it, such transferee has no title to the bill or the cheque, and cannot enforce payment of it.

LOST BANK NOTES. The same remarks apply to bank-notes. It may, therefore, be asked what is the object of stopping payment of cheques or bank-notes which have been lost or stolen, since in either case a bona fide holder for value can enforce payment of them. The reason for stopping payment is merely to trace through whose hands such cheque or bank-note has passed. In one case bank-notes, the numbers of which were known, had been stolen. The numbers were advertised. Eventually the notes came into the hands of a person who took them in exchange for gold. He knew of these numbers. In fact the numbers were suspended in his office at the time, but he had forgotten all about the matter. It was held that the bank could not refuse payment of them, because he had taken the notes in good faith and had given value for them.

WHEN NOT NEGOTIABLE. It should be remembered that the above considerations only apply so long as these instruments are in a negotiable condition. The negotiability of a bill of exchange is destroyed when it is over-due and dishonoured, or when it has been restrictively indorsed, or when it has been discharged. (See below under *Indorsement*). The negotiability of a cheque is destroyed by writing across the face of it the words "not negotiable." When, therefore, a person takes any of these instruments in these circumstances, he can have no better title to them than the person who gave it to him had; and if the transferor could not enforce payment, neither can the transferee. The above explanation shows what is implied by the words "negotiable" and "not negotiable." With this preface, the more familiar examples of negotiable instruments, viz., bills of exchange, cheques and promissory notes, will now be dealt with in some detail.

1. BILLS OF EXCHANGE.

A bill of exchange is an order in writing addressed by one person to another, in favour of a specified person or of bearer, for payment of a sum certain in money at a certain time. The order must be unconditional. The time of payment must be either on demand or at a fixed or determinable future time. The sum of money must be certain, and the order must not require any other act to be done in addition to the payment of money. For example, "a bill for such sum as W. Jones shall find to be a fair price for goods sold by J. Smith to R. Brown on July 25th, 1904," is not a bill of exchange, because the sum of money to be paid is not in express terms mentioned on the face of the instrument. So again, a bill for say £100 payable "on the marriage of X," or a bill for say £100 payable "on the arrival of the ship 'Teutonic' at Southampton," is not a bill of exchange, because not only is the time of the event incapable of being determined, but the event itself is uncertain. The marriage may never take place, or the ship may never arrive in port. But a bill say for £100 payable "on the death of X," is a good bill of exchange, for though the time of the death is uncertain, yet the event itself must take place. A bill may be made payable either at home or abroad.

AN INLAND BILL OF EXCHANGE is a bill drawn and payable within the British Isles, or drawn within the British Isles, upon some person resident therein. All other bills are foreign. The following is an example of an inland bill:

"LONDON, *June 24th*, 1904.

£200.

Two months after date pay to Mr. W. Jones, or order, the sum of two hundred pounds, value received.

JOHN BROWN.

To MR. JAMES ROBERTS,
BELFAST."

Here John Brown is called the "drawer," James Roberts the "drawee," and W. Jones the "payee." As soon as the "drawee" writes across the face of the bill his signature with or without the word "accepted," he is called the "acceptor." By so doing he signifies that he has agreed to the order of the drawer; but he is not liable on the bill until he has done so and has delivered the bill to the person who is entitled to it. As the bill is payable to order, the payee must write his signature on the back of the bill before he can obtain payment of it, or transfer it to a third party. When he writes his name on the back the payee is called the "indorser," and if he writes on the back of the bill the name of the person to whom he transfers it, and expresses it to be payable, such person is called the "indorsee." Such indorsee may in turn become an indorser. All persons thus affixing their signature to a bill are called "parties to the bill," and are each liable to the holder in due course, that is to the person who takes the bill from any one in good faith, and who gives value for it.

It will, therefore, be easily understood that the more signatures are attached to a bill, the greater is the holder's security. For if the acceptor is unable to meet the bill, the holder can call upon the drawer to pay it, and failing the drawer, he can demand payment from each of the indorsers, according to the priority of their indorsements, but notice of dishonour must be promptly given to the drawer and all the indorsers. (See "Dishonour" below.)

Where the amount expressed in words on the bill differs from the amount expressed in figures, the amount expressed in words will be taken as the real amount for which the bill is drawn. This also applies to cheques. A bill is not invalid by reason only of its not being dated, being ante-dated, post-dated or dated on a Sunday. The words "for value received" are unnecessary, as it is always presumed that value has been given, until the contrary is proved.

Bills may be drawn payable "at sight" or "on demand" or "so many days after sight," or "on a specified day," or "so many days or months after date." The payee may be the drawer himself; and the bill may be made payable to bearer or to order. As has been already explained, in the case of a bill payable to bearer, no indorsement is necessary to make the bill negotiable, though for the sake of security it is wise to obtain the payee's indorsement. In the case of a bill payable to order, the property in the bill cannot be transferred until the payee has indorsed it.

A FOREIGN BILL OF EXCHANGE is usually drawn in three copies or sets, exactly similar, but each is expressed to be payable only in case that each of the other two has not been paid. This is done to lessen the danger of being lost in transmission. The "First of Exchange" only need be drawn on stamped paper.

The following is an example of a foreign bill:

"LONDON, *July 25th*, 1904.

£100.

At sixty days after sight of this first of exchange (second and third unpaid) pay to the order of J. Brown, the sum of one hundred pounds, value received, and place the same to account as advised.

WILLIAM SMITH.

To MR. ROBT. HARVEY,
MELBOURNE."

RIGHTS AND LIABILITIES. A bill of exchange is a good payment for a debt unless and until it has been dishonoured, when the debt revives. The creditor, however, is not bound to accept payment by cheque or other bill of exchange, he can demand payment in legal tender (i.e. coin or Bank of England notes), and he is not bound to give change. But it must be remembered that where a creditor has been paid by a bill, and then transfers the bill to a third party, the bill being subsequently dishonoured, he (the creditor) cannot sue for the debt until he takes up the bill, or gets it back into his possession.

No person can be made liable on a bill of exchange unless he has affixed his signature to it and has capacity to contract; e.g. an infant cannot be made liable on a bill of exchange, even if he has given the bill in payment for necessaries, though he can be sued for the price of the necessaries. A lunatic or a drunken person who accepts a bill of exchange cannot be sued by a person who was aware of the lunacy or drunkenness, but he could be sued by a holder in due course, that is a person who gave value for it, and who was unaware that the bill was accepted by the acceptor when in a state of intoxication or lunacy. Again, where a person signs as servant or agent of another, he is not personally liable thereon, provided he acts within the scope of his authority, and makes it clear on the face of the bill that he is signing merely in his capacity as servant or agent of that other. He should, however, be careful to insert the name of his principal, for the mere addition to his own name of words describing himself as an agent does not exempt him from personal liability.

Where a bill is given for an illegal consideration, e.g. in payment of a bet, the person who took the bill in payment of the bet cannot enforce payment from the person who gave it to him in payment; but a holder in due course could, because he was not aware that the bill was founded on an illegal consideration, and because he gave value for it. Where the drawer has given no consideration (value) to the acceptor, he cannot sue the acceptor; but a holder in due course can enforce payment of it. The liability of all parties to the bill exists for six years from the maturity of the bill, during which period they may be sued by a holder in due course. The special features of bills of exchange will now be dealt with.

ACCEPTANCE of a bill of exchange signifies that the drawee agrees to the order of the drawer. It must be written on the bill and signed by the drawee, who must perform his promise by the payment of money only. The drawee may accept the bill before it has been signed by the drawer, but the bill is not a bill really until the drawer puts his name to it. And when a bill has been accepted without a drawer's name to it, the date of the bill is reckoned from the time when he puts his name to it. A bill may also be accepted when it is over due or after being dishonoured.

Acceptances are either general or qualified. A general acceptance agrees without any qualification to the order of the drawer. A qualified acceptance states in express terms some variation of the drawer's order. For example, the acceptor may agree to pay part only of the sum for which the bill is drawn, or to pay it at a particular place only, or may vary the time at which the bill shall be paid, or may make payment depend on some condition being fulfilled. A holder may refuse to take a qualified acceptance, and may then treat the bill as dishonoured by non-acceptance. If a holder takes a qualified acceptance without the permission of the drawer or an indorser, such drawer or indorser will be no longer liable on the bill.

ACCEPTOR, that is, the person who agrees to the order of the drawer. Until he accepts and delivers the bill to the party entitled to it, he is not liable on the bill. So that if the bill is stolen from his desk and gets into circulation, he cannot be made to pay it. An acceptor cannot turn round and say to a holder in due course that the drawer had no right to draw, or that the drawer's signature is a forgery, for he is presumed to know his signature. The acceptor is the person primarily liable on the bill.

An acceptor is not liable for any fraudulent alterations that may be made after acceptance. In one case, a bill for £500 was presented for acceptance, with a stamp to cover an amount of £3,500, and the drawer had designedly left spaces to insert this larger amount. The acceptor could easily have seen this, but he wrote his acceptance and handed the bill to the drawer, who fraudulently turned it into a bill for £3,500. Subsequently the drawer discounted the bill, and got cash for it. It was held that the discounter could only recover £500 from the acceptor.

DAYS OF GRACE. A bill must be paid when it falls due. The time when it falls due is determined by *the law of the country in which the bill is payable.* In this country, to determine the day on which the bill falls due, three days, called "days of grace," are added to the time mentioned on the bill as the date for payment, and the bill is due and payable on the last day of grace. If the last day of grace falls on Sunday, Christmas Day, Good Friday, or a public fast day or thanksgiving day, the bill is due on the preceding business day. When the last day of grace is a bank holiday; or when the last day of grace is a Sunday, and the second day of grace is a bank holiday; the bill is due and is payable on the succeeding business day. The term month in a bill means a calendar month.

DISCHARGE OF A BILL. A bill is discharged by payment; or when the acceptor is or becomes the holder of it in due course, at or after the time when payment is due, or when the holder of a bill at or after payment is due; renounces his right of payment against the acceptor, either in writing or by delivering up the bill to the acceptor.

For example, if the holder of a bill of exchange, say for £100, gave a receipt for that amount to the acceptor that receipt would not free the acceptor from his liability on the bill. In order to free the acceptor from liability on the bill, the bill must be given up to the acceptor; or the holder must at or after its maturity expressly state in writing that the acceptor is free from liability on the bill. Again,

suppose B lends A £500 and A gives B a promissory note for that amount. Subsequently B, in order to relieve A from liability, gives him a receipt for that amount. A is still liable on the note, and should B die, his executors could sue A on the note for £500. The proper course would have been for B to have given back the note to A.

When the holder intentionally cancels a bill, and the cancellation is apparent on the face of it, the bill is discharged. Material alterations, e.g. of the date, sum payable, time and place of payment, without the assent of all parties liable on the bill, will discharge it except as against the party who has himself made the alteration, and subsequent indorsers. But if the alteration is not apparent, the bill is not discharged, for the holder in due course can enforce payment of it according to its original tenor.

DISHONOUR. A bill is said to be dishonoured when the drawee refuses to accept it on its being presented for acceptance, or having accepted, refuses to pay it when it falls due. When a bill is dishonoured by non-acceptance, the holder cannot sue the drawee, but he can at once sue the drawer and any indorser, provided he gives within a reasonable time notice of dishonour to the drawer and the indorsers. If notice of dishonour is not given, the drawer and the indorsers will not be liable on the bill. The notice must be sent off to reach the party receiving the notice on the day after the dishonour, where such person receiving the notice resides in the same place as the person giving the notice. Where they reside in different places, the notice must be sent off on the day after the dishonour of the bill, and if there is no convenient post, then by the next post thereafter.

The same rules apply to dishonour by non-payment. But of course if a bill is dishonoured by non-payment, the holder can sue the acceptor as well as the drawer and the indorsers. Notice of dishonour need not be given to the acceptor.

Delay in giving notice of dishonour is excused where the delay is caused by circumstances beyond the control of the party giving notice, and not imputable to his default, misconduct or negligence. When the cause of delay ceases to operate, the notice must be given with reasonable diligence.

DRAWEE, that is, the person upon whom a bill of exchange is drawn. He must be named or indicated on the bill with reasonable certainty, e.g. the bill may be addressed to a particular place or house, and the person living there may accept it. The only person who can sue the drawee for non-acceptance is the drawer, and he cannot sue unless the drawee has agreed to accept, which agreement may be express, or understood by the usual course of business between the parties.

FORGERY. A forged or unauthorised signature is wholly inoperative, and no right to retain the bill or to enforce payment of it against any party to the bill can be acquired through that signature, unless the party against whom it is sought to retain or enforce payment of the bill is precluded from setting up the forgery or want of authority. An unauthorised signature not amounting to forgery may be ratified, and the party whose signature in the first place was unauthorised, may render himself liable on the bill. A few examples will make this clear:—

(1) A bill payable to the order of John Smith gets into the possession of another, who forges Smith's indorsement and hands the bill over to Brown, who takes it in good faith and gives value for it. Brown acquires no title to the bill, and cannot compel the acceptor to pay it.

(2) A clerk forges his employer's name as a drawer to a bill of exchange, gets D to accept it, and then indorses it over to C, who takes it in good faith and gives value for it. Here C can compel the acceptor to pay the bill, because the acceptor is precluded from denying the drawer's signature, as he is presumed to know that signature. Of course, if the acceptor is unable to pay, the supposed drawer is in no way liable because his signature had been forged, though, had it not been forged, he would have been liable to pay it, in case the acceptor was unable to meet the bill.

(3) A bill is payable to C's order. His clerk forges his indorsement, and transfers the bill to D, who takes it in good faith and gives value for it. D then presents the bill to the drawee for acceptance. The drawee accepts the bill and makes it payable at his bankers. The bankers pay D. The bankers must bear the loss, they cannot debit the acceptor with this payment. Hence bankers as a rule make a special agreement with their customers, to the effect that if they pay bills, accepted by their customers, the customers will in such cases bear the loss.

HOLDER IN DUE COURSE is the person who has taken a bill complete and regular on the face of it before the bill was overdue, and without notice of its having been dishonoured. He must have taken the bill in good faith and for value, and he must be unaware at the time the bill was negotiated to him of any defect in the title of the person who negotiated it to him. That is, he must not be aware that the person who negotiated the bill to him obtained it or the acceptance thereof by fraud, duress, force or fear or other unlawful means, or for an illegal consideration.

Any person who derives his title to a bill through a holder in due course, and is not himself a party to any fraud or illegality affecting it, has all the rights of a holder in due course, and may enforce payment against all parties liable on the bill.

When a bill payable after sight is negotiated the holder must either present the bill for acceptance or negotiate it within a reasonable time. If this is not done, the drawer and all indorsers prior to that holder are discharged. When accepted, the holder must present it for payment on the day it falls due, otherwise the drawer and the indorsers will be discharged from all liability on the bill.

A holder in due course holds the bill free from any defects of title of prior parties. He is the absolute owner of the bill, and can enforce payment of it, and if he obtains payment of the bill, the person who pays him in due course gets a valid discharge for the bill.

INDORSEE is the person to whom a bill of exchange is assigned, by the holder writing above his signature a direction to pay the bill to, or to the order of, such person. Upon delivery of the bill to the indorsee he becomes the owner of it.

INDORSEMENT is the signature on the back of a bill, whereby the person so signing and delivering the bill transfers to another the property in it. An indorsement may be in blank, or special, or restrictive, or it may be conditional.

(1) **An indorsement in blank** consists of the simple signature of the person to whom the bill is payable. It specifies no indorsee, and a bill so indorsed becomes payable to bearer. The holder may convert a blank indorsement into a special indorsement by writing above the indorser's signature a direction to pay the bill to himself, or to his order, or to some other person.

(2) **A special indorsement** specifies the person to whom or to whose order a bill is payable, e.g. Pay J. Day or order, W. Brown. In this case the bill is assigned by W. Brown to J. Day, and before the latter can assign the bill he must indorse it with his signature.

(3) **A restrictive indorsement** is one which prohibits further negotiation of the bill, or which expresses that it is a mere authority to deal with the bill as thereby directed, and that it does not transfer the ownership of the bill. For example, a bill is payable to D or his order. Before D can negotiate the bill he must write his signature on the back, and if he wishes to restrictively indorse it, he must prefix some such words as "Pay X only," or "Pay X for the account of Z," or "Pay X or order for collection." When a bill is restrictively indorsed it ceases to be transferable, unless the indorsement authorises transfer. If the restrictive indorsement authorises transfer, the bill has nevertheless ceased to be a negotiable instrument. All subsequent indorsees take the bill with the same rights and subject to the same liabilities as the first indorsee under the restrictive indorsement. A holder cannot get a better title to the bill than the person from whom he took it had.

(4) A conditional indorsement. Where a bill is indorsed conditionally, the condition may be disregarded by the payer, and payment by him to the indorsee is valid whether the condition has been fulfilled or not. Though of course, as between the indorser and the indorsee, the condition is binding.

When the holder of a bill payable to his order transfers it for value without indorsing it, the transferee gets no better title than the transferor had in the bill. In fact, the bill is not in a negotiable condition until the holder has indorsed it, and accordingly, if the holder had obtained the bill by fraud, and transferred it for value without indorsing it, the transferee would have no title to the bill and could not enforce payment of it. The transferee could compel the transferor to indorse the bill, and if this were done before the transferee discovered that the bill was tainted with fraud, the transferee could then enforce payment of the bill. The indorsement must not be partial. A partial indorsement is one which purports to transfer to the indorsee a part only of the amount payable. Where in a bill payable to order the payee or indorsee is wrongly designated or his name is mis-spelt, he may indorse the bill as therein described, adding, if he thinks fit, his proper signature. This of course applies to cheques (which see).

ISSUING A BILL. Every contract on a bill, whether it be the drawer's, acceptor's, or indorser's, is incomplete and may be revoked until the bill has been delivered, that is, until its possession has been transferred from one person to another. Suppose a bill is sent to the drawee for acceptance, and he writes his acceptance on it, but that before the drawee returns the bill he hears that the drawer has failed —then in this case the drawee can cancel his acceptance and return the bill dishonoured to the holder.

LOST BILLS. When a bill is lost before it is overdue, the holder may compel the drawer to give him another bill of the same tenor. He must, however, give to the drawer security to indemnify him in case the lost bill shall be found again.

PRESENTMENT is the bringing of a bill to the drawee for his acceptance, or if he has already accepted it, presenting it for payment at the proper place.

Where a bill is payable after sight presentment for acceptance as soon as possible is of importance in order to fix the maturity of it. It is well in every case to obtain acceptance of a bill as soon as possible in order to make the drawee liable. When a bill is duly presented and is not accepted within twenty-four hours, the person presenting it must treat it as dishonoured by non-acceptance. It must be left with the drawee if required, who at the end of the twenty-four hours must re-deliver it to the holder.

Presentment for payment must be made at the place where the bill is payable at the time when it falls due, otherwise the drawer and indorsers will be discharged from liability. Even though there is good reason to believe that the bill will be dishonoured, it must be presented for payment in order to charge the drawer and indorsers, and even then notice must be sent to them that the bill is dishonoured.

Presentment for payment is not necessary where a bill has been dishonoured by non-acceptance. Presentment for payment is excused, where, after the exercise of reasonable diligence, it cannot be effected, and in various other cases.

NOTING or **PROTEST** is a declaration attested by a notary public that a bill has not been accepted or has not been paid. Inland bills need not be noted, but if a foreign bill is not noted, the drawer and the indorsers are no longer liable on the bill. The noting must be made on the day of its dishonour, but it may be protested for better security against the drawer and indorsers at a future date, provided it has been noted by a notary at the due date.

A bill must be protested at the place where it is dishonoured; but when a bill is presented by post and returned dishonoured by post, it may be protested at the place to which it is returned, and on the day of its return, if received during business hours, and if not received during business hours, then on the next business day. When a bill payable at the address of some person other than the drawee has been dishonoured by non-acceptance, it must be protested at the place where it is expressed to be payable, and no further presentment to the drawee is necessary.

A protest must contain a copy of the bill, and must be signed by the notary making it, and must specify the person at whose request the bill is protested, the place and date of protest, the reason for protesting the bill, the demand for acceptance and payment made by the notary, the answer given, if any, or the fact that the drawee or acceptor could not be found.

Where the services of a notary cannot be obtained, protest may be made by any respectable householder in the presence of two witnesses. The following is the form to be used in such cases:—

> "Know all men that I, A. B. (householder), of in the county of in the United Kingdom, at the request of C. D., there being no notary public available, did on the day of 19 at demand payment (or acceptance) of the bill of exchange hereunder written, from E. F., to which demand he made answer (state answer, if any), wherefore I now, in the presence of G. H. and J. K., do protest the said bill of exchange.
>
> (Signed) A. B.
>
> G. H. } *Witnesses*
> J. K. }

Here follows a copy of the bill.

Where a bill is lost or destroyed, or is wrongfully detained from the person entitled to hold it, protest may be made on a copy or written particulars thereof.

The stamp on a protest may be adhesive, to be cancelled by the notary. Where the duty on a bill does not exceed one shilling, the stamp on the protest must be of the same value as the stamp on the bill. In any other case the stamp on a protest is one shilling.

STAMPS. The stamp may be adhesive on a bill drawn on demand. In all other cases the bill must be written on paper bearing an impressed stamp, excepting bills drawn abroad. (See below.)

INLAND BILLS must be stamped as follows:—

When payable on demand, or on presentation, or at sight, or within three days after sight, or when	*s.*	*d.*
the amount does not exceed £5	0	1
Exceeds £5 and does not exceed £10	0	2
„ £10 „ „ „ £25	0	3
„ £25 „ „ „ £50	0	6
„ £50 „ „ „ £75	0	9
„ £75 „ „ „ £100	1	0
For every £100, and also for any fractional part of £100 of such amount or value	1	0

FOREIGN BILLS must be stamped as follows:—

(*a*) A bill drawn in the United Kingdom and payable abroad is stamped as an inland bill.

(*b*) The same scale of stamping applies to bills drawn abroad payable in the United Kingdom.

(*c*) A bill drawn abroad and payable abroad, if in any way negotiated in the United Kingdom, must be stamped on the same scale as an inland bill, except that where the amount exceeds £50 and does not exceed £100 a 6d. stamp only is required. And when the amount exceeds £100 a 6d. stamp must be affixed for every £100 or fractional part of £100.

N.B.—In cases (*b*) and (*c*) the duties are to be denoted by adhesive stamps. Bills drawn abroad on demand require a penny postage and inland revenue stamp. In other cases the *ad valorem* duties must be denoted by adhesive "Foreign Bill Stamps" of sufficient amount.

The penalty for dealing with bills which are not stamped, or which are improperly stamped, or for neglecting the requirements as to cancelling stamps is £10. [Refer to "Cancellation of Stamps" in *Index*.]

2. CHEQUES.

NATURE OF A CHEQUE. A cheque is a bill of exchange drawn on a banker payable on demand. The relation between a banker and his customer is that of debtor and creditor. The customer lends his money to the banker,

who undertakes to discharge the debt, by honouring the cheques of his customer, to the extent of the funds lent to the banker. Consequently if a banker refuses to honour the cheques of his customer, when the customer has sufficient funds in the bank to meet them, the banker commits a breach of contract, and the customer may sue him for damages. But the holder of a cheque has no such right.

PAYMENT OF CHEQUES. The authority of a banker to pay a cheque drawn on him by his customer is revoked by countermand of payment or by notice of the customer's death. A banker also must not pay cheques drawn on him by his customer if he has received notice of an act of bankruptcy, or has had a garnishee order served upon him, forbidding him to honour cheques drawn by the customer on his funds in the bank.

A cheque should be presented for payment within a reasonable time. But the drawer is liable on the cheque for six years from its date. If, however, through delay in presenting the cheque the drawer has suffered actual damage, e.g. by failure of the bank, he is no longer liable on the cheque; but the holder can prove as a creditor for the amount of the cheque in the bankruptcy or winding up of the bank.

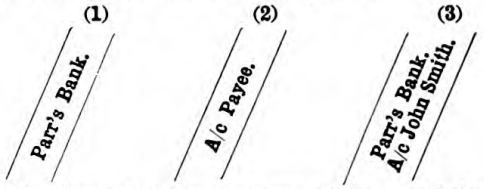
Care should be taken in filling up a cheque, for if the drawer negligently writes it in such a way that the amount can be altered, and the bank pays such altered amount, the loss will fall not on the bank but upon the drawer. Of course, a banker should refuse payment of a cheque which appears on the face of it to have been materially altered.

Cheques are either payable to "bearer" or "order." If neither of these words is written on the face of the cheque, it is held payable to order. A cheque payable to bearer need not be indorsed by the payee, but a cheque payable to order must be indorsed by the payee before it can be cashed. A cheque payable to bearer may be altered to order either by the drawer of the cheque or the payee, but a cheque payable to order cannot be altered to bearer except by the drawer of the cheque, who must sign his name or initials to the alteration.

HOW TO ENDORSE A CHEQUE. The payee should write his name exactly as it is written on the face of the cheque, omitting, of course, Mr., Esquire, or other title. Where the name is incorrectly spelled or incorrectly given, the endorsement should agree exactly with the name as given, the usual signature being written underneath. If the cheque be payable to Mr. Smith (without the mention of his first name or initials) he should endorse his usual signature. If payable to Mrs. Smith it should be endorsed Ellen Smith, or whatever the usual signature may be. If made out to Mrs. John Smith, she ought to endorse it as Ellen Smith, wife of John Smith.

Firms and companies doing regular business with a bank will of course ask their banker how they wish cheques endorsed. But the following directions may be found useful. If a cheque be payable to Messrs. Smith it should be endorsed Smith and Son, or John and James Smith, or in some such way, so as to show that it is endorsed on behalf of a firm of that name. In the case of a limited company, say *Harrod's Stores*, the endorsement should be made by a person appointed by the Board of Directors, and he should endorse as follows: per pro. or p.p. Harrod's Stores, Ltd., writing underneath his name and position, e.g. John Jones, Secretary. (See "per procuration" in *Commercial Dictionary*.)

CROSSED CHEQUES. For the purpose of tracing cheques and seeing that they do not come into the hands of the wrong party, it is usual to cross them. The crossing is done by drawing two parallel transverse lines, with or without the words "and Co." across the face of the cheque, when the crossing is said to be "general." Cheques so crossed can be paid only through a bank, and if paid across the counter by a banker, such banker will have to bear the loss if payment has been made to the wrong party. Sometimes a cheque is crossed "specially," and this is done by (1) inserting the name of the bank, through which payment is to be made, in the crossing; or by (2) inserting there the name of the person to whose account the payment is to be made; or by (3) inserting both the name of the bank and the name of the person to whose account it is to be credited. Examples of special crossing:—



(1) Means that the cheque can only be cashed through Parr's Bank.

(2) Means that only the payee can get cash for the cheque, and only from the bank where he has an account.

(3) Specifies not only the account to which the cheque is to be paid, but the bank where such account is kept.

The crossing of a cheque does not affect its negotiability, and if a crossed cheque has been stolen after being endorsed, the person who takes it from the thief in good faith and gives value for it can enforce payment of it, even though the cheque has been stopped. The loss will fall upon the payee. In order to destroy the negotiability of a cheque, the words, "not negotiable" must form part of the crossing. Whoever then takes the cheque can have no better title to it than the person who gave it to him had.

A cheque must bear a penny stamp. Bankers prefer that cheques drawn on them should be written on forms supplied by the bank, but there is nothing to prevent a cheque being written on an ordinary piece of paper, provided that the stamp is affixed.

Should a cheque be inadvertently crossed, and it is desired to cancel the crossing, the drawer alone can do this, by writing on the face of the cheque the words "pay cash" and adding his signature thereto.

NOT NEGOTIABLE. A crossed cheque with these words forming part of the crossing is no longer a negotiable instrument, that is, it is no longer on the footing of coined money. It is a peculiarity of coined money that whoever takes it in good faith and gives value for it becomes the absolute owner of the money. The same is true of negotiable instruments. But when a cheque bears the words "not negotiable," then the person taking it must be on his guard. He can have no better title to it than the person transferring it to him had. For example, a person comes dishonestly by a cheque marked "not negotiable" and gets his grocer to cash it. The grocer, even though he takes it innocently and gives value for it, is not entitled to the cheque, and cannot compel the drawer of the cheque or the drawer's banker to pay it. These words, then, provide an absolute safeguard to the danger of having crossed cheques lost or stolen.

A POST-DATED CHEQUE is merely an ordinary bill of exchange, *not* payable on demand, and therefore should not be negotiated before the date mentioned on it, otherwise a penalty may be incurred if it is insufficiently stamped as an ordinary bill of exchange.

FORGED SIGNATURES. If a banker pays a cheque upon which the drawer's signature has been forged, the banker himself must bear the loss, for the banker is presumed to know his customer's signature. But if the endorsement of the payee is forged, the banker will not be liable if he pays the cheque, for he cannot be expected to know the endorser's signature. The loss will fall either on the drawer or the payee, according to the circumstances of the case.

LOST CHEQUES. In sending cheques through the post, the loss will fall on the drawer, if such cheque is lost in transmission, unless the drawer of the cheque has been authorised by the payee to send the cheque through the post, either by express permission or by the usual course of dealing between the parties. The payee can compel the drawer to give him a fresh cheque upon the payee undertaking to indemnify him against loss and giving security, if required. The drawer should stop payment of the

original cheque, but this will be of no avail if the cheque should get into the hands of a *bona fide* holder for value, unless the lost cheque had been marked "not negotiable."

STALE CHEQUE. A cheque which has been in circulation for an unreasonable length of time is overdue, and a banker would refuse to cash a cheque which is six months old, though the drawer is liable on it for six years. Where the receiving banker and the paying banker reside in the same town, the cheque should be presented for payment before the closing hour of the bank on the day after it has been received. Where they reside in different places, the receiving banker should post it to the paying banker not later than two days after he received it. In all cases cheques should be cashed as speedily as possible.

BACKING A CHEQUE. Sometimes a person to oblige a friend writes his name on the back of a cheque belonging to his friend. By so doing he guarantees the cheque will be met on presentation, and, therefore, it is unwise to back a cheque, because if the cheque is not honoured, the person lending his name may have to meet it.

N.B.—A cheque may be drawn for any amount from 1d. upwards.

3. PROMISSORY NOTES.

A promissory note is an unconditional promise in writing made by one person to another, signed by the maker, engaging to pay on demand or at a fixed or determinable future time, a sum certain in money to, or to the order of, a specified person or to bearer. A bank-note is a promissory note issued by a banker, payable to bearer on demand, but there is this difference between a bank-note and a promissory note, that a bank-note may be re-issued after payment.

If made payable to the maker's order it does not become a promissory note until it is indorsed by the maker. The following is an example of a promissory note:—

"LONDON, 27*th July*, 1904.

£60.

On demand, I promise to pay Mr. John Brown or order the sum of sixty pounds, value received.

JAMES GREEN."

Here James Green is the maker and John Brown is the payee.

The note, of course, might be made payable not on demand, but at any time after date, and might be made payable to bearer. Where a note runs "I promise to pay," and is signed by two or more makers, each is liable for the whole amount, in case the others make default in payment.

Where a note payable on demand has been indorsed, it must be presented within a reasonable time for payment, otherwise the indorser will not be liable if it is not paid. Where a promissory note is made payable at a particular place, it must be presented for payment at that place, in order to render the maker liable. In any other case presentment for payment is not necessary in order to render the maker liable.

A promissory note is negotiable in the same manner as a bill of exchange or a cheque. Its negotiability may be destroyed by making it payable to a particular person only. The maker is the person primarily liable, and if he does not pay, notice of dishonour must be given to prior indorsers, each of whom then becomes liable according to the priority of his indorsement. But an indorser is not liable until the note has been presented to the maker for payment and payment has been refused. An instrument which purports to be a promissory note, and yet is invalid, may be good evidence of an agreement between the parties.

Promissory notes must bear a stamp according to their amount. The duty is the same as that for a bill of exchange. See "Stamps" under *Bills of Exchange*.

N.B. An I.O.U. is not a negotiable instrument, and does not require a stamp.

SALE.

In treating of this subject, we shall first deal with Contracts of Sale in general, and then with contracts relating to the Sale of Goods in particular.

1. CONTRACTS OF SALE.

In making a contract of sale, there must be an offer on the one side and an acceptance of that offer on the part of the other. The acceptance must correspond exactly to the offer, for if it is wider or narrower, there is no contract. Suppose A offers to sell B a horse for £50. B, in reply, says that he will take the horse provided that it is warranted sound and free from vice, or that he will give £45 for it. Here B has not accepted A's offer. He has merely made a counter-offer, and unless and until A accepts the counter-offer, there is no contract between the parties. The price must be mentioned, except perhaps in the case of the sale of goods, where, in the absence of any mention of the price, the law presumes a reasonable price. If the contract is in writing, the parties must be described, usually but not necessarily by name, else there is no contract.

WITHDRAWAL OF OFFER AND ACCEPTANCE. An offer can be revoked at any time before it is accepted, but after it has been accepted it cannot be withdrawn, without the consent of the other party. This principle, coupled with the fact that the law will not, as a rule, enforce a gratuitous promise, gives rise to a very peculiar position, with regard to the case of a person who offers to sell something and agrees that the offer shall remain open until a certain time, for in spite of such an agreement, the offerer can at any time withdraw his offer before it has been accepted.

For example, A on August 10th writes to B offering to sell to B the pictures in his house for £1,000, the offer to remain open until October 1st. In such a case, the law allows A to withdraw his offer at any time before October 1st, unless in the meantime B has accepted the offer, or has given A some consideration or value for keeping it open. It is not quite settled whether A must formally withdraw his offer, or whether selling the pictures without giving notice to B would be a sufficient revocation of the offer. It would be safer for him to inform B of the withdrawal.

Similarly, an applicant for shares in a company may at any time before the letters of allotment have been posted to him, withdraw his proposal to take up the shares.

On the other hand, an acceptance once communicated to the offerer cannot be withdrawn. It must be communicated by words or conduct, and the acceptance is communicated when it is made in the manner indicated or requested by the offerer; e.g., A writes through the post to B, offering to sell to him his house for £2,000. Here A, by his mode of making the offer, indicates that he expects an answer through the post, though, of course, B can give the answer by word of mouth. If B, therefore, writes a letter accepting the offer and posts it, the moment the letter is dropped in the pillar-box it is communicated to A, and B cannot withdraw his acceptance, without A's consent. Suppose B had changed his mind after he had posted his acceptance, and then sent a telegram to A withdrawing the acceptance, and the wire reached A before the letter. This would make no difference. B would still be bound to pay the purchase-money, and could not get out of his contract unless A consented. But if, after posting the original offer, A changed his mind, he could revoke the offer at any time up to the moment when B posted his acceptance, provided B received the revocation before posting his acceptance.

FORM OF THE CONTRACT. A contract of sale (i.e. an agreement to sell and to buy) may be made in writing or by word of mouth, or by conduct:

1. When the contract must be in writing. As regards agreements to sell certain kinds of property, the law requires that such agreements must be in writing, or that some note or memorandum thereof should be made in writing. This is for the purpose of preventing fraud, and also that there may be evidence as to what the terms of the contract really

are. Thus by the Statute of Frauds a contract for the sale of land or of interests in land (e.g. a house or a lease) will not be enforced by the Courts, unless such contract is in writing, or some note in writing is made thereof and signed by the party against whom it is sought to enforce the contract, or by his agent. If the agreement is made by word of mouth, neither party could compel the other to carry it out, unless there has been a part performance of the contract. What is a part performance of the contract is sometimes difficult to determine, but generally speaking, letting the purchaser into possession is sufficient. Strange to say, the payment of the purchase-money would not of itself be a part performance of the verbal agreement sufficient to make it enforceable.

Again, by the Sale of Goods Act, 1893, no contract for the sale of goods of the value of £10 or upwards is enforceable, unless the buyer accept part of the goods so sold, and actually receive the same, or give something in earnest to bind the bargain or in part payment, or unless "some note or memorandum in writing of the contract be made and signed by the party against whom it is sought to enforce the contract, or by his agent." Hence it will be seen that in the case of contracts for the sale of land, or of interests in land, or of goods to the value of £10 or upwards, there should, as a rule, be made some note in writing of the contract.

2 What the Memorandum must contain. The note or memorandum in writing must sufficiently describe or identify the property to be sold. The price or consideration for the property must always be mentioned, except in the case of the sale of goods, where if the price is not mentioned, a reasonable price will be presumed. The parties, i.e. the intending seller and the intending buyer, must be described, usually by inserting their names. Finally, in order to be able to compel a party to carry out the contract, the note must be signed by him or his agent. The following will serve as an example. Brown wishes to buy Robinson's house, and makes him an offer in writing after this fashion.

"LONDON, *August 10th*, 1904.

"Dear Sir,

"I offer you £1,000 for your freehold house, No. 319 Grosvenor Square, W.

"Faithfully yours,
"J. BROWN.

"W. ROBINSON, ESQ."

In this example all the conditions of a sufficient memorandum are satisfied—the price, the description, or identification of the property, and the names of the parties. Even if Robinson's name did not appear in the letter itself, but the letter was contained in an envelope addressed to him, that would be sufficient, for the envelope and the letter would be regarded as one document. If, now, Robinson accepts Brown's offer the contract is complete. He may accept verbally or in writing. If he accepts by letter signed by himself or his agent, each party can compel the other to carry out the contract, because each has put his signature to it. But if Robinson accepts verbally, Brown could not compel him to carry out the contract because his signature has not been obtained, and the law requires that the agreement must bear the signature of the party against whom it is sought to enforce the contract. Though Brown, in that case, could not force Robinson to sell the house, Robinson could compel Brown to buy it, because Brown has affixed his signature to the note.

3. When Letters serve as a Memorandum of Agreement. It may be mentioned that a contract of sale (agreement to sell) may be gathered from a series of letters in a correspondence between the parties, provided that they are so connected as to indicate, without the necessity of bringing in extraneous evidence, a clear offer on one side, and a definite acceptance of that offer on the other.

Where an agreement is contained in correspondence and requires a stamp, the letters containing it should be fastened together and taken to Somerset House to be stamped; but by the Stamp Act, 1891, certain agreements do not require to be stamped. They include (1) Agreements or memoranda the matter whereof is not of the value of £5; and (2) Agreements or memoranda relating to the sale of any goods, wares, or merchandise.

2. SALE OF GOODS.

The term "contract of sale" includes both actual sales and agreements to sell, between which there are several differences. An agreement to sell is a contract pure and simple, and it deals with something that has yet to be carried out. A sale is a contract and something else besides, for it acts as a conveyance of the property from the seller to the buyer. Where goods have been sold and the buyer does not pay up, the seller may sue for the price; but where an agreement to sell is broken, by the buyer refusing to take the goods, the seller cannot sue for the price, all that he can obtain is damages for breach of contract. If an agreement to sell is broken by the seller, the only remedy that the buyer has is to sue for damages. He cannot claim the goods, for they still belong to the seller, to do what he likes with them. But if there has been an actual sale, and the seller fails to deliver the goods, not only can the buyer obtain damages from him for breach of contract, but in some cases he can actually claim the goods. Lastly, if there is an agreement to sell, and the goods are destroyed before the actual sale is accomplished, the loss as a rule falls on the seller; whereas, if there has been a sale, and the goods are destroyed while in the possession of the seller and before they come into the possession of the buyer, the loss falls on the buyer, for they are his property.

FORMALITIES TO BE OBSERVED. As has been already stated, all contracts for the sale of goods of the value of £10 or upwards must be in writing, unless the buyer has accepted part of the goods so sold and actually received the same, or given something in earnest to bind the bargain or in part payment. This, of course, refers only to agreements to sell, and not to actual sales.

The word "accept" in this connection is not used in its ordinary meaning. It does not mean that the buyer has accepted the goods definitely in fulfilment of the contract, but merely that he has done some act which recognises the agreement that he had previously entered into. For example, Brown verbally orders Robinson to make him a motor car according to a certain pattern for the price of £500. Robinson makes the car and delivers it to Brown, who examines it, makes a trial run on it, and then returns it to Robinson, saying that it is not up to the required standard. Here Brown, by examining and testing it, shows that there had been an agreement between him and Robinson for the sale of a motor car, and in that sense he has accepted it, though of course he has not accepted it in the sense that the contract has been performed to his satisfaction. This recognition by Brown of the agreement between him and Robinson is all that the law requires, and obviates the necessity of a written agreement. Hence, although not in writing, the contract is enforceable, and Robinson can sue Brown for the price, but if Brown can show that the car was not according to instructions, he cannot be compelled to pay.

SUBJECT-MATTER OF THE CONTRACT. Where there is a contract for the sale of specific goods which, unknown to the seller, have perished at the time of the sale, the contract is void. The same thing happens where there is an agreement to sell specific goods, and subsequently the goods, without any fault on the part of the seller or buyer, perish before the risk passes to the buyer.

THE PRICE. The price in a contract of sale may be fixed by the contract, or may be left to be fixed in a manner thereby agreed, or may be determined by the course of dealing between the parties, and in other cases a reasonable price must be paid. Again, the price may be left for a third party to fix, and if such third party does not make a valuation, the agreement ceases to have any force. If such third party is prevented from making a valuation by the fault of the seller or the buyer, the party in fault will be liable to pay damages to the other.

CAPACITY TO CONTRACT. An infant cannot contract, neither can a person who is incapably drunk or who is a

lunatic. But if necessaries are supplied to these persons they must pay a reasonable price for them.

A husband is in some cases liable for necessaries supplied to his wife. If, when they are living together, he in any way allows tradesmen and others to regard her as his agent for the supply of necessaries, he will be liable. If, however, they sue him they must prove that he did either by his conduct or by his express authority hold her out as his agent. In order that the husband should not be liable, he ought to warn the tradespeople with whom his wife deals, but this is not absolutely necessary, unless he has previously allowed her to pledge his credit at their shops. Advertising the warning in the papers is of little or no use, for how can it be proved that the tradespeople have seen the advertisement. If husband and wife are living apart owing to the husband's misconduct, and he does not make proper provision for her, he will be liable for the price of necessaries supplied to her. If the husband and wife are living together, the Court will usually presume that she had authority from her husband to pledge his credit for the purpose of supplying the ordinary household necessaries. In order to escape liability in such a case the husband must prove either that he had expressly forbidden her to pledge his credit, or that he has provided her with an ample allowance for the purpose.

RIGHTS OF THE BUYER.

The buyer is entitled to have the goods delivered to him, and to have any conditions or warranties made in respect of the goods properly observed.

1. DELIVERY OF THE GOODS. *Delivery* means transfer of the possession, though it does not necessarily require the actual handing over of the goods. If a man sells the grain in his warehouse, there is delivery of the grain if the key of the warehouse is handed to the buyer, so as to enable him to have access to the place where the grain is stored. Unless the contract says so, it is no part of the duty of the seller to send or carry the goods to the buyer, but he must give the buyer proper facilities for obtaining possession of the goods, and in that case the place of delivery is the seller's place of business, and if he has no place of business, his residence. Where the goods are at the time of the sale in the possession of a third party, there is no delivery unless and until such third person acknowledges to the buyer that he holds the goods for him.

Where the goods are sent through a carrier, the seller ought to make terms with the carrier on behalf of the buyer, otherwise if the goods are lost or damaged in transit, the buyer may refuse to regard delivery to the carrier as delivery to himself, or he may take the damaged goods and sue the seller for damages. If the goods are sent by sea, it is the duty of the seller to give notice to the buyer so as to enable him to insure them, otherwise the goods are at the seller's risk during the voyage.

2. ACCEPTANCE OF GOODS. Except where trade usage or the course of dealing between the parties allows it, a buyer is not bound to accept a quantity of goods greater or less than he ordered, but if he accepts at all, he must pay the contract price. The same is the case where the seller delivers to the buyer the goods he contracted to sell, mixed with other goods. The buyer may accept the goods that are in accordance with what he ordered, and reject the rest, or he may reject the whole.

Unless it has been so agreed, a buyer is not bound to take delivery by instalments. The buyer is not bound to return rejected goods, but he must inform the seller that he has rejected them. But if he wrongfully refuses to take delivery, he is liable to the seller for any loss that may ensue, and for a reasonable sum of money for his taking care of the goods. Where the buyer has not had an opportunity of examining the goods before delivery, he is not deemed to have accepted them unless and until he has had a reasonable opportunity of examining them to see if they are in accordance with what he ordered.

The term "accept" is here used in its ordinary meaning, viz., that the buyer takes the goods in fulfilment of the contract. The buyer is deemed to have accepted the goods when he intimates this fact to the seller, or when he does any act which shows that he regards himself and not the seller as the owner of the goods, e.g., if he uses the goods or sells them, or transfers them to another. If after the lapse of a reasonable time he retains the goods without intimating that he has rejected them, he will be deemed to have accepted them.

3. CAVEAT EMPTOR. Formerly a seller was under no liability if the goods were not what they pretended to be, unless he had been guilty of fraud or deceit, or unless he had expressly warranted that the goods were of a suitable quality and reasonably fit for the purposes for which they were intended. There was no implied warranty of this nature, and this is still the law, except where it has been altered by statute. These alterations will be dealt with subsequently. Apart from these statutory exceptions, the maxim is *caveat emptor*, "the purchaser must be on his guard," for it is no part of the business of the Courts to make bargains for a man. The seller is not bound to disclose secret faults. His place is to stand by and let the purchaser find out for himself. If, however, the seller does anything to conceal these defects, or makes a false representation, either knowingly or unknowingly, concerning the goods, the contract may be rescinded in some cases, and in others an action for damages may be brought against the seller.

4. CONDITIONS AND WARRANTIES. Before dealing with the warranties and conditions which the law says that a seller shall be understood to make regarding the goods he sells, it will be advisable to distinguish between a warranty and a condition.

A CONDITION is something on which the contract depends, and which, if broken or not fulfilled, will entitle the party not in fault to repudiate the contract, though if he likes he can go on with the contract and sue the other party as for a breach of warranty.

A WARRANTY, on the other hand, does not go to the root of the contract; it merely entitles the person injured by its breach to obtain damages, and does not permit him to repudiate the contract. A warranty is merely a promise, express or implied, that in case there is a failure to perform the terms of the contract, the party injured by such failure shall be entitled to compensation. Whether a representation amounts to a condition or a warranty is a question of fact to be determined by what the parties really intended it to be, indeed, a stipulation may be a condition though called a warranty in the contract, and *vice versâ*. An example or two will make the distinction clear.

> A offers to sell his horse to B for £100. B replies that he will take it provided that A warrants the horse sound and free from vice, but if A cannot do so he will not buy the horse. A gives the required warranty, and B buys the horse. The warranty is the condition on which B bought the horse, and if the horse turns out unsound, the condition which goes to the root of the contract is broken. B can repudiate the contract and compel A to take back the horse and return the purchase-money. If B likes, he can keep the horse and sue A for damages, which may take the shape of a reduction in the price. Suppose, in the example already quoted, B had agreed to buy the horse, without stating that he made it a condition of his buying the horse that the animal should be sound, but in the course of the bargaining he asked and obtained a warranty from A. This is a warranty pure and simple, and if the horse proved unsound, B could only sue for damages. He would not be entitled to demand his money back and to return the horse.

As has been said, the law now implies that in the cases to be mentioned, the seller, without saying a word on the matter, undertakes that certain things shall be guaranteed. The seller undertakes that he has a right to sell the goods, and that the buyer shall have quiet possession of them. Where goods are sold by description, the goods must correspond with the description. Where they are sold by sample, the bulk must correspond in quality with the sample, and the buyer must be allowed to compare the bulk with the sample. The goods must be free from any defect, rendering them unmerchantable, which would not be apparent on examination of the sample. Where the buyer relies on the seller's skill or knowledge, and the goods

are of a description which it is the seller's business to supply, the goods must be fit for the particular purpose for which the buyer requires them. Where goods are bought by description from a seller who deals in that class of goods, the goods must be of a merchantable quality; but if the buyer has examined the goods, there shall be no implied condition as to defects which such examination ought to have revealed.

RIGHTS OF THE SELLER.

1. SELLER'S REMEDIES WHEN UNPAID. The seller has a personal remedy against the buyer for the price. When the buyer wrongfully neglects or refuses to pay, the unpaid seller can sue for the price of the goods, even though the goods have not been delivered to the buyer, if the time for payment was fixed in the contract, without anything being said as to the time for delivery. But the refusal to pay the price must be wrongful; for it is obvious that should circumstances, such as bankruptcy, render the seller unable to deliver the goods, he could not recover the price. When the buyer wrongfully neglects or refuses to take delivery of the goods, the seller may sue him for damages for non-acceptance, and may charge him a reasonable sum for taking care of the goods. Apart from these remedies, an unpaid seller has certain rights against the goods themselves, notwithstanding that the ownership of the goods may have passed to the buyer.

(1) While in possession of the goods he has a lien on the goods, or right to retain them for the price.

(2) After he has parted with the possession of the goods, he has, in case of the insolvency of the buyer, a right of stopping the goods in transit.

(3) In certain cases he has a right of re-sale.

2. SELLER'S LIEN. An unpaid seller who is in possession of goods can keep them until he is paid, if the goods have been sold without any stipulation as to credit; or if the goods have been sold on credit but the time of credit has expired; or, if the buyer becomes insolvent. A buyer is insolvent when he ceases to pay his debts in the ordinary course of business or cannot pay his debts as they become due, or has committed an act of bankruptcy.

The unpaid seller loses his lien when he delivers the goods to a carrier for the purpose of transmitting the goods to the buyer, unless he reserves his right of disposal of the goods. When the buyer or his agent lawfully obtains possession of the goods, the seller loses his right of detaining them.

The seller's lien is defeated if the buyer transfers a document of title to the goods to a *bona fide* purchaser for value: e.g., a bill of lading is sent to the buyer, who transfers the bill of lading to a *bona fide* purchaser for value, while they are still in the seller's possession. Such purchaser is entitled to the goods, and the seller cannot retain them.

3. STOPPAGE IN TRANSITU. When the buyer becomes insolvent, the unpaid seller who has parted with the possession of the goods has the right of stopping them *in transitu*, that is, he may resume possession of the goods as long as they are in course of transit between himself and the buyer, and may keep them until he is paid. The great difficulty is to determine when the transit is at an end. The law on the subject is summed up in a few words. "When the goods have arrived at their destination, and have been delivered to the purchaser or his agent, or where the carrier holds them not merely as carrier but as agent for the buyer, as when he warehouses them, the transit is at an end." Where, by the terms of the contract, the goods are to be despatched to a particular destination and no other, the buyer may not intercept the goods on their way thither, so as to put an end to the transit, and defeat the seller's right of stoppage *in transitu*; but in other cases he may. Observe also:—

(1) That delivery of goods on board a ship chartered by the buyer puts an end to the transit only if the buyer has complete control of the ship, so that the master and crew are his servants and bound to carry out his instructions.

(2) That delivery of goods to a carrier for the sole purpose of their being carried to their destination does not put an end to the transit, even though the carrier be named and paid by the buyer.

(3) When the carrier wrongfully refuses to deliver the goods to the buyer the transit is at an end, and in that case the seller can no longer exercise his right of stoppage *in transitu* and resume possession of the goods.

Stoppage is effected by the seller or his agent taking actual possession of the goods, or by giving notice to the carrier or other person who has the immediate custody of the goods, not to deliver them. Notice to a ship-owner is notice to the captain of the ship on which the goods are, only if the ship-owner has sent the notice to the captain, and the captain has received such notice. The carrier to whom such notice is given must re-deliver the goods to or according to the directions of the seller, at the seller's expense.

The right of stoppage is defeated if before the goods reach their destination the buyer transfers a document of title to the goods (e.g., a bill of lading) to a *bona fide* purchaser for value. Such purchaser is entitled to obtain possession of the goods, and the seller cannot resume possession of them.

When the seller stops the goods he does not regain the ownership of them, nor is the sale rescinded. He merely recovers the right to hold possession until he is paid. If, however, the goods are perishable, he can re-sell them.

4. RIGHT OF RE-SALE. Where an unpaid seller, who has exercised his right of lien or his right of stoppage *in transitu*, re-sells the goods, the buyer acquires a good title to them, and the original buyer can not claim them from him. Though it must be remembered that the unpaid seller had really no right to sell them, and for so doing may have to pay damages to the original buyer.

An unpaid seller can exercise his power of re-sale in three cases:—

(1) Where the goods are perishable.

(2) Where the seller gives notice to the buyer of his intention to re-sell, and the buyer does not within a reasonable time pay or tender the price.

(3) Where in the contract the seller expressly reserves to himself the right to re-sell in case the buyer makes default.

TRANSFER OF THE OWNERSHIP OF THE GOODS. Where goods are damaged or destroyed, the loss falls upon the owner. It is therefore a matter of great importance to determine when the ownership of the goods passes to the buyer. The rule is that the ownership passes at such time as the parties intended that it should pass. In the absence of any express stipulation in regard to this matter, the following rules determine when the ownership passes to the buyer.

(1) Where the contract is for the sale of specified goods in a deliverable condition, the ownership passes to the buyer at the moment the contract is made, even though the time of delivery or of payment is postponed. For example, A orders a particular piano worth £50 from B. B agrees to sell it. A is now the owner of that piano, though B can keep it until he is paid, unless they have otherwise agreed. If the piano while in B's care should be accidentally injured or destroyed through no fault of B's, the loss will fall on A, for he will be compelled to pay the purchase-money.

(2) Where there is a contract for the sale of specified goods, and the seller has to do something to them before they are fit for delivery, the ownership does not pass to the buyer until such thing be done, and the buyer has been told that it is done: e.g., a man buys cloth from a tailor, and asks the tailor to make it into a suit of clothes. The ownership of the suit does not pass to the buyer until it has been made, and until the buyer has word that the suit is ready for him. If, therefore, the suit were destroyed in the meantime, the loss would fall on the tailor. The same is the case where the goods have to be measured, weighed, or tested for the purpose of ascertaining the price.

(3) Goods "on sale or return," of which a very common example is newspapers and magazines supplied to a news-agent, who, if he cannot sell them, returns them to the publisher. The ownership of these goods passes to the buyer if he accepts them, or if he does something which shows that he has accepted them, or if he does not return them within a reasonable time, or at the time agreed upon for returning them.

TRANSFER OF TITLE. Where goods are sold by a person other than the real owner or his agent, the buyer cannot as a rule acquire a better title to the goods than the

seller had. A thief *steals* a watch or other article and sells it; the buyer has in this case no right to the watch. If, however, the thief had sold the watch *in market overt* to a *bona fide* purchaser, the buyer would have a good title to it, until the thief had been prosecuted and convicted, in which case the watch would have to be returned to the true owner; but if the thief were not convicted, the buyer could retain the watch.

By "market overt" is meant any place which is by law or usage set apart as a public market for the sale of goods commonly sold there, e.g., a market overt for the sale of cattle would not necessarily be a market overt for the sale of watches. The term also includes any shop in the City of London, on week-days between sunrise and sunset, shop meaning that part of the building to which the public have free access for the purpose of buying goods usually sold there. It should be noticed that the protection afforded to a *bonâ-fide* purchaser in a market overt does not apply in the case of the sale of a *horse* unless certain statutory formalities have been observed.

In certain cases, however, a purchaser in good faith can obtain a good title from a person who is not the lawful owner, or who is not the agent of the lawful owner. (1) For example, A obtains from B goods by means of *a false pretence*, and before B tries to recover them A sells them to a person who does not know that they have been obtained by fraud. Such purchaser acquires an absolute title to the goods and cannot be deprived of them. (2) Again, where the seller is allowed to remain in possession of the goods, and sells or pledges them to another, that other, if he takes them in good faith, and without notice of the previous sale, acquires a good title, and the original buyer cannot deprive him of these goods. (3) Similarly, where the buyer with the consent of the seller obtains possession of the goods, even though the ownership has not passed to such buyer, and then sells or pledges them, the person to whom he sells or pledges the goods has a good title to the goods.

SALES BY AUCTION. When goods are put up for sale by auction in lots, each lot is the subject of a separate contract. The sale is complete by the fall of the hammer. Before that happens, any bidder may retract his bid, but not afterwards. Unless the seller notifies that he reserves the right to bid at the auction, he cannot do so, for such bidding will be regarded as a fraud upon the buyer.

DEBT.

A DEBT is a sum certain in money owed by one person to another. Debts are divided into simple contract debts, specialty debts, and judgment debts.

(1) **Simple Contract Debt** is a debt due under a simple contract, i.e., a contract made by word of mouth, or by conduct, or by a simple writing. Such for example are debts due for goods supplied in the ordinary way by a tradesman to his customers, or a debt due on a dishonoured bill of exchange and the like.

(2) **Specialty Debts.** These are debts due upon a bond or other instrument under seal. Mortgage debts and debts due under a Bill of Sale are also of this class.

(3) **Judgment Debts.** Debts due under the judgment of a court of record like the High Court, or the various county courts, are called judgment debts. If, for example, an action is brought against a man for libel or other wrong committed by him, the damages and costs which he may be ordered to pay will constitute a judgment debt, and the man himself will be "a judgment debtor."

A JUDGMENT DEBTOR. He can be called upon to make immediate payment by the judgment creditor, who can at once enforce the judgment against the debtor by levying an execution against the debtor's lands or goods, that is, he can seize them unless the court has allowed a stay of execution, or has given the debtor time to pay. If the debtor has no property to satisfy the judgment, but afterwards acquires property, such property may at any time be seized under the judgment. A judgment debtor is not allowed to dispute his liability for a judgment debt.

DUTY OF A DEBTOR. A debtor must be always ready and willing to pay his creditor; he is even bound to seek out his creditor for that purpose. The payment must be in legal tender, otherwise the creditor is entitled to refuse it. The creditor need not make any demand for payment before suing the debtor.

ASSIGNMENT OF DEBT. If a creditor wishes to assign the debt, he must do so in writing, and notice in writing of such assignment must be sent to the debtor. If notice is not sent to the debtor, then if he pays the original creditor, the assignee of the creditor has no claim upon the debtor. Further, the assignee of a debt takes it subject to the equities, that is, whatever defence the debtor may have to the claim if it had been brought by the original creditor, will be equally good against the assignee of such creditor. For example, Jones owes Brown £500, but Jones has done work for Brown to the value of £150. If, now, Brown sued Jones for £500, Jones would be entitled to set-off the £150 against Brown's claim, and had Brown transferred the debt of £500 to Robinson, Jones could set-off his claim of £150 for work done, so that Robinson is only entitled to £350, though he may have given Brown full value for the assignment of the debt of £500.

WHEN INTEREST MAY BE CHARGED ON DEBTS. As a general rule, unless there is an agreement express or implied to pay interest, nothing more than the sum due can be recovered. A promise to pay interest is implied in cases where banks lend money, or where interest has been paid by the debtor in similar previous transactions. The law holds that even in the absence of any promise, express or implied, to pay interest, interest can be recovered where the debt is due under an instrument in writing, e.g., a bill of exchange or a cheque. So, too, the creditor will be entitled to interest if he in writing demands payment of the debt, with notice that in case the debt is not paid, interest at the current rate will be charged from the date of the demand. Sums due under a judgment of the High Court bear interest at the rate of four per cent. per annum; but county court judgments do not carry interest.

EXPENSE OF COLLECTING A DEBT. If a creditor employs an agent or a solicitor to collect a debt for him, he is not entitled to charge the debtor with the expenses of collection. This extra payment is, however, frequently charged, especially in cases where solicitors are employed to collect debts. In such a case, the debtor should tender the exact amount of the debt, and should refuse to pay the extra charge, for if a creditor chooses to go to the expense of collecting debts in this way, that is his affair. Of course, if the debtor delays payment, and the creditor has to bring an action to recover the amount of the debt, he (the debtor) may have to pay the creditor's costs of the action.

DISCHARGE OF DEBT. It frequently happens that a debtor asks his creditor to take a smaller sum than is owing, and give him a full discharge from the debt. If the creditor accepts this smaller sum in full discharge, there is nothing to prevent him from suing for the balance, for it must be remembered that a man cannot discharge his debt by paying a smaller sum. He is legally bound to pay the whole sum, and he cannot discharge his obligation by doing something less than he was bound to do. In such a case, the law holds that the debtor has given the creditor no consideration for being let off the balance, and therefore the creditor is not bound by his promise to let him off. But the law does not look to the *adequacy* of the consideration, and therefore if a debtor paid a debt of say, £20 by giving his creditor £15 in gold, and in addition a lead pencil, or a tom-tit, or an old hat, that would be good enough to discharge the debtor completely. The law also says, that if the debtor in the above case had given his creditor a cheque, say for £15 or a bill of exchange or bank notes (other than Bank of England notes) for that amount, and the creditor agreed to accept this payment in full discharge of the debt, then the debtor is under no further liability, the reason being that the creditor agreed to take *something different* from what he was legally entitled to demand, viz., gold or notes of the Bank of England.

LIMITATION OF ACTIONS FOR DEBT. Actions to recover simple contract debts must be brought within six years from the time when they became due, or within six years of the last payment of any part of the principal or

interest, or within six years of the last acknowledgment in writing of the debt, which acknowledgment must *unconditionally* import a promise to pay. So if the debtor says "it is my intention to pay *when I am in a position to do so*;" the promise being conditional will cause it to be invalid as an acknowledgment. In the case of specialty debts, the time limit is twenty years. In actions for the recovery of money charged on land, or for the recovery of the land itself, the period of limitation is twelve years. If the action is not brought within these periods, the creditor cannot afterwards sue for the debt. The debt becomes what is known as statute-barred; but a debt which has become statute-barred may be revived so as to enable the creditor to sue for it, provided that the debtor acknowledges in writing that he owes the debt. The acknowledgment must be signed by the debtor, and must contain a promise to repay the debt, or be so worded that a promise to repay can be gathered from it. Again, it must be remembered that the debt itself is not extinguished by lapse of time, but only the creditor's right to sue for it. Hence if, at any time, there should come into the hands of the creditor any money belonging to the debtor, the creditor may pay himself out of that money.

Where a debtor is out of the country so that an action cannot easily be brought against him, it may be asked, when does the time begin to run for barring the debt. If the debtor left the country before the debt became legally due, the time does not begin to run until he returns. But if after the debt had become due, or after he had paid any part of it, or had acknowledged it in writing, the debtor left the country, the time begins to run from the moment the debt could have been legally demanded, or from the date of the acknowledgment, or the last payment, and should the debtor remain away for the statutory period (six, twelve or twenty years as the case may be) the debt becomes barred, and the creditor cannot sue the debtor on his return. In such a case, while the debtor is away, the creditor ought to begin proceedings by taking out a writ against the debtor, before the statutory period expires. For though the writ cannot be served on the debtor, it can be renewed every year, and in this way the debt may be kept alive until the debtor's return, when he can be served with the writ.

WHERE TO SUE FOR A DEBT. If the debt is less than £20, the creditor *must* bring his action in the county court. Where the debt is between £20 and £100, the creditor *ought* to bring his action in the county court, unless he is certain that the debtor has no defence to the claim, in which case he may bring it in the High Court, and obtain summary judgment against the debtor, a more expeditious way than the process of the county court. Where the debt exceeds £100, proceedings *must* first be instituted in the High Court, though in some cases the High Court will remit the action for hearing in the county court. [Refer to "County Court" in *Index*.]

ATTACHMENT OF DEBTOR'S ASSETS. Any person who has obtained a judgment or order for the payment of money may get the Court to serve what is called a "Garnishee Order," by which are attached any debts due to the judgment debtor or any money standing to his credit at a bank. [Refer in *Index* to "Garnishee Order" and "Attachment of Debts."]

PUNISHMENT OF DEBTORS. Since 1870, imprisonment for debt has been abolished, but in certain cases debtors are still liable to be imprisoned. In the case of a judgment debt, where it is shown to the satisfaction of the court that the debtor has, or has had, since the date of judgment, the means to pay and has neglected or refused to pay, he may be imprisoned for six weeks, on the ground that he has been guilty of contempt of court in disobeying its order to pay when he had the means to pay. If the judgment debt is ordered to be paid by instalments, then the debtor may be imprisoned every time he makes default in the payment of any instalment. Imprisonment does not extinguish the debt, for the creditor may seize any property of the debtor in satisfaction of the debt. In the following cases, if the debtor fails to pay, he may be imprisoned for a period not exceeding a year, but he cannot be imprisoned a second time for the same debt:—

(1) Failing to pay a penalty, other than a penalty due on a contract.

(2) Failing to pay a sum which he has been ordered to pay, on being convicted in a court of summary jurisdiction.

(3) Where a trustee fails to pay money in his possession, when ordered by the court to do so.

(4) Where a solicitor fails to pay costs which he has been ordered by the court to pay, on account of his misconduct.

(5) Where a bankrupt fails to pay to his creditors any portion of his income or earnings which the court has ordered him to pay.

In all cases where a debtor has been imprisoned for failing to obey the order of the court, he can obtain his freedom by paying the debt.

A fraudulent debtor is under the bankruptcy laws liable to imprisonment for two years with or without hard labour, if with intent to defraud he does any of the following acts:—

(1) Failing to yield up to the trustee in bankruptcy the whole of his property and all his books and documents relating to it.

(2) Destroying his books or making false entries in them.

(3) Obtaining credit on false pretences.

(4) Concealing or removing property to the value of £10 or more, or omitting something material in his statement of affairs.

It is a crime punishable with a year's imprisonment for *any person* (1) to obtain credit on false pretences or by any other fraud, (2) to make any gift or transfer of his property with intent to defraud a creditor, (3) to conceal, or remove with intent to defraud his creditors, any of his property within two months before or after the date of any unsatisfied judgment against him.

BANKRUPTCY.

The law of bankruptcy affords relief to insolvent debtors, who by surrendering their property for the benefit of their creditors, are in return relieved from liability in regard to their debts. Creditors are protected against one another, for one creditor is prevented from obtaining undue advantage over his fellow-creditors, either by making a secret arrangement with the debtor, or by his own fraud. While the debtor is protected against his creditors he is prevented from taking improper advantage of them, and is punished if he is guilty of fraud. The administration of the bankrupt's estate, until the trustee is appointed, is carried out under the supervision of an "official receiver" appointed by the Board of Trade.

Only those who are capable of making a binding contract can be made bankrupt, and in order that bankruptcy proceedings may be commenced, there must be a sufficient debt due to the petitioning creditor or creditors, an act of bankruptcy committed by the debtor, and a proper petitioning creditor. If the Court is not satisfied with the proof of these matters, or is satisfied that for any other reason no order ought to be made, the petition will be dismissed.

MODE OF PROCEDURE IN BANKRUPTCY. Proceedings in bankruptcy are commenced by a creditor, or by the debtor himself presenting a petition to the Court, which on being satisfied as to the matters alleged in the petition, issues a "receiving order." The official receiver thereby becomes the receiver or protector of the property until a trustee has been appointed by the creditors. Within seven days of the receiving order being made, the debtor must furnish to the official receiver his statement of affairs, and after he has furnished his statement of affairs, the debtor must attend for public examination, on which occasion he must answer questions on oath. The official receiver makes a report on the debtor's statement of his affairs, and to a great extent the debtor's discharge depends on the nature of this report. At the public examination the Registrar inquires into the facts alleged by the creditors, and into the debtor's statement of his affairs, and whether he has been guilty of misconduct in conducting his affairs.

Within fourteen days after the receiving order, a general

meeting of the creditors is held, and this meeting decides whether the debtor shall be adjudged bankrupt, or whether a composition or an arrangement shall be accepted from him. If the debtor is adjudged bankrupt, the creditors then appoint a trustee to wind up the bankrupt's estate, or failing them, the Board of Trade appoints a trustee. On the appointment of the trustee, the property of the bankrupt passes to him, and it is his duty to realise the property and to divide the proceeds amongst the creditors.

At any time after he has been adjudged bankrupt, but not until his public examination has been concluded, the bankrupt may apply for his discharge. In dealing with the application, the Court pays special attention to the report of the official receiver, and on taking into account the whole facts of the case, may grant, refuse or suspend the discharge, or may grant it conditionally. The Court will, as a rule, grant the discharge, provided that a good dividend has been paid, that the bankrupt shows that his accounts have been properly kept, that he has not been recklessly extravagant, or indulged in rash or hazardous speculation, or been guilty of misdemeanour in his business. But until he does get his discharge he labours under certain disabilities, one of which is that any person being an undischarged bankrupt who obtains credit for £20 or upwards, without disclosing the fact that he is an undischarged bankrupt, is guilty of a criminal offence, and is liable to imprisonment.

In London, bankruptcy business is administered by the High Court; in the provinces by the local County Courts. The registrars of these courts hear petitions and issue receiving orders, hold public examinations of debtors, approve schemes of composition or arrangement, and grant discharges. But in the local County Courts the registrars can grant orders of discharge, or approve schemes of composition, only where such matters are unopposed.

The petition must be presented to the High Court when the debtor resided or had his place of business within the metropolitan district for the greater part of the six months immediately preceding the presentation of the petition, or when he is not resident in England, or when his address is not known. In other cases, the petition must be presented to the County Court of the district in which the debtor has resided, or has carried on business for the longest period during the six months prior to the presentation of the petition.

The leading topics of the law of bankruptcy will be dealt with in the following order:—

(1) Who may be made bankrupt.
(2) The conditions necessary in order that an insolvent debtor may be made bankrupt.
  (*a*) An act of bankruptcy.
  (*b*) The amount of debt due to the creditor.
(3) The Petition.
(4) The Receiving Order.
(5) The Official Receiver.
(6) The events occurring between the appointment of the official receiver and the appointment of the trustee.
  (*a*) Debtor's statement of affairs.
  (*b*) The public examination of the debtor.
  (*c*) The first meeting of the creditors in which the debtor may be adjudged bankrupt, and in which the trustee is appointed.
(7) The debts provable in bankruptcy.
(8) The property divisible amongst the creditors.
(9) The Trustee.
(10) Preferential Payments and the Distribution of the Property among the Creditors.
(11) Discharge of the Bankrupt.
(12) Small bankruptcies.

WHO MAY BE MADE BANKRUPT. Generally speaking, only those who are capable of making a binding contract are liable to be made bankrupt. (1) An infant cannot be made bankrupt. (2) A *lunatic* may be made bankrupt for debts contracted whilst sane, or if the act of bankruptcy was committed during a lucid interval. He may also be made bankrupt if it is for his benefit, provided that the court or his committee (that is, the person who takes care of the lunatic's estate) consents to his being made bankrupt. (3) A *married woman* carrying on a trade separately from her husband can be made bankrupt. (4) An *alien* may be made bankrupt provided that he is domiciled in England, or has within a year before the presentation of the petition, ordinarily resided or had a dwelling-house or place of business in England. (5) A *dead man* cannot be made bankrupt, but his estate can be administered in bankruptcy.

ACT OF BANKRUPTCY. Any act of the debtor which indicates that he is insolvent, and upon his doing any of these acts, a petition in bankruptcy may be presented against him. Acts of bankruptcy are as follows:—

1. If with intent to defeat or delay his creditors he leaves England, or remains out of England, or adopts any plan to keep out of the way of his creditors, e.g., absenting himself from his dwelling-house, or shutting himself up in his dwelling-house.

2. If he assigns his property to a trustee for the benefit of his creditors; or if he makes any fraudulent gift or transfer of his property or any part of it; or if he fraudulently prefers one creditor to another.

3. If he files a declaration of his inability to pay his debts, or gives notice, either verbally or in writing, to his creditors that he has suspended or is about to suspend payment, or if his goods have been seized to satisfy a judgment obtained against him, and such goods have been sold or have been held by the sheriff for twenty-one days; or if he fails to satisfy a final judgment against himself, after a creditor has served a bankruptcy notice upon him requiring him to pay the judgment debt.

> It must be remembered that in the case of a married woman carrying on business separately from her husband, failure to satisfy a judgment debt after a bankruptcy notice has been served on her will not constitute an act of bankruptcy.

THE PETITION. When an act of bankruptcy has been committed by a debtor, a bankruptcy petition may be presented by a qualified creditor, and a receiving order will be made against such debtor provided that—

> (1) The debt is not less than £50. Two or more creditors may join in a petition if the total amount due to them is not less than £50.
> (2) The debt is a definite sum of money, or is a sum capable of being definitely ascertained, and is payable immediately or at a certain future time.
> (3) The act of bankruptcy occurred within three months of the presentation of the petition.
> (4) The debt is not secured, i.e., a debt charged on some portion of the bankrupt's property, e.g., a mortgage or a bill of sale.
> (5) The debtor is domiciled in England, or within a year before the presentation of the petition has ordinarily resided or had a place of business in England.

At the hearing of the petition, which takes place within eight days after a copy of the petition has been served on the debtor, the creditor must prove the debt due to him, the service of the petition, and the act of bankruptcy. The petitioning creditor should attend the hearing, otherwise the petition may be dismissed. If the Court is not satisfied with the proof of any of these matters, or is satisfied that for any other reason no receiving order ought to be made, the petition will be dismissed. If a debtor present a petition against himself, his petition must state that he is unable to pay his debts, and the Court may thereupon make a receiving order, and if so the debtor is at once adjudged bankrupt. On presenting the petition the petitioning creditor must pay the stamp duty of £5, and must pay the necessary deposit into Court.

THE RECEIVING ORDER. The receiving order does not deprive the debtor of his property but protects it, so that it may not be wasted or diminished by any act of the debtor or of any creditor. It is made, if in the opinion of the Court the facts set out in the petition are proved. This receiving order is advertised in the local paper and in the *Gazette*, and a copy is served on debtor by the official receiver.

The official receiver now becomes the protector of the debtor's property. Ordinary creditors cannot from the date of the receiving order sue the debtor, and all legal proceedings brought by creditors against him are stayed. But, notwithstanding the receiving order, a secured

creditor can realise his security, e.g., a creditor having a bill of sale on the debtor's goods may seize them, so also can a landlord distrain for rent. Again, the receiving order does not affect a creditor whose debt is not provable in bankruptcy. A judgment creditor who has levied execution upon the debtor's estate must, in order to retain the benefit of such execution, have done so before the date of the receiving order and before he had any notice of the act of bankruptcy or of the petition.

The receiving order may be rescinded, if all the creditors are paid in full and the petitioning creditor assents; or if the creditors accept a composition approved by the Court, or if the interests of the creditors and public policy require it; or if a majority in number and in value of the creditors reside in Scotland or Ireland, and the estate ought to be administered there.

CONTROL EXERCISED OVER THE DEBTOR. From the date of the receiving order a strict control is kept upon the debtor. He must submit to the official receiver a statement of his affairs, and at his public examination give every information in his power. If adjudged bankrupt, he must do all that he can to assist in the realisation of the estate and the distribution of the proceeds amongst the creditors. The Court may order for any time not exceeding three months that the debtor's letters shall be delivered not to the debtor but to the official receiver. The debtor may be arrested in any of the following cases. If after a bankruptcy notice has been served upon him, or after presentation of a bankruptcy petition, or after the receiving order has been made—

(1) He absconds or is about to abscond.

(2) He removes or is about to remove his goods with the view of preventing or delaying possession being taken of them by the official receiver or the trustee, or if he conceals or destroys any of his goods, or any of his books or papers that might be of use to his creditors.

(3) Without the leave of the official receiver or the trustee he removes any goods in his possession above the value of £5.

(4) Without good cause he fails to attend any examination ordered by the Court.

THE OFFICIAL RECEIVER. This official is appointed by the Board of Trade. He investigates into the conduct of the debtor, and into his statement of affairs. And he reports particularly in regard to any act of the debtor which amounts to a criminal offence, or which would justify the Court in refusing or suspending the bankrupt's discharge.

The official receiver acts as protector of the debtor's estate until the appointment of the trustee. He acts as trustee during any vacancy in that office. It is his duty to advertise the receiving order, to summon and to preside at the first meeting of creditors, to issue proxies for meetings, to report to the creditors any proposal which the debtor may make to satisfy their claims.

STATEMENT OF AFFAIRS. Within three days of the receiving order the debtor must furnish to the official receiver a clear and accurate statement of his affairs. This statement must be in a form laid down by the law. If the petition is made by himself, the statement of affairs must be furnished within seven days of the receiving order. Any material omission or error in the statement of affairs, if made fraudulently by the debtor, renders him liable to imprisonment.

PUBLIC EXAMINATION. After the debtor has furnished his statement of affairs, he must attend his public examination, on a date fixed by the official receiver. The date is fixed as soon as possible after the debtor has furnished his statement of affairs. The examination will not be concluded until the affairs of the debtor have been sufficiently investigated, and not until after the day appointed for the first meeting of creditors. If the first meeting of creditors is adjourned, the public examination will not be closed until the first adjourned meeting is over.

The examination is held in open court. The debtor may be questioned by the official receiver or by any creditor who has proved his debt. These questions deal with the way in which the debtor has conducted his business, and his dealings with his property, to which questions he must answer on oath, and his answers may afterwards be used in evidence against him.

The public examination may be dispensed with when there is a proposal for a composition by joint debtors (e.g., partners), and one of them is unable to attend through illness or other good cause; *or* when the debtor is a lunatic, or is unfitted mentally or physically to attend.

MEETINGS OF THE CREDITORS. The first meeting of the creditors is held not later than fourteen days after the date of the receiving order, unless the Court extends the time. The debtor must attend and give every information in his power, unless he is prevented by illness or other good cause. Every creditor who has proved his debt can attend and vote either in person or by proxy. The affairs of the debtor and the causes of his failure are discussed, together with the comments of the official receiver upon the debtor's conduct, a copy of these matters having been previously sent to each creditor mentioned in the debtor's statement of affairs.

This meeting decides whether the debtor shall be adjudged bankrupt, or whether a composition or a scheme of arrangement shall be accepted from him, and as to the manner of dealing with the debtor's property. A composition or a scheme of arrangement must be passed by a majority in number representing three-fourths in value of all the creditors who have proved their debts. The debtor may be adjudged bankrupt by a majority in value of the creditors. After a debtor has been adjudged bankrupt, a trustee is appointed by the creditors to take charge and manage the estate during the bankruptcy. All these matters must, however, be approved of by the Court.

At the various meetings of the creditors, such matters as the appointment, removal, and remuneration of the trustee, the appointment of a committee of inspection, and whether an allowance should be made to the bankrupt are also decided.

The order adjudging a debtor a bankrupt may be annulled if a composition is afterwards accepted, or if the bankrupt has paid all his debts in full, or if the Court thinks that the debtor ought not to have been adjudged bankrupt.

DEBTS PROVABLE IN BANKRUPTCY. A creditor may give proof of any debt or liability to which the debtor is subject at the date of the receiving order, or to which the debtor may be subject before his discharge by reason of any obligation incurred before the date of the receiving order. But a creditor can not give proof of the following:—

(1) Demands in the nature of *unliquidated damages*, unless they arise by reason of a contract, promise, or breach of trust.

(2) Debts contracted by the debtor with any person after that person has had notice of an act of bankruptcy.

(3) Contingent debts, the value of which cannot be fairly estimated.

Every creditor should prove his debt as soon as possible after the receiving order. He must make an affidavit verifying the debt, giving full particulars of the debt, and the proofs by which it can be substantiated. This affidavit may be sent through the post to the official receiver. The creditor must deduct from his debt all trade discounts, but if he agreed to allow discount for ready cash he need not deduct more than five per cent.

A secured creditor may realise his security, and if the security does not realise sufficient to pay him the amount of the debt, he can prove for the balance. A secured creditor may surrender his security for the benefit of the other creditors, and may then prove for the whole amount of his debt.

The trustee must examine every proof, and in writing admit it or reject it. If he rejects a proof he must state in writing the grounds of rejection. For these purposes the trustee may administer oaths and take affidavits. Until the appointment of a trustee, the official receiver possesses all these powers.

N.B.—Any person wilfully making a false claim in bankruptcy is guilty of a criminal offence.

THE PROPERTY DIVISIBLE AMONG THE CREDITORS. The creditors can claim all property which may belong to

the bankrupt at the commencement of his bankruptcy, or of which he may become the owner before he obtains his discharge, except money earned wholly by the personal labour of the bankrupt. So, too, all goods belonging to other persons, which are at the commencement of the bankruptcy, in the possession, order, or disposition of the bankrupt *in the course of his trade or business* by the consent of the true owner, can be claimed by the creditors. Of course these goods must be under the bankrupt's control in such circumstances as to lead others to believe that he is the owner of them. Further, if a debtor has conveyed his property to another for the purpose of delaying, defeating, or hindering his creditors, such conveyance will be void, and the property will be divisible among the creditors. Again, if the person who is adjudged bankrupt has made a voluntary settlement of his property on another, such settlement will be void and the property will be deemed divisible amongst the creditors, if the settlement was made within two years of the bankruptcy. And if the settlement was made within ten years of the bankruptcy, it will be void unless the bankrupt can prove that at the time the settlement was made he was able to pay all his debts in full without the aid of the property comprised in the settlement, and that all his interest in the property then passed completely from him.

For example, suppose a man after his marriage voluntarily and gratuitously settles property on his wife or children, and becomes bankrupt within two years, the creditors can claim the property. And if he becomes bankrupt within ten years, they can also claim the property, unless he can show that at the time the settlement was made he was able to pay all his debts in full without the aid of that property, and that he ceased to have any interest in the property after he had transferred it to the wife or children.

A "voluntary" settlement is one that is not made for a good consideration. Marriage is a good consideration, so that the creditors could not take the property if he had made the settlement on his wife or children *before*, and *in consideration of*, his marriage. The same is the case if he had sold the property to a *bona fide* purchaser who gave value for it; or if after marriage he had made the settlement on his wife or children of property which accrued to him after marriage in right of his wife.

Moreover, a fraudulent preference of one creditor over another will be set aside, if made within three months prior to the date of the receiving order. The preferred creditor will be compelled to surrender the property or the payment to the trustee in bankruptcy, for the benefit of the creditors. But the payment to be set aside must have been made with the intention of preferring one creditor to another, e.g., if made under threats, or if the debtor had paid his creditor to save himself from exposure, or from a criminal prosecution, such payment would not be a fraudulent preference, and could not be set aside. Lastly, property over which the bankrupt has a "general power of appointment," that is, property which he can appoint or give to any one, including himself, is divisible amongst the creditors.

The following kinds of property belonging to the bankrupt will not pass to his creditors:—

(1) Property which he holds as trustee.

(2) The tools of his trade, and the bedding and wearing apparel of himself, his wife, and his children, not exceeding in value £20.

(3) Money earned wholly by the personal labour of the bankrupt during his bankruptcy, if such money is not more than is reasonably sufficient for his support.

(4) Any money which he may have obtained as damages for mental or bodily injuries inflicted on him, e.g., damages for libel, damages for injuries sustained in an accident, and the like.

(5) Property settled on the bankrupt until he shall become bankrupt. Of course this property must have been settled on the bankrupt by some person other than himself.

THE TRUSTEE. After the debtor has been adjudicated bankrupt, the trustee is appointed by the creditors. All the property of the bankrupt at once vests in the trustee, whose duty it is to take charge and manage the estate during the bankruptcy. He is often assisted by a committee of inspection, which sees that everything is carried out in the general interest of the creditors. The Board of Trade requires the trustee to give security for the proper performance of his duties. His remuneration is fixed by the creditors or by the committee of inspection, and is a commission payable partly on the amount realised by the trustee out of the estate, and partly on the amount distributed as dividends. If one-fourth in number or in value of the creditors, or if the bankrupt himself think the remuneration too great, the amount will be settled by the Board of Trade.

All money received by the trustee must be paid into the Bank of England, unless the Board of Trade allows it to be paid into a local bank. If a trustee retains in his own hands for more than ten days a sum exceeding £50, he is liable to pay twenty per cent. interest on the excess, and may be removed from his office, and receive no remuneration.

The *duties of a trustee* are to realise the estate and get in all the assets possible. For this purpose:—

(1) He may, with the consent of the committee of inspection, carry on the business of the bankrupt, or permit the bankrupt to do so, and bring and defend actions regarding the property of the bankrupt.

(2) He must keep clear and accurate accounts, and submit them to the committee of inspection at least once in three months; and he must furnish at least once a year to the Board of Trade a statement showing the proceedings in the bankruptcy up to the date of the statement.

(3) He may disclaim all property of the bankrupt which is subject to burdensome covenants, or all contracts of the bankrupt which would be likely to diminish the assets available for the creditors.

Having realised the assets, he must distribute the dividends to the creditors. When all these things are done he may be released from his office on satisfying the Board of Trade that he has satisfactorily performed his duties.

DISTRIBUTION OF THE PROPERTY AMONG THE CREDITORS. Generally speaking, all debts provable in the bankruptcy are paid *pari passu*; but there are certain debts which will be paid before the others. These Preferential Payments are:—

(1) The expenses of the bankruptcy proceedings, which must be paid in full.

(2) All rates and taxes due and payable within the twelve months preceding the bankruptcy, but not exceeding on the whole one year's assessment.

(3) All wages or salary of any clerk or servant for services rendered to the bankrupt within four months before the date of the receiving order, and not exceeding £50.

(4) All wages of any workman not exceeding £25, for services rendered to the bankrupt during two months before the date of the receiving order.

(5) Where an agricultural labourer has entered into a contract for the payment of a portion of his wages in a lump sum at the end of the year of hiring, that sum shall have priority.

(6) Where a landlord, after the commencement of the bankruptcy, distrains upon the goods of a bankrupt for rent due, the distress will be available only for six months' rent due prior to the adjudication order. But the landlord may prove for any surplus which may be due, and if he distrains before the filing of the petition the *whole* of the rent has a prior claim.

DISCHARGE OF THE BANKRUPT. At any time after he has been adjudged bankrupt, but not until his public examination is concluded, a bankrupt may apply for his discharge, but the application will not be heard until the public examination is closed. In dealing with the application, the Court takes into special account the report of the official receiver, and may either grant or refuse the discharge, or suspend the discharge or grant it, subject to some condition with regard to any earnings which may afterwards become due to the bankrupt, or with respect to his after-acquired property. But the Court must refuse the discharge if the bankrupt has been guilty of any criminal offence against the bankruptcy laws, or any other misdemeanour connected with his bankruptcy.

The Court must suspend the discharge for two years at least in the following cases:—

(1) When the estate has not paid a dividend of ten shillings in the pound to the ordinary creditors, unless this is due to circumstances beyond the control of the debtor.
(2) When the bankrupt has not kept proper books of account during the three years preceding the bankruptcy.
(3) When the bankrupt has continued to trade after knowing himself to be insolvent.
(4) When he has contracted debts with no reasonable prospect of being able to pay them.
(5) When the bankrupt has failed to account satisfactorily for a loss or a deficiency of assets.
(6) When the bankrupt has brought about his bankruptcy by rash and hazardous speculations, or by unjustifiable extravagance, or by gambling, or by gross neglect of his business.
(7) When the bankrupt has put any of his creditors to unnecessary expense by a frivolous or vexatious defence to an action properly brought against him.
(8) Where the bankrupt has within three months preceding the date of the receiving order incurred unnecessary expense by bringing a frivolous or vexatious action.
(9) Where undue preference has been given to any creditor within three months preceding the receiving order, the bankrupt not being then able to pay his debts as they became due.
(10) When the bankrupt has on any previous occasion been adjudged bankrupt, or made a composition or arrangement with his creditors.
(11) When the bankrupt has been guilty of any fraud or a fraudulent breach of trust.

The order of discharge frees the bankrupt from all his past debts, except when the liability is incurred through his own fraud. But he is not relieved from debts due by him to the Crown, or debts due as a penalty for infringing the revenue laws, or debts due under a judgment against him in an action for seduction, or under an affiliation order, or under a judgment against him as a co-respondent in a matrimonial cause.

An undischarged bankrupt labours under many disabilities. If he obtains credit to the extent of £20 or upwards, without disclosing that he is undischarged, he is liable to two years' imprisonment. All property to which he may become entitled until he receives his discharge will go to his creditors. Moreover, he cannot sit or vote in either House of Parliament; or act as a justice of the peace, or fill the office of county or borough councillor, or sit on various other local boards.

SMALL BANKRUPTCIES. Where the estate of the debtor is not likely to exceed £300, the Court may order it to be summarily administered with the object of saving time and expense. The procedure is the same as in ordinary bankruptcies, with these differences:—

There is no committee of inspection, and the official receiver has all the powers of a trustee. Notices of sittings of the Courts other than first meetings are not sent to creditors whose debts do not exceed £2. Six months are allowed for the distribution of a dividend, which, if possible, ought to be a final dividend.

If a debtor against whom a judgment has been obtained in a County Court is unable to pay the amount forthwith, and it appears his whole indebtedness does not exceed £50, the County Court may make an order for the administration of his estate and for the payment of his debts by instalments or otherwise.

AVOIDANCE OF BANKRUPTCY PROCEEDINGS.

To avoid the expense and trouble of bankruptcy proceedings, so that the creditors of an insolvent debtor may be paid a greater proportion of the money owing to them, and to avoid the disgrace and the disabilities attaching to a person who is adjudicated bankrupt, a deed of arrangement is sometimes agreed to between the two parties.

DEEDS OF ARRANGEMENT take various forms, the most common of which are:—(1) Deeds of Assignment for the benefit of creditors, (2) Deeds of Composition and (3) Deeds of Inspectorship. It should be remembered that a debtor in entering into any of these schemes should obtain the consent of all his creditors, for if any one of them refuses his assent, he may, within three months, file a petition in bankruptcy against the debtor, as such a proceeding is an act of bankruptcy on the part of the debtor. After the expiration of three months, a dissenting creditor will not be permitted to take bankruptcy proceedings against the debtor.

(1) **Deed of Assignment.** A deed by which an insolvent debtor transfers the whole of his property to a trustee, whose duty it is to realise the estate, and after paying expenses to distribute the proceeds amongst the creditors, in proportion to the amount of their debts.
(2) **Deed of Composition.** By a deed of composition the debtor agrees to pay so much in the £, either in a lump sum or by instalments, the creditors in return releasing him absolutely from all their claims upon him, or giving him a release conditional on his performing his agreement.
(3) **Deed of Inspectorship.** By a deed of inspectorship a debtor is allowed to carry on his business under the supervision of inspectors or trustees, appointed by the general body of creditors.

A deed of arrangement must be registered as a Bill of Sale in the Bills of Sale Office of the High Court, otherwise it will be void. A deed of arrangement may also be set aside if it is designed to defraud creditors, or if within three months of its execution a creditor who has not assented to the scheme files a bankruptcy petition against the debtor, and obtains a receiving order against him.

A trustee under a deed of arrangement must transmit to the Board of Trade in the month of January of every year, accurate accounts of what he has received and paid out on behalf of the estate. If he carries on the business of the debtor, he will be personally liable on any contract he may have entered into on behalf of the business, unless he makes the contract in the debtor's name.

Every deed of arrangement must bear a **stamp** of ten shillings, and in addition a stamp of one shilling for every £100 or part of £100 upon the value of the property transferred to the trustee, or on the amount of the composition to be paid.

LIMITED LIABILITY COMPANIES.

JOINT STOCK COMPANY. A joint stock company is an association of seven or more persons who contribute a certain amount of capital, in the same or different proportions, for carrying on a certain business or undertaking with a view to profit. Joint stock companies are either limited or unlimited:—

UNLIMITED COMPANIES. In these companies the liability of the members is unlimited, each shareholder being liable, to the full extent of his property, for debts incurred by the company. Moreover, should any shareholders prove unable to pay their fair proportion of the loss, the other shareholders are bound to make up the deficiency so long as any property remains to them. The liability, however, of each member ceases at the end of a twelvemonth from the time he withdrew from the company. Such companies are now extremely rare.

LIMITED COMPANIES. These are limited either by (*a*) guarantee or (*b*) shares. In (*a*) each member of the association makes himself responsible for an amount not exceeding a certain fixed sum. In (*b*) the liability of each shareholder is limited to the nominal value of the shares that he holds. When his shares are once fully paid up, he has no further liability.

NATURE OF A LIMITED COMPANY. Such an association differs from a partnership in various ways:—

1. A limited company is a being or person distinct from the persons composing it. The property of the company is not the property of the members, and their goods cannot be seized for the debts of the company. While in a partnership firm, the property of the firm is the property of the partners in common, and their private property can be seized for the debts of the firm.

2. A shareholder in a limited company is not an agent of the company which is in no way liable for the acts of the shareholder: but a partner is the agent of his fellow partners, and they are liable for his contracts or for his fraud or other wrongs done by him in the scope of the partnership business.

3. Shares in a limited company are as a rule transferable, unless the regulations of the company restrict transfer; but a partner cannot transfer his share without the consent of his fellow partners.

4. On the death of a partner the partnership is dissolved, but the death of a shareholder does not terminate the existence of a limited company.

5. In a partnership, the liability of each partner for the partnership debts is unlimited, and the whole of a partner's private property can, if necessary, be seized to satisfy the "firm's" creditors; but in a limited company, the liability of a shareholder is usually limited to the amount unpaid on his shares, and if these are fully paid up, he is under no further liability. In a very few companies the liability of the shareholders is limited by guarantee. Each shareholder agrees that he will contribute a sum up to a certain amount to meet the liabilities of the company so long as he remains a member, and for twelve months after he has ceased to be a member.

6. Lastly, the number of persons forming a partnership must not exceed twenty, and in the case of a banking partnership, ten persons, whereas in a limited company the number of members must never be less than seven, but there is no limit to the number of shareholders beyond this figure; they cannot, however, exceed the number of the shares into which the capital of the company is divided.

ONE MAN COMPANY. What is known as "a one man company" shows that a limited company is a very different person from the members composing it. In such a company one man holds practically all the shares, except those that are allotted to the six other persons necessary to form the company. Such companies may be very useful, possessing as they do all the advantages of private enterprise, while at the same time the liability of the virtual controller of the company is limited. His rights and liabilities are totally different from what they would be were his business not a company, and hence it may lead to sharp practices, by which the creditors of the company, who are virtually his creditors, do not receive a single penny piece.

> For example, S sold his business to a company consisting of himself and six members of his family, who took one £1 share each, while he took 20,000 shares. The price paid to him for his business was £30,000, the payment being not in cash but in 20,000 fully paid up shares, and £10,000 in debentures, that is, he lent the balance of his purchase money, £10,000, to the company on a mortgage of the property of the company. This gave him priority over any other creditors of the company. The company did not succeed, and was wound up, the assets realising £6,000 out of which to pay the £10,000 due to S (which was secured by debentures), and an additional sum of £7,000 due to unsecured creditors.
>
> The ordinary creditors claimed that S and Co. was really the same person as S himself; that he could not owe the £10,000 to himself, and that they should be paid their claims first out of the £6,000. It was held that S and Co. was a different person from S himself, and that he could keep the £6,000, as part payment of his loan to the company. The ordinary creditors got nothing.

The following remarks apply exclusively to companies in which the liability of the members is limited by shares. This is the class of limited company, public or private, with which every one is familiar.

FORMATION OF A LIMITED COMPANY. Suppose that it is desired to convert a private business into a limited company. A "Promoter" comes along and offers to buy the business and goodwill at an agreed price, or undertakes to find a purchaser for it. In the latter case he will obtain a contract for sale—a "preliminary agreement" to be entered into between the owner of the business and some person acting on behalf of the intended company. This he does so as to prevent the owner or vendor of the business from afterwards backing out. Having done this, he induces at least six other people to assist him in forming the company. They decide upon five things, which are embodied in a document known as the "Memorandum of Association."

> The five points are; (1) the objects which the company is formed to carry out; (2) the name of the company; (3) the address where the business is to be carried on; (4) how far each member is to be liable for losses; (5) the amount of capital which is needed for acquiring and carrying on the business.

The Memorandum of Association is then signed by the seven persons, who must each agree to take one share at least in the company, and their signatures to the document must be attested by a witness. The people who sign the Memorandum have to arrange how the business is to be carried on.

This is set out at length in a document called the "Articles of Association," which is signed by the seven people who subscribed to the Memorandum of Association. The articles describe how the whole internal management of the company is to be conducted, and, among other things, the duties and remuneration of the directors, the division of the capital, meetings of members, and the like.

The Memorandum, the Articles, and certain other documents, on being duly signed and stamped, are taken to Somerset House and delivered to the "Registrar of Joint Stock Companies," who, on payment of certain fees, enters the company on the Register and gives a "Certificate of Incorporation."

FLOTATION OF THE COMPANY. The persons forming the company may not have sufficient capital necessary for the successful carrying on the company's business, or they may desire to allow others to share in their good fortune. In either case they will invite the public to join them in sharing the burdens and the profits of the business. They will invite the public to contribute the capital by subscribing for shares. This is done by issuing a circular called a "prospectus," describing the nature of the business, the advantages to be derived from taking shares in the company, and the minimum amount of capital to be subscribed before proceeding to allotment.

> Before issuing the prospectus, the vendors or promoters, if at all doubtful that the public will subscribe capital sufficient to warrant their going to allotment, take care to have all or a part of the shares which they are issuing to the public "underwritten" or guaranteed. This means that they procure a person (underwriter) who for an agreed commission undertakes that in case the public do not take up the shares, he himself will take them up.

Accompanying the prospectus is a "form of application" to be filled up by those applying for shares, stating the number of shares for which they wish to subscribe, and enclosing a sum by way of deposit. This form of application is forwarded to the company's bankers, and on an appointed day the lists are closed, after which no application for shares is entertained.

The next step is to "allot" the shares among the applicants, and a "letter of allotment" is sent to those applicants whose offers to subscribe for shares have been accepted. The letter of allotment states the number of shares granted to the applicant, which may or may not be equal to the number for which he applied. On the allotment of all the shares, or as many as represent the minimum amount of capital required before commencing business (as stated in the prospectus), the company is said to have been successfully floated.

Following these preliminary remarks, the subject of Limited Companies is dealt with under the following heads:—

1. Memorandum of Association.
2. Articles of Association.
3. Incorporation.
4. Underwriting and Placing Shares.
5. Prospectus.
6. Promoters.
7. Directors.
8. Capital.
9. Members.
10. Shares.
11. Dividends.
12. Accounts and Auditors.
13. Meetings and Resolutions.
14. Borrowing Powers.
15. Debentures.
16. Winding up.
17. Readjustment Schemes.

MEMORANDUM OF ASSOCIATION.

This document must contain: (*a*) The name of the company, ending with the word "Limited." (*b*) The address of the registered office of the company. (*c*) The objects and powers of the company. (*d*) How the liability of the

members is limited. (*e*) The amount of the capital and the number of the shares into which it is divided.

(*a*) **THE NAME.** The name of the company with the word "limited" must be shown conspicuously on the outside of every building in which the company carries on its business, and all notices, advertisements, bills, and other documents of the company. In this way every person dealing with the company may know that the liability of its members is limited. The words "royal" and "imperial" must not form part of the name without the sanction of the Home Secretary.

A company may change its name, either by special resolution with the consent of the Board of Trade, or if it has inadvertently adopted a name similar to that of an existing company, the name may be changed by special resolution with the consent of the Registrar of Joint Stock Societies.

(*b*) **THE REGISTERED OFFICE.** The address of the company fixes the domicile or place of abode of the company —the country to whose laws the company is subject. This domicile cannot be changed without an Act of Parliament, but of course, the address may be changed from one part of the kingdom to another by giving notice to the Registrar. The registered office is the place where the register of members is kept, and at which writs or other notices must be served on the company.

(*c*) **THE OBJECTS AND POWERS.** The objects and powers of the company should be made as wide as possible, and should include everything connected, however remotely, with the main objects of the company's business. The reason for so doing is because the company cannot do anything outside the objects and powers given in the Memorandum. Anything done outside the scope of the Memorandum is *ultra vires* and is void, and cannot be ratified by the company, even though every shareholder agreed to it. The shareholders cannot ratify or make valid any act which is *ultra vires* the Memorandum, for they cannot do that which is forbidden by the law of the land. The Memorandum itself cannot be changed without the leave of the Court, and this is another reason for making its scope as wide as possible, so as to save the trouble and expense of resorting to the Court. Hence the greatest care should be taken in framing the Memorandum.

The objects of the company must not be illegal, and if the main objects of a company are gone, the company must be wound up.

A company may alter or extend its Memorandum by special resolution confirmed by the Court, if the alteration is to enable the company to carry on its business more economically or efficiently; or to attain its main purpose by new or improved means; or to enlarge or change the local area of its operations; or to carry on some other business which may be conveniently combined with its own; or to restrict or abandon any of its objects.

(*d*) **THE LIMITATION OF LIABILITY.** The liability may be limited by shares or by guarantee. If a simple statement is made that the liability of members is limited without any further words, it will be taken to mean "limited by shares," i.e. that no shareholder, in the event of the company being wound up, can be called on to pay more than the nominal value of his shares, or so much of it as remains unpaid, and if the shares are fully paid up he is under no further liability.

(*e*) **CAPITAL AND SHARES.** There is no limit to the amount of the capital or the amount of each share. The Memorandum ends with the "Association Clause," which runs as follows:—

> "We, the several persons whose names and addresses are subscribed, are desirous of being formed into a company in pursuance of this Memorandum of Association, and we respectively agree to take the number of shares in the capital of the company set opposite to our respective names."

There must be at least seven persons each taking at least one share to sign this document. Their full names and description must be given. One witness to all the signatures is sufficient. An infant may subscribe his name. All the subscribers may be aliens, provided that the business is carried on or is managed in England. The subscribers must pay for the shares set out against their names, must sign the Articles of Association, and must appoint the first directors. Until the directors are appointed the subscribers act as directors.

THE ARTICLES OF ASSOCIATION OR REGULATIONS.

(*a*) **THE ARTICLES.** The Articles are the rules which describe the mode of carrying on the business of a limited company. They deal with the appointment, duties, qualification, and remuneration of directors, the division of capital into shares, the issue and transfer of shares, calls, forfeiture of shares for non-payment, borrowing powers, meetings, votes, and resolutions, the payment of dividends, accounts, audit, and such other matters as may be necessary according to the nature of the company's business.

> A company need not draw up Articles, for if there are none, the form known as Table A in the first schedule of the Act of 1862 becomes the Articles of the Company.

The Articles must be printed in numbered paragraphs, and must be signed by the same persons who subscribed to the Memorandum. There must be a witness to the signatures. The articles must bear a 10s. deed stamp and a 5s. registration stamp.

The "Regulations" of the company are the Articles and any special resolutions altering the Articles passed by the company. These resolutions must be printed and appended to the original Articles, and a copy must be filed with the Registrar of Joint Stock Companies, together with a registration fee of 5s.

(*b*) **ALTERATION OF ARTICLES.** The Articles may be altered by a special resolution in a general meeting, i.e. a resolution passed by a majority of three-fourths of those present at a meeting of which due notice has been given, and confirmed by a bare majority at another meeting held from two weeks to a month later.

The alteration must be within the powers given in the Memorandum, otherwise it will be invalid, but any alteration which sacrifices the interests of a minority of the shareholders will not be allowed unless the alteration is for the good of the company as a whole.

A company cannot deprive itself of the power to alter its articles. An alteration not made in the proper way is not necessarily bad. It may be retrospective.

(*c*) **EFFECT OF THE ARTICLES.** The Articles bind each member to the company and to the other members. Thus where the Articles provided that if any member should become bankrupt, his shares should be sold to certain other members at a certain price, it was held that such an arrangement was good.

The Articles cannot authorise any act outside the scope and powers of the Memorandum. Such an act would be *ultra vires* and could not be ratified even if all the shareholders agreed to it. Whereas an act not authorised by the Articles, but within the powers of the Memorandum, may be ratified.

Shareholders are entitled to have a copy of the Memorandum and the Articles on payment of a shilling to the company. Any one may inspect these documents at Somerset House. Hence if any one deals with the company in any matter outside the scope of the Memorandum and the Articles, he may not be able to enforce the contract, for he could easily have ascertained that the matter was beyond the powers of the company.

But if the matter is within the scope of the Memorandum and the Articles, a stranger is not bound to inquire as to whether the directors have taken all the necessary steps. Thus in a certain company the directors had power to borrow money on bonds if authorised to do so by special resolution. They issued bonds without a special resolution having been passed. It was held that the bond holders could enforce the bond. If the bond holders, when they lent their money, had been aware of the irregularity, they would not have been able to enforce the bonds.

INCORPORATION.

(*a*) **DOCUMENTS AND STAMPS.** Before the company can be registered and incorporated, the following documents, duly stamped and signed, must be deposited with the Registrar of Joint Stock Companies.

(1) The Memorandum of Association, bearing a deed stamp of 10s. and (if the nominal capital of the company does not exceed £2,000) a fee stamp of £2. If the nominal capital exceeds £2,000, then the above fee of £2 and the following additional fees :—

For every £1,000 or part of £1,000, after the first £2,000 up to £5,000	£1	0	0
For every £1,000 or part of £1,000, after the first £5,000 up to £100,000	0	5	0
For every £1,000 or part of £1,000, after the first £100,000	0	1	0

But the total fees shall not exceed £50.

(2) Articles of Association, bearing a deed stamp of 10s. and a fee stamp of 5s.

(3) List of persons who have consented to be Directors, with a stamp of 5s.

(4) A Statutory Declaration of compliance with the Companies Acts, with a stamp of 5s.

(5) Statement of the Nominal Share Capital, with an *ad valorem* stamp duty of 5s. on every £100 or part of £100 of such capital.

(*b*) **FORM OF CERTIFICATE OF INCORPORATION.** "I hereby certify that the ——— Company, Limited, is this day duly incorporated under the Companies Acts, 1862 to 1900, and that the company is limited.

Given under my hand this—— day of ——

(Signature) Registrar of Joint Stock Companies.

This certificate is conclusive evidence that the company is duly registered, and that all matters necessary for registration have been complied with.

UNDERWRITING AND PLACING SHARES.

An underwriting agreement is one entered into before the shares are brought before the public, that in the event of the public not taking up the whole of the shares, or the number mentioned in the agreement, the underwriter will, for an agreed commission, take an allotment of such part of the shares as the public has not applied for. The commission may be for any amount, if (1) the Articles authorise payment; (2) the prospectus discloses this fact; and (3) the shares are offered to the public.

Underwriting differs from Placing Shares, in this, that the person who agrees to "place" shares, does not agree to take the shares, but to find others who will take them. For his services he is entitled to a commission.

THE PROSPECTUS.

(*a*) **WHAT IT IS.** The prospectus is a circular issued by the promoters after the company has been formed, inviting the public to take shares in the company. The greatest care should be taken in framing the prospectus, for although some colouring and exaggeration may be permissible, yet it must not contain any untrue statements of fact. It must not conceal any material facts, and it must disclose everything required by the Companies Act of 1900, and it must be dated and filed with the Registrar. The law is so strict at the present time, that many promoters do not issue a prospectus at all, or if they issue a circular they expressly state that it is not to be taken as a prospectus, or if they do issue a prospectus, the head office of the company is placed outside the United Kingdom, say in the Channel Islands, in which case the provisions of the Companies Acts do not apply. In most cases the company is floated without the issue of a prospectus, the public being induced to apply for shares by the process known as "making a market" for the shares. (Refer to "Making a Market" in *Index*.)

(*b*) **FALSE STATEMENTS IN PROSPECTUS.** Where the false statements are made knowingly, in other words fraudulently, a shareholder who has been induced to take shares on the strength of such false statements may have his contract rescinded, that is, he may get his money back, and he may also recover damages if he has actually sustained damage.

Where the false statements have been made unwittingly, that is made honestly, the shareholder who has applied for and has obtained shares can get his contract rescinded, but he must apply to the Court for rescission of the contract as soon as possible after he has discovered the misrepresentation, and before the company is wound up. He may also get damages against the directors or the promoters for the false statements, unless :—

(1) They had reasonable grounds for believing the false statements to be true : or

(2) They made the statements upon the authority of an expert whom they had reasonable grounds for believing to be competent : or

(3) The statements were a correct copy of an official document.

Concealment, which implies falsehood, amounts to fraud, and such concealment will render the directors liable.

(*c*) **THE PROSPECTUS** must state the following particulars :—

(1) The contents of the Memorandum.

(2) The number of shares as the qualification of directors and their remuneration, and their names and addresses.

(3) The minimum subscription on which the directors may proceed to allotment. This means the minimum amount of capital which must be subscribed by the public before shares will be allotted.

(4) The number of shares and debentures issued for other than a cash payment.

(5) The names of the vendors and the amount payable to each, and whether in cash, shares, or debentures, and the amount of the purchase money specifying the amount paid for goodwill.

(6) The amount payable as underwriting commission (if any).

(7) An estimate of the preliminary expenses.

(8) Promoters' fees.

(9) The date of and the parties to any material contract—but not if made in the ordinary course of the company's business, or if made more than three years before the issue of the prospectus.

(10) Names and addresses of the auditors.

(11) The interest of every director or promoter in the promotion of or in the property proposed to be acquired by the company.

Where the prospectus is issued more than a year after the company is entitled to commence business, then Nos. (1) and (2) may be omitted, and contracts made more than two years before the prospectus need not be disclosed.

If any of the above items be omitted in the prospectus, a director or a promoter will be liable in damages to any shareholder who sustains damage by reason of such omission, unless he did not know of the matter omitted, or the omission arose from an honest mistake of fact on his part. But a shareholder cannot repudiate his shares by reason of the above matters being omitted in the prospectus.

PROMOTERS

(*a*) **WHO THEY ARE.** A promoter is one who undertakes to form a company and to set it going, and who takes the necessary steps for that purpose. The term is simply a business one, and implies a person who "floats" the company. A promoter is not a trustee or an agent of the company, for it is not yet in existence, but he is practically in the position of a trustee towards the company which he promotes and towards the persons whom he induces to become shareholders.

The promoter makes the prospectus as attractive as possible, but he must take the greatest care to disclose all material matters, and not to make false or fraudulent statements in it (see above).

(*b*) **FIDUCIARY POSITION.** A promoter must not make any secret profits. If he secretly receives any commission or profit from the vendors or any one else, he can be compelled to give it up to the company.

Further, a promoter is not allowed to derive a profit from the sale of his own property to the company, unless all material facts are disclosed. He ought to disclose the amount of his profit on the sale. He ought to disclose

this either in the prospectus, or the Articles of Association, or to an independent board of directors.

DIRECTORS.

Directors are the persons managing a trading concern for the benefit of themselves and all other shareholders.

(*a*) **WHO MAY BE DIRECTORS.** Any one, except a clergyman licensed or allowed to perform the duties of an ecclesiastical office, may be the director of a limited company.

(*b*) **POSITION OF DIRECTORS.** A director is in a sense both an agent of and a trustee for the company. He must act faithfully as a trustee of all the property of the company which comes into his hands, and he must exercise *bona fide* all the powers which the company may have conferred upon him. But directors are not trustees for individual shareholders; thus directors while negotiating for the sale of the company at a very high price, bought shares from a shareholder without disclosing this fact to him, and it was held that the sale was good. Had they been trustees for him, they would have been bound to return him the shares. A director cannot, without the consent of the company, make a secret profit at its expense; nor can he contract with the company unless the Articles permit him to do so, otherwise the company may repudiate such a contract.

Directors are agents of the company. Hence any contract made by them for the company binds the company, provided it is within the scope of the company's business as defined in the Memorandum, and they themselves are not personally liable on such a contract, provided they make it clear that they are acting merely in their capacity of directors.

If the directors do an act beyond their powers as laid down in the Articles, but not beyond the powers of the company as defined in the Memorandum, such an act may be made valid by the consent of every shareholder. And in the same circumstances, if they make a contract on behalf of the company with an outsider who has no knowledge of their want of powers, the company will be bound by the contract.

If the directors, as agents of the company, commit a fraud or other wrong upon an outsider, the company will be liable provided that the act done was in the scope of their authority, and was in the company's interests.

(*c*) **APPOINTMENT OF FIRST DIRECTORS.** First directors may be appointed by the Articles, or by the subscribers to the Memorandum.

If appointed by the Articles, every such proposed director must have signed and filed with the Registrar his consent to act as director, and must either have signed the Memorandum for his qualification shares, or have signed and filed with the Registrar a contract to take from the company and to pay for his qualification shares (if any).

If appointed by the subscribers to the Memorandum, the appointment must be made either by the majority at a meeting of subscribers to which all of them have been properly summoned, or by a writing signed by all the subscribers.

(*d*) **QUALIFICATION.** A share qualification for directors is not essential, unless the company desires that its securities may obtain official quotation on the Stock Exchange. The Articles usually provide that no one may be a director unless he holds a certain number of shares, in which case the qualification must—(1) be disclosed in the prospectus; (2) each director must obtain his qualification shares within two months of his appointment, otherwise he will be liable to a fine of £5 for every day that he acts as director from the expiration of the two months; and (3) the company cannot commence business until every director has taken up his qualification shares and paid on them, if payable in cash, the same proportion as has been paid by the public on application and allotment.

Directors must not secretly accept their qualification shares from the promoters. If they do so, they will have to account for their value to the company.

(*e*) **DISQUALIFICATION.** If a director parts with his qualification shares he is disqualified. The Articles usually specify what acts will disqualify a director, e.g. holding a paid office under the company, such as secretary, making secret profits, or voluntarily absenting himself from meetings. When disqualified he cannot act, and the company may obtain an injunction to restrain him from acting; but an individual shareholder cannot take proceedings against him, unless the director holds the majority of the shares, and so prevents the company from bringing the action. Even then the shareholder can only bring proceedings if the director is perpetrating a fraud or is acting *ultra vires* the company.

> The Articles may stipulate that acts done by disqualified directors, or by directors not properly elected, shall be valid in spite of the disqualification.

(*f*) **REMUNERATION.** Directors cannot claim any remuneration for their services unless the Articles authorise payment; when there is no special provision in the Articles, payment to the directors is in the nature of a gratuity, and cannot be sued for. If the Articles provide for remuneration, the directors may sue for it, whether the company is making any profits or not.

If the Articles provide that the directors shall be paid a fixed sum per annum, or a yearly sum, a director who retires before the end of a year of service cannot claim anything. It is otherwise if the Articles provide that the directors shall be paid "at the rate of" so much per annum.

The fact that directors give their services gratuitously does not lessen their liability in any way.

(*g*) **QUORUM.** This is the number of directors who must be present to enable them to act as a board and to exercise the powers vested in them as a body. If the requisite number is not present, the meeting is irregular and cannot transact business. The Articles or Regulations usually fix the quorum. If no quorum is fixed, then the number who usually act will be sufficient. Every director must be summoned to the meeting. Proper minutes must be kept of their proceedings.

(*h*) **POWERS.** The powers of the directors are given by the Articles, but in addition to the specific powers given them there is usually a clause stating that the directors may exercise all the powers of the company which are not otherwise required to be exercised by the company in general meeting.

Directors who act in excess of these powers may be personally liable to those with whom they have to deal, on the ground that they warranted that they possessed authority so to act. Where the act done by the directors is in excess of their powers, the shareholders may ratify it, provided the act is within the powers of the company, as defined in the Memorandum.

Directors cannot, as a rule, make contracts with their company. Such contracts may be set aside, whether there is fraud or not. Of course this rule does not apply to the case of a director taking shares or debentures in the company. Again, the Articles may permit a director to make a contract or be interested in a contract with the company on certain conditions, e.g. that he is to disclose the nature of his interest in the contract, and is not to vote in the matter.

The directors exercise their powers by resolutions passed at a board meeting, of which due notice is given to every director, and at which the requisite quorum is present. The Articles may give them power to act otherwise. Directors cannot delegate their powers unless expressly authorised by the Articles to do so. The powers of directors cease as soon as winding-up proceedings have commenced. Unless the Articles contain a power to remove directors, a director cannot be removed until the Articles have been altered by special resolution. If it happens that a director cannot be removed, and a dead-lock ensues, the only thing that can be done is to obtain a winding-up order.

(*k*) **LIABILITIES.** In regard to false statements contained in a prospectus, the civil liability of directors has been already dealt with. But they may also be criminally

liable for false statements which are fraudulent, if made with intent to deceive any member, or with intent to induce persons to become shareholders, or to intrust their property to the company—the punishment being imprisonment not exceeding two years, or penal servitude not exceeding seven years.

Further, directors are liable in heavy penalties for breaches of the Companies Acts. Among the most important of these offences are—acting without qualification, allotting shares irregularly, not filing report of statutory meeting, not registering mortgages and charges, making false statements in documents, and commencing business improperly.

Where directors apply the funds of the company to purposes which are *ultra vires* the company (that is to purposes outside the powers given in the Memorandum,) they are personally liable to replace the funds, no matter how honestly they may have acted. Directors who are guilty of constant non-attendance and leave the management to others may be liable for the breaches of trust committed by others; in other words, they may be liable for negligence. In case directors are made liable for wrong doing, then any one who has to pay the damages may be entitled to call on the others who are equally blameworthy to contribute their proper share to the amount.

CAPITAL.

(*a*) **VARIETIES.** The capital of the company may be divided into three classes: Preference Shares, Ordinary Shares, and Deferred Shares.

(1) **Preference Shares** may entitle the holders either to priority in respect of dividends, or to priority in respect of return of capital in the event of the company's being wound up. The holder of preference shares of the first kind is entitled to a fixed annual dividend before any dividend can be paid on the ordinary shares, but he is not entitled to anything more, no matter how great the profits may be. Such shares are either "cumulative" or "non-cumulative." In the case of cumulative shares, if the profits in any one year are not sufficient to pay the fixed dividend, the deficiency must be made good out of the profits of subsequent years.

Preference shares are cumulative unless they are expressly made non-cumulative, or language is employed to show that they are not cumulative, e.g. where the Articles provide that the holders of the preference shares shall be entitled "out of the net profits of each year" to a preference dividend at the rate of five per cent. per annum. In this case the shares would not be cumulative.

(2) **Ordinary Shares.** These receive dividends after the preference shares have been paid their fixed dividend.

(3) **Deferred Shares or Founders' Shares.** The holders of these shares are entitled to the surplus profits, or to a certain portion of the profits after the payment of a certain dividend on the ordinary shares. They are usually very few in number, and hence, if the company is successful, they will be worth many times the value of the ordinary shares. The public do not like these shares, which are now seldom created. Founders' shares are allotted to persons who have borne the chief burden and expense in forming the company.

(*b*) **RESERVE CAPITAL** is capital which has not yet been called up, and which the company by special resolution decides shall not be called up except in the event of the winding-up of the company. In a recent case it was decided that a company has no power to mortgage its reserve capital, but the soundness of this decision has been disputed.

(*c*) **STOCK.** When the shareholders have fully paid up to the company the nominal value of the shares, the shares may be turned into stock. The difference between stock and shares is that stock may be divided into fractional amounts, whereas shares cannot be subdivided, unless authorised by the regulations or by special resolutions. But the holders of the stock are members and have the same rights as they enjoyed when holding shares of the same value as the stock. One great convenience of stock is that in transferring it, it is not necessary to specify all the numbers, as would be the case in transferring shares. A transfer of stock is merely one of so many pounds' worth of stock.

(*d*) **INCREASE OF CAPITAL.** When a company has issued all its share capital, and requires further funds for carrying on its business, it may issue new shares to the public. This power to increase capital is usually given in the Articles which prescribe the manner in which the permission to increase is given, whether by special resolution, extraordinary resolution, by the directors with the sanction of a general meeting, or by the directors alone. If the Articles are silent as to the increase of capital, the capital may be increased by special resolution. The new shares may be preference, or ordinary or deferred, provided that there is nothing in the Memorandum to prevent it. Any increase of capital must be notified to the Registrar of Joint Stock Companies.

(*e*) **ALTERATION.** Capital may be altered by "consolidating" existing shares, e.g. by changing every four £5 shares into one £20 share; or, as is more frequently done, by "subdividing" them, e.g. by changing every £5 share into five shares of £1 each; or by turning fully paid-up shares into stock.

The method by which an alteration of capital is effected is the same as that for effecting an increase of capital. Notice of the increase must be sent to the Registrar within fifteen days, under a penalty of £5 per day on every director of the company.

(*f*) **REDUCTION OF CAPITAL.** Where a part of the capital has been lost, dividends ought not to be paid without making some provision out of the profits for repairing the loss. The loss may be so great as, e.g. where a shipping company loses part of its fleet by a storm, or where a new invention makes articles unsaleable that it would be impossible to pay any dividends at all, for any profits would be employed in restoring the lost capital. In such cases the company may, by leave of the Court, write off this lost capital and pay dividends on the remaining capital.

In all cases where the rights of creditors would be jeopardised, the reduction cannot be effected without the leave of the Court, for the creditors look to this capital as the fund out of which they are to be paid. It is on the strength of this fund, and on the fact that the shareholders are liable for the amounts unpaid on their shares, that creditors deal with the company. If then this capital were reduced, and the liability of the shareholders to pay up on their unpaid shares consequently disappeared, the position of the creditors would be altered for the worse. The same would be the case were a portion of the paid-up capital returned to the shareholders. Hence before a reduction of capital can be effected, the sanction of the Court must be obtained, so that the rights of creditors may be safeguarded. But in cases where the rights of creditors are not endangered, reduction of capital can be effected without leave of the Court.

The company can, without leave of the Court, reduce its capital:—

(1) By forfeiting shares for non-payment of calls or other liabilities.

(2) By paying off paid-up capital out of accumulated profits, on the understanding that it may be called up again.

(3) By cancelling shares which have not been taken up.

The following modes of reduction require the leave of the Court:—

(1) Reducing the liability of members for uncancelled or unpaid capital, e.g. where the shares are £2 each, with £1 paid up, reducing them to £1 fully paid-up shares, and thus relieving the shareholders of a liability of £1.

(2) Returning to the shareholders, paid-up capital not wanted for the purposes of the company, e.g. where the shares are £2 fully paid up, reducing them to £1 10s., and giving back 10s. on each share.

(3) Paying off paid-up capital out of capital on the footing that it may be called up again.

(4) Cancelling or writing off capital which has been

lost or which is not represented by available assets, e.g. where uninsured property has been lost or destroyed.

The most common form of reduction is an "all round reduction," i.e. the nominal value of all the shares is proportionately reduced. The reduction may be written off one class of shares and not off others, as e.g. where the ordinary shares and not the preference shares are reduced. But no reduction will be permitted that is unfair to any class of shareholders.

In order to effect a reduction of capital, the Articles must give a power to reduce. If there is no power in the Articles, the Articles must be altered by special resolution so as to give the power to reduce. Subsequently a special resolution is passed to reduce the capital. The company then petitions the Court to confirm the resolution. An inquiry is ordered by the Court as to the debts and liabilities of the company. The creditors must consent or must be paid off, and after the lapse of some months the Court hears the petition, and confirms or refuses it as the case may be. If the petition is confirmed, and the Court sanctions the reduction, the words "and reduced" must be added to the name of the company, e.g. The X. Company, Limited and Reduced. The words are added only for a short period, about a month from the time the Court sanctions the reduction.

MEMBERS.

(*a*) **WHO ARE MEMBERS.** (1) Persons who sign the Memorandum become members when the company is incorporated. (2) Persons who agree to become members by applying for an allotment of shares or by taking a transfer of shares from a member and have been placed on the register of members. (3) Persons who are registered as members in succession to a deceased or a bankrupt member. (4) Persons who allow their names to be on the register of members.

A subscriber to the Memorandum must take and pay for the shares which he agreed to take unless all the shares have been taken up by others, and he must take the shares direct from the company; he cannot take them from another subscriber. A subscriber should be careful in this matter. Supposing a vendor agrees to take shares as part of the purchase money, and signs the Memorandum for those shares, he will have to take them twice over, once as part of the purchase money, and once for having signed the Memorandum for that number of shares.

Those who agree to take shares are not deemed to be members until their name is put on the register. But if a person has shares allotted to him he can insist on his name being put on the register, and if a member's name is wrongfully struck off, he is still a member. Further, if a person who has not agreed to take shares is put on the register, he is not a member at all.

An infant may be a member, but he can repudiate his shares on his coming of age, unless in the meantime he has received some benefit from them, e.g. dividends. If a person lends money to the company on a mortgage of its shares, he is in the position of a member in respect of those shares. A company may be a shareholder in another company, if its Memorandum gives it power to do so, or if it takes the shares in payment of a debt due to it by the other company. A person who agrees to "place" shares is not a member, because he does not agree to take the shares.

(*b*) **A PERSON CEASES TO BE A MEMBER:—**

(1) By transferring his shares to another, but for a year he still remains liable to be put on the "B list" of contributories. (See under "Winding up.") (2) By his shares being forfeited. (3) By his shares being sold by the company in order to enforce its lien on the shares. (4) By death; but his shares pass to his executor or administrator. (5) By the trustee in bankruptcy of a bankrupt member disclaiming his shares. (6) By having his contract of membership rescinded on the ground of mistake, or of a misrepresentation in the prospectus.

(*c*) **LIABILITY OF MEMBERS.** A shareholder is liable to pay to the company the whole of the nominal value of his share in cash. Otherwise he will be liable in the event of the winding-up for the amount remaining unpaid. This is quite irrespective of the price he himself may have paid for the shares. For example, the shares of a company may be of the nominal value of £5, on which only £2 has been paid up. The market price of those shares may be anything. In fact, if the company is very prosperous, a person buying the shares in the market might have to pay £20 for each share, and yet he would be liable for £3, the amount still remaining unpaid. If, then, the company afterwards fell on evil times, the position of such a purchaser would be serious.

The payment for shares must be in cash, but suppose the company owed a person, say £300, and he agreed to take 300 £1 shares in satisfaction of the debt, such a person would be deemed to have paid cash for his shares. Payment for shares may also be made not merely in cash, but in money's worth, e.g. by giving property or services in return for the shares. In this case, however, the contract to take the shares must, within one month, be registered with the Registrar of Joint Stock Companies. This contract must show what consideration the person gave for his shares, as e.g. property or services. Apart from circumstances of fraud, it is not necessary that the property or the services should be worth the shares given for them.

In ordinary cases, the shares must be paid for in cash, and the shareholder remains liable until the whole nominal value of the shares is paid up. Hence the company cannot "issue shares at a discount," that is, the company cannot issue shares say of £1 each, to a person for 15s. a piece, on the understanding that they are to be deemed fully paid up. If the company does issue the shares on those terms, the person taking the shares will be liable to pay the remaining 5s. on each share in the event of winding-up. It is *ultra vires* the company to issue its shares at a discount, and neither the Memorandum, nor the Articles, nor a unanimous vote of the shareholders can make it lawful.

N.B.—Even after a member has parted with his shares he remains liable for a year (see "Winding up").

(*d*) **REGISTER OF MEMBERS.** The register contains the names, addresses, and occupations of each member, the amount and the numbers of his shares (each share bears a number), the date of his acquiring them, and the amount paid up on each share. It must be remembered that the amount paid up on the shares has nothing whatever to do with the price which the member may have paid for his shares.

Outsiders may inspect this register on paying a shilling, members may inspect it gratis. Extracts may not be made, but a member may obtain a copy at the rate of 6d. per 100 words. The company may close the register for not more than thirty days in each year. The closing must be advertised.

No notice of any trust shall be put on the register. This does not mean that a person cannot hold shares in trust for another, but it does mean that so far as the company is concerned, it will regard the holder of the shares not as a trustee of, but as the owner of the shares, and therefore personally liable for calls upon the shares.

SHARES.

(*a*) **ALLOTMENT.** When a person applies for shares he makes an offer to take shares. The allotment is the acceptance of his offer. It is "the appropriation of a certain number of shares to a person by a resolution of the directors." To constitute a valid allotment there must be a duly constituted board of directors. The rules governing allotment are the same as those governing ordinary contracts, together with certain rules made by the Companies Acts.

An application to take shares may be revoked at any time before notice of allotment has been *posted* to the applicant. The moment the letter of allotment has been posted, the applicant is bound to take the shares, even though the letter never reaches him. But if there is unreasonable delay in allotting shares to an applicant, he may refuse to take them when allotted. Again, if he

makes a conditional application, and the condition is not fulfilled, he is not bound to take the shares. For example, B offered to take 100 shares if he were appointed manager. He was not appointed, and therefore he was not bound to accept the shares. Further, the directors in allotting shares must do so unconditionally, e.g. if in allotting they introduce a new term stating that the shares must be paid up at once under penalty of forfeiture, this is not binding on the applicant, who can, if he likes, refuse the shares. The company cannot proceed to allotment unless at least the amount of shares (if any) fixed by the Memorandum or the Articles as the minimum amount, upon which the directors may proceed to allotment, has been applied for, and not less than five per cent. of the value of the shares has been paid.

This is to prevent directors going to allotment when there is no possible chance of getting sufficient capital to carry on the company. Frequently they used to go to allotment merely for the purpose of getting their preliminary expenses.

If the minimum subscription is not subscribed within forty days from the issue of the prospectus, the money paid by the applicants must be returned within the next eight days; otherwise the directors will be liable to pay in addition five per cent. interest from the end of the forty-eight days.

(*b*) **SHARE CERTIFICATE.** The document issued to a shareholder by the company stating that he is the holder of so many shares, with their numbers, and the amount which has been paid up on each share.

Shareholders very often raise money by pledging the share certificate. Persons who lend money on these pledges run some risk, for a shareholder can nearly always get a new certificate by declaring that the old one is lost or destroyed.

(*c*) **TRANSFER.** A transfer of shares must be in writing. It need not be by deed unless the Articles require it. The transfer is not complete until the transferee is entered on the register. The stamp duty is 10s. per cent. on the price paid for the shares. If the shares are transferred for a nominal consideration, the stamp duty is 10s., whatever the actual value of the shares.

Where a shareholder transfers his shares to a man-of-straw in order to escape liability on the shares, the transfer is good, and the transferor is released from his liability provided he retains no right or interest in the shares. Usually, however, the Articles restrain the right of transfer by empowering the directors to refuse to register the transferee if calls are in arrear. In some cases they are empowered to refuse a transfer without assigning reasons, but in this case the directors must act *bona fide*. Again, the Articles may stipulate that before the shares can be offered to outsiders, the other shareholders may have the right to buy them at a fixed price. This is often done in the case of private companies.

In the case of "blank transfers," i.e. transfers where the name of the transferee is not inserted at the time of the transfer, the name of the transferee may be subsequently filled in. But if the transfer is to be by deed, this cannot be done unless the transferor gives the transferee a power of attorney to do so, and if this power is not given the transfer is void. Blank transfers are employed when a shareholder mortgages his shares, and in case he does not repay the loan, the mortgagee can fill in his own name, and get himself put on the register of members.

Where a shareholder sells part only of his shares, two new share certificates must be issued by the company—one for the shares not sold, which is given in place of the old certificate, and one issued to the purchaser of the sold shares.

(*d*) **FORGED TRANSFERS.** Where a transfer is forged, and the innocent transferee obtains a new certificate from the company, the true owner can nevertheless claim the shares, and have his name restored to the register. The transferee has no remedy against the company, but only against the person who transferred the shares, who is, of course, a criminal. But if the transferee has acted on the faith of the certificate, and has, for example, sold the shares, then he or the *bona fide* purchaser from him may sue the company. Hence a company, when a transfer has to be registered, usually writes to the transferor informing him of the deposit of the transfer form, and stating that it will be registered unless, by return of post, he objects. He need not reply, and if in fact the transfer is forged, his not replying will not prevent him from claiming the shares.

Where a transfer is invalid, the transferor is still liable for calls on the shares. Upon a valid transfer of shares, the transferee is bound to pay subsequent calls on the shares, and to indemnify the transferor against any calls or liability which may arise after the transfer. The transferor, however, remains liable for a year, in case the transferee is unable to meet calls.

Transfers made during a compulsory winding-up or during a winding-up under supervision of the Court, are void unless sanctioned by the Court. If made during a voluntary winding-up, they are void unless sanctioned by the liquidator. If a transfer is incomplete at the commencement of the winding-up because of not being registered, the Court will not put the buyer on the register, and he will thus not be liable on the shares. Where the same shares have been transferred to different persons who are not aware of the transferor's dishonesty in so doing, the transferee who is the first to get himself registered as a member is regarded as the owner of the shares.

(*e*) **TRANSMISSION.** When a shareholder dies his shares vest in his executor or administrator, and his estate remains liable for calls. The executor can be put on the register, but this will make him personally liable for calls, but he can recoup himself out of the estate. The executor can sell the shares without being put on the register.

When a shareholder becomes bankrupt, his trustee in bankruptcy can sell the shares for the benefit of his creditors. The trustee can repudiate the shares if they are worthless, or if there is any liability on them as for calls. In that case, the company can prove in the bankruptcy for the calls.

(*f*) **SHARE WARRANTS TO BEARER.** *When shares are fully paid up*, the company, if allowed by the Articles, may, on their giving up their share certificates, issue to its shareholders share warrants to bearer, stating that the bearer is entitled to the shares mentioned therein. The shares can then be transferred by simple delivery of the share warrant, and no stamp duty is required for the transfer, but the share warrant bears a stamp of 30s. for every £100. These documents, though under seal, are held to be negotiable instruments.

When a share warrant is issued to a shareholder his name is struck off the register, because, as the holder of the warrant is for the time being the shareholder, the company has no means of knowing who he may be. Hence "coupons" are attached to these warrants, entitling the holder to dividends on the dates mentioned in the coupons. When the dividend is due, the appropriate coupon is torn off and presented to the company for payment.

The holder of a share warrant has all the rights of a member, though his name is not on the register. Before he can attend a meeting or vote he must produce his share warrant.

(*g*) **CALLS.** Calls are instalments of the amount unpaid on shares, payable "when called for" by the directors in the manner prescribed by the Articles. Instalments payable by the terms of the prospectus are not calls, e.g. £1 shares may be issued on the terms of 5s. payable on application, 2s. 6d. on allotment, and 2s. 6d. within three months of allotment, the remaining 10s. when called for. The first three payments are not calls. The remaining 10s. is paid by means of calls.

Calls must be made by the directors in the manner specified in the Articles, otherwise they are invalid, and the shareholder need not pay. The call must specify the time and the place of payment.

The company can sue shareholders who refuse to pay calls. Interest may be charged on calls in arrear. The directors must take all necessary steps to enforce payment of calls, otherwise they will be guilty of a breach of duty,

The power of making calls must be exercised by the directors *bona fide* and for the benefit of the company.

(*h*) **PAYMENT IN ADVANCE OF CALLS.** The Articles may empower directors to receive from a member money due on their shares before any call has been made, and may pay interest on the amount so paid. But the directors can only receive such "payments in advance of calls" when it is for the benefit of the company, and the interest paid must not be excessive. In one case a company was insolvent. There was no money to pay the directors' fees. They accordingly paid up the amount due on their shares, and then out of this money paid themselves their fees. It was held that the directors were still liable on their shares. Where a shareholder pays in advance of calls, he is to that extent a creditor of the company, and is entitled to his interest on the amount so paid, even though there are no profits. The interest will in that case be paid out of capital.

Calls must be paid in cash. Money due from the company to a shareholder can be set-off against a call, and reckoned as a payment of the call.

Where a call is made before transfer, but payable after the transfer, the transferor is the person who has to pay the call.

(*k*) **FORFEITURE.** Shares may be forfeited if a shareholder does not pay calls, but only if the Articles give the directors this power. The forfeiture must not be collusive, i.e. it must not be made for the purpose of enabling a shareholder to escape from his liabilities. Forfeited shares are the property of the company, and may be sold for whatever price they will fetch. In other words, forfeited shares may be "issued at a discount."

When shares are forfeited, the shareholder cannot be sued for past calls, unless the Articles expressly provide for this; but in the event of the company being wound up within a year from the forfeiture, he would still be liable as a past member.

(*l*) **LIEN.** The company has a lien on the shares of a member for his debts and liabilities to the company. This lien may be enforced by the company selling the shares, provided that the Articles give the company power to do so.

DIVIDENDS.

The Articles usually determine in what proportion the profits shall be divided amongst the various classes of shares. If not, the profits are paid on each share in proportion to its nominal value, quite irrespective of the amount paid up on the shares.

On the declaration of a dividend, it becomes a debt due from the company to the shareholder for which he can sue at any time within *twenty years* from the date of the dividend. It must be paid in cash, unless the Articles expressly authorise payment in some other manner.

Dividends can be paid only out of profits. They must not be paid out of capital. To pay them out of capital is absolutely illegal; but in this connection a distinction is made between "Circulating Capital" and "Fixed Capital."

> *Circulating capital* is property which is acquired or produced with the view of selling at a profit; and the law and the practice is, that any loss of such capital must be repaired out of the profits before a dividend can be declared. *Fixed Capital* is property not intended for sale but to be used in producing goods, e.g. the buildings, plant, and machinery of a business.

Where a loss or depreciation of fixed capital occurs, the directors should make some provision out of the profits for repairing such loss before declaring a dividend. Any increase in the value of the assets or capital may be distributed as dividend.

If the directors pay dividend out of capital they are liable for the amount so paid out, but they can recover from the shareholders the amounts so paid to each shareholder, if the shareholder knew that the dividend was paid out of capital. Further, directors who pay a fictitious dividend when there are no profits, with a view of raising the price of the company's shares, may be criminally liable for conspiracy. Profits which have been set apart as a "reserve fund" are not capital, and may be distributed as dividend though there are no profits for the current year, and though there may be a loss of capital.

A transfer of shares does not give the purchaser the right to the dividend then accruing, unless the transfer is made "cum dividend." If the transfer is made "ex dividend," the seller claims the dividend accruing. In the absence of anything to the contrary, the buyer is entitled to all dividends declared after the date when he agreed to buy the shares, even though the shares have not yet been transferred to him.

ACCOUNTS AND AUDITORS.

Directors must keep proper accounts, which are usually made out annually, and copies are sent to the shareholders. At the annual meeting the accounts are passed.

The Capital Account will show on the one side the liabilities, including the amount of the subscribed capital, amount of bad debts, and other items. On the other side will be shown the value of the assets, with the necessary deductions for depreciation. The difference between the two sides will show the profit or the loss for the year. The same difference will be shown in the Profit and Loss Account.

The auditor must be appointed at the general meeting. If this is not done, the Board of Trade may appoint one. A director cannot be an auditor.

The duty of the auditor is to see that the books show the true financial position of the company, and to do this he must exercise reasonable care and skill in making investigations, but he is not liable for failing to find out skilfully laid schemes of fraud, when there is nothing to arouse his suspicions. He must not certify what he does not believe to be true. If he does not act honestly or with reasonable care and skill, the company may sue him for damages. It is no part of his duty to give advice to directors or shareholders; and it is nothing to him whether the business of a company is conducted prudently or imprudently.

The auditors shall have access to the books and papers of the company, and shall sign a certificate at the foot of the balance sheet stating that all their requirements have been complied with, and shall make a report to the shareholders as to the accounts and balance sheet laid before them, and shall state whether the balance sheet exhibits a true and correct view of the state of the company's affairs as shown in the books of the company.

MEETINGS AND RESOLUTIONS.

(*a*) **STATUTORY MEETING.** The general meeting, which must be held not less than one month and not more than three months from the date at which it is entitled to commence business. Seven days before this meeting a report must be sent to all the shareholders, showing:—

(1) The number of shares allotted, and the amount paid on each, or other consideration for which they have been allotted.

(2) The cash received for those shares.

(3) An abstract of the receipts and payments of the company, and an estimate of the preliminary expenses.

(4) The names and addresses of the directors, auditors, manager and secretary.

(5) If any contract requiring modification is to be submitted to the meeting, the particulars of the contract and the modifications.

(*b*) **ORDINARY MEETING.** The annual general meeting, which is usually held at some specified date in the year. This must be held in addition to the statutory meeting.

(*c*) **EXTRAORDINARY MEETING.** A meeting convened for the purpose of transacting business which must be done before the next ordinary meeting. An extraordinary meeting must be called if the holders of one-tenth of the issued capital of the company demand it.

(*d*) **MODE OF PROCEDURE:—(1) Notice.** Every member is entitled to notice of all these various meetings. The notice must specify any special business that is to be transacted.

(2) **Quorum.** Two members may form a quorum, unless the Articles specify the number.

(3) **Chairman.** Unless appointed by the Articles, the

chairman is elected by the meeting. Should he close the meeting capriciously, another chairman may be elected.

(4) **Voting.** Each shareholder has one vote, unless the Articles state that the voting power shall depend on the number of shares held. The voting is first done by a show of hands. At this state of the proceedings, proxies are not counted, and each member has but one vote. Any five members may demand a poll, which may be taken then and there. At the poll, each person signs a paper "for" or "against," and proxies are counted.

(5) **Proxy.** A written paper bearing a penny stamp, authorising a person to vote for a shareholder at a certain meeting. If it authorises him to vote at a series of meetings, it must be stamped as a power of attorney with a stamp of 10s. Voting by proxy is permitted only when the Articles expressly provide for it. The proxy holder is not bound to produce his proxy paper at the meeting.

(*c*) **RESOLUTIONS.** Resolutions are of three kinds—ordinary, special, and extraordinary.

(1) **Ordinary.** A resolution passed by the majority at a general meeting.

(2) **Special.** A resolution passed by a three-quarters' majority at a meeting convened for that purpose, and confirmed by a majority at a second meeting held not less than fourteen days and not more than a month after the first. Special resolutions are required for various purposes, e.g.

i. To alter the Memorandum or the Articles.
ii. To increase, alter, or reduce the capital of the company.
iii. To wind-up the company voluntarily.

(3) **Extraordinary Resolution.** This is the same as a special resolution, except that it does not require confirmation at a second meeting. When it is expedient to wind up a company voluntarily, owing to the fact that it cannot carry on its business by reason of its liabilities, an extraordinary resolution is passed.

BORROWING POWERS.

Every trading company has power to borrow money for the purposes of its trading, but other companies have no such power unless provided for by the Memorandum, or by the Act of Parliament creating the company. The borrowing powers of a trading company are usually exercised by the directors.

(*a*) **ULTRA VIRES BORROWING.** Where the Memorandum fixes the limit to the borrowing powers, any borrowing in excess of this limit is *ultra vires* the company, and is absolutely void, and the securities given for the loan are void. Such borrowing cannot be ratified by the shareholders. The lender cannot sue the company for repayment; but if the money has not been spent he can obtain an injunction to prevent the company from parting with it; or if the money has been employed in paying off just debts owing to creditors of the company, he is entitled to stand in the shoes of those creditors, and can sue the company for the amount owing to them. The lender, too, may in some cases be able to sue the directors for breach of an implied warranty that they had power so to borrow.

If the company has unlimited powers of borrowing money, but the directors have only limited powers and exceed them, the borrowing is *ultra vires* the directors, and is void, and the lender cannot sue the company unless the shareholders ratify the borrowing.

(*b*) **SECURITY.** When a company has power to borrow, it may borrow on the security of all or any of its property, real or personal, present or future. It may mortgage uncancelled capital if there is a power in the Memorandum so to do, or if there is power in the Articles, and there is nothing to the contrary in the Memorandum. The Company may not, however, borrow on the security of its reserve capital (though this has been disputed), nor can it borrow on the security of its books, for these must be kept at the office of the company and be open for inspection. Hence the liquidator in a winding-up has a better right to the books than a receiver appointed by the debenture holders.

(*c*) **MODE OF BORROWING.** Money may be raised by any one or by several of the following securities:—

(1) By a legal mortgage of specific parts of its property, or by an equitable mortgage, e.g. by deposit of title deeds.
(2) By a floating charge on the whole property of the company.
(3) By bonds, or by promissory notes.
(4) By debentures, or by debenture stock.

The method of raising money by the issue of debentures, or of debenture stock, will now be dealt with.

DEBENTURES AND DEBENTURE STOCK.

(*a*) **THEIR NATURE.** A debenture is a writing promising to repay a specified sum at a given date, with interest in the meantime half-yearly. It usually gives "a floating charge" on the assets of the company, as security for the loan. A floating charge means that the whole of the company's property, present and future, is security for the loan, but that the company, until the charge becomes a fixed charge, has power to deal with any specific part of its assets in the ordinary course of its business. It is a charge that is not enforced until the undertaking ceases to be a going concern, or until the person in whose favour the charge is created finds that default has been made in paying him his interest or principal. Until the debenture holders enforce their rights, the company has a free hand to deal with its assets in the ordinary course of business, i.e. may sell, lease, mortgage, or exchange its property as it thinks expedient.

A floating charge is liable to be postponed to the rights of the following persons, if they enforce their rights before the debenture holders proceed to enforce theirs.

(1) Landlord distraining for rent.
(2) A creditor who obtains a garnishee order.
(3) Persons, such as a clerk or a servant, entitled to preferential payments under the Bankruptcy Acts.
(4) A judgment creditor, if the goods are seized and sold before the debenture holders enforce their rights.

Debentures which give a charge on the company's property are sometimes called "mortgage debentures." but in that case a trust deed is drawn up giving to trustees power to act on behalf of the debenture holders.

The difference between debentures and debenture stock is chiefly one of name; the holders of the debenture stock are in much the same position as debenture holders. Debentures are either payable to bearer or payable to registered holder.

Debentures payable to bearer are negotiable instruments. Hence they may be transferred by simple delivery without paying a stamp duty on the transfer, and without notifying the transfer to the company, and further, the transferee who takes it in good faith and for value gets an absolutely good title, no matter what title his transferor had.

(*b*) **REGISTRATION.** Every debenture created, i.e. "sealed and issued" after January 1st, 1901, must be registered with the Registrar within twenty-one days of its issue, otherwise it will be null and void as against the liquidator and the creditors of the company. This means that the debenture holders cannot enforce their security, but the company is still bound to repay the loan. The Court may extend the time for registration. Debentures created before 1901 were merely registered in the company's register. The penalty for non-registration was only £50, and registration might be made at any time. Before 1901, intending creditors had no power of seeing what previous securities a company had given, but now any one on paying a shilling can inspect the register at Somerset House.

(*c*) **TRANSFER.** Debentures payable to bearer are transferred by simple delivery; debentures payable to the registered holder are transferred in the manner laid down in the conditions on the back of the instrument. If the instrument is silent on the point, they can be assigned by a simple writing, with notice to the company.

(*d*) **REMEDIES OF DEBENTURE HOLDERS.** A debenture holder who wishes to recover payment of his loan may employ any or all of the following remedies:—

(1) He may exercise such means as are given to him by the securities themselves, e.g. he may sell the company's

property, or have a receiver appointed if the conditions on the debentures give him these powers.

(2) He may petition for the winding-up of the company.

(3) He may obtain from the Court an order for foreclosure, i.e. he may become the owner of the property of the company.

(4) He may sue for the debt, and the Court will appoint a receiver.

WINDING-UP.

If a company becomes insolvent, or if there is good reason that the company should come to an end, the company is wound up. It cannot be made bankrupt. There are three kinds of winding-up: (*a*) Compulsory winding-up by the Court; (*b*) Voluntary winding-up; and (*c*) Winding-up under the supervision of the Court, a mode of proceeding seldom resorted to.

In the winding-up a liquidator is appointed, whose duty is to realise the assets and apply them in paying the creditors, and to distribute the residue, if there is any, amongst the shareholders. In a compulsory winding-up by the Court, after the winding-up order has been made, all proceedings against the company *must* cease, unless the Court orders otherwise. On a voluntary winding-up the Court *may* stay proceedings. Any disposition of its property made by a company after the commencement of the winding-up is void, as are all transfers of shares, unless the Court otherwise orders. In the case of a voluntary winding-up, transfers made during the winding-up must be sanctioned by the liquidator, otherwise they are void.

(*a*) **WINDING-UP BY THE COURT.** A company may be compulsorily wound up by the Court—

(1) When the company has passed a special resolution to that effect; or

(2) When the company does not commence business within a year from its incorporation, or if it suspends business for a year; or

(3) When the number of its members falls below seven; or

(4) When the company is unable to pay its debts; or

(5) When the Court is of opinion that it is just or equitable that the company should be wound up.

Winding-up for any of the first three causes seldom takes place. It usually arises from the inability of the company to pay its debts. A company is accounted insolvent:—

(1) If a creditor to whom the company owes £50 or more demands payment, and the debt is not paid within three weeks; or

(2) If a judgment debt or an execution remains unsatisfied; or

(3) If it is proved to the satisfaction of the Court that the company cannot pay its debts.

The first step in the compulsory winding-up of a company is usually taken by a creditor presenting a petition to the Court to give a winding-up order. A creditor may petition if there is an undisputed debt of £50 or more due to him, and any of the things mentioned above have happened. But the Court may refuse a winding-up order if there are no assets, or if the majority of the creditors do not wish it, or if the order will do no good. The winding-up dates from the presentation of the successful petition. When the affairs of the company are fully wound up, the Court makes an order that the company be dissolved, and this order is entered in the register of Joint Stock Companies.

(*b*) **VOLUNTARY WINDING-UP.** This is the most usual way of winding-up a company. It can be wound up voluntarily:—

(1) By an ordinary resolution, if the period fixed for the duration of the company has come to an end, or if an event upon which the company is to be wound up has happened.

(2) If for any cause whatever the company has passed a special resolution to wind up.

(3) If the company passes an extraordinary resolution that it cannot by reason of its liabilities carry on its business, and that, therefore, the company should be wound up.

A voluntary winding-up dates from the passing of the resolution to wind up. The company then ceases to carry on its business except for the purpose of winding-up; and transfers of shares are void except with the permission of the liquidator.

When the affairs of the company are wound up, the liquidator calls a general meeting, and lays his accounts before it, and after three months the company is deemed to be dissolved and ceases to exist.

(*c*) **THE LIQUIDATOR.** In compulsory winding-up, the liquidator is appointed by the Court, and is a trustee for the creditors; in voluntary winding-up he is appointed by the shareholders and is a trustee for them. He is paid a salary, and must give security not to make away with the assets, and he can be removed by the authority which appointed him. The liquidator may be assisted by a "committee of inspection," composed of contributories and creditors, who must meet at least once a month.

On his appointment, all the property of the company vests in him, and he has considerable powers vested in him. He can bring and defend actions on behalf of the company. He carries on the business of the company as far as is necessary for its winding-up. He may sell the property of the company, draw bills of exchange, and do all things that may be necessary for the winding-up of the company and the distribution of its assets. He has power to summon meetings of contributories, to settle the lists of contributories, to make calls on them for the purpose of paying the debts of the company, and to fix the date by which creditors must prove their claims or be deprived of all remedy against the company.

(*d*) **CONTRIBUTORIES.** These are the shareholders, past and present, who are liable for the amount unpaid on the shares. The "A list" comprises all the present members of the company. The "B list" comprises all persons who have ceased to be members within a year of the winding-up. Persons in the "B list" are liable only in respect of debts that were incurred while they were members. And they are only liable in respect of these debts when the members on the "A list" are unable to pay the calls made on them by the liquidator.

A contributory may also be a creditor of the company, but he cannot set off the debt due to him against his liability for calls; for example, a person may be liable for calls to the extent say of £2,000, and the company may owe him the same amount. He must pay to the liquidator the whole sum of £2,000, and afterwards prove his debt in the winding-up. He may thus stand to lose anything less than the £2,000. Certain creditors, however, such as clerks or servants of the company, have in the winding-up a right to be paid their claims before the other creditors (see "Distribution of the Property," under *Bankruptcy*).

READJUSTMENT SCHEMES.

(*a*) **ARRANGEMENTS WITH CREDITORS.** A company may enter into a scheme of arrangement with its creditors. Application is made to the Court to direct meetings of the creditors and contributories to consider the scheme. The resolution approving the scheme must be carried by a three-quarters majority of those present in person or by proxy at the meeting. A petition is then made to the Court to sanction the scheme. The most usual kind of scheme provides for the formation of a new company, that the debenture holders in the old company shall take debentures or preference shares in the new company, that the ordinary creditors of the old company shall take a composition of so much in the pound, payable partly in cash and partly in shares or debentures, and that the shareholders in the old company shall take shares in the new company on which a certain amount only shall be deemed to be paid up.

(*b*) **RECONSTRUCTION.** A company may be unable to alter or extend its objects as defined in the Memorandum, or it may be embarrassed by the rights of preference shares or of founders' shares, which being given by the Memorandum cannot be altered, or it may want new capital which it cannot get from the existing shareholders or from the public. In these cases, the company, instead of being wound up, may be reconstructed. To do this a new company is formed, and the old company sells its undertakings to the new company, on the footing that each shareholder in the old company shall receive a certain number of partly paid up shares in the new. The sale

may be effected by passing a resolution to wind up the old company and appointing liquidators with a power to sell to the new company. But if a member dissents from the sale, he may obtain payment in cash of the value of his interest.

The sale may be under a power in the Memorandum giving the company the right to sell its undertaking to a new company for shares in the new company, and to distribute these shares among the old shareholders. In this case the Memorandum may deprive the shareholders of their right to dissent.

(c) **AMALGAMATION.** Where two or more companies wish to amalgamate their undertakings, they may do so by the formation of a new company which takes over the undertakings of the existing companies; or one of the existing companies may take over the others provided its Memorandum gives it power to acquire the undertakings of other companies.

PARTNERS AND PARTNERSHIPS.

WHAT IS A PARTNERSHIP? The greater part of the law of partnership is consolidated in the Partnership Act, 1890. In that Act, partnership is defined as "the relation which subsists between persons carrying on a business in common with a view of profit." The relation between members of any company registered under the Companies Acts or formed by Royal Charter, etc., is not a partnership within the meaning of the Act. Common ownership of property, sharing gross returns, or even the receipt by a person of a share of profits from a business, does not of itself create a partnership. Thus it has been held an agreement between two joint owners of a house that one should put it in repair, manage the house, and let it if possible, and that the rent should be divided equally, did not constitute a partnership. An agreement between the owner of a theatre and a manager that the latter should provide a company to act, and that the gross receipts should be divided between the proprietor of the theatre and the manager, was held not to be a partnership. On the other hand, the receipt by a person of a share in the net profits of a business will generally be held to make him a partner in the business, though it is not conclusive evidence to that effect. The Partnership Act, 1890, specially provides that in the following cases receipt of a share of profits does not of itself make a person a partner.

(1) Where a debt is received by instalments out of the profits of a business.

(2) Where a servant or agent is remunerated by a share of the profits of a business.

(3) Where a widow or child of a deceased partner receives by way of annuity a portion of the profits made in the business.

(4) Where a person, under a contract in writing, has lent money to another and receives a rate of interest varying with the profits of that other's business, or a share of the profits.

(5) Where a person receives by way of annuity or otherwise, a portion of the profits of a business in consideration of the sale by him of the goodwill of the business.

But in cases (4) and (5) if the owner of the business becomes bankrupt, or dies insolvent, or makes an arrangement with his creditors to pay them less than twenty shillings in the pound, the lender of the loan or seller of the goodwill is postponed to the other creditors of the borrower or buyer.

WHO MAY BE PARTNERS. Each of the partners must be competent to contract; and, therefore, if an infant enters into a contract of partnership, he is not responsible for the debts of the firm, and he may repudiate the partnership before or when he comes of age. A married woman can be a partner, but she cannot always be made a bankrupt with the rest of the firm [See under *Bankruptcy*]. Certain professions cannot be carried on in partnership, e.g. the profession of a barrister.

CONTRACT OF PARTNERSHIP. Persons who have entered into partnership with one another are called collectively a firm, and the name under which their business is carried on is called the firm-name. The partnership contract need not be in writing, but may be entered into verbally. Sometimes, indeed, a partnership is inferred from the mere fact that persons carry on business together and share the profits. A partnership may be at will, i.e. determinable by any one of the partners by notice to the others, or it may be for a fixed period of time. If a partnership is to extend beyond a year, or an agreement is made that a partnership shall be entered into at some date more than a year after the date of the agreement, there must be some evidence in writing of the contract. This is on account of the provisions of sec. 4 of the Statute of Fraud [see under *Contracts*]. An agreement in writing for a partnership is termed "Articles of Partnership." A person may be a "dormant or sleeping partner," i.e. he may participate in the profits without taking any active share in the management, and without appearing to the world as a partner. Such a partner, like any other, is responsible for the debts of the firm. Sometimes a man who is not a partner may be held liable for the debts of the firm on the ground that he has induced others to give credit to the firm under the belief that he is a partner therein. For instance, if a partner, other than a dormant partner, retires from the firm, and does not give any notice to the firm's creditors, he may be liable for debts contracted after his retirement.

ILLEGAL PARTNERSHIPS. A private partnership cannot be formed of more than ten persons for banking, or twenty for any other business. If it exceeds that number, the members, while individually liable for debts incurred to those who had no notice of the illegality of the business, cannot enforce any claim arising out of the partnership dealings. If a number of persons exceeding the above desire to carry on business lawfully together, they must get themselves registered as a Company. A partnership is also illegal if the business intended to be carried on is, or afterwards becomes, contrary to law, morality, or public policy.

DURATION OF PARTNERSHIP. A partnership may be at will, or it may be for a definite period. If a partnership, entered into for a fixed term, is continued after the term has expired, it becomes a partnership at will, if no express new agreement is made, and the rights and duties of the partners remain the same as they were at the expiration of the fixed term so far as is consistent with the nature of a partnership at will; thus the terms of the original agreement as to share of profits, arbitration between the partners in the event of dispute, and so forth, would be still binding; but a clause in the articles providing that a partner wishing to retire must give a certain length of notice would be no longer applicable, for a partnership at will can be dissolved by notice at any time. If the partnership was originally constituted by *deed*, and has been continued as a partnership at will, such notice must be in writing.

EXTENT OF PARTNER'S AUTHORITY. Every partner is an agent of the firm and his other partners for the purpose of the business of the partnership, and the acts of any partner who does any act within the usual course of the firm's business, binds the firm and his partners, unless the person with whom he dealt knew that in fact the partner so acting had no authority, or did not know or believe him to be a partner. The question in such case is, "What is the usual course of the business?" Accordingly, this implied authority of each partner is more extensive in trading than in other kinds of partnership. Thus in every partnership, a partner has an implied authority to sell or buy goods, give receipts for debts, and engage servants; and in trading partnerships he may also bind the firm by borrowing money, negotiating promissory notes and bills of exchange, and pledging the firm's property. A partner cannot, however, bind the firm by executing a deed unless authorised by deed to do so; and a guarantee given by one partner in the name of the firm does not bind the firm unless there is some agreement to that effect among the partners.

LIABILITY OF PARTNER FOR DEBTS OF THE FIRM. "Every partner in a firm is liable jointly with the other partners for all debts and obligations of the firm incurred while he is a partner; and after his death his estate is also severally liable for such debts, subject to prior payment of his separate debts" (Partnership Act, 1890, sect. 9).

Thus in the case of Kendall *v.* Hamilton, A had lent money to B and C, ostensibly the only partners in a firm. He sued B and C, and got judgment which was not satisfied. He then discovered that D was a dormant partner in the firm, and sued D. There is a technical rule of law that a judgment recovered against some of divers joint contractors bars any action against another of them alone. It was held, therefore, that A's action against D was not maintainable.

There are two exceptions to this rule that liability of partners for debt is joint only. The estate of a deceased partner is separately liable; and if partners join in a breach of trust they are severally as well as jointly liable, and therefore a judgment against one partner would not discharge his co-partners. To avoid confusion, it should be pointed out that if A, B, and C, partners, are sued for debt and judgment is recovered against them, the separate estates (i.e. the private property) of A, B, and C is liable for the debt (subject to prior payment of their separate debts) if the joint estate (i.e, the partnership property) of A, B, and C is insufficient to meet the judgment.

LIABILITY OF RETIRED PARTNER. A partner who retires from the firm is liable for debts incurred before he retired, unless he is discharged by an agreement between the new firm and the old creditors. This agreement may be express, or implied from the conduct of the partners. A retired partner may sometimes be liable for debts incurred after his retirement, i.e. if his name remains in the business, and persons give credit to the firm under the belief that he is still a member. *The estate of a deceased partner*, however, is not liable merely because, after his death, the partnership business is continued in the old firm-name.

An incoming partner is not liable for debts incurred before he became a partner, unless there is some express or implied agreement between the new firm and the old creditors, by which the creditors discharge the old partnership from liability and agree to accept the liability of the new firm instead.

LIABILITY OF PARTNERS FOR TORTS. The firm is liable for the tort of any partner committed in the ordinary course of the business of the firm, or with the authority of his co-partners. The liability of partners for tort is joint and several. In particular, it is laid down by the Partnership Act, 1890, that if one partner, acting within the scope of his apparent authority, receives the money or property of a third person and misapplies it; or if the firm in the course of its business receives property of a third person, and the property is misapplied by one or more of the partners while it is in the custody of the firm, the firm is liable to make good the loss. If a partner is a *trustee*, and improperly employs trust money in the business, the other partners are not liable for the trust property unless they had notice of the breach of trust; but trust money can be followed and recovered from the firm if still in its possession.

In regard to the liability of the firm for a tort, or wrong, of any partner, the test is whether or not the act was committed by the partner acting in the ordinary course of the business of the firm.

Thus, where A and B were a firm of solicitors, and A received money from X to invest in a security specified by X, and A misapplied the money, B was held liable as well as A; but where A received money from X with general directions to invest it at the discretion of the firm, and A misapplied it, B was held not liable, because to receive money for general investment is not part of the business of solicitors.

RELATIONS OF PARTNERS ONE TO ANOTHER.

The mutual rights and duties of partners may be varied by the consent of all the partners. The subsequent rules, therefore, only apply in the absence of any agreement to the contrary.

1. PARTNERSHIP PROPERTY consists of all property brought into the partnership stock or afterwards acquired on account of the firm. Such property, even when it consists of land, is to be treated, as between the partners and their representatives, as personal estate. If A and B take a lease of a colliery to work it in partnership, the colliery is partnership property. So, too, if A and B are left land, and carry on the business of nurserymen already established thereon, the land devised to A and B is partnership property. But in a case where A and B were tenants in common of a colliery and began to work it in partnership, it was held that this did not by itself make the colliery partnership property. The Court can make an order on the application of any separate creditor of a partner who has obtained a judgment for his debt, charging such partner's interest in the partnership property with payment of the amount of the judgment debt, and may appoint a receiver of that partner's share of profits. The other partners have power to redeem the interest so charged.

2. PARTNER'S SHARE. In the absence of any contrary agreement, all the partners are entitled to share equally in the capital and profits of the business, and must contribute equally towards the losses of the firm.

Thus A, B, and C were partners under articles which provided that profits and losses should be shared equally. A brought in a capital of £10,000, B £5,000, C nothing. On the partnership being dissolved, the assets realised £10,000 and the debts amounted to £5,000. Hence the net assets were £5,000, and as the capital of the firm originally amounted to £15,000, there was a total loss of £10,000. Each partner stands to lose £3,333 6s. 8d. As C put in no capital he will have to contribute £3,333 6s. 8d., which will be added to the net assets, so that there will be £8,333 6s. 8d. available for distribution between A and B. Of this sum A will receive £6,666 13s. 4d., because the share of capital which he put into the partnership was £10,000. and he must lose £3,333 6s. 8d. For the same reason B will receive £1,666 13s. 4d.

3. INDEMNITY. The firm must indemnify every partner for any proper payment made or liability incurred by him in the ordinary course of business, or in preserving the property of the firm.

4. INTEREST ON ADVANCES AND CAPITAL. If a partner makes any actual advance beyond the amount of capital he agreed to subscribe, he is entitled to interest at the rate of 5 per cent. A partner is not entitled, before the ascertainment of profits, to interest on the capital subscribed by him.

5. CONDUCT OF PARTNERSHIP BUSINESS. Every partner may take part in the management of the partnership business, but no partner shall be entitled to remuneration for acting in the business. No person may be introduced as a partner without the consent of all the existing partners. The majority of the partners may decide differences as to ordinary matters, e.g. of management; but no change in the place or scope of the business can be made without the consent of all the parties. No majority of the partners can expel any partner unless a power to do so has been conferred by express agreement between the partners.

6. DUTY TO OBSERVE GOOD FAITH. Partners are bound to render true accounts and full information of all things affecting the partnership, to any partner or his legal representative. A partner must not make a private profit out of the partnership property or by use of the firm name. If a partner, without the consent of the other partners, carries on any business competing with that of the firm, he must account for and pay over to the firm all profits made by him in that business. Any partner has a right to inspect the books of the firm; but if he is about to retire from the firm and has sold the goodwill to the other partners, he must not extract from the books the names of the customers with a view to soliciting them in the event of his starting a new business for himself.

7. ASSIGNMENT OF PARTNERSHIP SHARE. Where a partner assigns his share of the partnership to an outsider, the assignee has no right to interfere in the management of the business, or to inspect the partnership accounts. The assignee is, however, entitled to the share

of the profits to which the assigning partner would otherwise be entitled. Should the partnership be dissolved, the assignee is entitled to receive that share of the partnership assets to which the assigning partner is entitled.

DISSOLUTION OF PARTNERSHIP. A partnership is *ipso facto* dissolved:

(1) by the death or bankruptcy of any partner.
(2) by becoming unlawful.
(3) by effluxion of time, if it was a partnership for a fixed term.
(4) by notice, if it was a partnership at will.
(5) at option of the other partners, if any partner allows his share to be charged for his separate debt.

A partnership can be dissolved by the Court on application by a partner.

(1) If a partner becomes lunatic.
(2) If a partner, other than the partner suing, becomes permanently incapable.
(3) If a partner, other than the partner suing, is guilty of such misconduct or breaches of the partnership agreement as injure the business or render it impossible to go on with him.
(4) If the business of the partnership can only be carried on at a loss.
(5) If the Court thinks it just and equitable that the partnership should be dissolved.

RIGHTS OF PARTNERS AFTER DISSOLUTION. After dissolution, the authority of each partner to bind the firm continues so far as may be necessary to wind up the affairs of the partnership. Each partner, in the absence of contrary agreement, has a right to have the firm's property sold, including the goodwill, and to have the surplus divided. If a partner has paid a premium to enter a partnership for a fixed term, and dissolution occurs before the term expires, the Court will order repayment of the premium, usually in proportion to the unexpired part of the term, unless the dissolution was due to the fault of the partner who paid the premium, or the partnership was dissolved by an agreement containing no provision for return of any part of the premium. If a member of a firm dies or otherwise ceases to be a partner, and the remaining partners carry on the business without paying him out his share of the partnership assets, he, or his representatives, can claim such part of the profits made after dissolution as the Court considers due to the use of his share, or interest at 5 per cent. on the amount of his share. If the Court rescinds a partnership contract on the ground of fraud or misrepresentation, the party entitled to rescind has a right, out of the surplus assets, after debts have been paid, to the return of his capital and any sum paid by him for the purchase of a share in the partnership, and to be indemnified by the person guilty of the fraud or misrepresentation against all the debts of the firm.

FINAL DISTRIBUTION OF ASSETS. Losses, including losses of capital, are paid first out of profits, next out of capital, and then by the partners individually in the proportion in which they were entitled to share profits. The assets of the firm, including the sums, if any, contributed by the partners to make up losses of capital, are then applied.

(1) in paying debts and liabilities to third persons.
(2) in repaying advances made to the firm by any partner.
(3) in repaying capital put in by the partners.
(4) the residue is then divided between the partners in the proportion in which profits are divisible, i.e. equally unless the Partnership Articles provide to the contrary.

ADMINISTRATION OF ESTATES OF DECEASED PARTNERS AND OF BANKRUPT PARTNERS. Where the Court administers the estates of deceased partners and of bankrupt and insolvent partners, the partnership property is applied as joint estate in payment of the debts of the firm, and the separate property of each partner is applied as separate estate in payment of his separate debts. The surplus, if any, of the joint estate is applied in payment of the separate debts of the partners, or the surplus, if any of the separate estate is applied in payment of the debts of the firm. This is the general rule, but in some cases a firm's creditor may prove his debt in the first instance against the separate estate of a partner, e.g. if the debt was incurred by fraud of the partner

PRINCIPAL AND AGENT.

THE PARTIES. In some respects the relationship of principal and agent resembles the relationship between a master and servant, indeed, in many cases, servants are also the agents of their masters; but the main characteristic of agency is that, in general, an agent is a mere connecting link between the principal and the third party. The agent, except in a few cases, which will be noticed later, does not enter into contracts on his own behalf; he is merely the representative of his principal, and therefore the latter alone is usually bound by his acts, while the agent himself does not, in general, incur any liability towards the third party.

The general rule is that anyone may be an agent, whether he or she be a minor, a married woman, or a bankrupt; but it is not every one who may be a principal. As it is the principal who is usually bound by the agent's contracts, only those persons can be principals who have themselves power to make the contracts which they employ the agents to effect. Thus infants cannot be bound by contracts that are not for necessaries; therefore they can only employ agents to effect contracts which are in the nature of necessities. If an infant employs an agent for another purpose, the agency will be void.

In those few cases in which an agent is personally responsible (see below) he must have capacity to contract personally, or he will not be bound.

APPOINTMENT OF AGENT. A person may be appointed an agent either expressly or by implication. Certain express agencies can only be created by deed, whilst others may be made verbally, the rule being: if the agent's duties require him to execute a deed he must be appointed by deed. Deeds appointing agents and giving them power to execute deeds are called "Powers of Attorney." The only other case in which the appointment of the agent must be by deed, is where the appointment is made by a corporation, for corporations cannot be bound by any important contract which is not executed under their corporate seal.

With the exception of a few unimportant cases, all other appointments may be made verbally. Principals and agents, however, cannot be advised, except in trivial cases, to content themselves with a verbal appointment. It is always best that the parties should draw up a written instrument stating clearly the nature of all the duties which the agent may be called upon to perform. This course of procedure would obviate many of the questions which frequently arise as to whether or not an agent in a particular transaction has exceeded the limits of his authority. An agency may be created without any words at all, and sometimes even unintentionally. There are many cases where the law will infer an agency. Thus a wife living with her husband is his implied agent for the purpose of obtaining the ordinary housekeeping stores and necessaries, unless he has expressly forbidden her to pledge his credit or given her an ample allowance for such purposes.

Lastly, there is a species of agency known as an "agency of necessity," where the principal will be presumed to have authorised the agent to act in a certain manner. Thus the master of a ship has an implied authority to pledge the owners' credit to enable him to continue the voyage, if he is unable to communicate with the owners. So, too, is a wife living apart from her husband, owing to his misconduct, an agent of that husband for the supply of necessaries to her, and he is bound to pay for those necessaries.

VARIETIES OF AGENTS. A principal can expressly authorise an agent to do whatever he pleases, provided it be for a lawful object, and the agent consents to perform it. But in cases of implied authority, it is frequently diffi-

cult to know what the agent can lawfully do, so as to bind the principal. The general rule is that where an agent of a particular kind is appointed, he has implied authority to do the things usually done by agents of a similar kind. Hence we come to consider some of the various kinds of agents:—

A Commission Agent is usually one who acts as agent in England for a foreign principal. The person in England with whom he deals looks upon him as the principal in the transactions. The term is also used loosely for all those who buy and sell on commission.

A "Del credere" Agent is an agent employed to sell goods for his principal and who gets an extra commission for guaranteeing to the seller the solvency of the buyer. In other words he guarantees that no bad debts will be incurred.

A Factor is an agent entrusted with the possession of goods for the purpose of selling them on commission. He has, under the Factor's Act, 1889, an implied authority to dispose of them in the ordinary course of his business, and can bind his principal on a *bonâ fide* sale, even where he has no express authority to sell.

An Auctioneer is an agent both for the buyer and seller, but it is the seller who usually pays his commission. Where he advertises a sale by auction "without reserve" he has implied authority, and is indeed bound, to sell to the highest bidder. Being an agent of both parties he has an implied authority to make the necessary signed memorandum on behalf of either party which is required by the provisions of the Sale of Goods Act, 1893. Where he has possession of the goods for the purposes of their sale by auction he has a lien for his charges.

A Broker is an agent employed to perform commercial transactions, and is usually paid by commissions called "brokerage." His implied authority varies in accordance with the customs of the particular trade with which it is his business to deal. Thus a stock exchange broker has implied authority to deal according to the rules and customs of the stock exchange.

DUTIES OF THE PRINCIPAL. The chief duty of the principal is to pay the agent the proper remuneration for his services. Such remuneration may take the form of salary or commission, or both. Where the remuneration is by way of commission, the agent is only entitled to it if the transaction is completed, unless the principal has acted wrongfully in preventing the transaction from being completed. The other great duty of the principal is to indemnify the agent against such expenses and losses as he may have incurred in the proper discharge of his duties. The duty to indemnify need not be expressed in the agency agreement; for when the principal has requested his agent to do anything which involves expense, the law will usually infer an agreement on the part of the principal to reimburse the agent for his out-of-pocket expenses.

DUTIES OF THE AGENT. The most important of all the duties which an agent has to perform is that which requires him to account for, and hand over to his principal, all the commissions and profits he may obtain in his agency transactions other than the remunerations which the principal has expressly or impliedly agreed to pay him. On no account may he keep any secret profit or commission; if he does so, the principal has the option of suing him for the secret profit, or suing him for damages for fraud, or treating the transaction in which the secret profit was made as void. Those who have business transactions with the agents of others must be careful not to give to such agents any secret profit, or they, too, may be called upon to pay damages for fraud. And by the Prevention of Corruption Act, 1906, such corrupt practices, on the part either of an agent or the person who transacts business with him, entail consequences still more serious (see below).

The next important duty of the agent is to carry out the agency transactions himself, and not to delegate his authority to someone else. This is the general rule, but there are a few exceptions to it. Thus an agent may delegate his authority whenever his principal expressly or impliedly permits him to do so, or where from the nature of the business or other unforeseen circumstances it is necessary or customary to delegate the authority. The agent cannot bind his principal on a contract made by a sub-agent, if he has merely employed the sub-agent to save himself trouble and inconvenience.

Lastly, it is the duty of an agent to be diligent and skilful in carrying out the transactions which he has been appointed to perform. The amount of diligence and skill required of him would, of course, vary with the nature of the employment and the circumstances of the case. Thus, if the agent were a stock-broker, he would be expected to display the knowledge of the rules regulating stock-exchange transactions necessary for the proper discharge of his functions; whereas a less amount of skill would be required from a person who does not hold himself out as being conversant with business transactions.

PUNISHMENT OF CORRUPT TRANSACTIONS. By the Prevention of Corruption Act, 1906, any agent who corruptly accepts any gift or consideration as an inducement (1) to do or forbear to do any act in relation to his principal's affairs or (2) to show favour or disfavour to any person in relation to his principal's affairs, shall be guilty of a misdemeanour and liable on conviction on indictment to imprisonment for a term not exceeding two years, or to a fine not exceeding £500, or to both such imprisonment and such fine, or on summary conviction to imprisonment not exceeding four months, or to a maximum fine of £50, or to both such imprisonment and such fine. The same penalties and punishment are incurred by any person who is proved guilty of corruptly giving a bribe to the agent.

LIABILITY OF PRINCIPAL FOR AGENT'S ACTS. The general rule is that the principal and he alone is responsible for the contracts entered into on his behalf by the agent. The agent is generally in the position of a mere conduit pipe connecting the principal with the third party, and so he assumes no personal liability. The cases where the agent is personally responsible are exceptions from the general rule. They arise where the agent has acted beyond the scope of his express or implied authority. In such cases the principal would not be liable on the contract unless he has ratified it.

The liability of the principal for the acts of his agent within the scope of his express or implied authority is not, however, confined to *bonâ fide* transactions. The principal is also liable for the fraud of his agent. If the agent, acting within the scope of his authority, express or implied, is guilty of any fraud, not only will the principal and agent be prevented from deriving any benefit from the fraud, the injured party may also recover damages for the fraud against both the principal and the agent, for "the fraud of the agent is the fraud of the principal."

If the agent acts beyond the scope of his express or implied authority, the principal would not be liable. But where an agent of a particular kind is employed, he is presumed by law to have the authority usually given to agents of that kind.

> Thus the servant of a private gentleman ordered to sell a horse has no implied authority to give a warranty; but it would be otherwise if he were the servant of a horse dealer.

So if an agent has authority to do a thing, and exercises that authority fraudulently, the principal will be liable if the fraud were committed for his benefit or if he had received any benefit from it; but the principal would not be liable if the agent committed the fraud solely for his own benefit.

RATIFICATION. In certain cases a principal will be liable for the acts of his agent where such acts do not come within the scope of the agent's authority. Thus if the agent performs a contract on behalf of his principal, which he has no express or implied authority to perform, the principal may make himself liable on the contract by ratifying the act of the agent, a subsequent ratification being regarded as equivalent to a prior command. It is not, however, every act of an agent which the principal is legally allowed to ratify. At the time when the agent performed the particular act or contract, he must have represented himself to be an agent for some particular person (whose identity he need not, however, disclose), or the principal will not be allowed to ratify it. Again, the principal must be actu-

ally existing at the time of the performance of the contract, or the subsequent ratification would not be effective.

Thus in the well known case of Kelner *v.* Baxter an agent purported to act as agent for a company which was not yet formed, and which consequently had no legal existence. It was held that the company when it was afterwards formed could not ratify the previous transaction.

Persons, therefore, who enter into contracts with agents purporting to act on behalf of companies about to be formed should be careful to see that the agent is personally bound on the contract, and that he is a person of sufficient substance to be worth suing, should the contract be broken; for in law such an agent would be regarded not as agent, but as principal in the transaction.

WHOM TO SUE ON AN AGENT'S CONTRACT. We now come to consider the rules which indicate whether in any particular case the agent or the principal is the proper person to be sued for the breach or non-performance of a contract entered into by the agent.

(1) If the agent falsely purports to act on the express or implied authority of a named existing principal, when in fact he has no such authority, the principal is liable if he ratifies the agent's act.

(2) If in the above case the principal does not ratify the agent's act or if, being non-existent at the time of the act, the law will not permit him to ratify it; the agent is the person liable. If he knew he had no authority, the proceedings would take the form of an action for damages for fraud; and if he honestly believed that he had the authority, the action would be for damages for the breach of an express or implied warranty of authority.

(3) If the agent rightfully purports to act for a principal whose name he discloses, the principal alone is liable on the contract; unless the third party, knowing who the principal is, deliberately elects to give credit to the agent only.

(4) If the agent rightfully purports to act as agent on behalf of a principal whose name he does not disclose, both the principal and the agent are liable on the contract. In such a case the agent is in the first instance the proper person to be sued, as it is impossible to sue an unknown person; but if the principal's identity is afterwards discovered, the third party may sue him instead of the agent.

(5) If the agent in England rightfully purports to act on behalf of a principal abroad and there is no evidence that he has been authorised to pledge the credit of the foreign principal, the proper person to be held liable is the agent and not the principal. This rule has become established, not because it is in accordance with the general principles of the law, but because, being a rule of public convenience and long recognised as customary, usual and right among mercantile persons, it has eventually received a legal sanction.

(6) Where the agent signs a bill of exchange as an agent, he must be careful to disclose the identity of his principal, or he will be personally liable; for by the Bills of Exchange Act, 1882, where a person signs a bill as drawer, indorser, or acceptor and adds words to his signature indicating that he signs on behalf of a principal, he is not personally liable; but the mere addition to his signature of words describing him as an agent does not exempt him from personal liability.

TERMINATION OF AGENCY. An agency contract is brought to an end in a number of ways. The simplest way is by agreement between the principal and agent; but of course they must not enter into any agreement which would prejudice the third parties on contracts already arranged. Secondly, the agency comes to an end when the object has been accomplished for which the agency was formed. This is especially the case where an agent has been appointed to do any one particular thing; as where he has been entrusted to sell a horse, the agency terminates when the horse is sold and the price paid to the principal. Similarly, where an agent has been appointed to act for a certain specified time, or where the custom of the particular business fixes a definite period for the performance of certain duties, the agency terminates at the end of that period.

Moreover, a principal has power to terminate the agency by revoking the authority he has given to the agent. But he must not revoke the agent's authority, without the agent's consent, if the agent has an interest coupled to the authority, of such a nature that the revocation would bring him into discredit. But a principal can always dismiss a fraudulent agent or one who makes a secret profit or commission. Again, the principal must not revoke the authority to the prejudice of an innocent party who has acted on the authority whilst it existed.

Lastly, the death or bankruptcy of either the principal or the agent usually has the effect of terminating the agency. The few exceptions to this rule are chiefly statutory, and have the effect of protecting innocent persons who have acted in good faith without notice of the death or bankruptcy.

GUARANTOR & GUARANTEE.

A GUARANTEE. This is a promise by one person to be answerable for the debt, default, or miscarriage of another. Originally at Common Law it need not be in writing, but the Statute of Frauds provided that "no action shall be brought whereby to charge the defendant upon any special promise to answer for the debt, default, or miscarriages of another person, unless the agreement upon which such action shall be brought or such memorandum or note thereof shall be in writing and signed by the party to be charged therewith, or some other person thereunto lawfully authorized."

Upon this section, it was held for many years that the note or memorandum of the agreement, to comply with the Statute, must set forth the consideration for the contract, but eventually the third section of the Mercantile Law Amendment Act provided that such a memorandum was not to be considered invalid to support an action merely by reason that the consideration did not appear in writing or by necessary inference from a written agreement.

DISTINCTION BETWEEN GUARANTEE AND INDEMNITY. In point of form, the distinction between these two contracts is, that a guarantee must be in writing, whilst an indemnity may be given verbally. As far as the substance of the two is concerned, in order to constitute a guarantee there must be an actual or prospective liability by a person to a third party for which the guarantor becomes collaterally liable, whilst an indemnity is a promise by one person to save another harmless from loss resulting from a transaction into which he enters at the instance of the person giving the indemnity.

LIABILITY OF GUARANTOR OR SURETY. After the debt has become due, the creditor may sue the guarantor without its being necessary to sue the principal debtor first.

DISCHARGE OF GUARANTOR.

A guarantee being a contract in which the surety is strictly held to the terms of his agreement, a corresponding strictness is exercised in his favour, and he may be released from his engagement, not only in the usual course by the ordinary and legal termination of the contract, i.e. by satisfaction, discharge, etc., but in many other ways, some of the more important of which are dealt with below.

1. CHANGE OF PARTIES. A variation of the parties to or for whom the guarantee is given will sometimes discharge the guarantor. Cases of this kind have mainly arisen in connection with guarantees given to or for firms consisting of several partners, and the law on this head is laid down by section 4 of the Mercantile Law Amendment Act, which provides as follows:—

"No promise to answer for the debt, default, or miscarriage of another made to a firm consisting of two or more persons or to a single person trading under the name of a firm, and no promise to answer for the debt, default, or miscarriage of a firm consisting of two or more persons, or of a single person trading under the name of a firm, shall be binding on the person making such promise in respect of anything done or omitted to be done after a change shall have taken place in any one or more of the persons constituting the firm, or in the person trading under the name of a firm, unless the intention of the

parties that such promise shall continue to be binding, notwithstanding such changes shall appear either by express stipulation or by necessary implication from the nature of the firm or otherwise."

2. GIVING TIME TO A DEBTOR. It is the general rule that if a creditor, without obtaining the consent of a guarantor, enters into an agreement for valuable consideration with the principal debtor which would be enforceable by the latter, to give him further time for payment, the guarantor will be discharged from liability, whether or not the arrangement made between the creditor and the debtor was for the advantage or disadvantage of the guarantor. The reason for releasing the latter is that the arrangement is an interference with his right to pay the debt at any time and then sue the principal debtor himself. The case of the Oriental Financial Corporation *v.* Overend, Gurney and Co., is an authority for the further proposition that an agreement by the creditor with the principal debtor to give time to a guarantor may discharge the latter from further liability.

3. CHANGE IN THE TERMS OF THE AGREEMENT. A guarantor is entitled to be discharged if the terms of the agreement under which he agreed to become liable are varied in any way. Lord Hatherly summed up the law on this point as follows: "Now it must always be recollected in what manner a surety is bound. You bind him to the letter of his engagement. Beyond the proper interpretation of that engagement you have no hold upon him. He receives no benefit and no consideration. He is bound, therefore, merely according to the proper meaning and effect of the written engagement that he has entered into. If that written engagement is altered in a single line, no matter whether it be altered for his benefit, no matter whether the alteration be innocently made, he has a right to say, 'The contract is no longer that for which I engaged to be a surety. You have put an end to the contract that I guaranteed, and my obligation therefore is at an end.'"

In addition to being discharged, if a variation is made in the terms of his own contract, a surety will be discharged by a variation in the contract made between the creditor and the principal debtor if (*a*) the alteration is a material one, or (*b*) although immaterial the guarantor entered into the contract upon the terms of the contract made between the creditor and the principal debtor.

4. CREDITOR DEALING WITH SECURITIES. A guarantor who is called upon to pay is entitled to all the securities in the hands of the creditor, whether he was aware of their existence or not, and no matter whether they came into the possession of the creditor before or after the contract of suretyship was entered into. This being the case, if the creditor does any act in connection with such securities, or omits to do anything which renders them ineffectual, the surety will be relieved *pro tanto* to the extent of the security in question. A surety, however, will not be discharged merely because a security becomes worthless, unless the creditor was directly responsible.

5. RELEASE OF THE PRINCIPAL. As a general rule, if the principal debtor is released by the creditor, such a release will operate as a discharge of the guarantor or guarantors also. In order that the sureties should be discharged, however, the release of the debtor must be an actual legal release, and one obtained from the creditor by fraud will not have the effect of discharging the sureties. A surety may, if he please, contract to remain liable, although the principal debtor is discharged, and in such a case he will not be affected by the release of the latter. The terms of the release of the debtor may also contain a reservation of the creditors' rights against the sureties. If the release is so worded as to be an absolute discharge of the debtor, the debt being extinguished, no rights could be reserved against the sureties, but where words of reservation are found, and the release does not purport to extinguish the debt absolutely, the release will often be construed not as putting an end to the debt entirely, but as a covenant not to sue, in which case the rights against the sureties would remain in existence.

6. PAYMENT OF THE PRINCIPAL CREDITOR. It is almost unnecessary to say that if the debt owing to the principal creditor is paid in full, the guarantor will be discharged from further liability, and if the debt is partially paid off, he will be discharged to that extent. The payment, however, must be a valid one. No unusual considerations affecting the validity of a payment are introduced merely by reason of the fact of the existence of a guarantor, and as a consequence the ordinary rules of law which determine the validity of a payment in other cases hold good in a contract of suretyship.

Not only is a surety entitled to the benefit of all voluntary payments by the debtor to the principal creditor, but also to the benefit of all payments the debtor may be compelled to make as a consequence of legal proceedings taken against him, and to any sums which may be realised by the creditor upon securities given to him by the debtor.

7. RETENTION OF A GUARANTEED CLERK OR SERVANT AFTER DISHONESTY. A very common form of the contract of suretyship is that in which one person guarantees the honesty of a servant entering the employment of another. Where such a continuing guarantee is given, if the master discovers that the servant has been guilty of dishonesty in the course of the service, and instead of dismissing the servant he chooses to continue him in his employ without the knowledge and consent of the surety, express or implied, he cannot afterwards have recourse to the surety to make good any loss which may arise from the dishonesty of the servant during the subsequent service.

GUARANTOR'S RIGHT TO CONTRIBUTION FROM CO-SURETIES. Where there are several guarantors of one debt, if one of them has been compelled by the creditor to pay the whole amount, or more than his fair proportion of it, he has the right to compel the other sureties to contribute a fair proportion of the amount so paid. This right to contribution usually arises only in the circumstances mentioned above, but it may also be put in force before an actual payment has been made by the surety. For instance, it is now established that if a guarantor is called upon to pay part of a debt due to the creditor, he may, before making any payment, take proceedings against his fellow sureties to enforce his right of contribution.

With regard to the proportion of the debt to be paid by the various sureties, the general rule is that they must contribute in equal shares if each is a surety to an equal amount, and if they are not equally bound, then proportionally to the amount for which each is a surety. The right of contribution by a surety cannot be enforced against his co-sureties if a fraud would be committed by insisting upon it, but it is not affected by the fact that the principal creditor has given the surety time for payment.

The method of enforcing the right is either by action, or in the case of the insolvency of the co-surety, by the institution of bankruptcy proceedings against him. Like other rights, a guarantor's right to contribution may be barred by the Statute of Limitations, time beginning to run against him when (*a*) he has actually paid more than the amount for which he is liable, or (*b*) when the liability of the surety is ascertained, i.e. when the claim of the principal creditor has been established against him, and this is the case although at the time of the action for contribution the statute may have run as between the principal debtor and the co-surety.

MONEY-LENDERS AND PAWNBROKERS.

REGISTRATION OF MONEY-LENDERS. Under the Money-lenders Act, 1900, the expression "money-lender" includes every person whose business is that of money-lending, or who advertises or announces himself, or holds

himself out in any way, as carrying on that business, except pawn-brokers, registered Friendly, Loan, or Building Societies, *bonâ fide* Banks and Insurance offices, such Corporations as may be authorized to lend money by special Acts of Parliament or by the Board of Trade, and persons *bonâ fide* carrying on any business not having for its primary object the lending of money. It is, however, safer for a person who is doubtful as to whether he is a "money-lender" within the meaning of the Act, to register himself as such; for it has recently been decided by the Court of Appeal that an unregistered money-lender cannot enforce his bargain against a borrower in a court of law.

The Act requires a money-lender to register himself as such, at an office provided for the purpose by the Commissioners of Inland Revenue, under his own or usual trade name, and in no other name, and with the address, or all the addresses, if more than one, at which he carries on his money-lending business. By the Act he is forbidden to carry on his business in any name other than his registered name, or in any place other than at his registered address or addresses.

The Commissioners of Inland Revenue have power, subject to the approval of the Treasury, to make regulations respecting the registration of money-lenders, the form of register, the particulars to be entered therein, and the fees to be paid on registration or renewal, which must not, however, exceed one pound.

The registration ceases to have effect after three years; but it may be renewed from time to time, and if renewed it has effect for three years from the date of renewal.

If a money-lender fails to register himself, as required by the Act, or carries on business otherwise than in his registered name, or elsewhere than at his registered address, he is liable on summary conviction to a fine not exceeding £100, and in the case of a second or subsequent conviction, to imprisonment, with or without hard labour, for a term not exceeding three months, or to a fine not exceeding £100, or to both. But inasmuch as a corporation cannot conveniently be imprisoned, it is provided that in the case of the second or subsequent conviction of a corporation, the penalty is a fine not exceeding £500.

> By these provisions as to the registration of money-lenders the Legislature has been able to stamp out an undesirable practice by which a money-lender would, under another name, lend money to extricate one of his own victims from his difficulties, thus getting him still further enmeshed within his toils.

PENALTIES FOR FALSE STATEMENTS AND REPRESENTATIONS. Under the Money-lenders Act, 1900, if a money-lender, by any false, misleading, or deceptive statement, representation, or promise, or by any dishonest concealment of material facts, fraudulently induces or attempts to induce any person to borrow money, or to agree to the terms on which money is to be borrowed, he is guilty of a misdemeanour and liable on indictment to imprisonment, with or without hard labour, for a term not exceeding two years, or to a fine not exceeding £500, or to both. The offence and punishment are the same where the offender is not a money-lender himself, but the manager, agent, or clerk of a money-lender.

Again, under Section 90 of the Larceny Act, 1861, if a person, with intent to defraud or injure any other person, by any false pretence fraudulently causes or induces any other person to execute any valuable security, or to affix his name to any document, in order that the same may be afterwards converted into or used as a valuable security, he is guilty of a misdemeanour and liable to three years' penal servitude, or to two years' imprisonment, with or without hard labour, and solitary confinement.

The above provisions, and especially the former, are aimed at money-lenders more than borrowers. But there is in addition the offence known as *false pretences*, which applies equally to money-lenders and borrowers. There is a great difference between the crime of obtaining money by false pretences and the crime referred to above under the Money-lenders Act. In false pretences the false statement or pretence which induces the other person to part with his property must be a statement as to an *existing* fact. Therefore, a mere fraudulent promise to do any particular thing is not a false pretence within the meaning of the Larceny Act, though it is an offence under the Money-lenders Act. It will thus be seen that the law leaves a fraudulent borrower in a more favourable position than a fraudulent money-lender.

The false pretences by which money may be obtained or loans effected need not, however, be expressed in words. It is sufficient if the offender's action or conduct is such as to constitute a false pretence as to some existing fact.

> Thus, if the borrower fraudulently disguises himself as a policeman and thereby induces the money-lender to enter into a transaction which he would not otherwise have undertaken, the law holds that he has by his conduct made the false pretence that he is in fact a policeman, to obtain the credit due to a person in such a position.

RELIEF GIVEN TO BORROWERS. Where legal proceedings are taken by the money-lender for the recovery of money lent, or for the enforcement of any agreement or security made or taken in respect of money lent, and the judge is satisfied that the interest charged in respect of the sum actually lent is excessive, or that the amounts charged for expenses, inquiries, fines, bonus, premium, renewals, etc., are excessive, and that in either case the transaction is harsh and unconscionable, or is of such a nature that Courts of Equity would give relief, the Court may, under the Money-lenders Act, 1900, re-open any account already made and relieve the person sued from payment of any sum in excess of the sum adjudged by the Court to be fairly due.

In ascertaining what is fairly due, the Court must take into consideration the risk and all the other circumstances of the case. And when the debtor has paid over more than is fairly due, the Court may order the creditor to refund the excess. Indeed, it is not necessary for the debtor to wait for the money-lender to take proceedings. He may himself apply to the Court, even before the time for repayment has arrived.

Money-lenders cannot, by any agreement to the contrary, deprive borrowers of these rights to relief. Again, a creditor cannot deprive the borrower of the relief to which he is entitled, by making the transaction take any particular form. Whatever its form, if the transaction is substantially one of money-lending by a money-lender the creditor is entitled to the relief given by the Act.

Again, Courts of Equity will always give relief to heirs, reversioners, and expectants who have made bargains unfair to themselves, especially in the case of *post obit* bonds, that is, bonds by which a person binds himself to pay a certain sum on the death, or at a fixed period after the death, of a person from whom he hopes to inherit property.

Sometimes a money-lender will try to mask his transaction by supplying the improvident with goods instead of money, knowing well that the borrower will speedily convert these goods into cash. Equity will give relief in these cases, by setting aside the transaction upon repayment of the proceeds of the resale with interest.

MONEY LENT TO INFANTS. Infants are, in law, persons under twenty-one years of age. Under the Betting and Loans (Infants) Act, 1892, if any one, for the purpose of earning interest, commission, reward, or other profit, sends or causes to be sent to a person whom he knows to be an infant, any circular, notice, advertisement, letter, telegram, or other document which invites, or may reasonably be implied to invite, the person receiving it to borrow money, or to apply to any person or at any place with a view to obtaining information or advice as to borrowing money, he is guilty of a misdemeanour, and liable, if convicted on indictment, to imprisonment, with or without hard labour, for a term not exceeding three months, or to a fine not exceeding £100, or to both the imprisonment and the fine. If he is convicted summarily, the imprisonment is limited to one month and the fine to £20; and where any such document sent to an infant purports to be issued from any address or indicates any

address where any business connected with loans is carried on, every person who attends at that address for the purpose of carrying on such business is deemed to have caused the document to be sent, unless he can prove that he is wholly ignorant of the despatch of the document.

Again, under the Money-lenders Act, 1900, where it is proved that the person to whom the document is sent is an infant, the person charged will be deemed to have known that he was an infant, unless he proves that he had reasonable grounds for believing the contrary. And this is especially so under the Betting and Loans (Infants) Act, 1892, when the document is sent to a university, college, school, or other place of education.

Under the Infants Relief Act, 1874, all contracts entered into by infants for the repayment of money lent or to be lent are absolutely void; and the Betting and Loans (Infants) Act, 1892, makes void any agreement made by the infant after he comes of age to repay loans advanced during infancy. But where an infant has obtained a benefit by falsely representing himself to be of full age, he is bound in equity to restore any advantage he may have obtained through his false representation.

RECOVERY OF MONEY LENT. Generally speaking, money lent can be recovered by action; but the Law will not give its assistance for the recovery of money in cases where it has been lent for an illegal or immoral purpose. In other words, the law declines to put a premium on crime, illegality or immorality.

For instance, certain games are considered by law to be "unlawful" games. They include every game of cards which is not a game of mere skill, and all games of dice except backgammon. Money lent for the purpose of being employed in the playing of such games cannot be recovered. Similarly, money cannot be recovered which has been lent for the purpose of settling the borrower's losses on illegal stock-jobbing transactions, even in cases where the lender has not been a party to the illegal transactions. So, too, where money or goods have been lent for an immoral purpose they cannot be recovered. Mere immorality is not illegal, but the law will not assist those who traffic in it.

> Thus, in the case of Pearce *v.* Brooks (1866 L.R. 1 Ex. 213.), where a firm of coach-builders had supplied a carriage on credit terms to a person who, as they knew, wanted it for an immoral purpose: it was held that no action would lie for the price of the carriage.

If a borrower refuses to carry out his agreement to borrow, the money-lender cannot as a rule obtain from the Courts a decree for the specific performance of the contract. The proper remedy for the breach of such a contract is an action for damages. The amount that the money-lender will recover by way of damages will not, however, in any way depend on the amount of the sum agreed to be lent. He will recover by way of damages any loss which he has actually sustained through the breach of the contract, but no more. The same reasoning applies where the lender refuses to carry out his contract to lend.

INTEREST GENERALLY. It has long been decided that no action lies at law for the recovery of interest on money lent unless the lender and borrower have come to some special agreement that interest shall be paid, or unless such an agreement may be implied from the usage of trade or from the special circumstances of the case.

> Thus, if A obliges his friend B with a temporary loan and nothing is said about interest, he cannot expect B to repay more than the actual amount of the loan. But with the exception of such temporary loans between friends, it is seldom indeed that money is ever lent except on terms as to interest.

With certain Statutory exceptions there is *no limit* to the interest that may be charged, and the rate frequently imposed by money-lenders is very high indeed. The Statutory provisions fixing the amount of interest chargeable on small advances by pawnbrokers on the security of goods pledged are dealt with in the next section. Generally speaking, therefore, since the repeal of the Usury Laws in 1854, borrowers have been, and still are, liable for the payment of such interest as they may have agreed to pay. Though, as will be seen below, Courts of Equity and courts acting under the Money-lenders Act, 1900, are in the habit of giving relief to borrowers who have agreed to excessive and unconscionable rates of interest.

Money is usually lent in one or two ways, and the rate of interest generally varies accordingly. The first of these is the lending of the money on good security, and the second is when it is lent on merely personal security, as on a promissory note. Where the security is good the competition of the money market brings the interest down to a very low level, generally as low as six, five, or four per cent., and occasionally lower. But where the money is obtained from a money-lender on merely personal security, the rate charged is generally enormous.

It not infrequently happens that even persons who possess good and valuable security will go to a money-lender instead of to a banker. Sometimes they are induced to do this for the sake of secrecy, but generally because they are unversed in business matters and unable to appreciate the value of their security in the open market. Borrowers should be warned against accepting the apparently easy terms offered by money-lenders on merely personal security. A money-lender will frequently make a preliminary loan on comparatively easy terms. When the time for payment arrives the borrower may be in difficulties; the only thing that suggests itself to be done is to obtain a renewal of the loan, and it is on these renewals that money-lenders charge such exorbitant rates of interest.

INTEREST ON SMALL ADVANCES BY PAWNBROKERS. Borrowers frequently raise money by pawning their goods. The Legislature has protected their interests in the case of small loans by the provisions of the Pawnbrokers Act, 1872. The interest fixed by the Act only applies to loans of ten pounds and under. In assessing the interest the Act divides these loans into three classes, according to the amount of the loan.

> (1) For loans of ten shillings or under the pawnbroker is entitled to charge a halfpenny for the ticket, and by way of interest a further sum of one halfpenny per calendar month on each florin or part of a florin lent. But after the first calendar month any time not exceeding fourteen days is to be reckoned as half a month only.
>
> (2) For loans of more than ten shillings, but not more than forty shillings, the pawnbroker is entitled to charge a penny for the ticket, and by way of interest a further sum of one halfpenny per florin per calendar month. After the first calendar month, a fortnight or less is reckoned as half a month only.
>
> (3) For loans above forty shillings and under ten pounds the authorised charge for the ticket is one penny, and the authorised interest is a halfpenny on every half-crown per month.

PAWNBROKER'S OBLIGATIONS. A pawnbroker is defined by the Pawnbrokers Act, 1872, as including "every person who carries on the business of taking goods and chattels in pawn." The Act regulates very effectively the transactions of pawnbrokers, particularly with regard to loans of under £10. The pawnbroker must take out an annual licence (which expires on the 31st July in every year) for each shop in which he carries on the business. The excise duty on each licence is £7 10s. If he acts as a pawnbroker without having a proper licence in force he is liable to a maximum penalty of £50. On conviction of fraud or criminal receiving the court may direct that the licence be cancelled.

> No person may establish a new pawn-broking business, or receive a licence to carry it on, unless he has obtained a certificate from the justices of petty sessions or from a stipendiary magistrate. This certificate is not necessary in the case of the executors, administrators, assigns, or successors to an existing business.

A pawnbroker must exhibit his full name with the word "pawnbroker" in conspicuous letters on the outer door of his shop, and must always keep in a conspicuous part of his shop the same information as is required by the third schedule of the Act to be printed on pawn tickets. He must also keep the proper books as required by the Act, and fairly and legibly enter his transactions therein.

THINGS A PAWNBROKER MUST NOT DO. A pawnbroker must not:—

(1) Receive a pledge in pawn unless he gives in return a proper pawn-ticket in the form required by the Act.

(2) Take a larger profit on a loan on pledge than is allowed by the Act (see above).

(3) Take an article in pawn from a person appearing to be intoxicated or under the age of twelve (in London, sixteen).

(4) Purchase, take in pawn or exchange a pawn-ticket issued by another pawnbroker.

(5) Employ any servant under the age of sixteen to take pledges in pawn.

(6) Purchase, except at public auction, any pledge while in pawn with him, or allow any pledge while in pawn with him to be redeemed with a view to his purchasing it.

(7) Dispose of property pledged, save at such time and in such manner as is allowed by the Act.

REDEMPTION OF THE PROPERTY PAWNED.—Pledges may be redeemed at any time within a year and seven days from the day of pawning. The holder for the time being of a pawn-ticket is presumed by law to be the person entitled to redeem the pledge, so that the pawnbroker is bound to return the pledge to any one who, within the year and seven days, produces the ticket and pays the amount of the loan and the proper interest thereon. If a person claims to have been entitled to a pawn-ticket, but alleges that the same has been lost, destroyed or stolen, he must apply to the pawnbroker for a printed form of declaration, which the pawnbroker must supply. The applicant, and some one to identify him, must then duly make the declaration before a justice and within three days return it to the pawnbroker. During the three days the pawnbroker is entitled to refuse to give the pledge to any one producing the ticket, and after the declaration has been returned he is indemnified by the Act for handing it over to the applicant producing the declaration. The making of a false declaration is punishable as perjury.

DISPOSAL OF THE PROPERTY PAWNED. After the expiration of the year and seven days the disposal of the pledge depends on the amount of the original loan. If the loan was for less than 10s. the article becomes the absolute property of the pawnbroker. If the loan was for more than 10s. the pawnbroker can, after the year and seven days, either allow the pledge to continue or dispose of it by *public auction*. In this case the holder of the ticket can always redeem until the sale. Before the sale the auctioneer must expose the pledges to public view, and publish catalogues and advertisements of the sale in manner provided by the Act. The pawnbroker may bid for himself at the auction, but on knocking down any article to a pawnbroker the auctioneer must audibly declare his name. The pawnbroker must keep for three years a copy of every catalogue relating to pledges sold by him, filled up with the amounts they fetched, duly authenticated by the signature of the auctioneer. At any time within the three years the holder of the pawn-ticket may inspect the entry of the sale in the pawnbroker's books and in the filled-up catalogue; and if the pledge has been sold for more than the amount of the loan and interest, the pawnbroker must on demand pay over the surplus, after deducting the expenses of the sale, to the holder of the ticket. If the sale results in a deficit the pawnbroker can sue for the balance, or set off the amount of the deficit against a surplus on another article pledged by the same person; but in this case the two sales must be within twelve months of each other.

PAWNBROKER'S LIABILITIES. These refer especially to pledges stolen, damaged, or destroyed by fire:—

(*a*) **Damage by Fire.** Where a pledge is destroyed or damaged by fire the pawnbroker must pay the pawner the *value* of the pledge, after deducting the amount of the loan and profit. The *value* of a pledge is to be reckoned as the amount of the loan and profit, *plus* 25 % on the amount of the loan.

(*b*) **Compensation for Depreciation.** If the pawner or holder of the ticket can prove to the satisfaction of a court of summary jurisdiction that the pledge has depreciated in value through the default, neglect or wilful misbehaviour of the pawnbroker, the court may award him reasonable compensation. This applies only to chattels pledged for less than £10. For pledges of a higher amount, if the pawner is able to prove negligence on the part of the pawnbroker or his servants, he can obtain damages in a civil court.

(*c*) **Loss by Theft.** The pawnbroker is not expected to guarantee against theft, but if he has been guilty of negligence, or omitted to take reasonable care in looking after the property he will be liable to make good the loss.

PAWNING OF STOLEN GOODS. Pawnbrokers run great risk of being regarded as the receivers of stolen property. If they take in goods, knowing that they have been stolen, they are punished as receivers. In all cases where they have acted innocently they are expected to give the police every possible assistance, and the court which tries the thief has a discretion to allow the pawnbroker to retain the goods or to compel him to return them to the true owner, according to the view it takes of the conduct of the owner and pawnbroker respectively. Most frequently it orders a return of the goods, on the terms that the owner pays the pawnbroker half the amount originally advanced on the pledge.

LANDLORD AND PAWNBROKER. If an ordinary pledgee (see "Pawn or Pledge" in *Commercial Dictionary*) falls into arrears with his rent, his landlord may distrain upon the pledged goods found on his premises; but in the case of a pawnbroker who takes in pledges in the ordinary course of his trade, his landlord cannot seize the pledged goods for arrears of rent.

BILLS OF SALE.

A bill of sale is a grant by deed, by which the ownership of personal chattels, but not the possession thereof, is transferred from one person called the grantor to another person called the grantee. The grant may be absolute, that is, the goods and chattels are sold outright to the grantee, though the seller is allowed to retain possession of them; or the grant may be conditional, in which case it is usually made as a security for the repayment of money lent by the grantee to the grantor. If the money is repaid the grant ceases to have any effect, that is, the grantee has no longer any claim upon the chattels; but if the money is not repaid, the grantee may, under certain conditions, take possession of the goods, and being already the owner of them, may dispose of the goods as he pleases.

As a bill of sale can only be given in regard to personal chattels, it is well to know what are included under this term. *Personal chattels* include goods, furniture and other articles, the ownership of which can be transferred by simple delivery. The term includes trade machinery, and also fixtures and growing crops, when assigned separately from the buildings or land to which they are attached. But shares or securities in Government stock, or shares and stock in public funds, or things in action (e.g., bills of exchange, book-debts and the like), are not personal chattels on which a bill of sale can be given.

For ordinary purposes, it is not necessary to explain what instruments are bills of sale, and what are not. But among familiar examples, it is well to note that a hire purchase agreement, whereby the owner of the goods reserves to himself the power to resume possession of the goods in case there is default in making the periodical payments as they become due, is not a bill of sale, because it is not a license or permission given to him to take the goods. The goods are his, and he reserves to himself the right to resume possession, in case the payments are not kept up.

ABSOLUTE BILLS OF SALE must be attested by a solicitor, and the attestation clause must state that before the execution of the bill of sale its effect has been explained to the grantor by the attesting solicitor. The bill of sale must truly set forth the consideration (value) for which it was given, and must be registered in the High Court within

seven days after its execution. In applying for registration a true copy of the bill is filed, with an affidavit stating the date of the bill, its due attestation and execution, the residence and occupation of the grantor and of the attesting witnesses. The registration must be renewed every five years. The renewal is effected by filing with the Registrar in the High Court an affidavit stating the date of the bill, the names, residences and occupations of the parties to the bill, and that the bill of sale is still in force as a security. If there is any material error in the affidavit, the registration will be void.

CONDITIONAL BILLS OF SALE are more commonly met with than are absolute bills of sale. They are usually given as security for the repayment of money borrowed by the grantor of the bill of sale, and are somewhat like mortgages of land. With this difference, that a legal mortgagee of land is entitled to go into immediate possession of the land, though as a matter of fact he rarely does so; while the grantee of a bill of sale cannot take possession of the chattels except under certain circumstances which will be mentioned subsequently. Under a conditional bill of sale, a person who borrows money remains in possession of the goods, but the goods belong to the person who lent the money, subject to this condition, that when the debt is paid off, the ownership of the chattels reverts to the person who has given the bill of sale (i.e., the borrower).

> Those who wish to preserve their credit should never resort to this method of raising money. It is the last resource of the needy, the reckless, or the unscrupulous. Persons in a position of trust, such as bank clerks, cashiers, and the like, should never under any circumstances borrow money by giving a bill of sale on their furniture or other goods, because every bill of sale has to be registered in the High Court. The register may be examined by any one, and lists of these registered bills of sale are regularly published by certain trade protection agencies. Hence it is easy for employers and others to obtain information as to whether those in their employ have resorted to this method of raising money. Accordingly, if employees in positions of trust do so their employers will get to learn of it, and will think that for one reason or another such employees are living beyond their means, and therefore exposed to the temptation of helping themselves to the money belonging to their employers. Indeed, many banks have adopted the rule of dismissing any of their clerks who borrow money in this way.

In order to constitute a valid bill of sale, it must be duly attested, duly registered, and must truly state the consideration (value) for which it is given, which consideration must not be less than £30. The bill must also be made in accordance with the form laid down by the Bills of Sale Act, 1882. If every one of these things is not observed the bill of sale is absolutely void, not only as against other creditors, but as between the grantor and grantee. It must be remembered that though in these cases the bill of sale will be void as between the grantor and the grantee, so that the grantee has no right whatever to the chattels mentioned in the bill of sale, still he can recover the money which he actually advanced to the grantor.

It will be seen from the above, a bill of sale on one's furniture cannot be given unless the money borrowed on it is not less than £30.

FORM OF A BILL OF SALE. The Bills of Sale Act lays down a form, but it is not absolutely necessary to follow that form in every detail. But the form must comply in all essential particulars with that given in the Act. The bill of sale must be by deed, that is, it must be in writing, signed and sealed by the grantor. It must state the names and residences of the grantor (borrower), and of the grantee (lender), and the consideration for which the bill is given, i.e. the amount borrowed by the grantor. It must state that the grantor, by way of security for the money lent, assigns to the grantee the chattels mentioned in the inventory attached to the bill. The bill must also state the rate of interest to be paid for the loan, and contain a covenant by the grantor that he will repay the loan with the stipulated interest on a given day, and a further covenant by the grantor that he will insure the goods, and pay all rent, rates, and taxes due on the premises in which the goods and chattels are. The bill of sale must also contain a clause that the goods so assigned shall not be seized or taken possession of, except for any cause mentioned in section 7 of the Bills of Sale Act of 1882. The causes for which the lender may seize the chattels are—

(1) If the grantor makes default in payment of the money due, or in the performance of the other covenants contained in the bill of sale.

(2) If the grantor becomes bankrupt, or has his goods distrained for non-payment of rent, rates, and taxes.

(3) If the grantor fraudulently removes or suffers the goods to be removed from the premises in which they were at the date of the bill.

(4) If the grantor unreasonably refuses to produce his last receipts for rent, rates, and taxes, when asked in writing by the grantee.

(5) If execution is levied against the goods under any judgment in law.

ATTESTATION. The bill of sale must be attested by one or more credible witnesses, who are not parties to the bill, i.e. who are neither the grantor nor the grantee, but an agent of the grantee may be an attesting witness. The address and occupation of an attesting witness must be accurately given, and if he has no occupation, that fact should be stated.

REGISTRATION. A bill of sale must be registered within seven days of its execution. If there are several bills of sale on the same chattels, they take priority according to the date of registration. The registration must be renewed every five years.

GRANTEE'S RIGHTS. The grantee has a right in the circumstances already stated, to seize the chattels mentioned in the bill of sale, and at the expiration of five clear days to remove and sell them.

GRANTOR'S RIGHTS. A grantor may have the bill of sale set aside if it has been obtained by misrepresentation or fraud. He can, if the seizure is irregular, or if the bill is invalid, apply to the High Court to restrain the grantee from removing and selling the goods; but he must make the application within five days of the seizure. If the goods have been wrongfully seized and sold, he can bring an action for damages.

RIGHTS OF THE OTHER CREDITORS OF THE GRANTOR. The landlord can, for non-payment of his rent, distrain upon goods comprised in a bill of sale, and so defeat the rights of the grantee. So also goods upon which a bill of sale has been given can be seized for unpaid rates and taxes. But a judgment creditor, i.e. a creditor who has obtained in a court of law a judgment against the debtor, ordering the debt to be paid, cannot seize goods upon which a bill of sale has been given. This is one of the ways in which an unscrupulous debtor defeats his creditors. He gives a pretended bill of sale on his furniture to a friend, who is in the know. No money need pass between them. The bill is duly registered and all the formalities complied with. Then when a creditor obtains a judgment against the debtor, and proceeds to seize the goods in accordance with the judgment, he is met by the bill of sale, and so cannot seize the goods.

STAMPS AND FEES. The fees payable are:—

	£	s.	d.
On filing a bill of sale and the affidavit where the amount advanced, including further advances, does not exceed £100	0	5	0
Above £100 but not exceeding £200	0	10	0
Above £200	1	0	0
Affidavit of re-registration	0	10	0
Fiat of satisfaction	0	5	0
Request for search	0	2	6
Certificate	0	2	6
Special or official search with affidavit ..	0	5	0
Warrant of attorney with affidavit	0	5	0
Office copies—per folio	0	0	6

These fees are to be paid by means of impressed stamps.

The stamp duty on a conditional bill of sale is an *ad valorem* duty, that is where the loan

	s.	d.
exceeds £30 and does not exceed £50	1	3
exceeds £50 and does not exceed £100	2	6
exceeds £100 and does not exceed £150	3	9
exceeds £150 and does not exceed £200	5	0
exceeds £200 and does not exceed £250	6	3
exceeds £250 and does not exceed £300	7	6
exceeds £300, then for every £100 or fraction of £100	2	6

COPYRIGHT.

DURATION OF COPYRIGHT. Copyright, or the sole and exclusive liberty of printing or otherwise multiplying copies of an original work, is not a right which endures for ever. The general policy of the law is against monopolies; at the same time if no such thing as copyright existed, authors, artists, and inventors would be seriously handicapped, as the enjoyment of the fruits of their toil would be snatched from them ere they could reap an adequate reward. The result of these two conflicting principles is a compromise which enables the proprietor of a copyright to enjoy a monopoly for a certain fixed or limited period.

The following gives the duration of copyright for the different classes of work:—

(1) For books, dramatic pieces, and musical compositions, whichever is the longer of these two periods: (*a*) The author's lifetime and seven years after his death; (*b*) Forty-two years from the first publication.

(2) For engravings and prints, twenty-eight years.

(3) For paintings, drawings, and photographs, the life of the author and seven years afterwards.

(4) For sculpture, fourteen years, but if the sculptor is alive at the end of that period, the copyright holds good for another fourteen years.

REGISTRATION OF COPYRIGHT. The proprietor of the copyright in any book or musical composition should register it at Stationers' Hall. The entry in the register should state correctly the title of the book, the time of its first publication, and the names and addresses of the publisher and the proprietor of the copyright. In the case of newspapers and other periodicals, the first number only need be registered. Where an author registers the copyright of a painting, drawing, or photograph the entry should contain his name and address, with a short description of the subject of the picture. He may, if he likes, supplement this with a photograph or sketch of the registered picture. In the case of dramatic works, registration is not necessary to secure the right of performance or "playright," but in so far as they are books, the "copyright," or right of multiplying copies, should be registered. Engravings do not require registration; but by the Engraving Copyright Act, 1734, the proprietor's name must be printed on each print to preserve the copyright.

The registration at Stationers' Hall does not confer a copyright. The only effect of registration being that an action cannot be brought for infringement of copyright until registration has taken place; but the registration may be made even after the alleged infringement, and indeed at any time before the commencement of the action. Where a copyright is assigned, the assignment should be registered so as to enable the assignee to sue in case of an infringement. Where the right of any person has been injuriously affected by an entry in the register, the person aggrieved may apply to the Court to have the entry expunged or varied.

COMPULSORY PRESENTATION OF COPIES. By the Copyright Act, 1842, a complete printed copy of every book published (and copies of subsequent editions containing additions or alterations), must within one month of publication, if published within the Bills of Mortality, and within three months if published elsewhere in the United Kingdom, be delivered on behalf of the publisher thereof at the British Museum. By the same Act the publishers must, if required to do so by the authorities at Stationers' Hall, or the librarians of any of the following libraries, deliver copies within twelve months of publication to the Bodleian Library at Oxford, the Public Library at Cambridge, the Library of the Faculty of Advocates at Edinburgh, and the Library of the College of the Holy and Undivided Trinity of Queen Elizabeth near Dublin. The penalty for neglecting to furnish these presentation copies is a sum not exceeding £5 in addition to the value of the book.

INFRINGEMENT OF COPYRIGHT. The copyright of a work may be infringed in a variety of ways, as by the unauthorised publication or sale of an exact and complete copy of the original work, or by a colourable imitation of it, or indeed, by making excerpts from it. There is no copyright in an idea and none in news; but forms of expression used to describe the idea or news are capable of copyright. Again, there can be no copyright in the title of a work; but if any one uses for his own work a title calculated to lead other people to believe that it is the work of some one else who has published something under the same name, he might be liable to an action for fraud.

There are many things which are incapable of copyright; thus immoral, indecent, and blasphemous works cannot be the subject of legal copyright; so, too, works possessing no originality whatever are generally incapable of copyright. There is no copyright in facts nor is there any in law; but if originality of statement or treatment is accorded to the facts or the law in any work, such originality of statement or treatment is capable of copyright.

An author cannot escape the consequences of infringement by the mere fact that in his work there is some original matter in addition to the matter which has been copied. An abridgment of a copyright work need not necessarily be an infringement, indeed it generally is not; it would, however, be an infringement if it were a mere colourable imitation of the original work and calculated to injure the sale of such work. Quotations, again, from a copyright work may or may not constitute infringement. They would be looked upon as infringements if used merely as a cloak to the utilisation of the labours of another.

Where a statute has assigned penalties for the infringement of a copyright, the appropriate remedy is an action for the recovery of the penalties; in other cases the proper remedy is an action for damages for the infringement, which may or may not, according to the circumstances of the case, be coupled with a claim for an injunction to restrain further infringement. An injunction alone may be sought, or, indeed, all or any of the three methods of procedure may be employed. The Courts will not grant injunctions where the infringements are trivial in character, and, of course, the amount of damages recoverable would depend largely on the extent to which the plaintiff had been injured by the infringement.

PROPRIETOR OF THE COPYRIGHT. Generally speaking, the copyright of an original work belongs to the author; but this is by no means invariably the case, as will be seen presently. Moreover, questions sometimes arise as to who is the person who ought properly to be regarded as the author.

Thus it has been held in the case of a *photograph*, that the assistant who arranged the group and took the picture was the author, and not the actual proprietor of the business. But it should be remembered here that by the Fine Arts Copyright Act, 1862, it is provided that where any painting, drawing, or negative of a photograph is sold to, or executed for or on behalf of, any other person for a good and valuable consideration, the person executing the same does not retain the copyright, unless the other person agrees in writing that he shall retain it, but the copyright goes to the other person. It has even been held that where a person orders and pays for a photograph of himself in the usual way, he can by injunction restrain the photographer from selling, or even from exhibiting as an advertisement, copies of the photograph.

With regard to the copyright in *articles* appearing in Encyclopædias, the Copyright Act, 1842, provides that, where the proprietor of an Encyclopædia employs persons to write articles for it and pays them for the work on the terms that he shall have the copyright, the copyright belongs to the proprietor; but he may not publish the articles or any of them separately without the author's consent. The same Act contains a similar provision with regard to articles written for reviews, magazines, or other periodicals of a like nature, with this difference, that, after the term of twenty-eight years from the first publication, the right of publishing the articles separately reverts to the author.

Copyright in *lectures* is dealt with in the Lectures Copyright Act, 1835, which provides that the sole right of printing or publishing them belongs to the author, or the person to whom he has sold the copyright. But the Act

does not apply unless two days' notice of the intention to give the lecture has been given to two local magistrates; nor does it apply to lectures given in universities, colleges, or public schools, or on any public foundation. But apart from the Act, where a lecture is not delivered to the public generally, the lecturer can restrain by injunction any publication of it, though members of the audience may make use of their notes of the lecture for their own instruction.

The law as to copyright in a *public speech* was recently laid down in the celebrated case of Walter *v.* Lane, wherein it was held that a reporter of the "Times" who took down verbatim a speech by Lord Rosebery, acquired a copyright in his report.

Lastly, registered proprietors of copyright works may assign or transfer their rights to other persons by entering particulars of the assignment in the register at Stationers' Hall. The assignment of the copyright in a dramatic piece does not carry with it the right of representation. All assignments must be in writing, and licenses to copy given by the proprietor to any person should also be in writing.

COPYRIGHT IN ART. The Fine Arts Copyright Act, 1862, gives to the "author" of every original *painting*, *drawing*, and *photograph* the copyright of such work for the term of his natural life and seven years after his death. But if at any time he sells or disposes of the work for a good and valuable consideration, he loses the copyright, unless it is expressly reserved to him at the time in writing, signed by the person to whom it is sold. If at the time of the sale the seller transfers the copyright to the buyer, he must do so in writing. It will thus be seen that the copyright in a work of art may easily be lost.

Sculpture is on a somewhat different footing. By the Sculpture Copyright Act, 1814, the copyright is given to the proprietor, who is generally the artist, for fourteen years from the date of "publication." Questions sometimes arise as to what is the date of publication. It generally means the time from which the public eye is first allowed to rest on it, as where it has been unveiled in a public place. The proprietor must cause his name and the date to be put on the sculptured work before publication. After the expiration of the fourteen years, if the original proprietor is still alive, the copyright returns to him for a further fourteen years.

With regard to the copyright in *engravings*, by the Engraving Copyright Acts, 1734 and 1766, the copyright in engravings is given to the proprietor or engraver for twenty-eight years, but the name of the proprietor must appear on every engraving. By the International Copyright Act, 1852, the protection is extended to prints taken by lithography or any other mechanical process, by which prints or impressions of drawings or designs are capable of being multiplied indefinitely.

DRAMATIC COPYRIGHT. By the Dramatic Copyright Act, 1833, as amended by the Copyright Act, 1842, the author of any tragedy, comedy, play, opera, farce, or any other dramatic piece or entertainment, or any musical composition, has the sole liberty of representing such production in places of dramatic entertainment for forty-two years from the date of the first publication, or for the term of his natural life and seven years more, whichever is the longer.

Such a production is deemed to be published on the occasion of its first public representation or performance. Questions frequently arise as to what is a "place of dramatic entertainment." It need not be a place habitually or even frequently used for the purpose of such entertainments; but to constitute an infringement the performance must be open to the public generally, and not be a purely private function. The fact that no charge is made for admission will not necessarily save it from being an infringement, but such a fact will be strong evidence of its purely private character. The fact that the performance is given for the benefit of a charity or other worthy or meritorious object will in no way prevent its being an infringement, if otherwise it is an infringement. A person is none the less the "author" of a dramatic piece if he employs assistants in carrying out portions of the work which he has devised.

The right of producing and publicly representing a dramatic work, which is sometimes conveniently called "playright," must be distinguished from "copyright," strictly so called, which is the right of printing or multiplying copies of the original work. The two rights are closely akin, and cannot be treated separately, though it is provided by the Copyright Act, 1842, that the assignment of the "copyright" of a dramatic piece does not carry with it the "playright," unless the intention to convey such a right is expressly entered in the register at Stationers' Hall.

A person may generally without infringement of copyright dramatise a novel written by someone else; but if the author of the novel has also dramatised it, the other person may be liable for infringement of the play though not of the novel, unless his play is entirely different from that of the author of the novel. The proprietor of the "playright" need not have his right registered to enable him to sue in the case of an infringement.

By the Theatres Act, 1843, no new plays or additions to old ones may be acted in any theatre until they have been submitted to and sanctioned by the Lord Chamberlain. The fee charged for this examination must not exceed two guineas. The Lord Chamberlain has power to forbid the presentation of any play whenever of opinion that it is desirable in the interests of good manners, decorum, or the public peace, so to forbid it. A penalty not exceeding £50 is incurred by every person who presents or causes to be acted for hire any play which has not been sanctioned, or which has been disallowed by the Lord Chamberlain.

MUSICAL COPYRIGHT. Musical compositions are generally governed by the same principles as dramatic works, but there are certain statutes which apply to them and not to other dramatic works. Musical compositions are capable of both playright and copyright. Indeed, many musical compositions, as operas, are frequently indistinguishable from dramatic pieces. A mere song will not generally constitute a "dramatic piece," even when it is intended to be sung in costume, but the authorities are somewhat conflicting on this point. But inasmuch as the Dramatic Copyright Act, 1833, does not apply to musical compositions, the playright of such compositions may be infringed by a public performance which is not "in a place of dramatic entertainment." A sheet of music is a "book" within the meaning of the Copyright Act, 1842, so before an action for infringement of "copyright" can be brought, it must be registered.

By the Copyright (Musical Compositions) Act, 1882, the proprietor of the copyright of any such composition who desires to retain the playright, must have printed on the title page of every copy a notice to the effect that the right of public representation or performance is reserved; and if the owners of the copyright and playright are different persons, the owner of the playright must give to the owner of the copyright a notice in writing requiring him to print the announcement on the title pages.

By the Musical Copyright Act, 1906, every person who prints, reproduces, or sells, or exposes, offers or has in his possession for sale any pirated copies of any musical work, or who has in his possession plates for the purpose of reproducing the same, is liable on summary conviction to a fine not exceeding £5. A subsequent conviction involves a fine of £10 or two months' imprisonment.

COPYRIGHT IN DESIGNS AND TRADE MARKS. *Designs* may be registered in the register of designs at the Patent Office. The comptroller may, if he thinks fit, refuse to register a design presented for registration, but an appeal lies from his decision to the Board of Trade. When a design is registered, the registered proprietor has a copyright in it for five years from the date of registration. On the sale of any article to which a registered design has been applied, the proprietor must, before delivery, mark it with such figures and words to denote that the design is registered as may be prescribed, otherwise the copyright will be lost. The copyright given by the Patents, Designs, and Trade-mark Acts only applies to the right to use the design in connection with articles registered in

the same class in the register. Moreover, the designs must be new and original.

Trade-marks may be registered in the Patent Office. If the comptroller refuses to register a trade mark, an appeal lies to the Board of Trade, which may, however, refer the matter to the Court of Appeal. (See "Registration" under *Trade Marks*.)

INTERNATIONAL COPYRIGHT. By the International Copyright Acts, 1844, 1852, and 1875, the Sovereign may, by Order in Council, direct that copyright may be granted in respect of foreign works in cases where the foreign country has made provision for the copyright of British works. Prior to these Acts no protection was given to the works of foreigners resident abroad.

In 1885 a conference on the subject was held at Berne, in Switzerland, and in consequence of that conference, the International Copyright Act, 1886, was passed, the Berne Convention, 1887, was signed, and the Order in Council of November, 1887, was issued. The countries concerned in these enactments are Belgium, France, Germany, Hayti, Italy, Luxemburg, Monaco, Montenegro, Spain, Switzerland, and Tunis. The authors of works first produced in any of these countries have the same copyright in the United Kingdom as if the works were first published here, except that they are not to have a longer copyright than they would have in their own country.

Austria and Hungary have effected with Great Britain a convention similar to the Berne Convention. With regard to the United States, to secure a copyright there, a British author must not only publish his work simultaneously in both countries, but the books for sale in the United States must be printed there and from type set up there. There is no similar protection for publishers and printers in the United Kingdom.

PATENTS.

WHAT IS A PATENT? A patent is a grant from the Crown by letters patent to the true and first inventor of some manner of new manufacture, conferring on him the sole right or monopoly of making, using, or selling it during the period for which the patent is granted. The term "inventor" includes a person who first introduces an invention from abroad; but it must be noted that foreign inventors have certain rights under the International Convention referred to in a paragraph below. A patent may be granted to two or more persons jointly, and of these only one need be the true and first inventor.

SUBJECT MATTER OF PATENT. The essentials of the subject matter of a valid patent are that it shall be (*a*) an invention, (*b*) new, (*c*) useful. Each of these terms require some explanation:

(*a*) **An Invention.** An invention may be something entirely new, as for example the telephone, or it may be a new method of carrying out an old process, as for example the employment of machinery to perform what has previously been done by hand; or it may be an improvement of some existing process or manufacture. Some ingenuity must be shown; thus a mere combination of two existing machines is not good subject matter of a patent unless the means used to connect them require invention. It has been said that "you cannot take out a patent for a principle, but you may take out a patent for a principle coupled with a mode of carrying the principle into effect." Thus the discoverer of electricity could not have patented his discovery; but any new mode of utilising in a practical way the force of electricity is good subject matter for a patent. The discovery of a new use for a process or apparatus formerly used for other purposes is not an invention; thus there is no invention in applying an ordinary water tap to a beer bottle. A new and useful product, for example a new dye, can be patented; but a product is not new merely because it is produced by machinery instead of by hand labour, although in this case the new machinery itself would be good subject matter for a patent.

(*b*) **Novelty.** If the invention has become known in this country by prior use or publication, even by the inventor himself, no patent can be afterwards granted for it. This, however, does not apply:—

(1) Where the prior use was in the nature of an experiment by the patentee to test the utility of his invention, and not for profit.

(2) Where the patentee disclosed the matter only to those in confidential relationship with him, as for instance, to an assistant whom he employed.

(3) Where the prior use was by others who failed to carry out what the subsequent invention afterwards successfully accomplished.

In these cases the patent will be sustained, notwithstanding its prior publication. A patent may, however, be held invalid for want of novelty by reason of prior publication, although the prior publication has never been put to any practical use. It is sufficient for the person who opposes the patent to show that the prior publication was clear enough to enable any one who had ordinary knowledge of the subject to carry out the invention.

(*c*) **Utility.** The patent to be valid must be useful. This does not necessarily mean commercially profitable. A patent is considered to be useful if it fulfils the purpose for which it was designed by the patentee. A small amount of utility is sufficient to support the patent. Thus an invention is useful by which an article, good, though not so good as one of the same kind previously known, can be produced more cheaply by a different process.

GRANT OF PATENT.

1. APPLICATION. The first step in the application for a patent is to fill in a declaration, obtainable at any postal money-order office, in which the applicant states his full name, address, and occupation, and gives the title of the invention. He must declare that he is the true and first inventor, and that to the best of his knowledge and belief the invention is not in use by any other person. The applicant then signs the declaration and sends it to the Comptroller General at the Patent Office, together with his Provisional Specification or Complete Specification. Forms of these can also be obtained at a post office. The *Provisional Specification* sets out shortly the nature of the invention, but does not enter into details. The *Complete Specification* describes in detail the nature of the invention and in what manner the same is to be performed, and states distinctly the features of novelty claimed. It is very important that the specification should be framed with great care, for it must be remembered that whether a patent is a new and useful invention is not decided at the time the patent is granted, but only when the patent is called in question by some action for infringement.

2. PROVISIONAL SPECIFICATION. As a rule, the applicant sends in a Provisional Specification only with his declaration. He then receives from the Patent Office a certificate of filing, and the application is advertised in the *Official Journal* (*Patents*). A certificate of acceptance is then forwarded to the applicant, and this also is advertised. The applicant has now got provisional protection, and he can use or publish the invention without prejudice to the patent applied for.

3. COMPLETE SPECIFICATION. Within six months from the date of his application, the applicant must file his Complete Specification, or his application will be deemed to be abandoned. It may be mentioned here that a fee of £1 is payable on application for provisional protection, and of £3 on the filing of the Complete Specification. The Patent Office having received the Complete Specification, a certificate of filing is forwarded to the applicant, and the Examiners in the Patent Office compare the Complete with the Provisional Specification to see if they accord with each other and are properly prepared. On applications for patents on and after January 1st, 1905, a further investigation, for which an additional £1 fee must be paid, will be made into the novelty of the patent. This investigation into novelty is limited in scope, and is referred to more fully below. If the examiner is satisfied on these points a *certificate of acceptance* is issued and advertised

in the Official Journal. The Complete and Provisional Specifications are then printed and published.

4. OPPOSITION TO GRANT. Any person interested may at any time within two months from the date of the advertisement of the acceptance of a Complete Specification give notice at the Patent Office of opposition to the grant of the patent. Such opposition may be entered on the ground that the applicant obtained the invention from the person opposing or from a person of whom he is the legal representative, or that the invention has already been patented in this country, or that the Complete Specification claims an invention other than that described in the Provisional Specification, and that such other invention forms the subject of an application made by the opponent in the interval between the leaving of the Provisional Specification and the leaving of the Complete Specification. The Comptroller hears the parties and decides the case, subject to an appeal to the law officer (i.e. the Attorney or Solicitor General).

5. SEALING PATENT. If no opposition be entered, or if, in case of opposition, the matter is decided in favour of the applicant, the Comptroller causes a patent to be sealed with the seal of the Patent Office, and issued to the applicant.

PATENTS ACT, 1902. By the Patents Act, 1902, sections 1 and 2, which came into force on January 1st, 1905, a limited examination into the novelty of the invention claimed is to be made at the time when a Complete Specification is deposited. If the examination shows that the invention has been wholly or in part claimed or described in the Complete Specification of any prior English application of the last fifty years, the applicant is to be informed and may amend his Specification, which amended Specification will be examined in like manner. The Examiner reports to the Comptroller and the latter decides whether the Specification shall be accepted, or whether a reference to any prior Specification ought to be made in the Specification by way of notice to the public. Appeals from the decision of the Comptroller General are heard by one of the Law Officers of the Crown. It should be noted that this investigation does not in any way guarantee the validity of any patent. The legal validity of a patent cannot be determined until it has been questioned in a court of law.

DURATION OF PATENT. A patent is granted for fourteen years, and is maintained in force by payment of annual renewal fees after the end of the fourth year. A patentee may, however, before the expiration of his patent, present a petition to the King in Council praying for an extension of his patent, and if the Judicial Committee of the Privy Council report that the patentee has been inadequately remunerated by his patent, the term may be extended for a further period of seven, or, in exceptional cases, fourteen years.

INFRINGEMENT OF PATENT. During the term of patent right, the privilege of using, selling, or otherwise exercising the patent belongs exclusively to the patentee or his representatives, and any one who interferes with his rights in this respect is liable to an action for infringement, even though he acted quite innocently and did not know of the existence of the patent. The mere offering for sale, although no sale is effected, and the importing of the patented article from abroad will constitute an infringement.

REMEDY FOR INFRINGEMENT. The remedy of a patentee for an infringement of his patent is to bring an action claiming an injunction, i.e. an order from the Court stopping further infringement, and damages. The party against whom the action is brought can plead that he has not infringed the patent, or that the patentee was not the true or first inventor (in which case the defendant must show who was the true or first inventor), or that the patent is invalid from want of novelty or utility, or is otherwise not proper subject-matter for a patent.

ACTION FOR THREATS. A patentee must remember that if he threatens alleged infringers of his patent with legal proceedings, he must be prepared to carry out his threats if necessary; for it is provided by Statute that if a person, claiming to be a patentee, threatens any other person with legal proceedings, any one aggrieved by such threats, if the person making the threats does not take action, may bring an action against the patentee on the ground that no infringement has been caused, and may obtain an injunction to put a stop to such threats, and damages, if any, caused thereby.

ASSIGNMENT OF PATENT. Letters patent are freely assignable, and the assignee may bring in his own name the same actions against those who have infringed the patent as the patentee himself might have done. An assignment of a patent must be by deed and should be registered.

CO-OWNERS. Either of two joint patentees may use the patent without being liable to account to the other for profits, unless there has been an agreement between them to the contrary; but neither may dispose of the right of the other; nor can one co-owner release a person who has infringed the patent from liability to damages to the other co-owner.

LICENCES. A patentee may grant licences to individuals or to firms to use his patent. Such licences may be restricted, i.e. they may give the right to a part of the invention only, or the right to use or sell the patent only in a certain district. If a man is given a licence to sell patented articles, a purchaser from him can resell without direct authority from the licensee.

COMPULSORY LICENCES. On petition to the Board of Trade by any person interested, the Privy Council (to which the Board will refer any *prima facie* case) may order that the patentee shall grant licences, or in default have his patent revoked, if he has not satisfied the reasonable requirements of the public; but no order of revocation shall be made before the end of three years from the date of the patent, or if the patentee gives satisfactory reasons for his default.

A government department may use an invention for the services of the Crown on terms to be agreed on with approval of the Treasury between the department and the patentee, or if they cannot agree, on such terms as shall be settled by the Treasury after hearing all parties interested.

INTERNATIONAL AND COLONIAL ARRANGEMENTS. The International Convention for the Protection of Industrial Property, 1902, provides that applicants for a patent in any one of the countries of the Union (to which Great Britain and most of the other important States belong) shall enjoy twelve months within which to apply to the other countries, and the right of priority is established by applying for the patent. Foreign applications when made in this country must be accompanied by a Complete Specification. In addition to the countries which are members of the Convention, there are certain other countries and colonies with which the British Government has made arrangements for mutual protection of patents.

REGISTRATION. A register of patents is kept at the Patent Office. The patent is registered here after it has been sealed. The register also contains entries of assignments, licences, amendments, revocation, and other matters affecting the patent. If the patentee borrows money on the security of his patent, the lender should see that the fact of his charge is entered on the register as a notice to others.

REVOCATION. A petition to the Court may be presented asking that a patent shall be revoked. Such petition may be presented by the Attorney General, or any person authorised by him, or by any person who alleges that the patent was obtained in fraud of his rights, or that he was the true inventor and actually published the invention, or that he publicly manufactured, used, or sold, before the date of the patent, anything claimed by the patentee. If a patent is revoked on the ground of fraud, the successful petitioner, if he is the true inventor, may have the patent, for the remainder of its term, transferred to himself.

FALSE REPRESENTATION. It is an offence, punishable on summary conviction by a fine of £5, for a person to represent that an article sold by him is a patented article when no patent has in fact been granted to him. If an invention has been provisionally protected only, it is an offence to mark it as "patented." If marked at all it should be marked "Patent applied for." It is also an offence, punishable with a fine of £20, for a person to describe himself as a Patent Agent when he is not duly registered as such.

TRADE MARKS.

WHAT IS A TRADE MARK? A trade mark is defined by statute as "a mark used or proposed to be used upon or in connection with goods for the purpose of indicating that they are the goods of the proprietor of such trade mark by virtue of manufacture, selection, certification, dealing with, or offering for sale." By the Trade Marks Act, 1905, a registrable trade mark must contain or consist of at least one of the following essential particulars:—

(1) The name of a company, individual, or firm, represented in a special or particular manner.

(2) The signature of the applicant for registration, or some predecessor in his business.

(3) An invented word or invented words.

(4) A word or words having no direct reference to the character or quality of the goods, and not being according to its ordinary signification a geographical name or a surname.

(5) Any other distinctive mark; but a name, signature, or word or words, other than such as fall within the descriptions in the above paragraphs, will not, except by order of the Board of Trade or the Court, be deemed a distinctive mark.

INVENTED WORD. The meaning of this phrase has caused some difficulty. The House of Lords has recently decided that an invented word may be registered as a trade mark, although it may bear some remote reference to the character and quality of the goods. Thus the word "Solio," as a trade mark for photographic paper, was held good. But the word must really be an invented word, not a mere corruption of, or addition to, a word in common use; nor is it valid if it is merely a word, or number of words, spelt wrongly, but conveying to the ear the sound of the actual words, such as the word "Uneeda."

GEOGRAPHICAL NAME. A geographical name cannot be registered as a trade mark. It has, however, been held that a trade mark is not invalid merely because the word selected is also, by some chance, the name of some obscure place or locality. On the other hand, if the goods are named after the place of their manufacture, such name cannot be registered as a trade mark, even if it be some very out-of-the-way or unknown locality. It will be shown later that there are certain unregistered trade names, some of them geographical, which are upheld as good at common law, quite apart from registration under the Statute.

REGISTRATION. At one time, if a trade mark came by use to be recognised in trade as the mark of the goods of a particular manufacturer or trader, he acquired an exclusive right to use the trade mark in connection with goods of the same kind; but now, by Statute, no infringement of a registrable trade mark can be restrained unless the trade mark has been registered. An application form can be obtained at all the chief post offices for the sum of five shillings. On this form a representation of the mark should be mounted, and the essential particulars of the trade mark be set out. By the Trade Mark Rules goods are divided into fifty classes, and the applicant must state under which class he desires to register his mark. He, or his agent, then signs the application form and forwards it to the Comptroller at the Patent Office. The Comptroller signifies to the applicant his acceptance or refusal of the trade mark. If accepted, the mark is advertised in the Official Trade Mark Journal. If no opposition is offered within one month, the applicant is called upon to pay a fee of £1, and the certificate of registration is issued. The Comptroller may refuse a trade mark on the ground that it does not conform to the rules, or that it resembles an existing mark. In such a case the applicant may appeal from the Comptroller's decision to the Board of Trade, who may decide the matter themselves, or—a course usually adopted—refer the appeal to the Court.

OPPOSITION. The trade mark may be opposed by some interested person, for example, another trader. The notice of opposition should be given within one month from the date of the advertisement in the Journal; the applicant must then, within one month, send to the Comptroller a counter statement of the grounds on which he relies to support his application. Otherwise he is held to have abandoned his application. Declarations are then made by the opponent and by the applicant in support of their respective cases, and the Comptroller hears and decides the matter. From his decision an appeal lies to the Court or, with the consent of the parties, to the Board of Trade.

EFFECT OF REGISTRATION. Application for registration of a trade mark is deemed to be equivalent to public use of the trade mark; and registration of a person as proprietor of a trade mark is *prima facie* evidence of his right to the exclusive use of the trade mark, and after the expiration of five years from the date of registration it is conclusive evidence of his right, unless the person opposing it applies successfully to have the register rectified by expunging the mark on the ground that it ought never to have been registered, as, for example, if it was not a trade mark at all. A person cannot sue for damages for infringement of his trade mark until it has been registered, except in the case of trade marks in use before August 13th, 1875, in which case, if he has applied for registration and it has been refused on the ground that his trade mark is not registrable, he can sue upon producing a certificate from the Comptroller that registration was so refused.

PERIOD OF PROTECTION. The period of protection for a registered trade mark lasts for fourteen years. At the end of that time the registration may be kept in force for another fourteen years upon payment of a renewal fee of £1, and so on from time to time at the expiration of every period of fourteen years.

RECTIFICATION OF REGISTER. A person aggrieved, i.e. a person who may probably suffer any loss from the use of the trade mark claimed (as, for example, a person who is sued for infringement of a mark which ought never to have been registered), may apply to the Court to have the mark struck off the register, or varied, on such grounds as that the mark is common to the trade, or that the goods distinguished by the trade mark are not traded in, or that it is similar to a trade mark of his own already registered. The registered proprietor, also, may apply to the Court to alter the register in any non-essential particular, as, for instance, to add the word "Limited" to the name of a Company.

IDENTICAL TRADE MARKS. Except by order of the Court or in the case of trade marks in use prior to the 13th August, 1875, no trade mark will be registered in respect of any goods if it is identical with one belonging to a different proprietor already on the register in respect of goods of the same nature. Registration will also be refused if the second trade mark so nearly resembles the one first registered as to be calculated to deceive. Where each of several persons claims to be proprietor of the same trade mark or nearly identical trade marks in respect of the same description of goods, the Registrar may refuse to register any of them until their rights have been determined by the Court. In the case of an honest and concurrent user of a trade mark, or of other special circumstances the Court may, if it think proper, permit the registration of the same or similar marks by different proprietors in respect of the same description of goods, subject, however, to such conditions and limitations as it may think fit to impose.

MARKS REGISTERED ABROAD. A subject of a foreign State, which has become a party to the International Convention for the protection of Industrial Property, can apply to have any trade mark registered by him in his country registered in this country in priority to other applicants coming after the date of foreign registration, provided he files the application within four months of registration abroad. The trade mark must conform to the requisites of English law.

ASSIGNMENT OF TRADE MARK. A person entitled to a trade mark cannot transfer the trade mark except in connection with the goodwill of the business. A person cannot grant licences to others to use his trade mark; to do so would be to forfeit his claim to the mark. If a business, with the trade mark, is assigned, the assignee should apply to the Comptroller to alter the register. If in any case, whether by reason of a dissolution of partnership or otherwise a person ceases to carry on business and the goodwill of such person does not pass to one successor but is divided, the Registrar may permit an apportionment of the registered trade marks of the person among the persons in fact continuing the business. An appeal lies to the Board of Trade from the decision of the Registrar.

TRADE NAME. If the goods of a particular trader have, by long use, become known in the market by an unregistered or unregistrable trade name, i.e. one not capable of registration as a trade mark, he acquires a right to prevent any other person from using the same name in connection with the same kind of goods for trade purposes in such a way as is likely to deceive the public. Thus the words "Yorkshire Relish," though unregistrable as a trade mark, because geographical in nature, were held to be a trade name only usable by those who had the secret of the manufacture. In some cases the use of a man's own name may be such as to deceive; for example, if there is a well-known firm of a certain name, and another person of that name starts trading in the same articles. Where this is so, the person aggrieved can obtain an injunction against such use of the name, but, as a rule, he must prove fraudulent intent.

SHEFFIELD MARKS. The Trade Marks Act, 1905, makes special provision for the registration at Sheffield by the Cutler's Company, in a register termed the Sheffield Register, of trade marks used on metal goods. In the case of persons carrying on business in Hallamshire, or within six miles thereof, the application for registration must be made to the Cutler's Company direct.

COTTON MARKS. The Trade Marks Act, 1905, also provides for the continuance of a branch registry at Manchester for the registration of Cotton Marks, the registrar thereof being styled the "Keeper of Cotton Marks."

REMEDY FOR INFRINGEMENT. The remedy for infringement of a trade mark is an action for damages and an injunction. Where the trade mark has been used with knowledge that it belongs to another manufacturer, the Court will order an account to be taken of any profits made, and give compensation accordingly; but if the person infringing acted innocently and without the intention of defrauding any one, he usually has only to pay the costs of the action and submit to an injunction against him, preventing any further infringement.

COUNTERFEITING. The forgery of a trade mark (which includes the making of a spurious trade mark so nearly resembling an existing mark as to be likely to deceive) is a criminal offence, punishable with fine or imprisonment. It is for the person charged to prove that he acted without intent to defraud. Persons who sell, or use in trade, goods with forged trade marks are also guilty of an offence, unless they can prove that they acted without guilty knowledge, and that on demand they gave all the information they could as to the persons from whom they obtained such goods.

WARRANTY. On the sale of goods to which a trade mark or trade description has been applied, the vendor is held, by Statute, impliedly to warrant that the trade mark or trade description are genuine. Any person who represents a trade mark as registered which is not so is liable for every offence on summary conviction to a fine not exceeding £5.

UNAUTHORISED ASSUMPTION OF ROYAL ARMS. By the Act of 1905 if any person, without the authority of His Majesty, uses in connection with any trade, business, calling, or profession, the Royal Arms (or arms so closely resembling the same as to be calculated to deceive) in such a manner as to be calculated to lead to the belief that he is duly authorised so to use the Royal Arms, or if any person without the authority of His Majesty or of a member of the Royal Family uses in connection with any trade, etc., any device, emblem or title in such a manner as to be calculated to lead to the belief that he is employed by or supplies goods to His Majesty or such member of the Royal Family, he may be restrained by injunction from continuing to use the same at the suit of any person authorised to use such arms, emblems, etc., or at the suit of any person authorised by the Lord Chamberlain to take proceedings.

THRIFT AND TRADE ORGANIZATIONS.

1. TRADE UNIONS.

OBJECTS OF TRADE UNIONS. A Trade Union is a combination of a number of persons engaged in the same trade for certain purposes described more or less generally in the "Objects and Rules" of the Union. The following are two typical descriptions:

(1) A systematic organization, formed with desire of creating a bond of brotherhood and sympathy throughout the trade, in order that those who by honest labour obtain a livelihood in this particular branch of industry may in their combined capacity compete more effectively against the undue and unfair encroachments of capital than could possibly be the case by any number of workmen when acting individually.

(2) Any organization to secure to all its members the fair reward of their labour: to provide for the settlement in a conciliatory manner of disputes between employer and employed, so that a cessation of work may be avoided: to secure the enforcement of the Factory Acts or other legislative enactments for the protection of labour: to afford pecuniary assistance to any member who may be victimised or without employment in consequence of a dispute or lock-out or when disabled by accident.

The above descriptions by no means exhaust the objects of Trade Unions, for those of other Unions include (1) the abolition of piece work, (2) the obtaining of equal pay for equal work irrespective of the sex of the worker, (3) the exercising of a control over the supply of apprentices, (4) the provision of sick, accident, and burial funds, (5) the establishment of healthy workshops, etc.

THE ANCIENT GUILDS. Less than a century ago trade unions, as we now know them, were non-existent. Long before that time there were combinations of workmen, or as they were then termed, craftsmen. These ancient combinations were called "Guilds." In the City of London they were styled "Companies," a name under which these corporations still exist, although their rights and powers are now vastly different from those enjoyed in the 15th and 16th centuries. At that time, some of these Guilds were empowered to seek out and prosecute any person practising their trade, if that person was not an admitted member of the Guild. The members of the Guild were master craftsmen employing and training apprentices who in due time, having fulfilled certain stringent conditions, became themselves master craftsmen and members of the Guild. Each member of the Guild worked at his trade, and only in very rare instances did he employ another master craftsman, so that the modern relationship of employer and employed was almost unknown. Economic conditions changed with the years, machinery was introduced, crafts were sectionized, the capitalist

became necessary to the workmen, and now we have the employing few and the employed many. The employed finding that they as individuals could not effectively resist any tyrannous acts of the employers, formed themselves into Trade Unions. On the other hand, the employers have found it necessary to combine to protect their interests against the attacks of the Unions; so that to-day there exist the Workmen's Unions and the Employers' Associations.

NUMBER OF TRADE UNIONS. Trade Unionism to-day is a mighty force. There are 121 Unions, each with a membership of over 1,000. The largest of these is the Coalminers, with close upon half-a-million members, and the other large ones include The Boiler Makers and Iron Shipbuilders, 43,000; The Amalgamated Society of Engineers, 84,000; and The Northern Counties Cotton Weavers, 90,000.

TRADE UNION ACT, 1871. By the Common Law of England (as distinguished from the Statute Law) it is illegal to restrain any person, master or workman, from carrying on his trade according to his discretion, for his own best advantage. This general Common Law rule was in full force prior to 1871, and rendered illegal all the combinations which included among their objects any restraint of the individual in the exercise of his trade. It is necessary to make clear what was the effect of this illegality. There was no power which had authority to compel the dissolution of the combination or Union, but such combination or Union could not be recognised for any purpose as legal entity. For instance, the Unions could not be recognized as property-owners, their officers could embezzle funds with impunity, and generally the difficulties surrounding the management and organization of these bodies were so great as to render it almost impossible to carry them on successfully. In 1871, the Legislature determined to legalize Trade Unions under certain conditions, which are dealt with in the following paragraphs.

REGISTRATION OF TRADE UNIONS. The Act of 1871 applies only to such Unions as are registered, so that an unregistered Union is still an illegal combination. Any seven persons can apply for registration as a Union The application must be made to the Registrar of Friendly Societies, and upon a Form which can be obtained from the Registrar. This form must be signed by seven members of the Union and be accompanied by a copy of the rules, the names and titles of the officers, and (if the Union is already in existence) a memorandum stating generally its position respecting membership, funds, etc.

COMPULSORY RULES. The Statute is very explicit as to what the rules must include, before any Union can be recognised as a legal body. The rules must include statements as to:—

(1) The location of the office of the Union and place where its business meetings are to be held. (2) The objects of the Union, and a limitation preventing the disbursement of any funds of the Union except in furtherance of such objects. (This limitation will be enforced by the Courts, if necessity arise). (3) The conditions under which members become entitled to benefit, and also the condition affecting fines and forfeiture of membership. (4) The mode of making or amending the rules. (5) The method of appointing the officers, committees and trustees. (6) The mode of investing the funds. (7) The conditions under which all persons interested in the funds of the Union may inspect the books and the membership roll.

If the Registrar is satisfied with the rules, he will issue the Certificate of Registry on the payment of his fee (£1), and so long as that certificate is not withdrawn, any Court is bound to recognize the Union as a body entitled to sue or prosecute and also as liable to legal process which may be brought against it. Should there be any change in the Rules or in the personnel of the officers, such changes must be notified to the Registrar before the 1st June in each year. Annual returns must be made to the Registrar before the same date, and must comprise the following particulars:—

(1) The assets and liabilities at the date of the return. (2) The receipts and expenditure for the year. (3) The expenditure on the several branches of the Union work. Every officer of a Union not making this return is liable to a penalty not exceeding £5 for each offence.

DISABILITIES OF TRADE UNIONS. Although the Act of 1871 legalized Trade Unions for certain purposes, it must be made clear that the Act had not the effect of placing a Trade Union in the same legal position as a body which does not include among its purposes the "restraint of trade." Section 3 of the Act says:—"The purposes of any Trade Union shall not, by reason merely that they are in restraint of trade, be unlawful so as to render void any agreement or trust," and this section expresses in general terms the principle, and the *whole* principle underlying the Act.

LIMITED POWERS. The rules of all Trade Unions have provisions affecting subscriptions and benefits. An agreement by a member to pay his subscription is not enforceable in a court of law, so that in this respect the Union stands where it did before the Act of 1871. Nor can a member compel (by action-at-law) his Union to pay him benefits under the Rules. This rule applies not only to pecuniary help during strikes, but also to sick, accident, funeral, tool and other benefits. The Courts cannot in any way assist a Trade Union in enforcing any rule or order which prescribes hours of labour, rates of wages, or place of employment.

TRADE DISPUTES. In what is known as the Taff Vale case, a Railway Company sued a Union and its secretaries for "instigating and conducting a strike of the railway workmen in August, 1900, in the course of which contracts were broken, violence and intimidation took place, and great loss was occasioned." The jury found a verdict in favour of the Company, and the Union funds were mulct in damages and costs. The House of Lords upheld this interpretation of the law, but their judgment has practically been reversed by the Trade Disputes Act, 1906. This Act exempts Trade Unions, whether of workmen or masters, from actions against them in respect of "tortious" acts (see *Torts*) alleged to have been committed by them or on their behalf "in contemplation or in furtherance of a trade dispute."

STRIKES. In 1875 it was enacted by the Conspiracy and Protection of Property Act, that: "An agreement or combination of two or more persons to do or procure to be done any act in contemplation or furtherance of a trade dispute between employers and workmen, shall not be indictable as a conspiracy if such an act by one person would not be punishable as a crime." Prior to 1875, a strike usually brought its participators within the meshes of the criminal law by rendering them liable to indictment for conspiracy. In 1867 Baron Bramwell, in Regina *v.* Druitt, said:—"An agreement for co-operation against liberty of mind and freedom of will, irrespective of any intimidation or physical coercion, is a criminal conspiracy." A comprehensive dictum which ably summarised the law as it then existed, and led to the appointment of a Commission, the report of which brought about amendments of the law, which as shown by the extract from the Act of 1875 (quoted above) exempted peaceably conducted strikes from the operations of the Criminal Law.

PICKETING. In the course of a strike or a lock-out, the workmen usually endeavour to further their aims by preventing their employers from obtaining the services of other persons. One of the means employed is picketing, that is, a watching of the premises of the employer with a view to dissuading any person from accepting service in the "picketed" premises. By the Conspiracy Act, 1875, it is an offence, rendering the offender liable to a fine not exceeding £20, or imprisonment of not more than three months, if he endeavour to compel any other person to do any act which he has a right to abstain from doing or to abstain from any act which he has a legal right to do. But it is specially provided that it is not an offence to picket a place in order merely to obtain or communicate information. Thus, so long as the pickets do not intimidate, annoy, or use any physical force, they are acting within their rights, and not creating grounds upon which can be

based successful criminal proceedings. It should be made clear that "intimidation" in this connection has been held to mean a threat or threats of physical violence.

2. FRIENDLY SOCIETIES.

THEIR NATURE. A "Friendly Society" is a voluntary association formed by its members with a view to helping each other in old age, sickness, etc., and for other similar purposes. The Legislature has passed from time to time many enactments dealing with these societies, but these have been finally consolidated into the Friendly Societies, Act, 1896, which, with the Collecting Societies and Industrial Assurance Companies Act, 1896, contains the bulk of the law on the subject.

REGISTRATION. The Friendly Societies' Act, 1896, allows the following societies to be registered with the Registrar of Friendly Societies, who is a paid official of the Treasury:

(*a*) Societies for the purpose of providing by voluntary subscriptions of their members, with or without the aid of donations, for:—

(1) The relief or maintenance of the members and their families during sickness, old age, or widowhood, or for maintaining their orphan children.

(2) Insuring money to be paid on the birth of a member's child, or on the death of a member, or for the funeral expenses of his family.

(3) The relief or maintenance of members in search of employment, or when in distressed circumstances.

(4) The endowment of members or their nominees at any age.

(5) The insurance against fire to an amount not exceeding £15 of the implements of a member's trade.

(*b*) Societies for the purpose of insurance to any amount against loss of neat cattle, sheep, lambs, swine, horses, or other animals.

(*c*) Societies for any benevolent or charitable purpose, or for purposes of social intercourse, mutual helpfulness, mental and moral improvement, and rational recreation.

But no society will be registered unless it consists of seven persons or more, nor will any friendly society be registered which contracts for the assurance of any annuity exceeding £50 per annum or of a gross sum exceeding £200.

CONDITIONS OF REGISTRATION The method of registration is for an application for registration to be sent to the Registrar, signed by seven members and the secretary, together with copies of the rules and a list of the names of the secretary and of all the trustees and authorised officers of the society. A society cannot be registered under a name which is either identical with that of another registered society, or so similar thereto as to be likely to deceive the public. If the Registrar refuses to register a society, an appeal will lie to the High Court. If a society has branches, a list of the branches, with their responsible officials, must accompany the application for registration. Again, notice of the establishment of every new branch must be sent to the Registrar.

DUTIES OF REGISTERED SOCIETIES. Every registered society and branch must have a registered office and one or more trustees. The trustees are appointed by the resolution of a majority of the members present, and entitled to vote at a meeting of the society. A copy of such resolution, signed by the secretary and by the trustees appointed, must be sent to the Registrar. The accounts of every registered society must be audited annually, and a return of the receipts and expenditure, funds and effects of the society or branch, as audited, must be made to the Registrar before the 1st of June in every year. Every five years the assets and liabilities must be valued, and a return made, of every registered society other than a benevolent society, working men's club, cattle insurance society, or authorised society.

RULES OF THE SOCIETIES. The rules of registered societies must set forth:—

(1) The name and situation of the society. (2) The whole of the objects of the society, the conditions of membership, the fines which may be imposed on the members, and the consequences of not paying fines or subscriptions. (3) The mode of holding meetings, the right of voting and the manner of making or altering the rules. (4) The appointment and removal of the officers of the society and, in the case of a branch, the conditions under which it may secede from the parent society. (5) The investment of the funds, the keeping of the accounts, and the annual audit. (6) The annual returns of the accounts to the Registrar. (7) The inspection of the books by every person having an interest in the society's funds. (8) The manner of settling disputes. (9) The keeping of separate accounts of all moneys received or paid in respect of funds, benefits, expenses of management, and contributions. (10) A quinquennial valuation, with the exceptions already mentioned under *Duties of Registered Societies.*

There must be rules also relating to the dissolution of the society, and to an application to the Registrar for an investigation of the affairs of the society, or for winding up the same.

RIGHTS OF MEMBERS. Any person is entitled to a copy of the rules of any society on payment of a sum not exceeding one shilling. Every member and every person interested in the funds of a society or branch is entitled to be supplied gratuitously with a copy of the last annual return or a balance sheet duly audited. Members and persons interested in the funds may at all reasonable times inspect the books of the society; but they may not inspect the loan account of another member without his consent, unless they are officers of the society or specially authorised by a resolution of the society. Militiamen, yeomanry, and volunteers, members of Friendly societies, cannot be fined for non-attendance at meetings where it has been occasioned by the discharge of their duties.

SETTLEMENT OF DISPUTES. In the event of disputes arising between members, or persons claiming under the rules of a society, and the society, such disputes are generally decided in the manner directed by the rules of the society. There can be no appeal from such a decision, and if disobeyed the decision may be enforced on an application being made to a County Court. But unless the rules expressly forbid it, the parties to a dispute may by consent refer the matter to the Registrar. Where the rules contain no directions as to disputes, or where no decision is made within forty days, the person aggrieved may apply either to the County Court or to a Court of Summary Jurisdiction to hear and determine the matter in dispute.

3. BUILDING SOCIETIES.

THEIR NATURE. The Building Societies' Act, 1874, permits any number of persons to establish under that Act a society, either terminating or permanent, for the purpose of raising by the subscriptions of its members a stock or fund for making advances to members out of the funds of the society upon security of freehold, copyhold, or leasehold estate, by way of mortgage. These societies are called Building Societies, and have the power of holding land and of raising funds by the issue of shares.

THE MEMBERS. The members of a Building Society fall naturally into two great classes, those who lend and those who borrow. The Act of 1874 provides that the liability of any member of a building society under that Act, in respect of any share upon which no advance has been made, is limited to the amount payable thereon under any mortgage or other security, or under the rules of the society.

The several members of a Building Society, and all persons claiming on account of such members, are bound by the rules of the society, and the law will presume that they are acquainted with them.

OFFICERS OF A SOCIETY. Every officer of a Building Society having the receipt or charge of any money belonging to the society must, before taking upon himself the execution of his office, become bound with at least one surety, or give the security of a guarantee society, or such other security as the Building Society may direct, binding

him and his executors or administrators to account for all the society's money passing through his hands.

RULES. The rules of every Building Society established since 1874 must set forth :—

(1) The name and chief office or place of meeting of the society. (2) The purposes to which the funds are to be applied, and the manner in which they are to be invested. (3) The manner of making, altering, or rescinding the rules. (4) The manner of appointing, remunerating, and removing the board of directors or committee of management, auditors, and other officers. (5) The manner of calling meetings. (6) Provision for an annual or more frequent audit. (7) Whether disputes are to be settled by reference to the court, or to the Registrar, or to arbitration. (8) Provision for the custody and use of the seal of the society, which in all cases must bear the registered name thereof. (9) Provision for the custody of the mortgage deeds and other securities of the society. (10) The powers and duties of the board of directors or committee of management, and other officers. (11) The fines and forfeitures which may be imposed on members. (12) The manner in which the society, whether terminating or permanent, may be dissolved. (13) The manner in which the stock or funds of the society are to be raised. (14) The terms upon which shares are to be issued and the manner in which the contributions are to be paid and withdrawn, with separate tables for principal and interest. (15) The limits within which preferential shares may be issued. (16) The manner of making and repaying advances, the deductions for premiums, and the conditions of redemption, with tables. (17) The manner of ascertaining and providing for losses. (18) The manner in which membership is to cease. (19) Within what limits the society intends to borrow, if at all.

REGISTRATION. All societies formed under the Building Societies' Acts, 1874 to 1894, must obtain a certificate of incorporation from the Registrar of Friendly Societies, whose duty it also is to act as registrar to Building Societies. If any society commences business without first obtaining a certificate of incorporation, the person or persons responsible will be liable on summary conviction to a penalty not exceeding £5 for every day business is carried on. Provision is made by the Act of 1874 for granting certificates of incorporation to Building Societies founded before that date.

Persons intending to establish a Building Society must transmit to the Registrar two copies of the rules signed by three of such persons and the intended secretary. If the Registrar approves the rules, he returns one copy to the secretary, with a certificate of incorporation, and retains the other copy. Every society on receiving a certificate of incorporation becomes a body corporate, with a registered name, a common seal, and perpetual succession until it is dissolved.

POWER TO BORROW MONEY. Building Societies may receive deposits or loans at interest from the members or other persons, or from corporate bodies, joint stock companies, or from any terminating building society, to be applied to the purposes for which they have been established. In a *permanent* society the total amount so received on deposit or loan, and not repaid by the society, must not at any time exceed two-thirds of the amount for the time being secured to the society by mortgages from its members. In a *terminating* society the total amount so received and not repaid may either be a sum not exceeding such two-thirds as above, or a sum not exceeding twelve months' subscriptions on the shares for the time being in force.

TERMINATION OF A SOCIETY. There are four principal ways in which a building society may come to an end :—

(1) By dissolution in the manner prescribed by its rules. (2) By dissolution with the consent of three-fourths of the members holding not less than two-thirds of the number of shares in the society. (3) By winding up either voluntarily or under the supervision of the Court, or by the order of the Court, on the petition of any member authorised by three-fourths of the members present at a general meeting called for the purpose, or on the petition of any judgment creditor for not less than fifty pounds. (4) On an award of dissolution made by the Registrar after investigation.

4. SAVINGS BANKS.

A Savings Bank may not receive any deposit which makes the sum standing in the name of any depositor exceed £200, and when that sum is reached no interest is to be allowed on the excess. (Such excess may arise from the accumulation of interest on the moneys deposited). The maximum amount which a person may deposit in one year is £50. If any person has a deposit in more than one savings bank in the United Kingdom, or has more than one deposit in the same savings bank (as is possible by entering a second deposit under another name), he is liable to forfeit the amount illegally deposited. There are two principal classes of Savings Banks : (1) Post Office Savings Banks, (2) Trustee Savings Banks.

POST OFFICE SAVINGS BANKS. These were established by the Post Office Savings Bank Act, 1861, to grant facilities for the deposit of small savings, to make the General Post Office available for the purpose, and to give the direct security of the State to every depositor. Depositors are entitled to repayments not later than ten days after they have demanded it. The moneys deposited are devoted to the reduction of the National Debt. The rate of interest payable to depositors is $2\frac{1}{2}$ per cent. per annum on every complete pound, that is to say, sixpence on every pound left on deposit for a complete year. It should be remembered that interest is paid only on the pounds (not the odd shillings), and that it is reckoned from the first day of the month following the day of deposit, and ceases on the first day of the month of withdrawal.

TRUSTEE SAVINGS BANKS. These banks cannot now be formed except with the approval of the National Debt Commissioners. The rules and regulations for the management of these banks must provide :—

(1) That none of its trustees or managers shall receive any remuneration beyond their actual expenses, and that the other officers shall only receive such remuneration as is fixed by the rules. (2) That at least two trustees, managers or officials, shall be parties to the bank's transactions, so as to form a double check. (3) That the depositors' pass book must be compared with the ledger on every transaction of repayment, and on its first production at the bank after each 20th November. (4) That depositors must produce their deposit books for the above purpose at least once a year. (5) That no money be paid to or received from depositors except at the office and during business hours. (6) That there be a half-yearly audit, and at least half-yearly meetings of the management, and that minutes thereof be kept.

Trustee Savings Banks must make weekly returns to the National Debt Commissioners. The officers of these banks entrusted with the receipt and custody of money must give security for the just and faithful execution of their duties. No trustee or manager is personally liable except for moneys actually received by him and not paid over, or for neglect or omission in complying with the rules and regulations, or for neglecting to take security from the officers of the bank. Trustees must invest all the money belonging to the savings bank in the Bank of England or of Ireland only. No trustee savings bank may be designated or described in any manner which imports that the Government is responsible or liable to depositors for money placed in the safe keeping of the bank.

PREFACE.

AS a glance at the next page will suffice to show the full scope of this Commercial Guide, when taken in connection with that part of the Legal Guide which deals with Commercial Law, we need only point out here the purposes it is designed to serve.

In this Guide we have kept especially in view the wants of the man of business, who, though an expert in his own particular calling, is sure at various times to require information on matters that lie beyond the range of his own special occupation. In the section on Commercial Law (pp. 564–607) the business man will find a clear statement of the law in its bearing on commercial matters. In the Commercial Dictionary, which immediately follows, he will find a concise explanation of every important commercial term current in any branch of trade. And in the articles on Banking and other forms of financial business, as well as in those relating to the carriage of merchandise by means of Shipping and Railways, he will find a well-arranged stock of information on a variety of commercial topics ready to his hand. The remaining portion, also, we believe, will prove extremely useful to men of affairs in their correspondence and accounts, containing, among other matters, postal regulations, a long list of commercial terms in four languages, and a variety of tables, some as aids to calculation, and others (such as those of Excise Licences and Stamp Duties) which are sure to be in constant requisition for instant reference.

Whilst providing especially for the requirements of men in business, we aim also in this Guide at being of service to persons of all ranks and occupations, since all alike have constant dealings, either as buyer or seller, in some form or other. Even those who derive their income mainly from dividends, and have no definite business to attend to, would find it to their advantage to possess a little sound knowledge on business matters. Many of the subjects here treated of—for instance, Insurance, Banking, Stock Exchange, and the Money Market—are such as closely concern all persons who have money to invest. And in the Commercial Dictionary, which comes first in this Guide, all such persons can easily ascertain the meaning of any commercial term or transaction in which they may happen to take an interest. We need scarcely add that this section will also be found of much service to the youth entering on a business career, as it will enable him to gain a general acquaintance with commercial subjects, and thus to take a more intelligent view of his own particular business by viewing it in relation to many others.

A COMMERCIAL GUIDE.

A DICTIONARY OF COMMERCIAL TERMS.

ABANDONMENT. Where an insured ship has sustained such damage that it would not pay a prudent owner, even if uninsured, to repair it, the vessel, though it may still be in existence, is said to have become a "constructive total loss." So, too, the cargo may be in such a damaged condition as to be practically valueless. In such a case the owner *abandons* the adventure to the underwriters, or to the company in which the vessel is insured, that is, he transfers to them the whole of his interest in the cargo, or the ship, with all the profits that may possibly arise from it, in return for which the owner demands payment of the whole amount for which the venture was insured.

ABOVE PAR. When the price of stocks or shares is above their nominal value, they are said to be at a premium or above par.

ABRASION OF COIN. The loss in weight which takes place in coined money, and which is due to its being in circulation for a length of time. It is reckoned that in eighteen years a sovereign loses so much in weight as to make it fall below the standard required by law, and ought therefore to be withdrawn from circulation. A coin which is below the standard weight and which is given in payment to any person, may be cut, broken or defaced by him, the loss falling on the person tendering it in payment.

ACCEPTANCE of a bill of exchange signifies that the drawee agrees to the order of the drawer. After it has been accepted the bill is called an *Acceptance*.

ACCEPTANCE FOR HONOUR. Where a bill of exchange has been dishonoured for non-acceptance, or or better security, and is not overdue, an outsider may intervene and accept the bill for the honour of any person liable on it. (See under *Negotiable Instruments.*)

ACCEPTANCE, GENERAL. The acceptance of a bill of exchange is said to be general when the acceptor writes his signature across it without any qualification as to the time, place, or amount of payment. (See "Acceptance" under *Bills of Exchange.*)

ACCEPTANCE, QUALIFIED. In regard to a bill of exchange, a drawee may not be willing to comply with the exact terms of the drawer's request. He may choose to alter or vary those terms and to accept the bill thus altered. (See "Acceptance" under *Bills of Exchange.*)

ACCOMMODATION BILL. An accommodation bill is one to which a person puts his name to oblige another without receiving any consideration or value for so doing. For instance, A is in want of money and he draws a bill of exchange on his friend B, who, though he has received no consideration for doing so, accepts the bill, on the understanding that when the bill falls due A will meet it. A having obtained B's acceptance, gets the bill discounted, and thus obtains the cash of which he is in need. When the bill falls due, A pays its amount to the discounter, but should he not do so, B, who received nothing, will have to pay. It is therefore unwise to lend one's name to a "fictitious bill." No one is, however, liable on the bill, until value has been given for it, which is, usually speaking, when the bill is discounted. This method of raising money is known as "kite-flying."

ACCOUNT. A statement relating to goods supplied or to services rendered, or to pecuniary transactions, showing the amount due from one person to another.

ACCOUNT, CAPITAL. An account which shows the amount of capital embarked in any business and the way in which it has been expended.

ACCOUNT, CURRENT. An open or running account which shows how persons between whom business transactions are being carried on for a definite period stand to one another.

ACCOUNT, PROFIT AND LOSS. An account which shows on the debit side all moneys, charges and expenses paid out, and all losses incurred through bad debts, depreciation of property and the like. The credit side shows all moneys received. If the amount on the credit side exceeds that on the debit side, there is a nett gain, but if the debit exceeds the credit there is a loss. Thus a business man is enabled to see how his affairs stand.

ACCOUNT, SALES. An account furnished to a principal by his agent, giving details of the sale of a consignment of goods. It states the quantities sold, the price paid for each lot, the total proceeds, the deductions made for the agent's commission, and for expenses incurred by him for freight, insurance and the like, and, lastly, the nett proceeds.

ACCOUNT, STATED. Where parties dispute or are in doubt as to the exact amount owing from one to the other, they may agree that a certain sum shall be settled as the amount actually owing. From this admission that the money is due, the law implies a promise to pay the amount.

ACCOUNT, STOCK EXCHANGE. The settlement of the transactions between buyers and sellers which takes place periodically, or the period between one settlement and the next. It takes place twice a month, but in the case of consols once a month. The settlement extends over three days, in the mining market four days. The first day is the "carrying-over" or making-up day; the second is the "ticket day." The last day is the "pay day" or settling day, when the stock has to be delivered, or the "differences" have to be paid. (See *Backwardation* and *Contango.*)

ACCOUNT, SUSPENSE. An account to which items with which it is not proposed to deal at the moment are transferred. For example, where a payment is made which through some legal or other difficulty may have to be refunded, the person to whom the payment is made enters in it his suspense account until the matter is finally adjusted, and it is ascertained whether the money is to be refunded or not. If this were not done, the books in case the money had to be refunded would show a fictitious gain.

ACCOUNTABLE RECEIPT. A written acknowledgment of the receipt of money or of goods which have to be accounted for afterwards, e.g., pawnbroker's ticket, an entry in a bank pass-book.

ACCOUNTANT. The chief work of accountants is in preparing, investigating and auditing accounts. They are frequently employed as trustees, liquidators, and receivers in bankruptcy, and in the winding up of limited companies. When a business is to be sold, or turned into a limited company, the services of an accountant are engaged to ascertain the profits or earning capacity of the business in order to be able to estimate the price to be paid for it. Any one may call himself an accountant, but the name is usually applied to a class of men who have been trained to the work, and who have a special knowledge of business affairs. These belong to one of two great bodies, the Institute of Chartered Accountants and the Incorporated Society of Accountants and Auditors. These hold periodical examinations for admission to their membership.

ACQUITTANCE, a release or discharge from any legal liability.

ACTIVE BONDS, bonds on which interest is paid in full from the date of issue.

ACTIVE CIRCULATION, the notes of a bank actually in the hands of the public. (See "Bank Return" in *Index.*)

ACT OF BANKRUPTCY. An act which if committed by a debtor will render him liable to bankruptcy proceedings.

ACT OF GOD. Any event which arises from natural causes outside human control and which could not reasonably be foreseen and provided against, e.g., tempest, lightning, sudden and severe frost. No one can be made liable for loss arising through an act of God.

ACT OF HONOUR. Where a bill is dishonoured for non-acceptance or non-payment, a person not liable on it may accept it or pay it to save the honour or reputation of the drawer or some other person liable on the bill.

ACTUARY. A person skilled in calculating the value of life interests, annuities and life insurances. The manager of an insurance company is often called an actuary. The Institute of Actuaries is composed of Fellows, Associates, Students, Honorary Members and Corresponding Members. (Refer to "Actuary" in *Index.*)

ADJUDICATION ORDER. An order made by the Court, when bankruptcy proceedings have been taken against an insolvent debtor, by which he is adjudged bankrupt and his property vested in a trustee. (See under *Bankruptcy.*)

ADJUSTMENT. In marine insurance average adjustment consists in determining, when a general average has occurred, what amount of contribution must be paid by those whose interests have been benefited by a sacrifice of some interest

on behalf of all, so as to make good the loss of the persons whose property has been sacrificed. This is determined when the vessel has reached her destination. When a particular average occurs the work of adjustment determines what items of loss or of expense should be borne by the shipowner and the merchant, and what should be borne by the underwriter. This work is done by a class of professional men known as "average adjusters" or "average staters," and it involves a great amount of technical knowledge and skill.

AD VALOREM. In proportion to value. An *ad valorem* duty is a duty of so much per cent. on the value of the goods. Such duties are not levied in the United Kingdom, where all duties on goods are according to their weight or quantity. *Ad valorem* stamp duties are in proportion to the value of the subject matter of the document, e.g., the stamp duty on bills of exchange, bills of sale and the like.

ADVANCE. Money paid before it is legally due: especially used to denote money paid to the consignor of goods, on receipt by the consignee of the bill of lading or the invoice.

ADVANCE FREIGHT, payment made in advance for carriage of goods by sea. It is due as soon as the goods are shipped, and cannot be recovered should the goods be destroyed by fire, or the ship lost, and the goods, consequently, not delivered.

ADVANCE NOTE. A master on engaging a seaman at a port in the United Kingdom may advance him not more than a month's wages when he signs the articles of agreement. It is illegal to advance more than this sum, but this restriction does not apply where the master engages the seaman at a foreign port.

ADVENTURE, BILL OF. A writing, signed by a person to the effect that goods shipped on board in his name really belong to another, and are at that other's risk, the person signing the document being liable to account only for their produce, i.e., for the price which they realise after deducting expenses.

ADVICE. Information or instructions on some business matter, especially in regard to the drawing of bills or the forwarding of goods. Thus, if a merchant wishes to draw a bill upon a person, he writes a "letter of advice," advising that person of the fact, giving full particulars as to the amount, the date, the time which the bill has to run, and the name of the person to whom the bill is payable. If the advice is not sent, the bill on being presented for payment or acceptance may be dishonoured for *want of advice*.

AFFIDAVIT. A written statement on oath sworn before a Commissioner for Oaths, and used in cases where oral evidence is not required; e.g. in support of an application for injunction. It usually requires to be stamped with a half-crown stamp.

AFFREIGHTMENT. The contract of a ship owner to carry goods for payment called the freight. This contract may be embodied either in a bill of lading or a charter party.

AFTER DATE. When this phrase is written on a bill of exchange or a promissory note, it means after the date of the bill.

AFTER SIGHT. When a bill is drawn at so many days after sight, it means that the bill will fall due at the expiration of that time, reckoning from the date when the bill was first presented to the drawee for his acceptance. The acceptor inserts on the bill the date of his acceptance, in order that the holder of the bill may know when to present it for payment.

AGE ADMITTED, an indorsement on a life policy stating that the insurance company is satisfied with the proof of age furnished by the person insuring.

AGENDA. The programme of business to be gone through at a meeting.

AGIO. The term agio is used to express the difference between the values of the metallic and the paper money of a country, or between one sort of metallic money and another.

ALLONGE. A slip attached to a bill of exchange for the purpose of providing space for additional indorsements, when there is no further room on the bill itself. It forms part of the bill and requires no additional stamp.

ALLOTMENT. The distribution of shares in a limited company to those who have applied for them on the invitation contained in the prospectus.

ALLOTMENT NOTE. A note by which a seaman authorises the ship owner to pay over a part of his wages, not exceeding one-half, to some near relative or to a savings bank. The payment to the relative cannot be made until the expiration of a month from the date of the agreement; if to a savings bank, the payment cannot be made for three months. The note must be in the form approved by the Board of Trade. The term near relative includes wife, parents, grandparents, child, grandchild, brother or sister.

ALLOTTEE. The person to whom shares in a limited company have been allotted, in response to his application for shares based on the invitation contained in the prospectus.

ALL RIGHTS RESERVED. A phrase used to denote that the copyright in a book must not be infringed without the permission of the person possessing the copyright, otherwise proceedings will be taken against the person so infringing.

ALLROUND PRICE. Same as "*Overhead Price.*"

AMORTISATION, the method of extinguishing loans by a gradual repayment spread over a specified number of years. This is done by setting aside at stated intervals a specific sum to pay the interest on outstanding bonds, and to pay off a certain number of the bonds themselves, the bonds to be paid off being determined by the numbers drawn at the times fixed for the purpose.

ANCIENT LIGHTS. Refer to *Index*.

ANNUITY. An annual payment made during the life of an individual, or for a given time, or in perpetuity. Persons who are unable to give security frequently borrow money, in return for which they give the lender an annual payment. Again, a person who has no relatives or others whom he may wish to benefit, may desire to obtain the greatest amount of enjoyment out of what capital he possesses. In that case he will sink his capital in purchasing an annuity, either from an Insurance Company or from Government.

ANTE-DATE, to date a document before the proper time.

APPRAISER. A person who values goods and property of all kinds, repairs, labour and the like. He must take out an annual license, for which the payment is £2. For the duty on valuations refer to "Stamp Duties" in *Index*.

APPRENTICE. One who by a deed called *indentures* agrees to serve for a number of years a master who is bound to instruct him and make him a master of his craft. The master must provide his apprentice with food and clothing, failure to do which is a criminal offence. If the apprentice leaves his master without permission he may be imprisoned for fourteen days without hard labour. The apprenticeship ends on the death or bankruptcy of the master, or if he abandons his trade. It may also terminate by mutual consent, and in some cases by the misconduct of the apprentice. The master may not deduct anything from the wages of the apprentice unless the indentures permit it. [The stamp duty on the indentures is 2s. 6d.]

ARBITRAGE is the system of equalising prices in different markets by buying in the cheaper and selling in the dearer at one and the same time, chiefly in regard to stocks and shares, bullion and foreign exchanges. It is carried on between London and New York and the various Continental capitals. It frequently happens that the same stock is quoted at slightly different prices at the same time in two different places, say London and Paris. If a slightly higher price rules in Paris, the operator buys in London as much of the stock as he can, and at the same time telegraphs to his correspondent in Paris to sell the same quantity of stock. In this way, if the difference in the prices permit, the two operators contrive to make a profit after deducting the necessary expenses. If prices were higher in London than in Paris, the operator would sell in London and buy in Paris. This traffic in stocks and shares is known as "arbitrage." It manifestly tends to equalise prices, and thus to promote stability of the market.

ARBITRATION. Where a matter is in dispute between two or more persons, they may agree not to go to law about it, but to refer the dispute to some competent person for his decision. (See *Award.*)

ARBITRATION OF EXCHANGE. Sometimes a merchant finds it to his advantage to pay his debts due in one country by a bill of exchange payable in another. For example, A wants to remit money to his creditor in Paris, but owing to the fact that many others wish to do the same, the price of bills payable in Paris is slightly higher than their face value. A, however, finds that for the opposite reason the price of bills in Berlin is slightly lower than their face value. A therefore finds it cheaper to pay his debt due in Paris, by a bill payable in Berlin. This is called "arbitration of exchange," and is analogous to arbitrage in stocks and shares.

ARREARS. Money unpaid after the proper time of payment.

ARTICLES OF ASSOCIATION. The rules and regulations for carrying on the business of a limited company. They are the terms on which the shareholders agree amongst themselves as to how the business shall be carried on.

AS PER ADVICE, in accordance with a previous letter giving information or instructions.

ASSETS. The term may mean the property of a deceased or of an insolvent person, or the property of a deceased person which is available to pay his debts, or the entire property of every sort belonging to a trading concern.

ASSIGNEE. The person to whom any property or any right is assigned.

ASSIGNMENT. The transfer of any right or property. Liabilities cannot, as a rule, be assigned without the consent of the party for whom the contract is to be performed. *Land* is assigned by means of a deed known as a conveyance. *Choses in possession*, e.g., ordinary chattels and goods, can be assigned by mere delivery. *Choses of action*, that is rights to a thing, e.g., a debt, must be assigned in writing, and notice must be given to the debtor or other person from whom performance is due.

"A" STOCK, deferred stock of a railway company.

AT SIGHT. These words written on bills of exchange or promissory notes signify that they are payable on demand.

Days of grace are not allowed in the case of bills payable at sight.

ATTACHMENT. A writ of attachment authorises the seizure of a person's goods and chattels in order to compel him to comply with the wishes of the court.

ATTESTATION CLAUSE. A clause in a will or other legal document, stating that the witnesses necessary to its validity have duly witnessed the execution of the document, and appended their signatures.

ATTORNEY, POWER OF. A deed whereby one person authorises another to act on his behalf. A general power of attorney is one by which the agent has power to act for him in all matters, or in all matters of a particular business. A special power of attorney is an authority to do some particular act.

AUCTION. A public sale of property by biddings which increase the price. Where land is sold by auction, the particulars of sale should state whether the land is to be sold without reserve, or subject to a reserve price, or that a right to bid is reserved. If sold without reserve, the seller or any one on his behalf is not allowed to bid. This also applies to goods sold by auction.

AUDIT, an examination of the accounts of any concern to see if they truly represent its position.

AUDITOR. A person who examines the accounts of a business so as to ascertain its exact financial position. He must not certify what he does not believe to be true. The law now requires that the accounts of local governing bodies must be audited, as must also be the accounts of all bodies entrusted with public funds. The mere fact that an auditor certifies the accounts to be correct, and that the books have been properly kept, is no guarantee that the business has been prudently managed, or that its funds have been judiciously expended or invested. It is only in the case of local authorities that the auditor's certificate is a guarantee that the funds have not been improperly expended.

AVERAGE. In marine insurance the word average means loss. In the phrase "general average" it means (*a*) the *loss* to be borne in common by all the interests benefited by the sacrifice of some interest for the good of all, as when the masts are cut away to save the ship and the cargo, or when a part of the cargo is jettisoned to save the ship and the rest of the cargo; and (*b*) the *contribution* to be paid by each party concerned, towards making good the sacrifice incurred for the benefit of all. (Refer to "Average" in *Index.*)

AVERAGE BOND. Where the owner of a ship has incurred a loss or has been put to expense in order to save the ship and the cargo from destruction he is entitled to a contribution from the cargo-owners. This contribution is known as average: and he may enforce it by getting the consignees of the cargo to enter into a bond for the due payment of their share of the contribution when ascertained.

AVERAGE CLAUSE. In fire insurance, where a policy contains an average clause, the effect is that if the value of the property at the time of the fire exceeds the sum for which the property is insured, the owner, unless the property is totally destroyed, will only receive a fraction of the insurance money corresponding to the proportion which the sum insured bears to the value of the property. For instance property worth £1,000 is insured for £1,000. A fire causes damage to the extent of £1,800. The owner will not recover the whole of the insurance money, but only one-quarter of the loss actually incurred, that is, £450, this being the ratio which the amount for which the property is insured bears to the value of the property.

In a policy of marine insurance, the average clause states that in regard to certain commodities the underwriters will not be liable for any loss unless the loss be total, or the ship be stranded. Other commodities are free from average, that is, the underwriters will not be liable for any loss which does not amount to a certain percentage of the value of the goods insured, unless the ship be stranded, sunk or burnt.

AVERAGE, GENERAL. See *Average* and under *Shipping.*

AVERAGE, PARTICULAR. A loss which happens through an accident, as when goods are damaged by the perils of the sea, or when the masts are blown overboard. The loss falls on the person whose property has been injured, and he cannot claim contributions from the other persons who have an interest in the ship or the rest of the cargo. Of course, if he is insured, the underwriters will bear the loss when its amount has been ascertained. It is the business of an average adjuster to ascertain the amount of this loss. When a person puts in a claim for particular average, the underwriter requires him to give full details of the actual cash value of the goods in their damaged state, the policy of insurance, the bills of lading and various other matters. (See under *Shipping.*)

AVERAGE STATER OR AVERAGE ADJUSTER. A person whose business it is to settle the amount of contributions to be paid in connection with marine losses. (See *Adjustment.*)

AWARD. The decision of an arbitrator on a disputed matter which is referred to him for decision. Where the parties agree in writing to submit their dispute to arbitration, the agreement must bear a 6d. stamp, except where the matter in dispute does not exceed in value £5. The award must be in writing and must be given within three months from the time that the matter was submitted to arbitration. It must be final and unconditional on all the matters submitted, or else it is void. Where an award is partly good and partly bad, the good part will be valid if it can be separated from the bad. The arbitrator must be impartial, and must exercise all the care and skill which he can be reasonably expected to exercise, though he is not liable for want of skill or for negligence. He cannot sue for his fees, but he can withhold his award until his fees are paid. As a general rule the finding of an arbitrator is final and conclusive, and the courts will not alter or amend it, but the court will set aside an award for any of the following reasons:—

(1) If there is corruption or misconduct on the part of the arbitrator, or if he makes a mistake going to the root of the matter in dispute.

(2) If any of the parties is guilty of fraud or conceals facts, or wilfully deceives the arbitrator.

(3) If fresh facts are discovered throwing new light on the matter in dispute.

(4) If the award is uncertain or inconclusive, or is in excess of the powers conferred on the arbitrator.

An award must be stamped as follows: Where the amount or value does not exceed—

	£	s.	d.
£5	0	0	3
£10	0	0	6
£20	0	1	0
£30	0	1	6
£40	0	2	0
£50	0	2	6
£100	0	5	0
£200	0	10	0
£500	0	15	0
£750	1	0	0
£1000	1	5	0
£1000 or over ..	1	15	0

BACK-BOND. A deed by which the owner of property constitutes himself a trustee of the property. It may be given for a loan, and when this is paid off, the owner is restored to his former position.

BACKED NOTE, a note issued by a ship-broker authorising goods to be received from a barge and put on board ship.

BACK-FREIGHT. Where goods cannot be delivered at their port of destination owing to causes beyond the control of the ship owner, the master may carry the goods back to the place from which they were shipped, if such a course is really the best for the interests of the owner of the goods. The owner of the goods must in that case pay freight for the return voyage, which is called return freight or back-freight.

BACKING A BILL. A phrase usually but not necessarily employed with reference to accommodation bills. Where a person presents such a bill to a bill-discounter, the discounter may not put much faith in the persons whose names appear on the bill, and will, therefore, not cash it, unless some person of known solvency writes his name on the back of the bill, thereby making himself liable if the bill is not met at maturity.

BACKWARDATION. When a dealer in the Stock Exchange agrees to sell a certain quantity of stock which he does not possess, he may, if the price of the stock rises before account day, find that he will sustain a serious loss. The bargain is not really to deliver stock, but to pay the difference between the price at which he agreed to sell and the price to which the stock has risen. In the hope, therefore, that the price of the stock will fall before the next account day, he pays to the purchaser a certain rate of interest on the amount in order to be allowed to defer the delivery of stock (or rather to defer the payment of the difference). This payment of the interest is called backwardation, and is paid by the "bears." The process of deferring delivery is called "carrying over." (See *Bear.*)

BAILIFF. (1) One in charge of the management of an estate, a land-steward; (2) a legal officer who acts as the sheriff's agent in levying an execution or distraining for rent.

BAILMENT. Goods or chattels are said to be bailed, when they are delivered by one person to another for some specific purpose or object; as where goods are lent, or pawned, or deposited with a person for safe custody, or let on hire, or delivered to a carrier for the purpose of being conveyed, or where they are entrusted to a person for the purpose of having some work done to them. The person who delivers the goods is called the *bailor:* the person to whom they are delivered is called the *bailee.* The rights and liabilities of the different kinds of bailees are discussed in their appropriate places, under the headings of Carriers, Innkeepers, Pawnbrokers, and Warehousemen or Wharfingers. It may, however, be said that where goods have been deposited for safe custody with a person who receives no reward for his services, such person will be liable only for damage arising from his gross negligence or wilful misconduct. In the case of a hirer he must take reasonable care of the thing hired, and will be liable for ordinary negligence but not for unavoidable accident.

BALANCE OF TRADE. A phrase which denotes the difference between the value of the imports and the exports of a country. The balance is said to be against a country when the imports exceed the exports, for then the country is supposed to be owing more to other countries than is due from those countries to it. The

country is, as it were, in the position of a debtor, and if the balance of trade persist in remaining against that country, it would, if this theory were true, be on the verge of bankruptcy.

That this is not the case may be seen from the position of England. For years the value of the imports into the United Kingdom have very greatly exceeded the value of the exports, and yet this country is very far from being impoverished. The explanation lies in the fact that the exports of a country really pay for its foreign liabilities, and if the imports exceed the exports, the reason is that other countries owe more to it than it owes to foreign countries. This is the position of England. On account of the large amounts of English capital invested abroad, large sums of money in the shape of interest and dividends are due to this country. Again, most of the sea-borne trade of the world is carried by British ships, and so a large amount of money is due to England for freight. It must be remembered, too, that foreign loans are contracted through the agency of London Banks, and the work done by them in this connection must be paid for.

What the balance of trade chiefly affects is the foreign exchanges, i.e., the rate at which foreign bills of exchange can be bought and sold in this country. If more money is due to a country than is owing by it, the price in that country of bills payable abroad will be slightly less than their face value. Such bills are said to be at a discount. If, on the other hand, merchants of a country have to remit more money abroad than is due to them from foreign countries, the price of foreign bills will be slightly higher than their face value, and they are then said to be at a premium. (See *Bill Broker.*)

BALANCE SHEET. A document showing the accounts of a business. It is the same as a statement of affairs, with this difference, that it is the result of the books being balanced. A proper balance sheet should show

1. On the Dr. side: (1) Capital of the business. (2) The debts and liabilities. (3) The reserve fund set aside to meet contingencies. (4) The profit and loss.
2. On the Cr. side: (1) The property owned by the business, stock in trade, plant, buildings, etc. (2) The debts owing to the business. (3) The cash and investments (if any).

BALANCING BOOKS. The reckoning up of the accounts in the ledger for the purpose of seeing how a business stands, and of ascertaining the gain made or the loss sustained in a given period.

BANKS AND BANKING. See *Index.*

BANK BILL. A bill of exchange drawn by one bank on another bank.

BANK CREDIT. The credit given by a bank to a person, who gives security to the bank. The bank allows the person to draw on it up to a certain amount agreed upon. If the person does not repay the loan, the bank may realise the security, or have recourse to the person (if any) who has agreed to become responsible for the loan.

BANK OF DEPOSIT. A bank which receives money and pays interest on it, on condition that the money cannot be withdrawn without notice.

BANK OF ISSUE. A bank that issues its own notes.

BANK HOLIDAYS. In England and Ireland they are Easter Monday, Whit Monday, the first Monday in August and Boxing Day, the 26th December, but if Boxing Day falls on a Sunday, the following Monday. In Scotland, the Bank Holidays are New Year's Day, Good Friday, the first Monday in May and in August, Christmas Day. If New Year's Day or Christmas Day falls on a Sunday, then the Monday following is a bank holiday. In addition to these, other days may be appointed by royal proclamation as bank holidays.

BANK, JOINT STOCK. A bank, of which the capital is subscribed by the shareholders, who are members of a company, usually, but not necessarily, with limited liability. If a joint stock bank has the power to issue notes, the liability of the shareholders in respect to such notes is unlimited. (Refer to "Banks, Joint Stock" in *Index.*)

BANK NOTES. Bank notes are promissory notes issued by a bank, payable to bearer on demand. They differ from ordinary promissory notes, in that after being met, they may be re-issued, a practice very common with Scotch and Irish Banks, but not with the Bank of England, which never re-issues notes once they have been returned to it. Bank notes of less than £5 cannot be issued or circulated in England, though Scotland and Ireland seem to thrive on one-pound notes. Bank of England notes are legal tender for all sums above £5, except by the bank itself or its branches. This means that debts may be lawfully discharged by the payment of Bank of England notes, and if a creditor refuses them and afterwards sues the debtor, he will probably lose the costs of his action; but the Bank itself cannot compel its creditors to accept its notes in discharge of its liabilities. Notes of the Bank of England are exactly on the same footing as coined money. Notes of other banks are not legal tender, but they are good tender if not objected to at the time of tender.

People in sending notes through the post often, for the sake of security, cut them in half, sending on one half first, and then the second half. The property in the whole note remains in the sender until he sends on the second half, and if he changes his mind and refuses to post the second half, he can recover the first half back. If a note is lost, the bank cannot be compelled to pay it unless an indemnity is given.

Bank notes are negotiable instruments, and therefore whoever takes them in good faith and gives value for them becomes the absolute owner of them, even if the person transferring them is not the owner. If notes are lost or stolen, and the finder or the thief pays them away say to a shopkeeper, in order to discharge a debt, and the shopkeeper takes the notes in good faith not knowing they were lost or stolen, such shopkeeper becomes their owner, and the bank cannot refuse to cash the notes for him.

BANK PAPER, bills accepted or endorsed by a bank (same as "*Bank Bills*").

BANK POST BILL. A bill of exchange which can be purchased from a bank, for the purpose of remitting money to a distance. The bank is itself the acceptor of the bill, which is usually payable so many days after sight; in the case of Bank of England post bills, the period is seven days. It is said that no days of grace are allowed. The following is an example of such a bill.

"Union Bank Post Bill."
London, 1*st October*, 1901.
No.——

At seven days after sight, I promise to pay this my Sola Bill of Exchange to John Green, or order, the sum of one hundred and fifty pounds, value received of William Brown.

A. B ——
Director of the Union Bank of England.
£150.

In this example, William Brown wished to remit £150 to John Green. He therefore deposited that sum with the Union Bank, and received in return the bill payable by the bank to John Green. Of course, if William Brown had an account at the Union Bank, he would simply have drawn a cheque on the bank, and post-dated it. The word "sola" means that the bill is single, and is not one of a "set."

BANK, PRIVATE. A private bank is a bank carried on either by a single owner, or by several persons, not exceeding ten in number, forming an ordinary partnership. Most of the old private banks have been amalgamated with modern joint stock banks.

BANK RATE. This is the advertised minimum rate per cent. of discount charged by the Bank of England. (Refer to "Bank Rate" in *Index.*)

BANK RETURN. A report issued weekly by the Bank of England, showing its financial condition. (Refer to "Bank Return" in *Index.*)

BANK STOCK. The capital of a bank.

BANKER'S CHEQUES. A banker's cheque is a cheque drawn by one bank on another bank.

BANKRUPT. A person who is insolvent, that is, unable to pay his debts in the ordinary course of business, or as they become due. Strictly speaking, the term should only be applied to an insolvent debtor who has been adjudged bankrupt by the court.

BANKRUPTCY. Refer to *Index.*

BARGAIN AND SALE. The phrase is by legal usage restricted to contracts for the sale of lands, though there is no reason why the phrase should not be applied to contracts for the sale of goods or other personal property.

BARRATRY. The term comes from an Italian word signifying to cheat. Common barratry consists in *habitually* stirring up or maintaining quarrels or law suits, or in continually disturbing the peace by brawls, or in taking or detaining possession of property the right to which is in dispute. Habitually breeding discord between neighbours is also barratry. It is a crime punishable with fine or imprisonment. A common barrator may also be required to find sureties for good behaviour.

In marine insurance and in contracts relating to shipping generally, the term barratry means any fraud or knavery or wilful wrong-doing on the part of the master or the crew, by which the interests of the owners of the ship or cargo are injured, e.g., scuttling the ship, or abandoning it without just cause, pilfering the cargo and the like. In contracts of sea-carriage, the ship owner is liable to the owners of the cargo if any loss happens to their property from this cause, unless the ship owner expressly inserts in the contract a clause exempting himself from this liability. (See *Bill of Lading* and *Charter Party.*)

BEAR. A stock exchange dealer, who, having agreed to deliver stock *which he does not possess*, at a certain price, hopes that the price will fall before the next account, for then he will be able to buy the stock at the lower price and sell it at the agreed price, thereby making a profit. As the contract is frequently not one to deliver stock, but to pay "difference," the seller would in this case receive from the purchaser the difference between the actual price and the agreed price. Had the stock risen in price, the seller would have had to purchase the stock and deliver it at the agreed price which is lower, or to pay the difference in price to the purchaser. It is therefore to the interest of a person who has agreed to deliver at a certain price stock which he does not possess, that the

stocks should fall. Hence he is called a "bear," because he endeavours to pull down prices. (See *Backwardation* and *Bull.*)

BEAR ACCOUNT. Where a "bear account" exists in any stock, the amount of stock sold for the settlement is greater than the sellers are able to deliver, and if the bear is not able to find the stock which he has agreed to deliver, he may have to pay "backwardation" so as to be allowed to "carry over" to the next account, in other words, he may have to pay interest for postponing delivery of the stock.

BEARER BOND. A bond for the repayment of money borrowed. The ownership of it can be transferred by simple delivery, and the bearer or holder of the bond becomes entitled to the payment of the interest and the principal guaranteed by the bond.

BELOW PAR. When the nominal or par value as it is called of shares exceeds their selling price, the shares are said to be at a discount or below par.

BENEFICIAL INTEREST, an interest giving a person the right to enjoy property or to derive some benefit from it, in cases where such person may not be the legal owner of the property, e.g. a mortgagor has a beneficial interest in the property mortgaged, though in law he is not the owner, the legal ownership being vested in the mortgagee.

BEQUEST the name given to personal property, such as goods and chattels, and leaseholds bestowed by will on a person.

BILL BOOK. In practice, bill books are merely used as memorandum books, and do not form part of the book-keeping system of a firm. They contain information of the bills of exchange payable to the firm (bills receivable), and of the bills payable by the firm, bills which they have to meet. The following items are entered: (1) Date of the bill and the length of time it has to run. (2) Name of the acceptor (if it is a bill receivable) and the name of the drawer (if it is a bill payable). (3) Amount of bill and where payable. (4) Date when it becomes due.

BILL BROKER. A person whose business it is to buy and to sell bills of exchange. Those who wish to remit money to a foreign country purchase from the broker bills payable in that country, the broker having previously purchased the bills from persons who have to receive money from the country in question. Should it happen that it is necessary to remit more money to a country than is to be received from it, the price which the broker will charge for bills on that country will be slightly higher than their face value, because more bills are wanted than are in the market, and the bills are then said to be at a premium. If, on the other hand, there is to be received from a country more money than has to be remitted, the price charged will be slightly less than the face value of the bills, which are then said to be at a discount. The price, however, cannot rise above or fall below a certain point called the "specie point." If the price of bills went too high, persons wishing to remit money would not buy the bills, they would send specie (gold or silver) instead. If the price of the bills fell too low, they would not sell bills to the broker, they would prefer to wait and have the specie transmitted to them. The specie point is therefore determined by the cost of transmitting gold, and the expense of insuring it in transit.

N.B.—Bill brokers must not be confused with bill discounters, that is, persons who cash bills (less discount) and hold the bills until they mature, when they receive an amount corresponding to the face value of the bill.

BILL OF CREDIT. A letter frequently termed a "letter of credit" written to a person requesting him to advance to a third person named therein, money up to a certain amount. The person making the request undertakes to re-imburse the person making the advance. (See *Circular Note.*)

BILL OF ENTRY. A certificate delivered to the Customs authorities by merchants who are exporting or importing goods, giving particulars of the nature, amount and value of the goods, and the port or place to which the goods are to be exported, or from which they have been imported. When this certificate has been signed by the collector of customs, the goods can then be shipped or unloaded, as the case may be. Goods exported are "entered outwards," goods imported are "entered inwards" (See also *Bill of Sight.*)

BILL OF EXCHANGE. A bill of exchange is a written order addressed by one person to another requesting him to pay to a specified person or bearer a sum certain at a specified time. (Refer to "Bills of Exchange" in *Index.*)

BILL OF HEALTH. A document given to the master of a ship by the authorities of the port from which the ship comes. It describes the health and sanitary conditions of the port, and according as there is no contagious or infectious disease existing or is feared to exist, or is actually existing at the time of the ship's departure, the bill is clean, suspected or foul. If the bill is clean, the passengers and goods are not quarantined, but if the bill is suspected or is foul, they may be subjected to quarantine. (Refer to "Ship's Papers" in *Index.*)

BILL OF LADING. A document which is given by the master or the ship's agent stating that the goods sent by a consignor have been received on board ship, and the terms on which the goods will be carried. It also serves as a document of title to the goods. (Refer to "Bill of Lading" in *Index.*)

BILL OF PARCELS. An account given by the seller to the buyer, containing particulars of the goods bought and their price.

BILL OF SALE. A grant by deed, by which the ownership of personal chattels, but not the possession thereof, is transferred from one person to another. (Refer to "Bills of Sale" in *Index.*)

BILL OF SIGHT. When the importer of goods is not able for want of information to make a perfect entry of the goods, i.e., to fill up a bill of entry, he signs a document called a bill of sight, giving the best description of the goods that he can. The goods are then allowed to be landed, but before they can be actually delivered to the importer a perfect entry must be made.

BILL OF STORE. When goods of British origin have been exported and are afterwards re-imported within five years of exportation, they are entered by a bill of store, which gives full particulars regarding them. This document permits them to be landed free of duty, though they would be liable to duty if of foreign origin.

BILL OF SUFFERANCE. A permit authorising coasting vessels to trade from one English port to another without paying customs dues, even though there are dutiable articles on board. Of course, these goods cannot be landed until the duty is paid, unless they are stored in a bonded warehouse.

BILL, VICTUALLING. Goods carried on board ship for the necessary purposes of the voyage are exempted from customs due, by means of a permit called the victualling bill.

BIMETALLISM. The system of currency in which there are two metals, gold and silver, which are both standards of value, and both legal tender, and in which the values of the two metals are settled in a fixed ratio one to another. The advocates of this system say that if a bimetallic currency were established, there would be a greater stability in prices. The great difficulty, however, is in determining the relative value to be given to gold and silver. At the present time (1906) pure gold is about thirty-seven times the value of silver, but the supporters of the bimetallic theory would not adopt this proportion. Even suppose they did, and a bimetallic currency were to be established, there is no guarantee that the two metals would remain fixed in value. There might be discovered enormously rich gold mines. The supply of gold might be so great, that gold would fall greatly in value, and yet in a bimetallic currency, provision could not be made for this. Suppose a bimetallic currency were established, and that one gold piece should be equal in value to thirty-two silver pieces, each of the same weight. In process of time it might happen that owing to a diminution in the supply from the mines, gold would become more valuable, say that as bullion, one piece of gold would be equal to forty pieces of silver. What would happen is that people would refuse to bring gold to the mint to be coined, because as coin it would be worth less in silver than as bullion. For the same reason, people would melt down their gold coin into bullion, because in the shape of bullion it would buy more silver than it would as coin, and as bullion exchange it in the open market for silver. Then they would bring the silver to the mint to be coined. And as under a bimetallic system both metals would be legal tender, every debtor would pay his debts in silver, the cheaper metal. Thus the bimetallic currency would become practically a monometallic currency.

BLACK LIST. A list of persons against whom it is necessary to warn the public, because their credit is so bad that it is unwise to enter into contracts with them. Such lists are published by the various trade protection agencies to their subscribers for their private information, in order to protect them from the risk of bad debts. The list contains the names of persons who are bankrupt, or have suspended payment, or who have raised money on their goods and chattels by means of bills of sale, or who have a number of unsatisfied County Court judgments against them.

BLANK ACCEPTANCE. Where a person affixes his signature to a stamped bill as acceptor without mentioning the amount for which it is drawn. The drawer can afterwards fill up the bill for any amount that the stamp will cover.

BLANK INDORSEMENT. Where a person indorses his name on a bill of exchange or a bill of lading or other document, without inserting the name of the person to whom the document is given. A bill of exchange indorsed in blank is payable to bearer. (See under *Bills of Exchange.*)

BLANK TRANSFER. A document transferring the stock or shares in a Company without the name of the transferee being filled in. It is resorted to when the holder of the shares wishes to raise money on them, and it empowers the lender to deal with them as he thinks fit, in case the money is not repaid. The borrower remains on the list of shareholders until the lender realises them, to do which, he, the lender, must have his name entered on the register of shareholders. A blank

transfer cannot be by deed, for a deed that does not specify both the name of the transferor and the transferee of the shares is void.

BOARD OF TRADE. The Board of Trade was originally, and still is in theory, a committee of the Privy Council, for the consideration of all matters relating to trade and foreign plantations. Its work was at first to give information and advice to the other government departments when they required it in matters of trade. It also collected and revised statistics relating to trade. The name "Board of Trade" was first officially recognised in the Harbour Transfer Act, 1862. Since 1872, the Board of Trade has become almost purely administrative, regulating and supervising all matters concerning the mercantile marine, trade, navigation, railways, bankruptcy, the registration and the winding up of companies, patents, copyright and trade marks. The work of the Board is conducted through the following departments:—

1. Marine. This department administers the Mercantile Shipping list which deals with the engagement and discharge of seamen, the examination of masters, mates and engineers, regulations for the health of the crews, survey of ships, inquiries into wrecks, and into misconduct of officers and engineers.

2. Statistical, Commercial and Labour. The duty of this department is to supply other offices with information when asked. It prepares returns relating to shipping and navigation, and compiles statistics relating to railways, emigration, and labour, particularly with regard to the state of the labour market, the hours of labour, wages, the condition of the workers, trades unions and strikes and the price of commodities. It edits the Board of Trade Journal, dealing with information likely to be useful to business men. This department administers the Conciliation Act, which was passed for the purpose of settling and of preventing disputes between employers and employed.

3. Railway. This department inspects railways and tramways before they are opened for traffic, and inquires into accidents when they occur. It reports on tolls and rates proposed in railway and dock bills. Bye-laws of railway and tramway companies have to obtain its approval; and it has power to revise the maximum rates charged by railways for goods traffic. In regard to electric lighting it has power to make rules for the protection of the public. It supervises the registration of Joint Stock Companies, and deals with copyright, trade marks and patents.

4. Bankruptcy. The head of this department is the Inspector-General in Bankruptcy. Its work is to see that trustees and liquidators who administer bankrupt estates, or who deal with the winding up of companies, discharge their duties honestly and efficiently.

5. Finance. This department deals with the accounts of lighthouses, of the superintendents of marine offices and of receivers of wrecks. It administers the merchant seaman's fund, seamen's savings banks, seamen's money orders, wages and effects of deceased seamen, and relief to distressed seamen, etc. It examines the accounts of Life Insurance Offices and lays them before Parliament.

All moneys produced by the realisation of bankrupt estates and the compulsory liquidation of limited companies are in the custody of this department.

6. The Harbour and Fisheries Department have the care of the foreshores belonging to the Crown, and see that no injury is done to navigable harbours and channels; the registration of British Ships and the preservation of fisheries are also in their hands.

BONA FIDE. In good faith, without fraud, deceit or non-disclosure of the truth.

BOND. A bond is a writing signed and sealed by a person who is called the obligor, by which he acknowledges that he owes a certain sum of money to another, or that he is bound to do some act for the benefit of that other, who is called the obligee.

A bond usually contains a condition that if the obligor pays so much money, or does a specified act, the contract will be void. The condition is that if the debtor performs the specified act or pays the creditor on a given day a sum of money (usually half the amount which he acknowledges that he owes, and which is called the penalty), the bond shall be void, and the debtor be released from his obligation. The law will not, however, compel the payment of the whole penalty, on failure of the debtor to perform the condition. All that the creditor can recover is the amount really owing; and if the arrears of interest, together with the money actually borrowed, exceed the penalty, then in that case the creditor can recover the amount of the penalty only.

Where a person gives his bond not to do a certain thing under a penalty, he will not be allowed to do the thing and pay the penalty. The Court may not only compel him to pay the penalty, but will issue an injunction to restrain him from doing the act which he undertook not to do. Thus where a bank manager gave a bond to his employer that he would not under a penalty of £1,000 enter the service of any rival bank in the same district within two years after leaving his service, it was held that the bank manager could not by paying the £1,000 to his employer claim the liberty of entering the service of a rival bank. And as he had become engaged to another employer, the Court compelled the bank manager to quit his service.

Money due under a bond can be recovered within twenty years after it has become due, whereas in the case of simple contract debts, the right to recover is barred at the end of six years from the last acknowledgment in writing of the debt, or the last payment of any portion of the principal or interest.

The following is an example of a common money bond for the repayment of £1,000:—

"**Know All Men** by these presents that I, William Brown, of 409 Cheapside, in the City of London, am bound to Henry Green, of 761 Wallbrook, in the City of London, in the sum of two thousand pounds, to be paid to the said Henry Green, his executors, administrators or assigns, or to his or their attorney or attorneys, for which payment I bind myself, my heirs, executors and administrators by these presents. Sealed with my seal.

Dated this 1st day of October, 1904.

Signed, sealed and delivered by the said William Brown in the presence of
Thomas Jones,
628 Cheapside, City of London,
Merchant."

Now the Condition of the above-written bond is such that if the above-bounden William Brown, his heirs, executors, or administrators should on the 1st day of March, 1905, pay to the above-named Henry Green, his heirs, executors, administrators, or assigns the sum of one thousand pounds with interest for the same, from the date of the above-written bond at the rate of four per cent. per annum, without any deduction. **Then** the above-written bond shall be void, otherwise the same shall remain in full force and virtue.

Bonds for the repayment of money are stamped as follows:—

	£	s.	d.
Not exceeding £10	0	0	3
„ £25	0	0	8
„ £50	0	1	3
„ £100	0	2	6
„ £150	0	3	9
„ £200	0	5	0
„ £250	0	6	3
„ £300	0	7	6
Exceeding £300, then for every £100 or part of £100 ..	0	2	6

BONDED DEBT. The money owing by a corporation for the repayment of which it has given bonds.

BONDED GOODS. Goods liable to duty are not required to pay the duty so long as they are not intended to pass into the hands of the consumer. Until such time they are stored in bonded warehouses, which are under the control of Customs or Excise Officers, and cannot be removed until the duty has been paid, unless they are removed for exportation. These goods are "in bond" because the owners enter into a bond for the payment of the duty when the goods are removed for consumption.

BONDED WAREHOUSE. A building where dutiable goods can be stored free of duty, until removed for consumption, when the duty on them is paid. The warehouse is under the absolute control of revenue officers, whose duty it is to see that the taxes on the goods are paid before they are removed for consumption.

In order to obtain permission to keep a bonded warehouse, a person must satisfy the Customs Authorities that the warehouse is necessary for the locality, and must enter into a bond for the proper keeping of the warehouse. After the permission has been obtained, the revenue officers have charge of the warehouse, and no goods can be removed or dealt with in any way except by the permission and in the presence of these officers.

BOND NOTE. A permit to remove goods from a bonded store for exportation, or for removal from one store to another.

BOOK DEBTS. Debts due to a trader in the ordinary course of his business, and which are entered in his account books. These debts can be assigned, but the assignment must be in writing, the assignee must give consideration or value for the debt being assigned to him, and notice of the assignment must be given to the debtor. If notice is not given to the debtor, he may pay the debt to the original creditor, and in that case the assignee can not make him pay over again. Any defence which the debtor may have to the creditor's claim will be equally good against the assignee of the creditor. If a trader becomes bankrupt, his book debts can be claimed on behalf of his creditors, unless prior to the bankruptcy he had validly assigned them to another.

BOTTOM. In commercial language the term bottom signifies a ship.

BOTTOMRY BOND. "A contract by which in consideration of a loan of money advanced for the necessities of a ship to enable it to proceed on its voyage, the ship is made liable for the repayment of the money in the event of the safe arrival of the ship at its destination." (Refer to "Bottomry Bond" in *Index*.)

BOUGHT DAY BOOK, the book in which credit purchases are entered from day to day.

BOUGHT NOTES AND SOLD NOTES. Notes exchanged between two merchants, embodying the terms of a contract of sale entered into between them. The bought

note (bought of you) is given to the seller the sold note (sold to you) is given to the buyer; but where a broker is employed, the bought note is given to the buyer, and the sold note to the seller. (See *Broker's Contract Notes.*)

BOUNTIES. When the government of a country wishes to foster the manufacture and export of goods, it sometimes pays money to the manufacturers or the exporters, so as to enable them to sell their commodities cheaply to foreign customers, and thus undersell their foreign rivals. These payments are called bounties, and are paid according to the quantities exported.

BOURSE. An exchange where merchants meet for business, but the term is most commonly applied to the Stock Exchange.

BRAND, a mark indicating the quality of goods, or the manufacturer by whom they are made.

BRITISH SHIP is a ship which is registered as such, and which is entirely owned by British subjects, unless registered as the property of a limited company. (See under *Shipping.*)

BROKER. A broker is "an agent employed to make bargains in matters of trade or navigation, for other people in return for a compensation called brokerage." He is in short a mercantile agent. A broker is not in possession of the goods which are the subject of the contract. He cannot as a rule buy or sell in his own name, when acting for other people, and he is not liable to be sued on the contract which he enters into on behalf of others, unless he appears on the contract to be a principal. When a broker makes a contract for others, he enters the terms of the contract in his own book, and then sends a copy of the entry to both parties. The bought note (bought for you) is sent to the buyer, the sold note (sold for you), is sent to the seller. These notes should be identical in terms, otherwise there may be no contract at all, especially, as often happens, when the broker has not entered the terms in his book.

Insurance Brokers are employed to effect policies of insurance. The underwriter is paid the premium by them, and they in turn look to the insured for the premium. He receives the policy of insurance from the underwriter, and it is his duty to see that the policy is drawn up. He must use all diligence in obtaining adjustment and recovering the loss for the insured. If the broker pays the full loss to the insured, not knowing one of the underwriters to be bankrupt, he is prevented by trade custom from recovering it back.

A Ship Broker is employed to effect the charter of a ship. He is usually paid a commission of five per cent. on the freight by the ship-owner. (Refer to "Charter Party" in *Index.*)

A broker must act in accordance with his instructions, else he will lose his right to brokerage. If he makes any secret profits over and above the agreed remuneration, he can be compelled to hand them over to his principal.

BROKERAGE. The payment made to a broker for carrying out the sale or the purchase of property.

BROKER'S CONTRACT NOTES. The records of a transaction which a broker sends to his principal. The bought note (bought for you) is sent to the buyer, the sold note (sold for you) to the seller. Both notes are identical in terms. Where the notes refer to the sale of stock or other securities from the value of £5 to £100, they must bear a penny stamp, over £100 the stamp is a shilling. The penalty for not stamping or for not transmitting the notes is £20. If the broker transmits an unstamped note he cannot recover his commission, but if he transmit no note at all, he can recover his commission.

Contract notes for the sale of goods do not require a stamp, but contract notes for the sale or purchase of stock or marketable securities must be stamped as follows:

When the stock is of the value	£	s.	d.
of £5 and under the value of £100 .. the stamp—	0	0	1
When the value exceeds £100 the stamp—	0	1	0

The stamps used are adhesive, and when the stamp is one shilling, a **Special Stamp** used only for contract notes must be purchased. The penalty for evading this duty is £20; and if a broker transmits an unstamped contract note, he forfeits his right to brokerage.

BROKER'S ORDER, the same as "*Backed Note.*"

BROKER'S RETURNS, lists supplied to ship brokers showing all the goods which have been received as cargo on board ship. These lists afford proof as to whether the goods have been received on board or not, and are available where a mate's receipt has not been given.

"B" STOCK, a name given to the preference stock of certain railway companies.

BUCKET SHOP. A name given to the offices of brokers who are not members of the Stock Exchange. These outside brokers are not allowed to carry out the sale or the purchase of stocks and shares. For this purpose they must employ brokers who are members of the "House," a name given to the Stock Exchange.

BUILDING SOCIETIES. A building society advances to its members loans for the purpose of acquiring houses, or of acquiring land for building purposes. In return for the loan, the house or land so acquired is mortgaged to the society. When the loan is repaid, the house becomes the absolute property of the member. The fund out of which the society grants the loans is provided by the subscription of the members themselves. The members may be *investing* members, who merely pay subscriptions to the society, receiving interest on their subscriptions; or they may be *borrowing* members, who obtain from the society loans on mortgage.

Building Societies are of two kinds—Terminating and Permanent.

1. In a terminating society each member takes a share, for which he usually pays by instalments. Out of the fund thus provided, loans are made to the members up to the value of the share. The members ballot among themselves as to the order in which each shall obtain his loan, and when he receives his advance he mortgages to the society the property which he has purchased with the loan, as a security that he will pay all the instalments. When the last member receives his share, by which time all the instalments due by him and the other members will have been paid, the society terminates.

2. In a permanent society, which may last for an indefinite time, the members take shares for which they can pay either in a lump sum or by instalments, receiving interest on their payments. Advances are made to members on mortgage of the property purchased with the advance. These loans are paid off by instalments which cover both principal and interest. (Refer to "Building Societies" in *Index.*)

BULL. A person who agrees to buy at a certain price stocks and shares *which he does not want*, in the hope that before the account the price will rise. The seller will then have to buy them at the higher price and sell them at the lower, and as the contract is usually a contract to pay differences, he, instead of delivering the stock, pays the difference to the purchaser, who thus makes a profit. It is therefore to the interest of "bulls" that the price of stocks should rise, and their energies are directed towards keeping up prices. (See *Bear*, *Backwardation* and *Contango.*)

BULL ACCOUNT. Where buyers have bought more stock for the settlement than they are able to take up, they pay interest to be allowed to postpone the taking up of the stock until the next account. This payment made by the "bulls" for carrying over is called contango.

BULLION. Uncoined gold and silver; the precious metals viewed solely as merchandise and not as money.

BUREAU DE CHANGE. A money-changer's place of business.

BUYERS OVER, a phrase indicating that in a given market there are no sellers, or that there are more buyers than sellers.

BUYING IN. When a seller does not deliver the stock to a purchaser at the appointed time, the purchaser may buy the stock in the market and charge any extra expenses incurred to the seller. Usually certain "days of grace" are allowed the seller in which to make delivery, and if at the end of this period delivery has not been made, the purchaser may instruct the officials of the Buying-in and Selling-out Department to buy the stock for him, any extra expense incurred being charged to the seller.

BYE-LAWS. Originally the word bye-law meant a law made by the local authority for the regulation of a town. Now-a-days it means any law, rule or regulation affecting the public, made by any corporation or company in pursuance of powers conferred by Act of Parliament. These bye-laws must not contravene the law of the land, and in making them the corporation or the company must not exceed the powers conferred on it by Parliament.

CALL MONEY, a money-market term to signify loans made by a bank to bill-brokers and others, repayable on demand.

CALLS. 1. The instalments by which the capital of a limited company is paid up. Usually the shares are issued on the terms that so much of the value of the shares shall be paid on allotment, the remainder to be paid by instalments at stated intervals, or when the directors shall think fit. It is the payments made when "called for" by the directors that are termed calls.

2. In stock exchange transactions, a "call" gives one dealer the option of calling or buying from another a certain amount of securities or shares at a fixed price within a certain period. For this option of buying or not as he thinks fit, he pays a price agreed upon between the parties. (See *Options.*)

CALLED BOND. See *Drawn Bond.*

CALL OPTION. See *Options.*

CAMBIST. A money-changer; a person who buys and sells bills of exchange.

CAPITAL. Capital is defined by Adam Smith as "that part of a man's stock which he expects to afford him a revenue." Another view is that capital is wealth in process of exchange, before it reaches the hands of the consumer. Thus the loaf which a family eats is not capital, but the same loaf in the baker's shop forms part of the baker's capital, because out of the sale of it he expects to make a profit. Again, the jewels which a lady wears cannot be said to be capital, but the jewels in a jeweller's shop are capital. Whether wealth is or is not capital depends on the use to which it is put. If wealth is intended for consumption it is not capital, but if it is employed for the purpose of making a profit it is capital. The true

functions of capital in an economic sense are to assist the labourer with tools and materials, and to enable the capitalist to accumulate a stock which he can dispose of at a time when it is most convenient to him. Viewed in this light, it will be seen that the functions of capital is not to maintain the labourer; in short, wages are not paid out of capital, but out of the product which the labourer has himself been employed to make.

Capital is sometimes described as being either fixed capital or circulating capital. Fixed capital is in a more or less permanent form, and it means such wealth as is not exhausted by a single act of production, e.g., buildings, machinery, railways, and the like. Circulating capital consists of such things as raw materials which have not reached their final stage, and which are intended to be worked up into new forms. The distinction, though somewhat convenient, is based on an erroneous idea, and has led to many wrong conclusions in the theory of the production and the distribution of wealth.

In commerce, capital is regarded as the entire property of a business undertaking which is devoted to the carrying on of its affairs for the purpose of earning profits and of liquidating its liabilities. In a Limited Company, the capital is that sum subscribed by the shareholders for carrying on the undertaking. The sum authorised to be raised by the Memorandum of Association of a limited company is called the "nominal" or "authorised" or "registered" capital of the company. The sum actually subscribed in return for the allotment of the shares is called the "subscribed" capital, and is frequently far smaller in amount than the authorised capital. The portion unpaid is called the "unpaid" or "uncalled" capital, and may afterwards be demanded in the shape of "calls" from the shareholders, either for the purpose of carrying on the business or for the purpose of liquidating the liabilities of the company.

CAPITAL ACCOUNT. The account which in great industrial undertakings, like railways, deals with the capital provided for carrying on the undertaking. It is kept quite separate from the revenue account, which deals with the earnings of the enterprise.

CAPITAL STOCK, the share capital contributed by the shareholders of a limited company.

CARRIER. A common carrier is one who carries goods as his regular business, and who holds himself out as ready and willing to do so for any person who may wish to engage him. (For his liabilities refer in *Index* to "Common Carrier," "Ship-Owner as Carrier," and "Railway Company as Carrier.")

CARRYING OVER. When a person has agreed to sell at a stated price stock which he does not possess, he may find it inconvenient to deliver the stock on settling day. He accordingly pays interest on the amount of stock which he agreed to deliver in order to be allowed to defer the delivery to the next settlement. This payment is called backwardation, and the process of deferring delivery is called "carrying over." Similarly when a dealer has agreed to buy at a stated price stock which he does not want, he makes a payment called contango, in order to be allowed to defer acceptance of the stock until the next settlement: in other words to have his account "carried over" until the next account day. (See *Backwardation* and *Contango.*)

CART NOTE. When dutiable goods which are not intended for immediate consumption in the country itself, or are intended for exportation, are carried from one bonded warehouse to another, or from the bonded warehouse to the docks for shipment abroad, they must be carried in bonded carts, so that they may not be tampered with. Permission to carry them in this way is given by a document called a cart note.

CASE OF NEED. Sometimes a drawer or an indorser may insert in a bill of exchange the name of a person to whom the holder of the bill may resort in case of need, i.e., if the bill is dishonoured by non-acceptance or non-payment. Such person, who is called the referee, in case of need will meet the bill if it is dishonoured. The holder may resort to him or not, as he thinks fit.

CASH. Strictly speaking, the term cash means coined money or any other medium which is legal tender, such as Bank of England notes; but the term is frequently used with reference to things which can be readily converted into money, e.g., bank notes, cheques, bills of exchange, exchequer bills, and the like.

CASH ACCOUNT. An account in which all the cash received is entered on the debit side, and all the cash paid out is entered on the credit side. When the debit side exceeds the credit, there is a balance of cash in hand; when the credit side exceeds the debit, there is a deficiency of cash.

CASH BOOK. Where a cash account is not kept, the Cash Book is used instead and serves precisely the same functions. The Cash Book and not the Cash Account is adopted in modern book-keeping. A petty cash book is kept for small payments, the totals of which are afterwards entered in the Cash Book.

CASH CREDIT. See *Bank Credit.*

CASTING VOTE. A vote given by a chairman of a public meeting, when the meeting is equally divided, so that a decision may be made one way or another. It is usual to confer this power on a chairman, otherwise he would not be entitled to a casting vote in addition to his ordinary vote.

CAVEAT EMPTOR. See under *Sale.*

CERTIFICATED BANKRUPT. A bankrupt who has obtained his discharge.

CERTIFIED CHEQUE OR MARKED CHEQUE. A cheque recognised by a banker and marked by him, that it is a valid cheque, and will be paid on presentation. Where a banker certifies a cheque, he is bound to meet it, and the drawer of the cheque is no longer liable in it, after it has been certified at the request of the holder. Most of the legal decisions on marked cheques are American, for in that part of the world they are frequently met with, but in this country the practice of certifying cheques is seldom resorted to.

CERTIFICATE OF INCORPORATION. A certificate granted by the Registrar of Joint Stock Companies, showing that a company has been duly registered.

CERTIFICATE OF ORIGIN. A document showing the place of origin of goods, where they have grown or have been manufactured.

CERTIFIED TRANSFER. See *Marked Transfer.*

CHAMBER OF COMMERCE. An association of merchants, manufacturers, financiers and others engaged in mercantile pursuits for the purpose of promoting and fostering trade interests in general, and the commercial interests of its own district in particular. For this purpose these associations collect information relating to all matters affecting trade and discuss such measures as are likely to promote their interests. Legislative measures tending to affect commercial interests are keenly debated, and united action is taken regarding them, either by petitioning Parliament, or by putting pressure on private members. In addition, they play an important part in trade and labour disputes.

For the most part, chambers of commerce have sprung into existence during the past fifty or sixty years; but several were founded during the last quarter of the 18th century, the earliest being that of Glasgow, founded in 1782, followed at short intervals by Dublin, Manchester, Belfast and Birmingham. The Liverpool Chamber of Commerce was founded in 1851, that of London being the latest, 1881. There are now over 100 in the United Kingdom, ten of which are in Scotland and ten in Ireland. Two or three of these bodies, notably that of Glasgow, are incorporated under Royal Charter, but the greater number are incorporated under the Companies' Acts, and as they are not formed for purposes of gain, they are entitled by a license from the Board of Trade to omit the word "limited" after their names.

A new development, which has strengthened the hands of Chambers of Commerce, is the formation of the Association of Chambers of Commerce founded in 1860. The Association holds an annual congress, usually during the month of September, at one or other of the provincial towns. To this congress are invited delegates from foreign chambers, and officials from the Board of Trade, to discuss and promote measures likely to further the interests of trade and commerce.

CHAMPERTY. A criminal transaction in which one person lends money to another in order to carry on a lawsuit for the recovery of property, on the understanding that should the lawsuit be successful, the party lending the money shall share in the proceeds.

CHARGES FORWARD OR CARRIAGE FORWARD. A term which means that the person to whom goods are sent will pay the cost of carriage on delivery of the goods.

CHARTERED ACCOUNTANT. A person who holds a certificate from the Institute of Chartered Accountants to the effect that he is able to do accountancy business. The certificate may be obtained by passing the examinations held by the Institute.

CHARTERED COMPANY. A company which has been granted a charter from the Crown, authorising it to carry on a certain business or undertaking. Companies of this nature have in some cases had considerable governing powers granted them under their charter, by which they were able to conquer and rule vast territories. Such for instance was the old East India Company, and the Chartered Company which rules Rhodesia.

CHARTER-PARTY. A contract by which a ship owner places a ship or a part of a ship at the disposal of a merchant for the carriage of goods by sea. In return the merchant, who is called the charterer, agrees to pay a sum of money called freight. (See under *Shipping.*)

CHATTELS. See under *Bills of Sale.*

CHEAP MONEY. Money is said to be cheap when it can be obtained easily and at a low rate of interest; in other words, when the bank rate is low so that bills of exchange are discounted at a price a little less than their face value, and loans on stocks and other securities are secured on very favourable terms.

CHEQUE. A bill of exchange drawn on a banker payable on demand. (Refer to "Cheques" in *Index.*)

CHEQUE-BOOK. A book containing blank cheques supplied by a bank to its customers, that is, to those who have an account at the bank.

CHEQUES, CROSSED. Refer to "Cheques" in *Index*.

CHEQUE TO BEARER. A cheque which is payable without the necessity of indorsement by the payee.

CHEQUE TO ORDER. A cheque which has to be indorsed by the payee before payment of it can be obtained.

CHOP. A term used in the China trade as equivalent to brand.

CHOSE IN ACTION, the *right* to a thing, as distinct from the thing itself. The term includes all rights arising out of contracts, e.g. debts, negotiable instruments, policies of insurance, and the like. The term is also used in a wider sense to include personal property of an intangible nature, e.g. copyright.

A chose in action can be assigned only in writing signed by the assignor, and where the chose in action is a right arising out of a contract, notice must be sent to the person liable on the contract. Consideration or value in return for the assignment must also be given to the assignor, except in the case of negotiable instruments, where consideration is presumed. In this latter case, the assignment is made by simple delivery of the instrument, and need not be in writing.

The assignee of a chose in action (other than a negotiable instrument) can have no better title to it than the assignor had, and any defence which the party liable on the contract might have had against the assignor will be equally good against the assignee.

CHOSE IN POSSESSION, a term employed to denote goods and chattels. It is equivalent to a thing actually in one's possession.

CIRCULAR NOTE. When a person going abroad wishes to avoid the risk and trouble of carrying large sums of money, he obtains from his banker "circular notes," in each of which the banker requests his foreign correspondents to pay to the person named in an accompanying letter a certain sum. This letter is called "a letter of indication," and is signed by the banker and by the payee, in order to lessen the risks of personation and of forgery. It contains a list of the foreign banks at which the circular notes can be cashed. These notes are of no value without the letter of indication and *vice versa*.

CIRCULATING MEDIUM. Anything which serves the purposes of coined money in effecting sales and purchases, and in discharging debts and other obligations.

CLEAN BILL. A clean bill of health is a bill which states that the place from which a ship comes is free from infectious or contagious diseases.

A clean bill of lading is one where the captain states that the goods were received in good order and condition, without any qualification whatever. As between the shipowner and the owner of the goods, the phrase indicates that the shipowner has no claim against the goods, except for freight.

CLEARANCE. The permission to sail given to the master of a ship by the officers of customs on his complying with the necessary formalities and paying port dues, light dues, and other charges.

In regard to goods, clearance means that the necessary formalities have been complied with, and the duties (if any) have been paid, in order to have the goods passed by the customs officers.

CLEARING A BILL, to get cash for a bill of exchange.

CLEARING BANK. A bank which is a member of the London Bankers' Clearing House.

CLEARING HOUSE (Banking). The house in which bankers meet in order to settle their obligations to one another. By means of this institution, cheques and drafts which the customers of the various banks have drawn on their respective banks, and which have been paid into banks other than their own, are set-off against one another, so that on the whole very little gold passes between the banks. For instance, at the close of the day's business, bank A may have paid into it cheques to the value of £10,000 drawn on bank B. If now, bank B has an equal amount of cheques drawn on bank A, it is manifest that the two banks will not have to transfer any gold to each other. The transfer of the cheques will do equally well. (Refer to "Clearing House" in *Index*.)

CLEARING HOUSE (Railways). An association of which nearly all the railways in England and Scotland are members. It deals with through traffic, that is, where passengers and goods are carried in one journey over lines belonging to two or more companies. It settles what portion of the fares and charges should be allotted to each of the companies over whose lines the goods and passengers are carried. The Clearing House also deals with inquiries as to lost luggage and goods. (Refer to "Clearing House" in *Index*.)

CLOSING PRICES. The prices which prevail in a market at the end of the day's operations.

COASTING TRADE. All trade carried on by sea from any one part of the United Kingdom to any other part thereof. No goods can be carried in a coasting ship except such as shall be laden to be carried coast-wise at some port of the United Kingdom. The master of a coasting ship is liable to a penalty of £100 if, when at sea, he takes in or puts out goods, or if he deviates from the voyage, unless forced by unavoidable circumstances, or if, having touched at some place over sea, he does not make known this fact to the proper authorities at the first port in the United Kingdom where the vessel arrives. The master must keep a proper cargo book, stating his name, the port of destination, and the port to which the ship belongs. Before leaving the port of lading, a copy of a "transire" or pass for the goods must be furnished to the Customs authorities, and this transire must be given up to the proper Customs Officer within twenty-four hours of the ship's arrival at the port of discharge.

N.B.—Coasting vessels are exempt from compulsory pilotage.

COINAGE. In the United Kingdom the standard of value is the sovereign, which when issued from the Mint must not exceed 123·47447 grains in weight, or be less than 123·27447 grains, this allowance for variations in the weight being known as the "remedy" or margin within which the coin will be regarded as of correct weight. The gold of which sovereigns are made (standard gold) consists of eleven-twelfths pure gold and one-twelfth alloy (copper). This admixture of alloy is for the purpose of making the coin more durable. Twenty pounds weight troy of standard gold are coined into 934 sovereigns and one half-sovereign.

When it is said that the sovereign is the standard money, it is meant that the value of the sovereign corresponds exactly to the value of the material of which it is made. The silver and the copper coins are *token* money, that is, the nominal value of a silver or a copper coin is vastly greater than the material of which it is composed. Token money is in this country legal tender to a limited amount—forty shillings in the case of silver, and twelve pence for copper. That is to say, a debt of more than forty shillings cannot be discharged by a payment in silver, and a debt of more than a shilling cannot be paid in copper money, unless the creditor agrees to accept the payment. The amount of silver and copper coinage to be issued is arranged by consultation between the Mint and the authorities of the Bank of England.

A pound troy of silver is coined into sixty-six shillings, and as the cost of a pound of silver is considerably less than £1 10s., it will be seen that the Mint makes a considerable profit on the coinage of silver; in the case of the copper coinage the profit is even greater.

COMBINATION or COMBINE. The term "combine" is applied to a union of the leading manufacturers or dealers in any line of business for the purpose of protecting their trade interests, which usually means the keeping up of prices, and the doing away of competition amongst themselves, at the expense of the community at large. (See *Trusts*.)

COMMANDITE. Strictly speaking, *commandite* is a loan to a person engaged in business, but in its ordinary sense it is equivalent to a share in a partnership business, the liability on which is limited in amount. In French commandite companies there are two kinds of partners, one called *associés en nom collectif*, who are like partners in English law, and whose liability for the debts of the firm is unlimited. The other called *commanditaires*, who take no part whatever in the business, but embark their money in it, and whose liability is limited, like the members of a limited company in England.

COMMERCIAL BILL. See *Trade Bill*.

COMMERCIAL CRISIS or PANIC. When a great number of trading concerns suspend payment, a feeling of distrust prevails amongst bankers and others whose business it is to lend money to those engaged in mercantile pursuits, and accordingly they refuse to advance loans, except at high rates of interest, and on securities that can be quickly realised. The result is that many undoubtedly solvent concerns are unable to procure the advances necessary to meet their current liabilities, though, if given time, they could pay more than twenty shillings in the £. Hence these businesses come to grief, and involve many others in their fall, and in the end there is panic all round. This sudden contraction of credit which precipitates the crisis generally follows an undue expansion of credit. When trade is brisk and prices high, banks are only too ready to make advances to traders, either by allowing them to over-draw, or by discounting bills drawn against the proceeds of consignments of goods, which proceeds are reckoned on the basis of the high prices prevailing. This easiness of obtaining credit in the shape of loans enables traders and manufacturers to enlarge their business. Goods are produced for which there is no market, and prices therefore fall. Through the sudden fall in prices, the more shaky firms are unable to repay their over-drafts or to meet as they become due the bills drawn against consignments of goods when prices were high. Accordingly the banks which before were only too ready to give credit, now refuse to give credit except under stringent conditions, with the result that reputable firms cannot get the necessary advances and so have to suspend payment.

To prevent, if possible, the recurrence of these crises, the Legislature has considerably restricted the power of banks to issue notes (see under *Banking*). It is evident, however, that this restriction does not go to the root of the evil. For while banks are limited in their power of making loans by the issue of paper money, there is no limit to their power of making advances in the shape of over-drafts, or of discount-

ing bills on easy terms; and it is in this latter manner that banks do make advances to their customers. This branch of the subject is dealt with in full detail in the article on Banking.

COMMISSION AGENT. A person who is employed as his regular business to buy or to sell property on behalf of others. He is entitled to a commission, usually of so much per cent., on the value of the property which he is employed to buy or to sell.

The relations of commission agents to their employers and others are governed by the law of agency. (Refer to "Principal and Agent" in *Index*.) But a word or two may be said in regard to their remuneration, which is often the subject of dispute between them and their principals, these disputes relating to such points as, whether the agent has earned his commission, or where several agents are employed to negotiate a sale or a purchase of the same property, which of them is entitled to be paid commission. A few examples will suffice to illustrate the nature of these disputes, and the law as to the points involved.

The agent must do the work himself, and the work must be done properly. If the transaction is completed by another who is not his sub-agent, he is not entitled to receive commission. Thus, where an agent introduced a purchaser who did not come to terms, but afterwards bought the same property at an auction conducted by another agent, it was held that the first agent could not claim commission. The work must be done in a reasonable time. For instance, an agent was employed to negotiate the sale of a public-house, the terms stating that commission should be paid him on a sale at "any future time." Nearly two years later the house was sold, but not through his agency, and it was decided that he could not recover anything. Where the contract of agency expressly stipulates the amount of remuneration, the agent is not entitled to commission if the work is only partially done. Thus, where an agent was employed to negotiate a sale of property on the terms that he would receive 2½ per cent. if he procured a purchaser for £19,000. The purchaser whom he introduced failed to carry out the purchase, and a part of the property was afterwards sold at £7,000. In this case the agent was not entitled to any payment. If, through the fault of his principal, the sale falls through, the agent is entitled to damages amounting usually to the commission he would have earned had the transaction been completed. Where several agents have been employed to carry out a sale, the agent through whose introduction the sale was effected will alone be entitled to payment. To prove this, the purchaser must be called upon to show through which agent he made his offer.

COMMITTEE OF INSPECTION. In bankruptcy, the committee of inspection consists of a number of the creditors appointed by the rest, to watch over and supervise the proceedings of the trustee. In the winding-up of a limited company, the committee is appointed by the creditors and the contributories to look after the liquidator.

COMPANY, LIMITED LIABILITY. A company, the capital of which is divided into shares. The liability of the shareholders is limited to the amount unpaid on their shares. If these are fully paid up, the shareholders are under no further liability should the company come to grief.

COMPOUND OPTIONS. (See "Call Option," the "Put of More," and the "Put and Call," under *Options*.)

COMPOUNDING WITH CREDITORS. An agreement by which all the creditors of an insolvent person agree to accept so much in the £, and to give to the debtor a full discharge from all his liabilities to them.

COMPROMISE. Where a matter is in dispute and the parties agree not to go to law about it, but to settle it between themselves by a give and take arrangement.

COMPULSORY WINDING UP. Where the Court has decreed that the Company shall be wound up by the Court itself.

COMPUTING A BILL, reckoning the date upon which a bill of exchange falls due.

CONCESSION. A term used to describe a grant of land made by a public authority to a company or to a private person, for the purpose of using the land for railways and the like, or for working mines.

CONDITIONAL ADVANCE NOTE. A note given by a master of a ship promising to pay to the order of a seaman named therein, a sum of money after the expiration of a certain number of days from the time the ship has sailed, upon the condition that the seaman goes to sea in the ship. If the seaman is shipped in a port of the United Kingdom the advance must be for not more than a month's wages, but if he is shipped in a foreign port there is no limit to the amount of the advance.

CONDITIONS OF SALE. These state the terms of sale when property is to be sold by auction, e.g., the property to be sold with or without reserve, the mode of bidding, the payment of deposit, auctioneer's fees, the date and place of completing the contract.

CONFIRM. To set out in writing the particulars of a verbal agreement, or to refer to a letter previously sent.

CONSIDERATION. See under "Contracts" in *Legal Guide*.

CONSIGNMENT. The sending of goods from one town to another, either at home or abroad. The person sending the goods is called the consignor and the person to whom they are sent is called the consignee. The term is often applied to the goods themselves.

CONSOLIDATED FUND. Formerly, when Government raised a loan, a particular part of the revenue was assigned for its repayment. This part of the revenue was called the "fund" for that loan, and every loan had its appropriate fund. Towards the end of the 18th century these funds were consolidated, and the total debts were payable out of the total revenue. The consolidated fund is, therefore, the account of the Exchequer kept at the Bank of England, into which all the revenue collected is paid, and out of which all payments of interest on the National Debt, and payments for carrying on the government, and for maintaining the army and the navy are made. This revenue consists of customs, excise stamps, income tax, property tax, receipts from the Post Office, Crown lands, and a host of miscellaneous taxes. It is paid into the Bank mainly through the Inland Revenue office.

CONSOLS. A term first applied to the various government loans which in 1751 were consolidated into one, bearing interest at three per cent. Prior to that date, there were nine different government loans at different rates of interest. The interest on consols was reduced in 1888 from 3 per cent. to 2¾, and in 1902 it was further reduced to 2½ per cent. It may be of interest to state that the lowest price Consols has reached was in 1797, when, owing to the Mutiny at the Nore, the price fell to 47¾. The highest price was a few years ago, when it rose to 114. The price at the present time (1906) is about 87.

CONSTRUCTIVE TOTAL LOSS. In marine insurance "constructive total loss" means a loss which entitles the insured to claim the whole of the insurance money, on abandoning the ship and its contents to the underwriters. The ship may still be in existence, but in such a damaged condition that it would not pay a prudent owner, even though uninsured, to repair it; or the ship may be in such a position as to make its total destruction highly probable. (See *Abandonment*.)

CONSUL. An official appointed by the government of a country to reside at some place abroad, in order to protect its commercial interests, and the interests and welfare of its subjects residing there. He may be a subject of the State appointing him, or a subject of the State in which he exercises his functions, or a domiciled foreigner residing in that country. Before taking up his duties he must receive an "exequatur" from the government of the country in which he is to act. This exequatur is the recognition of his official position, without which he will not be allowed to act on behalf of the State appointing him.

To the end that he may efficiently perform his duties, a consul enjoys certain immunities and privileges which, however, fall far short of those granted to ambassadors and others engaged in the diplomatic service. He cannot be called to serve in the local defence forces, or to serve on a jury. If arrested for a crime, he ought, pending the trial, to be admitted to bail, or confined to his residence, so that he may be able to perform his consular duties. His official residence, the consulate as it is called in most countries, is, though not in the United Kingdom, exempt from the payment of rates and taxes. For some purposes it is regarded as part of the territory of the State which the consul represents, e.g. registering the births and deaths of the subjects of that State, and of recording certain contracts entered into between its subjects. In time of war, the troops of a belligerent must not, except in case of urgent military necessity, molest the consulate, for that would be regarded as a grievous insult to the State whose agent the consul is, and its archives, i.e. the official papers, must be kept inviolate. In countries exposed to frequent revolutions like the South American Republics, the foreign consulates are a refuge for foreigners during troublous times.

In Mohammedan and other non-Christian states, consuls, by virtue of treaties concluded with those States, enjoy a quasi-diplomatic position. Their powers are much wider than in Christian countries, for the consular courts have sole jurisdiction in all disputes, civil or criminal, in which Europeans are involved. The reason for this peculiar power is that the system of morality and the laws prevailing in those countries differ widely in many material respects from those prevailing in European States. Further, there is not sufficient confidence in the impartiality and integrity of the native officials to permit of their exercising jurisdiction over Europeans. One Eastern country, Japan, has made such strides in recent years, that the various European States possessing consular courts there, agreed to withdraw them a few years ago.

The various grades in the consular service are consuls-general, consuls, vice-consuls, and consular agents, some of whom are wholly engaged in the consular service, whilst others are principally engaged in trade on their own account, and give only a limited time to their public duties.

A British consul watches over the rights of British subjects who may be in his

district. He is required to assist them if tried for offences, and to see that they are not inhumanly treated on being convicted. He has power to make inquiry upon oath concerning all offences committed by British seamen on the high seas, and to assist shipwrecked and unemployed seamen and other destitute persons, and to provide them with the means of returning home. He issues passports to British subjects, celebrates marriages between them, and generally does his best to further British interests. Some of his most important work consists in collecting information regarding the trade and the commercial needs of his district, so that British traders may be able to develop trade with that district. In business transactions he has the powers of a notary public and of a commissioner for oaths.

CONSULAGE. The fees which a consul receives for discharging his official duties.

CONSULAR INVOICES. Certain countries, notably the United States, require that goods exported to them shall be accompanied by an invoice describing the quantity, quality and the nature of the goods, in order that the customs duties should not be evaded. The truth of the statements contained in the invoice must be sworn to by the merchant exporting them.

CONTANGO. When a dealer on the Stock Exchange agrees to buy at a stated price stock which he does not really want, he does so in the hope that the price will rise before the "settling day." If the price should rise he will make a profit, because the stock has to be delivered to him at the price agreed upon, and he can then sell it at the higher price. The contract is, however, usually not one for the delivery of stock, but for payment of the "difference" between the contract price and the market price, and in this case this difference would be paid to the buyer. Should, however, the price of the stock fall before the settling day, the buyer will lose, for he will have to pay the contract price for the stock which is higher than the market price, and consequently, if he desired to sell, he would suffer a loss. If he does not want the stock, he will have to pay the "difference." This, however, may be inconvenient, and accordingly he asks the seller to postpone to the next settlement the delivery of the stock for which he (the buyer) bargained, or the payment of the difference for which he is liable. For postponing or "carrying over" this settlement the buyer will have to pay interest, and this payment is called contango. (See *Backwardation*, *Bear* and *Bull*.)

CONTANGO DAY. Accounts between buyers and sellers on the Stock Exchange are settled twice a month, except in the case of Consols and one or two other securities, where the settlement is monthly. The settlement usually extends over three days, the first day of which is known as "contango day," "making-up day," or the "carrying-over day." It is on this day that the transactions for delivery of stock or for payment of differences are adjusted. (See *Ticket Day* or *Name Day*, and *Pay Day*.)

CONTINGENT ANNUITY, an annuity payable on the happening of a given event.

CONTINUATION, the same as "*Carrying Over.*"

CONTINUATION RATES, the rates charged for carrying over bargains. (See *Backwardation* and *Contango*.)

CONTRABAND. Any foreign trade forbidden by the laws of a State. The term is usually applied to the smuggling trade, which seeks to evade the customs regulations.

CONTRABAND OF WAR. Any articles supplied by a neutral to a belligerent for the purpose of enabling him to carry on the war. Some commodities are *absolutely* contraband, because in themselves they are of direct use in warlike operations, e.g., arms and ammunition, and machinery for making them, military and naval stores of all kinds, ships and parts of ships, and the like. Other articles which are innocent in themselves, but which may be employed in military or naval warfare, are said to be *conditionally* contraband. Whether or not they are contraband, depends upon the use for which they are destined. Provisions, liquor, money, telegraph materials, coal, timber and the like are contraband if destined for the use of the fighting forces, but are not contraband if intended for the use of the ordinary civil population.

CONTRIBUTORIES. Those persons who have to contribute to the assets of a limited company on its being wound up. The sums which they may be called upon to contribute are limited to the amount which is unpaid on the shares. The contributories are either those who are shareholders at the time of the winding up, or those who have been shareholders within a year of the winding up.

CONVERTIBLE PAPER CURRENCY. A currency that can be exchanged on demand for its full value in coin when presented to the bank or the authority which issued it. Bank notes are a good example.

CONVERTIBLE SECURITIES. Securities which find a ready market, and therefore can be easily sold and turned into ready money, e.g., government securities of all kinds.

CO-OPERATION. The term co-operation embraces two distinct ideas, co-operation in consumption and co-operation in production.

(1) **Co-operation in Consumption** is more familiar to ordinary people, and is the system by which the worker seeks to spend his income to the best advantage, the system in which the proprietors of a shop are its customers, thus doing away with the middle-man and enabling the consumer to get his commodities cheaper. This kind of co-operation has met with a fair amount of success.

(2) **Co-operation in Production,** on the other hand, has been an almost unqualified failure. Under this system, the agents in production—capital and labour—are united in such a way that the employer is got rid of. The workers, either by means of their own or of borrowed capital, are their own employers. The profits which would otherwise be annexed by the employer go to swell the wages of the labourer, who is thus stimulated to exert himself to his utmost. Further, it is contended that co-operation would make employment more stable, because where an employer ceases to carry on his business as soon as it ceases to be profitable, if the labourers were their own employers they would still go on producing, and sell their product for what it would fetch. In spite of these apparent advantages, co-operation in production has never been a success, not merely because of the selfishness and laziness inherent in human beings, but because an industrial undertaking carried on under one head is more likely to be well managed than where each worker has a voice in the management. Moreover, a large body of men would be quite incapable of gauging the wants of far distant markets, or of markets where the demand was constantly fluctuating, and consequently would never be able to make the supply of a commodity correspond with the demand for it; so that the conditions of production would be more unstable than ever. Co-operation in production is possible only in an industry which can be carried on by a small body of workmen who are on a level of strength and skill, and in which the initial expenditure for tools and materials is small, and the manufactured articles are produced merely for a local market. In these days of Combinations and of Trusts these conditions are not, however, likely to be fulfilled.

COPYRIGHT, the sole right of printing and publishing the work of an author. (Refer to "Copyright" in *Index*.)

CORNER. The process of what is known as "cornering" can only take place when people speculate in "futures," i.e., agree to buy or sell commodities which they don't possess, and probably don't want to possess, and which are not yet in existence. Take for instance wheat or cotton, or any similar product in general demand. Before the harvest has been gathered in, speculators begin to study the harvest prospects. Their calculations may lead them to think that there will be an abundant harvest. Accordingly they determine to sell. They contract with other speculators to sell to them at a fixed price any agreed quantity of the commodity at a future date, say when the harvest is gathered in. This they do in the hope that the harvest will be abundant, and that therefore prices will fall. If this calculation turns out correct, they will reap a profit, because they can get the wheat at market price and sell it at the agreed price, which is much higher. It may happen that they miscalculated the prospects of a good harvest. The harvest may turn out scanty, and prices will therefore rule high, and so those who agreed to sell at the fixed price will have a bad time.

But they will have a still worse time if any of the other speculators to whom they agreed to sell possess a large capital and buy up as much of the forthcoming supply of wheat as they can, for by so getting hold of or "cornering" the available supply, they force the unhappy speculators into a tight place. The sellers cannot in that case get the commodity which they agreed to sell, except by buying it from those to whom they had agreed to sell it, and these having the advantage will naturally exact high terms, with the result that the unfortunates who agreed to deliver the commodity at a fixed price will have to pay huge sums to be freed from their bargains, for frequently the contract to deliver the wheat is like the contract to deliver stock and shares on the Stock Exchange, a contract to pay "differences" only, viz., the difference between the agreed price and the market price. It is the old game of "bulls" and "bears" over again, and is nothing but gambling.

The evils inflicted on the producer, on the consumer, and on trade generally by this system of gambling in "futures" can hardly be estimated. When men deal in futures they are really betting on future fluctuations in prices, and in order to bring about the desired rise or fall in prices, they do not hesitate to influence the market so as to bring about the rise or the fall on which they have made their bets. If the bears succeed in pulling down the prices of grain or cotton or other commodity below what they would have been had the markets not been influenced, the producer may be badly hit, the bulls may be ruined, while the gain to the consumer may be inappreciable. On the other hand, if the bulls succeed in forcing up prices, the consumer has to pay the increase, while the producer, if he agreed to sell his crop before it came to maturity, will not participate in the rise

in price. The whole gain goes into the pockets of the successful speculators.

COST AND FREIGHT. The phrase denotes that the price quoted will cover the cost of the goods and carriage.

COST BOOK MINING COMPANIES. A cost book mining company consists of several men called "adventurers," who form themselves into a partnership for working a mine. They receive permission from a landowner to search for ore, and if successful they take a lease of the ground, paying to the landowner a certain share of the output. The terms of the agreement amongst the members are entered in the "cost book," which contains, among other items, particulars of all moneys received and paid out and a list of the members. Any member can be sued by a creditor who has supplied necessaries for working the mine, and this whether the creditor knew or did not know at the time of supplying the necessaries that he was a shareholder. Members are liable for unpaid calls on the winding up of the company, unless they had ceased to be members two years previously.

COST, FREIGHT AND INSURANCE. The price charged for goods when it covers not only the cost but the expense of insuring and of carrying them.

COUNCIL BILL or **DRAFT,** a bill or draft drawn by the Secretary of State for India upon the Government of India, payable at the Bank of England. Such bills are negotiable instruments.

COUNSEL'S OPINION, an opinion in writing given by a barrister on a case or a point of law submitted to him by a solicitor, for the guidance and information of a client of the solicitor or of the solicitor himself. The value of such an opinion depends entirely on the skill and knowledge of the counsel giving it. It has no binding force, and is not in any way recognised by the Courts, save in this respect, that a solicitor acting in accordance with counsel's opinion cannot be sued by a client who accuses him of negligence or incompetence in the matter in question.

COUNTRY CLEARING. The system by which each country bank sends to its London agent the cheques and drafts on other banks which have been paid into it in the course of the day. The various London agents present to each other the cheques so received, which are then transmitted to the banks on which they have been drawn. (See under *Banking.*)

COUPON. Debenture bonds or other documents for the repayment of money, with interest at stated intervals, have a slip attached to them stating that a certain amount by way of interest will be paid at a specified time. When payment of interest is due, the slip is cut off and delivered to the payer. Such coupons, when attached to a debenture bond, are called "dividend warrants." There is no stamp duty on a coupon, which is one of a set of coupons, whether issued with the security or subsequently issued in a "sheet of coupons." But a coupon attached to a scrip certificate must be stamped.

COVER. Security given for a loan so as to ensure that the lender shall not lose in case the borrower makes default. Stock brokers frequently require their clients to deposit "cover," that is, money or securities, when undertaking speculative ventures for them, because in Stock Exchange transactions the brokers are personally liable on any engagements entered into by them on behalf of their clients, and the "cover" protects them in case the clients fail to pay.

CRANAGE. The charge for using cranes for loading or unloading goods on board vessels.

CREDIT. LETTER OF. A letter addressed by a bank or a firm to another, requesting that other to pay to a person named in the letter a specified sum of money, for the repayment of which the bank or the firm making the request becomes responsible. (See *Circular Note.*)

CREDIT NOTE. When a purchaser receives goods which are defective in quality or quantity, or has been overcharged, the seller grants him a reduction in the price, and this reduction is embodied in a *credit note.*

CREDIT SLIP. Same as *Paying-in Slip.*

CUM DIVIDEND. The word *cum* means "with" or "together." When stocks and shares are sold "cum dividend," the buyer not only gets the stock or the shares, but also the dividend that is accruing or which may then be due.

CUM DRAWING. When bonds for the repayment of money borrowed with interest are sold at a time when the drawing of the bonds is near, the buyer, if the bonds are sold "cum drawing," takes any profit which may accrue at the drawing.

CUM NEW. When a company increases its capital, it very often gives to its shareholders a right to take up the new issue of shares on more advantageous terms than are offered to the public. If, when this is about to take place, the shares are sold "cum new," the buyer participates in these advantages.

CUMULATIVE PREFERENCE SHARES. These are shares upon which a dividend is guaranteed, and if the dividend remains unpaid in any one year, or any number of years, it accumulates until it can be paid. Dividends on such shares must be paid before any other dividends can be paid, though of course, they are postponed to interest on debentures, for that is interest on money borrowed, and not interest on capital invested in the company, and the creditors must be paid before the shareholders will be allowed to receive dividends.

CURRENCY. The currency of a country consists of anything which is used as a medium of exchange in effecting sales and purchases, and in discharging debts and other obligations.

CURRENCY QUESTION. The question whether the present single-standard countries such as the United States and Great Britain should adopt a double-standard currency of gold and silver, making silver as well as gold legal tender to any amount. (See *Bi-metallism.*)

CURRENCY BONDS. Bonds for the repayment of money borrowed, together with interest, and which repayment is made in the currency of the country in which the loan is raised.

CURRENCY OF A BILL. The period which a bill has to run before it becomes due for payment. When a bill is drawn payable at so many days after date, the currency of the bill is the time between the date of the bill and the date on which it has to be met. In the case of a bill payable after sight, the acceptor, when he puts his signature on the bill, must also put the date of his acceptance; the currency of the bill is in that case the time between the date of acceptance and the date for payment.

CURRENT ACCOUNT. A current account at a bank is an account of money deposited by a person at a bank. It is the account on which a customer draws cheques. He can add to this account, or withdraw the whole or part of the amount without giving any notice. As a rule, banks give little or no interest on a current account.

CUSTOM, a usage prevailing in a particular trade or a particular locality, or common throughout the community. The custom of a particular trade does not form part of the law of the land, but may be given in evidence in legal proceedings. A general custom, i.e. a custom prevailing throughout the community, becomes law the moment that it is recognised and enforced by the Courts. The Law Merchant, which affects commercial contracts, e.g. in regard to the negotiability of bills of exchange and other written instruments, had its origin in the customs prevailing in commercial circles.

CUSTOM HOUSE. This institution supervises the export and the import trade of a country, and collects the duties which the government may impose on the importation or the exportation of commodities. It sees that nothing is admitted which the law forbids, or allows only on certain conditions being fulfilled, e.g., false coins, obscene literature, books, pamphlets, etc., which infringe foreign copyright, explosives, and other dangerous materials, and animals suffering from contagious diseases. To the customs officers are entrusted also the duty of inquiring into the health of every ship which arrives at any port in the United Kingdom.

CUSTOMS BILLS OF ENTRY. These are published daily by the Customs authorities, giving information of the different kinds of goods imported and exported, and of the ships arriving and leaving English ports and of those loading there.

CUSTOMS DEBENTURE. A certificate issued by the customs authorities entitling a person to receive drawback of duty on the exportation of certain goods on which duty had been previously paid. Where goods which have paid duty on importation are exported within a certain time, the government pays back the duty to the real owner of the goods. This payment is called "drawback"; and the customs debenture is a document entitling the owner to receive payment of the drawback (see *Drawback*). The stamp duty on such a certificate is one shilling where the amount to be returned does not exceed £10. If it does not exceed £50, the stamp duty is 2s. 6d. In all other cases the stamp duty is 5s.

CUSTOMS DECLARATION. When parcels are posted to any place outside the United Kingdom, the sender must make a written declaration of the nature, value and weight of the parcel, for the information of the customs authorities of the place to which the parcel is posted.

CUSTOMS ENTRY. Written particulars of the nature, weight and value of goods imported or exported, furnished to the customs authorities by the importer or the exporter of the goods, or by the ship owner.

CUSTOMS DUTIES AND CUSTOMS TARIFF. The customs duties are the taxes levied on goods imported into a country. The list of articles that are liable to pay duty, and the scale of duties is known as the tariff.

In this country, the collection of the customs duties is entrusted to a Board of Commissioners. These duties are imposed solely for revenue purposes, and not for the purpose of fostering home manufactures. They are levied solely on goods which cannot be produced or which are not allowed to be produced in this country, or on imported goods, which if manufactured here are taxed for revenue purposes, so as to put these goods on the same level as the home-produced article. An example of this class is spirits and other liquids containing alcohol.

Prior to 1840 there were about 1,200 articles liable to import duty. In that year Sir Robert Peel considerably reduced the list, and in 1860 the list was still

further reduced to 142 articles. Now-a-days the list consists of about a dozen divisions, embracing, roughly speaking, about fifty articles, the more important being tea, coffee, cocoa, dried fruits, alcohol in every shape, and tobacco in its various forms.

The duties on these articles are not *ad valorem*, but according to quantity or weight, and are due the moment they are landed here; but as a matter of convenience, and for the purpose of not restricting trade, the duty is not paid immediately unless the articles are destined for immediate consumption. Where the goods are not so intended, they can be stored in bonded warehouses, duty free, and the duties are not payable until the goods are removed for home consumption. If removed for exportation, the duty is not paid at all.

DANDY NOTE. A delivery order authorising the removal of goods from a bonded warehouse, when intended for exportation or to be used as ship's stores. The document is filled in by the exporter and sent to the Controller of Accounts. (See *Pricking Note.*)

DAY BOOK. In book-keeping, most business concerns keep two books for entering credit transactions as they occur. One book, called the "Bought Day Book," is devoted to purchases on credit, the other, called the "Sales Day Book," to sales on credit.

DAY TO DAY LOANS. Money lent by banks to stockbrokers and others for one day at an agreed rate of interest. These loans can be renewed from day to day, if both parties agree to this course.

DAYS OF GRACE. The three days added to the period which a bill or a promissory note has to run, so as to extend the time of payment (see under *Bills of Exchange*). In insurance it is the time allowed for payment of the premiums after they have become due. In stock-exchange transactions, bargains for the delivery of stock must be settled at the appointed day, but usually an extended period, called days of grace, is allowed in order for the delivery to be completed.

DEAD ACCOUNT. An account of money, stocks, etc., standing in the name of a deceased person.

DEAD FREIGHT. The rate charged for the empty space when the charterer of a ship having undertaken to load a full cargo fails to do so.

DEAD RENT. A fixed annual rent payable on a mining lease whether the mine is worked or not. It differs from a royalty rent, in that the latter is paid according to the quantity of minerals or ore extracted.

DEAD WEIGHT. Cargo such as coal or minerals which pays freight according to its weight, and not according to the space which it occupies.

DEAR MONEY. Money is said to be dear when the rate of interest charged on loans is high even when good security is given for repayment.

DEATH DUTIES. The taxes levied on the estates of deceased persons, and paid by those who benefit by their death. They include Probate Duty, Legacy Duty, Account Duty, Succession Duty, and Estate Duty. (Refer to *Inder.*)

DEBENTURE. A written promise, usually under seal, given by a company to repay with interest at a specified time, money lent to the company. Debentures are of two kinds (*a*) mortgage debentures, which gives a charge on all or a part of the company's assets, or (*b*) debentures which merely promise to repay the money advanced to the company.

DEBENTURE BONDS. Bonds issued by a company, or a government, or a corporation for the repayment of money at a specified time.

DEBENTURE STOCK. Stock issued by a company in return for a loan. The rate of interest on debenture stock is fixed and perpetual. Such interest is paid after the interest on mortgages and bonds created prior to the issue of the debenture stock has been paid, but must be paid before any dividends can be paid on any shares or stock of the company, whether such stock or shares are ordinary, preferred, or guaranteed.

DEBIT NOTE. When goods sent to a purchaser are defective in quality or quantity, or when the purchaser has been overcharged, he sends a debit note to the seller claiming a reduction from the contract price.

DEBT. Refer to *Inder.*

DECIMAL SYSTEM. The system by which numbers, weights, measurements, and quantities are calculated by divisions of ten. The best example of the decimal system is that adopted by France, which has been followed by many European countries (see *Metric System*). There is no doubt that the system has many advantages, notably that of easiness of calculation, and were the system universally adopted it would facilitate the course of business in international trade, and would enable England to compete more successfully with her foreign rivals in commerce.

In regard to coinage, the Decimal system has made more headway than in regard to weights and measures, for great commercial countries like Canada and the United States have practically a decimal coinage, while still adhering to the system of weights and measures prevailing in England. The dollar, equal to 4s. 2d. of English money, is the standard coin, and is divided into ten dines, and the dine is equal to ten cents., so that a cent. is the equivalent of the English halfpenny. Many schemes have been suggested for placing the English coinage on a decimal basis, the most feasible being to make the sovereign the standard, retaining the florin as its tenth part, and sub-dividing the florin into ten equal parts, each of which would as nearly as possible be the equivalent of 2¼d. Other coins could be made either multiples or sub-multiples of 2¼d.

DECK CARGO. Cargo stowed on deck. The ship-owner is not liable for damage resulting to goods stored on deck, unless he has expressly agreed to be liable. Similarly the underwriter is not liable for average when deck cargo has been injured or lost, unless in the policy of insurance he agrees to be liable. *Prima facie*, the deck is not the place for cargo, which ought to be stowed below deck.

DEEDS OF ARRANGEMENT take various forms, the most common of which are (1) Deeds of Assignment, (2) Deeds of Composition, (3) Deeds of Inspectorship. (See under *Bankruptcy.*)

DEFAULTER. On the Stock Exchange, when a member is unable to fulfil his engagements with other members, or becomes bankrupt, or is notoriously insolvent, he is said to be a defaulter. Insolvency means "inability to pay debts in the ordinary commercial sense, and in the ordinary course of business." When a member is in this position, notice of the fact is given, by the waiter striking the rostrum three times with a wooden hammer to call the attention of the House, and announcing to the members that the person in default is unable to comply with his bargains. The defaulter who is thus "hammered" ceases to be a member, Provided he has no creditors outside the Stock Exchange, his estate is taken over by official assignees who are members of the House. These official assignees call in what debts may be owing to the defaulter from other members, and when the estate is realised, distribute the assets among the creditors. In this way the defaulter is saved from the disabilities under which an ordinary bankrupt labours; but if he has creditors who are not members of the House, the ordinary bankruptcy law applies to his case, and the above procedure cannot be resorted to.

A defaulter may be re-admitted as a member if he pays 6s. 8d. in the pound, provided his conduct is approved of by the Committee of the Stock Exchange, but he is in no way relieved from his liabilities to his fellow-members by his being re-admitted. In fact he is bound to discharge his debts to them, if his means permit, and he may be called upon to furnish an annual statement of his affairs until his debts are discharged. A member is not allowed to deal with a defaulter or to carry on any business for his benefit before he is re-admitted, unless the permission of the Committee of the Stock Exchange has been obtained.

DEFERRED ANNUITY. An annuity payable after the expiration of a certain agreed period. Such annuities may be purchased from the government at any Post Office. Should the person for whom the annuity is purchased die before the expiration of the agreed period, the purchase-money is not refunded.

DEFERRED BONDS. Bonds issued by a company or a corporation or by government, entitling the holder to a gradually increasing rate of interest, until a certain rate is attained, when they are converted into active bonds bearing a fixed rate of interest.

DEFERRED STOCK OR SHARES. The holders of these stocks and shares are not entitled to any dividends until the preference, guaranteed and ordinary shareholders have received a fixed rate of dividend.

DEFICIENCY. In the customs and excise a certain percentage of the total measurement or weight of dutiable goods is not subject to the duty, so as to allow for wastage. This allowance is called deficiency.

DEFICIENCY BILL. When the expenditure temporarily exceeds the revenue, the deficiency is met by the government borrowing from the Bank of England, giving in return bills for short periods.

DEL CREDERE AGENT. A del credere agent is a mercantile agent, who in return for an extra commission undertakes that the person to whom he sells goods will pay his employer for them. In effect he guarantees his principal against losses through the insolvency or bankruptcy of the persons to whom he sells his employer's goods. Apart from this his position is determined by the ordinary law of agency (see *Agency*).

DELIVERY BOOK. When goods are sent by railway or by carrier, particulars of them are entered in a book. These entries are signed by the person to whom the goods are delivered, thus serving as receipts to show that the goods have been received by the persons to whom they were consigned.

DELIVERY ORDER. An order written by the owner of goods requesting the person who has charge of them to deliver the goods to the person named in the order. The term sometimes means that the person (warehouseman, dock-owner, or wharfinger) who has the custody of the goods undertakes that he himself will deliver them. A delivery order, like a bill of lading, or a dock-warrant, is not really a negotiable instrument, for the person

who takes it has no better title to the goods mentioned in it than his transferor had. It is, however, a "document of title" to goods, and is therefore frequently used as a means of raising money. Where the goods are of the value of £2 or upwards, the order must bear a penny stamp, to be paid by the person to whom the order is delivered. A delivery order is not rendered invalid by being unstamped unless the holder of it was trying to evade the duty.

DEMAND DRAFT. A bill of exchange payable on demand.

DEMISE, a term employed to denote the granting of a lease.

DEMONETIZE. To remove coins from the rank of standard money.

DEMURRAGE. (1) The payment made by the shipper of goods to the ship-owner, as compensation for delay in loading or unloading a ship. It is the converse of despatch money. (2) A charge made by railway companies for delay in removing goods carried by them.

DEPOSIT ACCOUNT. An account of money lodged at interest with a banker, and which, as a rule, cannot be withdrawn without notice to the banker. Such money is described as "money on deposit," and the receipt given for it by the banker is called a "deposit note." If the depositor is a customer of the bank, payments made into the deposit account are not entered in his pass book, which refers to his current account. The deposit account must be kept separate from the current account. No stamp is required for the "deposit note" or receipt.

DEPOSIT NOTE or **DEPOSIT RECEIPT.** (See *Deposit Account.*)

DEPRECIATION. The amount by which property has been diminished in value. In every well-conducted business a certain amount is allowed for depreciation of the buildings, plant and stock, so that when the books are made up, the balance sheet will show the real value of the property at the moment.

DERELICT. A ship abandoned at sea by those in charge of it, who have given up all hope of returning to it or of recovering it. Every master of a ship who has seen a derelict on the high seas must report it to the Lloyd's agent at his next port of call, or if there is no Lloyd's agent there, he must report to Lloyd's direct. Persons bringing derelicts into safety are entitled to salvage amounting, as a rule, to not less than one-third the value of the property, and not more than one-half.

DESPATCH MONEY. In chartering a ship a certain number of days called working days is allowed for the loading or unloading of a ship. Should the charterer load or unload in a shorter time, he is given by the ship-owner a sum of money for every hour less than the allotted time. Despatch money is the converse of demurrage.

DESPATCH or **DESPATCH NOTE.** A Customs document which is sent with goods liable to duty at their place of destination, and must be produced to the customs officers at that place.

DEVIATION. A mercantile term signifying that the vessel has deviated from the course usually followed, or from the route expressly agreed to by the parties. Conditions as to deviation are found in policies of marine insurance, in bottomry bonds, and in contracts of affreightment, i.e. in bills of lading and charter parties. The only deviations allowed in these various contracts are for the purpose of avoiding perils of the sea, capture, getting provisions, etc., and saving life.

DEVISEE. The person to whom lands are given by will.

DEVISOR. The person who makes a will of lands.

DIES NON. A phrase signifying a day on which business cannot be transacted.

DIFFERENCES. An agreement to pay "differences" is nominally a contract for the sale of stock or commodities at some future date at a fixed price. At the time the contract is made, the seller does not possess the stock, nor does the buyer want it. In fact the parties do not intend that there shall be any transfer of the stock from one to another. The buyer merely agrees that if the price of the stock should fall by the time the account is to be settled, that he will pay to the seller a sum of money equal to the difference between the price agreed upon and the actual market price. Hence it is to the interest of the seller that the price should fall, and as he does his utmost to pull down prices, he is called a "bear." On the other hand, if the price should rise by "settling day," the seller agrees to pay to the buyer the difference between the contract price and the market price. It is to the interest of the buyer that prices should go up, and therefore he does his best to force up prices, hence he is called a "bull." An example will make this clear. A, a dealer on the Stock Exchange, agrees to buy for the next account (which takes place twice a month) 100 shares at £1 per share from B, another dealer. If, when the settlement takes place, the price of the shares has risen to 21s. per share, the seller will hand to the buyer 100 shillings. If, on the other hand, the price falls to 17s. 6d. per share, the buyer will hand to the seller 100 half-crowns, £12 10s. in all.

Contracts to pay "differences" are purely gambling contracts unenforceable by law.

DIRECTOR. The person who manages the business of a limited company.

DISCLAIMER. A renunciation of rights and liabilities. (See "Trustee" under *Bankruptcy.*)

DISCHARGE. In legal phraseology the term "discharge" means a release from liability.

DISCOUNTING A BILL. The price which a banker or a money-lender gives for a bill of exchange which has yet some time to run is something less than the face value of the bill. The deduction thus made is called discount, and represents the banker's profit on the transaction. The amount of the discount depends on three things, the length of time the bill has to run before it becomes due, the bank rate, and the financial standing of the parties to the bill. Suppose it is desired to discount a bill for £648 payable three months hence, that the parties to the bill are all of good credit, and that the bank rate is five per cent. The banker will in that case calculate the interest on £648 for three months at five per cent., which comes to £8 2s., and deducts the £8 2s. from the amount of the bill, giving the holder £639 18s. At the expiration of the three months the banker presents the bill to the acceptor for payment, and receives from him £648, making a profit of £8 2s. on the transaction. It is by transactions such as these that banks derive a great part of their profits. (See under *Banking.*)

It will be observed that the discount thus calculated is not true discount; it is really interest on the amount actually advanced by the banker, and is greater than the rate nominally charged by him. An example will make this more striking. Suppose the bill is for £100, payable a year hence, and that the parties to the bill are of somewhat shaky credit. In this case a money-lender may charge a very heavy rate, say forty per cent. This he deducts from the amount of the bill, giving the holder £60, and at the end of the year the money-lender will receive £100 for the £60 which he advanced, making a profit not of 40 per cent. but of 66⅔ per cent. on the loan. This helps to explain the enormous profits which money-lenders realise on the advances made by them. In the foregoing case the true discount would be arrived at by reckoning what sum would amount at the end of the year to £100 when the rate charged is 40 per cent. £1 at 40 per cent. would at the end of a year amount to £1 8s., and therefore the calculation is worked out as a sum in simple proportion, in this way :—£1 8s. : £100 : : £1 : x. The result being £71 8s. 6d., which represents what the borrower ought to have received instead of the £60 advanced to him.

DISHONOUR. The refusal to accept a bill when presented for acceptance, or the refusal to pay it when it falls due.

DISSECTION. The separation of accounts and invoices in order that the various items of sales and purchases may be entered to the account of the special department of the business to which they belong.

DISTRESS or **DISTRAINT.** Seizing goods and chattels for rent or payments due. (Refer to "Landlord and Tenant," in *Index.*)

DISTRINGAS. A notice served upon a bank or a company, forbidding the transfer of certain shares or stock in that company or bank, or the payment of any dividends on the same. The object is to prevent certain persons from dealing with these shares or receiving interest on them, because others have a claim on the stock or the shares.

DIVIDEND WARRANTS. A written order to a banker requesting him to pay the amount of the dividend to the person named therein. Dividend warrants are negotiable instruments and must be stamped as bills of exchange.

DOCK DUES. Payments made to the owners of docks by the owners of ships using them, according to the tonnage of the ships. The term includes payments made by the shippers of goods to the dock owners.

DOCKET. A summary of the contents of a document.

DOCK MASTER. The person who has authority to control the movements of all vessels entering, using, or leaving the docks owned by his employers.

DOCK WARRANTS. Warrants issued by a dock company entitling the person named therein to take possession of goods in the custody of the company. The warrants are delivered by the dock company to any person named by the owner of the goods. A dock warrant is a "document of title" to goods, and a pledge of it is deemed to be a pledge of the goods, and its lawful transfer to a buyer who takes it in good faith puts an end to the sellers' lien, or the sellers' right of *stoppage in transitu* (see under *Sale*). It is not, however, a negotiable instrument, for the person to whom it is transferred cannot have a better title to the goods than his transferor had.

Persons who own goods stored with a dock company can easily raise money on them, by causing the company to issue a dock-warrant in favour of the lender. Dock-warrants must bear a 3d. stamp.

DOCUMENTARY BILLS. A bill of exchange to which are attached certain documents, such as the bill of lading and a copy of the policy of insurance. The bill of lading and the policy of insurance relate to the goods for which the bill of exchange is given in payment. In the event of the bill of exchange being dishonoured, the

seller of the goods having the bill of lading in his possession can claim the goods.

DOCUMENTS OF TITLE. Documents which serve as proof that the person named therein is the owner of the goods to which the documents refer. The following is the list given by the Factors' Act—bills of lading, dock warrants, warehouse-keepers' certificates, delivery orders or other warrants for the delivery of goods.

DOMICILED BILL. A bill of exchange made payable at a place other than the place of business or residence of the drawee is said to be domiciled at the place where it is payable. Where a bill accepted generally and without any qualification as to the place of payment, has the place of payment inserted *without* the consent of the acceptor, the bill becomes void, for such an insertion is a material alteration of the bill.

DONATIO MORTIS CAUSA. A gift made in contemplation of death.

DOUBLE ENTRY. The system of book-keeping invented by the Italians, in which every transaction is entered in two different accounts, one relating to the giver or creditor, the other to the receiver or debtor. In one account the transaction is entered on the debit side, and in the other account it is entered on the credit side, thus ensuring greater accuracy, in which respect it is greatly superior to book-keeping by single entry.

DRAFT. A name often given to a bill of exchange, but the term has various other meanings, especially an order on a bank, and the first rough copy of a document.

DRAIN OF BULLION. The term is applied to a diminution in the reserves of bullion in the Bank of England, caused by the necessity of having to make foreign payments, which, if it went on unchecked, would seriously hamper the trade of the country. In order to check this flowing away of the reserves, the Bank authorities usually raise the Bank rate. (See under *Banking.*)

DRAWBACK. When goods which on importation have paid duty are intended for exportation, and not for use in the country levying the duties, the whole or a part of the duty is returned to their owner when the goods are re-exported. In England the payment of drawback is largely obviated by the adoption of the warehousing system (which see). There is only one case now in which payment of drawback is made, and that is where raw materials subject to duty are imported to this country to be worked up in the manufacturer's own premises, and when finished the product is exported to other countries, as for instance, tobacco leaf manufactured into tobacco or cigars, coffee berries converted into coffee, and the like.

DRAWEE. The person upon whom a bill of exchange is drawn, and who, when he has signed it, will have to pay it. He is not liable to pay until he has put his signature to it, when he is called the acceptor. (See under *Bills of Exchange.*)

DRAWER. The person who draws a bill of exchange upon another.

DRAWN BONDS. Sometimes a corporation or other governing body when borrowing money, issues bonds of its repayment, on the understanding that every year a certain number of the bonds will be paid off, until all are redeemed. The order in which the bonds are redeemed is determined by the drawing of lots, and the holders of the bonds so drawn are entitled to immediate payment, but are not entitled to the payment of any further interest on the bonds.

DRUG IN THE MARKET. Goods which are practically unsaleable, because the supply greatly exceeds the demand.

DUE DATE, date when Bills of Exchange and Promissory Notes are due.

DUNNAGE. Mats, planking, and the like, used in the stowage of cargo for the purpose of protecting it.

DUTCH AUCTION. In a Dutch auction the article is put up at a certain price, which the auctioneer gradually lowers until a purchaser is found.

DUTY. A tax levied on the exportation or the importation or the manufacture of goods. A duty levied on the importation or the exportation of merchandise is called a customs duty. An excise duty is a tax levied on manufactures in the home country.

EARNEST. A small sum of money given by the buyer to the seller to bind the bargain between them. It may be the most insignificant coin of the realm. In the case of contracts for the sale of goods of the value of £10 or upwards, the giving of earnest money obviates the necessity of having the contract in writing.

EASEMENT, a right enjoyed by a person over land or a tenement of which he is not the owner, in virtue of his ownership of other lands or tenements. The most common examples are rights of way and rights to light. (See *Ancient Lights.*)

EJECTMENT. Refer to "Landlord and Tenant" in *Index.*

EMBARGO. The detention by a state of vessels within its ports, or the prohibition of trade between certain ports. The detaining of ships is usually an act of hostility adopted by a belligerent in time of war, but it may be a measure adopted in the public interest in time of peace, as when a government lays an embargo on vessels belonging to its own citizens for the purpose of preventing their carrying certain products out of the country, e.g., on all vessels carrying coal. In this country it is illegal for the government to lay an embargo on vessels laden with wheat.

EMBLEMENTS, growing crops which may be produced within a year. An outgoing tenant has in most cases a right to these emblements, when he is compelled to quit his holding, or in lieu thereof he is entitled to a year's notice expiring with a current year of his tenancy.

ENDORSEMENT. See *Indorsement.*

ENDOWMENT POLICY. See "Varieties of Policy" under *Life Insurance.*

ENFACED RUPEE PAPER. Promissory notes issued by the Indian government as a means of borrowing money. On the face of these notes is written a notification that interest on them is payable in London by draft on Calcutta. Persons wishing to remit money to India purchase these notes readily.

ENTERED AT STATIONERS' HALL. These words appearing on the title-page of a book mean that the book has been registered at Stationers' Hall, for copyright purposes. Any person pirating the book will be liable to legal proceedings. Before a book can be entered at Stationers' Hall it must be printed and published. (Refer to "Copyright" in *Index.*)

ENTRY. Written particulars of goods exported or imported, supplied by the ship-owner to the Customs' authorities. These particulars have to be furnished whether the goods are liable to duty or not.

ENTRY FOR WAREHOUSING. When dutiable goods are imported not for immediate consumption, but for the purpose of being stored in a bonded warehouse, written particulars of the goods must be furnished to the Customs' authorities.

EQUITY OF REDEMPTION, a phrase which denotes the rights remaining in a mortgagor when he has mortgaged his property.

ERRORS AND OMISSIONS EXCEPTED. The letters E. & O.E. are placed at the foot of accounts to denote that the person sending the account or the invoice shall not be liable for any omissions or errors, but shall be entitled to correct them.

ESTATE DUTY. Refer to *Index.*

EVEN. A stock exchange term to denote that an account is carried over to the next settlement, without any payment of contango or of backwardation.

EX ALL. When securities are sold "ex all," the seller retains the rights to any dividend or bonus that may be due, and the right to claim any new stock or shares that may be offered on advantageous terms to the holders of the old stock or shares.

EXCHEQUER BILLS. Bills issued by the Treasury in virtue of an Act of Parliament authorising such issue. They are for the purpose of borrowing money for temporary emergencies, when it is not desired to add to the National Debt. The rate of interest is so much per cent. per day, but it must not exceed 5½ per cent. per annum, payable half-yearly. They may be paid off at the end of the year, or may be renewed, but they cannot be current for more than five years.

Exchequer Bills form a very convenient way for locking up money, because they bear interest, and because when the holder is in want of ready cash he can quickly turn them into money. They are negotiable instruments, and are received by the revenue authorities in payment of the taxes. The following is the form of an Exchequer Bill.

No.—— £. By virtue of an Act for raising the sum of by Exchequer Bills for the service of the year this Bill entitles or order to one thousand pounds, after the rate of threepence per cent. per diem out of the and this Bill is to be current and pass in any of the public revenues, aids, taxes, or supplies, or to the account of His Majesty's Exchequer at the Bank of England after the day of

Dated at the Exchequer this day of

If the blank is not filled up this Bill will be paid to bearer. The cheques must not be cut off.

EXCHEQUER BONDS are bonds issued by the Treasury for the repayment of money borrowed by the government. They are issued by the authority of an Act of Parliament, which also states when they are to be redeemed. Exchequer bonds are payable to bearer, and are not received in payment of taxes.

EXCISE. Duties in commodities manufactured and consumed in the country (Refer to "Excise" in *Index.*)

EX-DIVIDEND. When stocks and shares on which a dividend is just due are sold "ex dividend," the buyer is not entitled to the dividend. (See *Cum Dividend.*)

EX-DRAWING. When bonds which are about to be drawn are sold "ex-drawing," the purchaser does not get any benefit accruing from the drawing.

EXEQUATUR. The recognition by the government of a state of the official position of a consul appointed to take up his duties in that state. Until he receives his exequatur he is not allowed to perform his consular duties. In England, the exequatur is given to consuls and consuls-general, but very seldom to vice-consuls; it takes the form of a Letter Patent issued by the Foreign Office and signed by the King, and the grant of the exequatur is advertised in the Gazette. In Austria,

the word "exequatur" is merely stamped on the consul's commission in token of recognition of his position. The Russian and Danish Governments merely notify to the consul that he is duly recognised.

EX NEW. When a company wishes to increase its capital it does so by issuing new shares, which are sometimes allotted to the old shareholders in proportion to the number of the shares they hold. But such shareholders must claim them within a reasonable time; after which the old shares are quoted "ex new," that is, the purchaser of the old shares is not entitled to claim in virtue of such purchase, any right to the new shares issued. The phrase also means that if, when the new shares are to be issued, the old shares are sold "ex new," the seller reserves to himself the right of taking up his proportion of the new issue.

EX-OFFICIO. "By virtue of his office." The mayor of a city is frequently, in virtue of his office, a member of the various local governing bodies of the city.

EX PARTE. An ex parte proceeding is in legal matters a proceeding taken in the Court by one party when the other party is not present, and has not received notice of the proceeding.

EXPECTED TO RANK. In bankruptcy proceedings a debtor is required to make out a statement of his affairs which amongst other things contains the amount of his liabilities which it is expected will rank against the estate for dividend; in other words, the amount owing by the debtor, and which can be proved against his estate.

EXPECTATION OF LIFE. In insurance, the term denotes the number of years which a person of any given age may in the ordinary course of things expect to live. For example, a man of twenty-one years of age may expect to live to a trifle under sixty years of age, a woman under similar circumstances, may expect to live nearly a couple of years longer. (See p. 704.)

EX SHIP. When goods are sold "ex ship," the purchaser has to bear the expenses of removal, after they have been unloaded from the ship.

EX WAREHOUSE. Goods sold "ex warehouse" must be removed at the expense of the purchaser.

FACE VALUE. The nominal amount for which bonds, notes, debentures, and the like are issued, or the amount for which a bill of exchange is drawn. This amount appears on the face of the document, and in many cases differs from its real value. When the real value is above the nominal or par value, the property which the document represents is said to be at a premium; when the real value is below the face value, the property is said to be at a discount.

FACTOR. An agent employed to buy or sell goods on behalf of a principal, but acting as if he were himself the principal.

FAIR TRADE. In regard to international trade, the phrase means treating other countries as they do our own country. Where foreign countries levy duties on English products, we ought in "fair trade" to tax theirs, and generally speaking, admit their products on the same terms as they admit ours.

FAVOUR. In business correspondence, the term favour is used for a letter received. The payee of a cheque, or of a bill of exchange, is described as the person in whose favour the cheque or the bill is drawn.

FIDELITY GUARANTEE. See under *Insurance.*

FIDUCIARY LOAN. A loan granted without security being required from the borrower.

FIDUCIARY NOTE ISSUE. A paper currency depending for its value not on gold or silver, but on securities or on the confidence of the public that the notes will be met by the authority or the bank issuing them.

FI. FA. An abbreviation of *Fieri Facias.* The writ of Fieri Facias enables a judgment creditor to seize the goods and chattels of his judgment debtor in satisfaction of the judgment.

FINANCE. The term is used with reference to the raising and the expenditure of the revenues of a state, and also to the business of getting the public to subscribe money for loans to governing bodies, or for industrial and commercial undertakings. The persons who are skilled in such matters are described as financiers.

FIRE INSURANCE. Refer to *Index.*

FIRM. Another name for an ordinary partnership business. A partnership must not consist of more than twenty persons, and in the case of a banking partnership the number must not exceed ten. (For the rights and liabilities of partners, refer to "Partners," in *Index.*)

FIRM OFFER. An offer made by a person who has made up his mind not to increase it.

FIRST CLASS PAPER. A name given to negotiable instruments of which there is no doubt that they will be met when they become due. Such for example as bills which have been accepted or indorsed by men whose financial stability is unquestioned, or exchequer bills and exchequer bonds the payment of which is guaranteed by government.

FIRST OF EXCHANGE. One of the copies of a bill which is drawn in a set. (See under *Bills of Exchange.*)

FIRST OPEN WATER. This phrase is used in charter parties with reference to ships trading with the Baltic ports, to mean "immediately after the ice breaks up"; for during the winter this sea is frozen over.

FITTER. In the north of England, a fitter is an agent who sells and ships coals on behalf of a particular mine. His commission is known as fittage.

FIXTURES. The term denotes chattels permanently attached to land or to buildings on the land.

FLASH POINT. The temperature at which the vapour of an oil will ignite. In this country oil must not be sold if it bursts into flame on being raised to a temperature of 73°, but in some other countries, the "flashing point" is much higher. It is a question whether the numerous lamp explosions which take place are due to the low flash point adopted in this country, or are due to the defective nature of the lamps used.

FLOATERS, a term in the money-market signifying Bearer securities on which loans are raised by bill-brokers, e.g. bonds of the London County Council, Consol certificates, and other securities of the highest class. They are so called from the fact that they float from bank to bank, as one bank calls in its loans on these securities and another lends on them.

FLOATING CAPITAL. That portion of a trader's capital which is not locked up in a permanent investment, but which is actually available for carrying on his business.

FLOATING POLICY. In marine insurance, a floating policy is one in which the vessel is not named, but which covers the goods by whatsoever ship they may be carried. (Refer to "Marine Insurance" in *Index.*)

FLOATING SECURITY or **FLOATING CHARGE.** It is usual when a limited company obtains a loan to give as security for its repayment a charge on the assets of the company. This charge is not enforced so long as the company continues to be a working concern, so that the company can deal with the property just as if there were no charge upon it, unless, indeed there is default made in payment of the principal or interest, or the company is wound up, in which case the person having the security can seize the property.

FLOTSAM. When a ship is sunk or wrecked and the goods float upon the sea, they are called flotsam.

FOLIO. A sheet of paper doubled. In law writing a folio means seventy-two words, in parliamentary writing a folio means ninety words. In printing folio means the number appended to each page, and in book-keeping two opposite pages.

FOOLSCAP. A sheet of paper having formerly for its water mark the device of a fool's cap and bells. Foolscap is of varying size: in printing it is 17 inches by 13½ inches · in writing paper, 16¾ inches by 13½ inches.

FORECLOSE. An action of foreclosure is brought to compel a mortgagor to pay off the mortgage debt or be deprived for ever of his right to redeem the mortgaged property. The Court then fixes a day for re-payment, and if the mortgagor fails to pay up at the appointed time, the mortgagee becomes the absolute owner of the property.

FORM OF APPLICATION. When the public is invited to take shares in a limited company, each applicant for shares must fill up a form, stating the number of shares he desires and the amount he has deposited with the company's bankers as proof of his *bona fides.* Attached to this form of application there is a form of receipt, which, when the applicant takes the form to the company's bankers and pays the deposit, is filled up by the bank as a receipt for the deposit paid. This receipt does not require a stamp.

FOR MONEY. On the Stock Exchange, sales of securities and shares are either "for money" or "for the account." In a sale "for money" the securities are at once delivered by the selling broker and paid for immediately by the broker for the buyer. Transactions of this kind are chiefly confined to consols.

FOR THE ACCOUNT. Most transactions on the Stock Exchange are for "the account," that is, the seller agrees to deliver and the buyer agrees to pay for the securities on the next settling day. The settling day occurs every fortnight, except in the case of consols, when it takes place once a month. (See "Account" under *Stock Exchange.*)

FORWARDING AGENT. A person who is employed to collect and deliver goods on behalf of others.

FOUL BILL. A document granted to the master of a ship by the authorities of a port from which a ship has come, showing that the port in question has an infectious or contagious disease prevailing there. (See "Ship's Papers" under *Shipping.*)

FOUNDERS' SHARES. Shares issued as fully paid up to persons who have contributed to the preliminary expenses of forming the company, or who have taken an active part in its formation as a remuneration for their services. These shares sometimes entitle their holders to divide among themselves an aliquot portion, such as one-sixth or one-third of the profits; but in many cases the holders of founders' shares are entitled to the surplus profits after a certain fixed rate of dividend has been paid on all the other shares, ordinary, preferred, and guaranteed.

FREE ALONGSIDE SHIP. Goods delivered free alongside a ship or wharf must be carried there at the expense of the seller, and are at his risk until arrival alongside the ship.

FREE OF ALL AVERAGE (F.A.A.). This clause inserted in a policy of marine

insurance means that the underwriter is liable only in case the thing insured suffers a total loss. He is not liable either for particular average, i.e., a partial loss or deterioration of the things insured, or for general average, i.e., where the interest insured is liable to contribute to the loss sustained by some other interest for the benefit of the whole venture.

FREE OF CAPTURE AND SEIZURE (F. C. & S.). This signifies that the underwriter is not liable for any loss arising from the capture and seizure of the thing insured.

FREE OF EXPENSE TO SHIP. This clause in a charter-party makes the charterer and not the ship-owner liable for loading and unloading the ship.

FREE OF GENERAL AVERAGE. In marine insurance, where a policy contains this clause, the underwriter is not liable for general average contributions due from the thing insured to some other interest insured, where that other interest has sustained some loss or incurred some sacrifice for the common good.

FREE OF PARTICULAR AVERAGE. This clause is an extension of the Memorandum in Lloyd's Policy (*q. v.* under Insurance), and was adopted in its present shape by marine insurers in 1883. Its effect is that the insurer is not liable for any *partial* loss sustained by the thing insured, unless such partial loss arises from the ship being stranded, sunk, burnt, or in collision with another ship.

FREE ON BOARD (F. O. B.). This means that goods are sold at a price which includes the cost of delivery on board ship. The moment they are shipped they are at the buyer's risk, and he must pay the cost of freight and the insurance.

FREE OVERSIDE. This signifies that the moment the goods are unshipped they are at the buyer's risk, and he must pay the cost of their removal.

FREE TRADE. By free trade is meant that a country does not tax imports in order to protect or foster home industries. The phrase does not imply that no duties are levied on imports, but if levied they are imposed for the purpose of raising a revenue only, and on goods which the country is itself incapable of producing, or on goods which, if produced at home, would be liable to taxation.

The policy of taxing imports for the sake of revenue only was initiated by Pitt, who derived his ideas from Adam Smith's "Wealth of Nations," but this policy was completely put an end to by the war with Revolutionary France, and by the prohibitory Corn Laws passed during the period 1791–1815.

A revival of free trade principles took place on Huskisson's accession to office, 1823. That statesman greatly modified the Navigation Acts, and reduced the duties on raw materials, such as silk and wool. A further step towards a free trade policy was taken by Peel in his budget of 1842, when the import duties on hundreds of articles were abolished or reduced, and in 1846 he carried the repeal of the Corn Laws, reduced the duties on silk, cotton manufactures, and foreign spirits, and withdrew the protective duty on sugar, while the duties on meat, live stock, and vegetables were abolished. The reduction or the abolition of import duties on many other articles during the period 1846–1860 made England a free trade country.

FREIGHT. Originally the term freight meant the load or cargo, but now it means the payment for carriage of goods by sea. (Refer to "Freight" in *Index.*)

FREIGHT NOTE. A note embodying the payments due for freight.

FREIGHT RELEASE, an order authorising the master of a ship to give up possession of a consignment of goods, the freight having been paid. A freight release is necessary only when goods have been shipped freight forward, i.e. when the consignee is supposed to pay the freight.

FRIENDLY SOCIETIES. A friendly society is one formed for the mutual benefit of its members, who subscribe to its funds, and are relieved when in distress. Usually their objects are to afford relief or give maintenance to members in sickness or bodily or mental infirmity, or in old age (i.e., after fifty), or when out of employment. These societies also make payments on the birth of a member's child or on the death of a member or of any of his family. Payments are also made when a member loses by fire his tools or implements of trade, not exceeding in value £15.

Where a friendly society grants annuities to its members, the amount of each annuity must not exceed £50, or if a lump sum is paid to a member, it must not exceed £200.

The term "friendly society" is now extended to *Working Men's Clubs* formed for the recreation or the improvement of their members. Refer in *Index* to "Clubs" and "Friendly Societies."

FUNDED DEBT. The debt of the Government which it is not bound to repay, or which is repayable only after a long period from the date when the loan was raised, e.g., consols. It is contrasted with the unfunded debt, i.e., money borrowed by Government for short periods on Exchequer Bills, and the like.

FUNDS. See *Consolidated Fund* and *Consols.*

FUTURES. See *Corner.*

GARNISHEE ORDER. This is a notice sent by the Court to persons who have in their custody money or goods belonging to judgment debtors, or who owe money to such debtors, ordering them not to part with such money or goods. The object of this notice is to prevent the judgment debtor from obtaining possession of the money or the goods and applying them to his own purposes, instead of paying his judgment creditors. Such notices are frequently served on banks which have funds belonging to those of their customers who have been ordered by the Court to pay money either by way of debt, or as damages to others. The person on whom the order is served is called the "garnishee." (Refer to "Attachment of Debts" and "Garnishee Order" in *Index.*)

GAZETTE. The "London Gazette" is a government newspaper published every Tuesday and Friday. All royal proclamations, government notices, appointments and promotions in the Army and the Navy, and in the various departments of the State, are published in the Gazette, as well as such public matters as bankruptcies, winding-up of companies, dissolution of partnerships, and the administration of the estates of deceased persons. In lawsuits, a copy of the Gazette is good evidence of the truth of any government or official notice, but in such actions the whole copy of the Gazette, and not a mere cutting from it, must be furnished to the Court.

GENERAL ACCEPTANCE. See *Acceptance, General.*

GENERAL AVERAGE. See *Average, General.*

GILT-EDGED. In commercial slang the phrase is applied to paper, i.e. to bills or securities of exceptionally high value. Securities which are described as gilt-edged being of high price, are considered as absolutely safe investments. Such, for example, are the stock, shares, and securities of any of the great British railways.

GLUT IN THE MARKET. A market is said to be glutted when the supply of any commodity is in excess of the demand.

GODOWN, a name given to a warehouse or store for goods in India and in other parts of the Far East.

GOLD BONDS. Bonds which are payable in gold.

GOOD MERCHANTABLE QUALITY. In contracts for the sale of goods, the phrase denotes that the goods are in a sound condition and up to the average quality.

GOODWILL, every advantage or benefit that has been derived from the reputation that a firm or a business has acquired through being established for a length of time. Such goodwill may be a very valuable asset, and may be sold or transferred, but only if the premises in which the business is carried on are sold or transferred at the same time. The person who acquires the goodwill of a business is entitled to represent himself as the person carrying on that business, and to restrict the competition of the person from whom he has acquired the goodwill. This competition may be restrained by an agreement between the parties, and provided the restraint is reasonable, and is just sufficient to protect the interests of the person to whom the goodwill is transferred, the law will enforce it. In the absence of an express agreement, the person transferring the goodwill will be restrained from soliciting the patronage of the old customers.

When a partnership is dissolved, it is usual to transfer the goodwill of the partnership business to one or more of the partners of the old firm. When this is done, the other members will not be permitted to solicit the patronage of the customers of the old firm. If, however, no arrangement in regard to the matter is arrived at, each member who carries on a business similar to that carried on by the old firm can invite the customers of the old firm to do business with him.

GREENBACKS, legal tender notes of the United States, first issued in 1862, during the Civil War. They were so called from the devices printed in green ink on the back. The term is now applied to notes issued by a National Bank in the United States.

GROUNDAGE, dues paid by ships for being allowed to occupy space in a port.

GROUND RENT. When land is leased for building purposes, the owner of the ground is entitled to a rent during the period which the lease has to run. At the end of that period, the buildings erected on the land become the property of the person who owns the land.

GUARANTEE SOCIETY, a company which, in return for the payment of a premium, undertakes to make good to an employer any losses which he may sustain through the dishonesty of those he employs. (See "Fidelity Guarantee," under *Insurance.*)

GUARANTEED STOCK is stock the interest on which is guaranteed. Sometimes not only the interest but the principal also is guaranteed. The interest may be guaranteed by government or by the company issuing the stock, or by another company.

GUILD, an association or a company of men for the purpose of protecting the commercial interests of its members. Prior to the Reformation these guilds were numerous throughout the country, and in addition to looking after trade interests, attended to their spiritual and material needs. At the Reformation these guilds were swept away, with the exception of the Guilds of the City of London.

HALL MARK, the mark placed on gold or silver articles to indicate the quality of the gold or silver contained therein; for example, in the case of gold, a crown and the number 22 indicates that the article is 22 carat gold, that is, that the article contains 22 parts of pure gold out of 24. Eighteen carat gold is marked with a crown and the figure 18. On silver ware the marks of Britannia and a lion *passant* indicate respectively that the articles are of 11 oz. 10 dwts. and 11 oz. 2 dwts. fineness, these weights showing the proportion of pure silver in 1 lb. (=12 oz.) of the metals thus marked.

HAMMERED, a term used on the Stock Exchange to denote a defaulter, i.e. a member who is unable to fulfil his contracts or to meet his liabilities towards his fellow members. Such a member is then expelled, or is suspended for a period of time, during which he is not allowed to transact business with other members of the "House." If, however, the member is able to pay 6s. 8d. in the £ he may be re-admitted, provided his conduct in business has been satisfactory in other respects. Re-admission does not free him from his liabilities; and if at any time he is in a position to pay in full his liabilities to his fellow-members, he may be called upon to do so. (See *Defaulter.*)

HANSE TOWNS, a league of the great commercial towns in north Germany and adjacent countries, formed in the 13th century, for the purpose of putting down piracy and of protecting trade and commerce. During the 15th century the league decayed, and in recent times the only survivors were the towns of Hamburg, Bremen, and Lubeck. These have now been deprived of their distinctive privileges.

HAWKER, a person travelling about with a horse or other animal drawing merchandise or goods for the purpose of selling them in a place in which he does not usually reside or carry on business. Annual licence £2.

HEREDITAMENT, any property whatsoever which descends to the heir, as distinguished from property which devolves on the next of kin, e.g. lands descend to the heir, but personal property, such as money, stocks and shares, and leaseholds go to the next of kin.

HIGH SEAS, that part of the sea which is outside the three-mile limit from the shore. Inside that limit the sea belongs to, and is under the jurisdiction of, the country on which it borders.

HIRE PURCHASE. When goods are purchased on the hire system, the arrangement is that the goods are to become the property of the person who hires them on his making a specified number of payments periodically. Until all the payments have been made, the goods belong to the person who lets them out, though, of course, possession of the goods is given to the person hiring them. Should default be made in the payments, the owner of the goods may resume possession of them. Great care should be taken in drawing up a hire-purchase agreement, otherwise the owner may find himself deprived of his right to re-take the goods. In such agreements it is usual, therefore, to state that when the payments have been completed, the hirer shall have the option of purchasing the goods on payment of a further sum, usually a sum equal in amount to one instalment. A condition should be inserted that the hiring agreement should be capable of being terminated at the option of either party, or in the breach of any of the terms of the agreement. The object of these various provisions is to prevent the ownership of the goods from passing to the hirer until the whole of the terms of the contract have been fulfilled. The hirer has merely an option to purchase, and is not a purchaser until the period of hiring is at an end. Consequently he is not the owner of the goods during the period of hiring, and cannot, therefore, sell them or pledge them. Should he sell or otherwise deal with them, the owner can recover them from any person into whose hands they may have come. Were these provisions not inserted in the agreement, the hirer would be the purchaser from the moment the hiring agreement was signed, and when the hirer came into possession he could dispose of them as he pleased, and the true owner could not recover the goods from any person to whom the hirer had sold or pledged them, provided that such person had received them in good faith. Goods let on the hire-purchase system may be seized by a landlord for arrears of rent, but the owner of the goods can recover their value from the person who has hired them.

A properly drawn hire purchase agreement should contain the amount of each instalment, and the date on which it is payable. The number of instalments should be stated. There should be inserted a stipulation that at the end of the agreed period of hiring the hirer should have the option of purchasing the thing hired, on payment of a further sum, with a proviso *that the article shall not become the property of the hirer* until such purchase and payment be made. Provision should be made that in case the hirer make default in paying any one of the instalments, the hirer shall on demand return to the owner the thing hired, and that the latter shall be entitled to enter on the premises of the hirer, and seize and re-take the thing hired.

HOLDER IN DUE COURSE. See under *Bills of Exchange.*

HOLDER OF A BILL OF EXCHANGE, the person to whom a bill of exchange or a cheque has been transferred.

HOLDING OVER, a phrase denoting that a tenant refuses to give up possession of premises after he has himself given notice to quit, or, in the case of a lease, after the landlord has given him notice to quit on the expiration of his lease. In the former case the tenant is liable to pay double rent; in the latter, he is liable for double the yearly value.

HOME USE ENTRY, a document which has to be filled up when it is necessary to remove from a bonded warehouse goods liable to duty, where such goods are to be consumed within the country, and are not intended for export.

HONOUR, a term denoting the duly fulfilling of a monetary obligation, e.g. to honour a bill is to accept the bill on presentation, or after being accepted, to pay it when it becomes due.

HORSE POWER, the standard employed for indicating the driving power of a steam engine. It is reckoned that a horse is capable of raising 33,000 lbs. weight through one foot in a minute, or 550 lbs. through one foot in a second. In reality this is about 1½ times the power of an ordinary horse.

HOTCHPOT. "A term signifying the mingling of property in certain cases, in which a person claiming to share in a common fund is bound as a condition of so doing to bring into the fund other property deemed in law to have been previously advanced to him in anticipation of his final share in the fund."

HYPOTHEC. In Scots law, a hypothec corresponds roughly to a mortgage in English law, with this difference, that mortgages deal with lands or interests in lands, whereas a hypothec may relate to goods and chattels. The term signifies a security given to a creditor over the goods and chattels of the debtor while they are allowed to remain in the possession of the debtor.

IMPERSONAL ACCOUNTS, in book-keeping, accounts which deal with goods and not with persons, as e.g. wine account. Sales to a person are put to the debit side of the buyer's account and are put on the credit side of the seller's goods account. When the personal and impersonal accounts tally, the accounts are correct.

IN ADVANCE OF CALLS, payments made by shareholders on the amount due upon their shares before any call on the shares has been made. Such payments in advance can be made only if the regulations of the company permit them, and if it is for the benefit of the company that they should be made. Interest may be paid on such advances, even though no profits have been made by the company.

INCOME TAX. Refer to *Index.*

INCONVERTIBLE PAPER CURRENCY, paper money for which the holder cannot demand coin from the Bank or the Government issuing such notes. Bank of England notes were from 1797 to 1820 inconvertible, that is, the holders of such notes could not compel the Bank to give gold in exchange for them.

The great danger of an inconvertible paper currency is its tendency to depreciate in value as a consequence of the temptation to a government to increase the issue of the paper money as an easy way of paying its debts and obligations. People cannot be certain that the government will ultimately redeem such notes, and hence they exhibit an increasing reluctance to accept the paper from their debtors, or in exchange for goods. The real value of inconvertible paper money, therefore, may fall to an insignificant fraction of its nominal value.

INDENT. An order for goods received from abroad by a merchant.

INDENTURE. A deed between two or more parties. Formerly the duplicates of the agreement were written on one parchment. The parchment was then cut by a zig-zag or indented line, so that the duplicates could be fitted into one another, and thus proof was furnished that they were counterparts of the same agreement.

INDORSEE, the person to whom a bill of exchange is transferred by the holder writing not only his own name on the back, but the name of the person to whom the bill is transferred. (See under *Bills of Exchange*).

INDORSEMENT, INDORSER. See under *Cheques.* and *Bills of Exchange.*

IN FORMA PAUPERIS. Where a person who is very poor wishes to embark on a lawsuit, he may be allowed to sue as a pauper, provided he can swear (make an affidavit) that his possessions are not worth £25, not including his wearing apparel and the subject matter of the action. He must satisfy the Court that he has a good cause of action, and this is done by obtaining a written and signed opinion from a barrister that the cause of action is *prima facie* good. On being allowed to sue *in forma pauperis*, he is excused the payment of court fees, and the Court may assign him a solicitor and counsel to assist him in the conduct of his case. These are not permitted to charge for their services, but they may be reimbursed for out of pocket expenses.

INLAND BILL OF EXCHANGE. A bill of exchange drawn and payable within the United Kingdom, or drawn within the United Kingdom upon some person resident in it. All other bills are foreign.

INLAND REVENUE. Refer to *Index.*

IN RE. In the matter of.

INSCRIBED STOCK or **REGISTERED STOCK.** Where a loan is raised by a State or a Company, and bonds for its repayment are not issued, but the lenders are allotted shares or stock, and have their names registered or entered in a list at the head office of the Company, or at the seat of government of the State issuing the stock, such stock is called Inscribed or Registered Stock, and can only be transferred by the owner, or his agent, signing an entry to that effect in the said register.

INSPECTING ORDER, an order permitting an intending buyer to inspect the goods of the seller, where such goods are stored at a dock or a bonded warehouse.

INSURABLE INTEREST, a pecuniary interest in the subject matter of the insurance.

INSURANCE. Refer to *Index*.

INTER ALIA. Among other things.

INTERBOURSE SECURITIES. Where a State raises a loan simultaneously in several countries, as e.g. Russian Loans, the bonds for the repayment of the loans, if they are transferred from a person in one of the lending countries to a person in another lending country, are negotiated at a fixed rate of exchange.

INTEREST WARRANTS. See *Dividend Warrants*.

INTERIM DIVIDEND, a dividend paid on shares before the whole amount of the nett profits of an undertaking for a given period has been ascertained.

IN TRANSITU. On the way; in course of transit.

INVENTORY, a list or schedule containing a true description of goods, chattels, furniture, and the like.

I. O. U., an abbreviation of the words "I owe you." This is a document of very little value save as evidence of indebtedness between the parties, though it is not conclusive evidence of the actual amount owing by one party to the other. It is not an agreement, or a receipt, or a negotiable instrument, and therefore a person cannot sue upon it. It does not require a stamp, and the affixing of a stamp to it does not increase its value or importance. The following is an ordinary form of an I. O. U.

October 12th, 1904.

I. O. U. £67 (sixty-seven pounds).

JAMES SMITH.

To R. OWEN.

INVOICE, a written account giving full particulars as to the quantity, quality, and prices of goods sent to a purchaser.

JETSAM. Where a ship is in danger of being sunk, and to lighten the ship goods are cast into the sea and remain under water, such goods are jetsam (cf. *Flotsam*).

JETTISON, casting goods or the ship's tackle overboard for the purpose of saving the ship or the rest of the cargo. (See under *Marine Insurance*.)

JOBBER. The members of the Stock Exchange are divided into two classes, brokers and jobbers, or dealers. These latter deal in securities which they buy from or sell to the public through the medium of the brokers. (Refer to "Jobbers" in *Index*.)

JOINT ACCOUNT. Where two or more persons subscribe the money for carrying on a particular undertaking, the account of the transactions is kept in their joint names. The profits are shared and the losses borne in a proportion agreed upon by the parties themselves.

JOINT STOCK COMPANIES, companies whose liability may be either limited or unlimited, and whose capital is subscribed by more than 20 persons (the maximum number allowed by law for a partnership).

JOINT STOCK BANK. A bank owned by a corporate body. (Refer to *Index*.)

JOURNAL. In book-keeping, the items from the Waste Book are posted into this book, in which the position of the parties as debtor or creditors is clearly shown, from thence the items are transferred to the ledger.

JUDGMENT CREDITOR, a person who brings an action in a court of law for a debt due to him, or for damages for some wrong done to him, and obtains judgment in his favour.

JUDGMENT DEBTOR, a person against whom a judgment in a court of law in an action for debt or for damages has been obtained, and who has not satisfied the judgment. A judgment debtor is liable to be made bankrupt if the amount of the debt is not less than £50, or he may be committed to prison for contempt in not obeying the order to pay, no matter what the amount of the debt may be.

KEELAGE, charges that have to be paid for permission to keep a ship in port.

KEEPING HOUSE, confining oneself at home for the purpose of delaying or defeating creditors. The debtor must deny himself to a creditor when the creditor calls for payment and asks to see him personally, otherwise the debtor cannot be said "to keep house," and thereby render himself liable to be made bankrupt.

KENTLEDGE, permanent ballast such as pig-iron or other weighty material which on account of its superior cleanliness is preferred to ordinary ballast.

KITE, the same as *Accommodation Bill*.

KNOT, a nautical mile, equal roughly to 2,027 yards.

LAC, a term signifying 100,000 rupees, equal to £6,666 13s. 4d.

LAGAN, goods thrown overboard from a ship which is sinking, and being weighty, are buoyed so that they may be recovered.

LAME DUCK, a defaulter on the Stock Exchange. A member who is not able to meet his liabilities to his fellow-members. (See *Defaulter*.)

LAND WAITER or **SEARCHER,** an officer of customs whose duty it is upon the landing of merchandise, to examine, weigh, and measure it, and to keep an account thereof, for the purpose of assessing the amount of duty to be paid on it.

LANDING ACCOUNT, a document stating information regarding goods landed at a wharf, and the charges for warehousing them.

LANDING ORDER, a permit authorising goods to be landed from a ship, after the duty, if any, has been paid.

LAW MERCHANT that part of the law which deals with commercial transactions. It was originally founded on the general customs of merchants of all nations, and gradually was incorporated into the common law. The law relating to negotiable instruments and to partnerships is derived largely from the custom of traders.

LAY DAYS, the time allowed in charter-parties to ships for the purpose of loading or unloading while staying at a port. (See "Demurrage," under *Shipping*.)

LEAKAGE, an allowance made to merchants for the leakage of casks, or the wasting of liquors.

LEAKAGE AND BREAKAGE. The words "leakage and breakage excepted," when inserted in a charter-party or a bill of lading, renders the ship owner free from liability for any damage caused in this way to the goods which he has agreed to carry. If, however, the damage has been caused by the negligence of the crew in handling or stowing the goods, the ship owner will be liable.

LEDGER. In book-keeping this is the book of accounts into which the entries from the other books are finally posted, so as to show at a glance the state of the trader's affairs.

LEEMAN'S ACT, an Act of Parliament passed in 1867 for the purpose of preventing the sale of shares in banks by persons who did not possess the shares. It provides that contracts for the sale or transfer of bank shares shall be void unless the numbers by which such shares are distinguished or set forth in the contract, or unless the name of the registered holders of such shares is inserted. This Act is evaded by the rules of the Exchange, which compels its members to fulfil contracts for the sale of bank stock or shares, even though the numbers of such shares, or the names of the holders of such shares, are not inserted in the contract.

LEGACY DUTY. Refer to *Index*.

LEGAL DAY. Twenty-four hours, reckoned from midnight to midnight. If, therefore, a payment is due on a given day, there cannot be any default in paying until the end of that day, which expires at midnight.

LEGAL TENDER, any currency or money by which a debtor can legally discharge his debt, or which a creditor is bound to receive in final discharge of an obligation to him. Gold is legal tender for debts up to any amount; silver where the debt is two pounds or under; and copper up to one shilling. Bank of England notes are legal tender except so far as the bank itself and its branches are concerned. This means that the Bank cannot compel its creditors to take payment in its own notes.

Where a person offers legal tender in discharge of a debt, and the creditor refuses to receive such tender, the debtor is not freed from his liability. He must continue ready and willing to pay the debt. If, however, a creditor, after having refused a legal tender, sues the debtor, he will lose all the costs of his action on the debtor paying the money into court and proving that the creditor had previously rejected the legal tender.

LESSOR, the person who grants a lease of land or premises to another.

LESSEE, the person to whom a lease is granted.

LETTER OF ALLOTMENT. When invitations are issued to the public asking them to apply for shares in a company, those who succeed in obtaining the shares are informed by a letter of allotment stating the number of shares which have been allotted them. The stamp duty is a penny where the amount does not exceed £5. Over £5 the stamp duty is sixpence.

LETTER OF ATTORNEY, the same as *Power of Attorney*. (See *Attorney, Power of*.)

LETTER OF CREDENCE, the letter given to an ambassador by his sovereign, which he delivers to the sovereign to whom he is sent. This letter requests the sovereign to whom the ambassador is accredited, to give credence to any communications which the ambassador may make on behalf of his government.

LETTER OF CREDIT or **BILL OF CREDIT,** an open letter or request whereby a merchant or a banker requests some other person to advance money, or to give credit to a third person named therein, and promising that he will repay the same to the person advancing the money, or that he will accept bills drawn upon himself for an equal amount. A letter of credit is not a negotiable instrument, and therefore only the person named in it is entitled to the amount. Letters of credit, except those payable in the United Kingdom, must be stamped on the same scale as Bills of Exchange.

LETTER OF INDEMNITY, a letter guaranteeing a person against any claim or loss.

LETTER OF LICENCE, a document by which creditors allow an insolvent debtor a longer time for the payment of his debts, promising not to take any steps against him or his property until the expiration of that time.

LETTER OF REGRET, a letter sent to a person who has applied for shares in a public company, stating that shares cannot be allotted to him.

LETTER OF RENUNCIATION, a document attached to a letter of allotment, which on being signed by the person to whom the shares have been allotted, enables him, on sending it to the directors, to renounce his right to take up the shares. He is then in no way liable on the shares which had been allotted to him.

LETTERS OF ADMINISTRATION, authority given to a person to administer the estate of one who has died intestate. This authority is usually given to the next of kin, and in some cases to a creditor of the deceased. The duties of an administrator is to call in the estate and collect the assets of the deceased, to pay the debts of the deceased, and to distribute the residue among the next of kin.

LETTERS OF MARQUE, permission given in time of war by a State to its subjects, authorising them to fit out ships for the purpose of preying on the commerce of the enemy.

LETTERS PATENT, a document issued by the government granting to a subject some "dignity, office, privilege, monopoly, or the like." It is addressed "to all to whom these presents shall come," and are not sealed up but are left open, and are recorded in the Patent Rolls, so that all subjects of the realm may read them, and be bound by their contents. Being left open they are called letters *patent* (L. *patere*, to be open). Letters patent for inventions are sealed with the seal of the Patent Office.

LIEN, the right which a person has of retaining property in his possession which belongs to another, until certain demands of his are satisfied; e.g. a pawnbroker has a lien on goods pledged to him, that is, he is entitled to retain them until the pledgor repays the loan with interest. Similarly, an unpaid seller has in certain cases a lien on the goods sold, so long as such goods remain in his possession. But the term lien has been extended to cases where the person having the lien has not got possession of the property over which the lien is exercised. The unpaid seller of land has a lien on the land even though the land has been conveyed to the purchaser. So, too, where the contract for the sale of land falls through, the intending purchaser has a lien on the land, for the amount of any deposit he may have paid to the vendor. Such liens are described as "equitable liens," to distinguish them from "possessory liens," in which the person exercising the lien has possession of the property. There is a third class of liens called "maritime liens," e.g. the seaman's lien for unpaid wages. Such a lien can be enforced by arrest of the ship under an order of the Admiralty Division of the High Court of Justice.

LIGHTERAGE, a charge made for conveying goods in a barge or a lighter.

LIFE ANNUITY, an annuity that terminates at the death of the recipient.

LIFE INSURANCE. Refer to *Index*.

LIGHT DUES, dues levied on ships for the purpose of maintaining the lighthouses, beacons, and the like, necessary to warn and to guide those who are navigating ships round the British coasts. These dues are levied by Trinity House.

LIMITED AND REDUCED, a phrase applied to a limited company whose capital has been reduced by permission of the Court.

LIQUIDATED DAMAGES. When the amount claimed by a plaintiff in an action can be definitely ascertained by calculation or in accordance with a fixed scale of charges, it is said to be liquidated or "made clear." Thus in an action to recover arrears of rent, or the amount of a cheque, such amount can be reckoned up, and the plaintiff, should he succeed in the action, is entitled to that amount. He cannot be awarded a smaller sum. When, however, the amount depends on all the circumstances of the case and has to be estimated by the jury, the damages are said to be *unliquidated*. Thus in an action for libel or for personal injuries, the jury may award the plaintiff any sum or nothing at all. No one can determine beforehand what amount the jury will award.

In a contract, the parties frequently fix the amount which is to be paid on breach of the contract. Where this is the case, such amount will be regarded as liquidated damages. Thus in building contracts, a penalty is often exacted for delay in completion, at the rate of so much per day or per week. Such a penalty for delay is in the nature of liquidated damages.

LIQUIDATED DEBT, a debt, the precise amount of which is capable of being calculated. (See *Liquidated Damages.*)

LIQUIDATOR, the person appointed to settle the affairs of a limited company, which is being wound up.

LLOYD'S, an association of underwriters and other persons engaged in marine insurance. It took its name from the fact that the members formerly met at Lloyd's Coffee-house in Lombard Street. The Society was incorporated by Act of Parliament in 1871, which states the objects of the Society to be "the carrying on of the business of marine insurance by members of the Society, the protection of the interests of the members of the Society in respect of shipping, and cargoes and freight: the collection, publication, and diffusion of intelligence and information with respect to shipping."

Members must deposit with the committee (1) gilt-edged securities to the value of £5,000, or (2) a guarantee policy of £5,000. (See "Lloyd's Form of Policy" under *Marine Insurance.*)

LLOYD'S BOND, a device for the purpose of enabling railway companies and other corporations to borrow to a greater extent than the law allows them. Thus, though the Company may not borrow in excess of its powers, it may incur debts for work done or materials supplied, and give a bond for its due repayment. The following is an example of such a bond:—

The X Railway Company.

No. Bond for £.

The X Railway Company do hereby acknowledge that they stand indebted to in the sum of £ for money due and owing from the Company to the said And the Company for themselves, their successors and assigns, covenant with the said his executors, administrators and assigns, to pay the said sum of with interest thereon, at the rate of £5 per cent. per annum, from the date hereof, until payment. Such interest to be payable half-yearly upon the day of and the day of in each year. Given under the common seal of the Company, the day of

A. B., Secretary.

N.B.—On the production of this bond, the interest will be paid at the office of the Company.

LLOYD'S REGISTER, an association established in 1843 to compile an accurate classification of the shipping of the United Kingdom of the foreign vessels trading to this country. The register issued annually contains the names of vessels arranged and classified according to their construction, nature of materials, state of repair, and the like. These statistics are obtained by the surveyors. When a vessel is registered A1 at Lloyd's, the A denotes that the ship is built in the very best manner. The 1 indicates the first-rate condition of the stores, tackle, and the like. A ship may remain in this class for fifteen years, and if she remains in a completely efficient state, her registration as A1 may be renewed.

LOCK-OUT. When an employer shuts the gate of his factory or place of business so as to prevent his workmen entering and continuing their work, he is said to "lock out" his workmen.

LOCOMOTIVE CHARGES, charges made by a railway company for the use of an engine and of the line in conveying a trader's trucks from the line into the trader's private siding. These charges do not cover the cost of loading or unloading the trucks.

LOCUM TENENS, holding a place or doing duty for another.

LOCUS STANDI, the right of a party to appear and be heard on the question under discussion before a tribunal or at a meeting

LOG-BOOK. The book in which the master of a ship enters all the events of any importance occurring during the voyage.

LONG-DATED BILL, a bill of exchange which has a long time to run before it falls due.

LONG-EXCHANGE. A money market term meaning the rates of exchange quoted for bills having three months to run.

LONG OF STOCK, an American term signifying that a person holds stock in the expectation of a rise in its price. Such a person is in the same position as a "bull" on the London Stock Exchange. (See *Bull.*)

MADE BILL. A bill of exchange payable abroad and negotiated in the first place in England.

MAINTENANCE, the act of giving assistance to a person who is instituting legal proceedings in which the person giving the assistance has no valuable interest, or in which he acts from an improper motive. Maintenance is a crime. "Champerty" is maintenance in which the motive for giving the assistance is that in case the action be successful, the plaintiff shall divide the proceeds of the action with the person giving the assistance. This is also a crime.

MAKING A MARKET. Refer to *Index*.

MAKING A PRICE, the two prices of any given security which the jobber quotes to the broker, one at which he will sell, the other at which he will buy.

MAKING-UP DAY, the first day of the fortnightly or monthly settlement on the Stock Exchange. (See *Contango Day.*)

MAKING-UP PRICE, the price at which the various securities which are the subject of Stock Exchange transactions is fixed at each settlement. Usually it is the actual market price at a given moment. This price is fixed for the purpose of enabling the members to settle their contracts, or to "carry over" in case they wish to postpone taking up or delivering stock. (See under *Stock Exchange.*)

MALUM IN SE, an act which is wrongful in itself; one which violates not only the law of the land but the moral law, e.g. murder, theft, and the like.

MALUM PROHIBITUM, an act which is wrongful because it violates the law of the land, but which is not generally recognised as a breach of the moral law, e.g., refusing to pay the education rate, breaches of the Vaccination Acts, and the like.

MANIFEST, a document which describes in detail the various packages and consignments constituting the ship's cargo. (See "Ship's Papers," under *Shipping.*)

MARGIN, in Stock Exchange transactions, a sum of money or securities deposited by a speculator with his broker against loss on speculations. In this sense it is equivalent to "cover." The margin is usually reckoned at ten per cent. of the par value of the stocks.

MARINE INSURANCE. Refer to *Index.*

MARKED CHEQUE. See *Certified Cheque.*

MARKED TRANSFER or **CERTIFIED TRANSFER.** Where a shareholder sells part only of the stock or the shares which he holds in a company, the transfer is indorsed by the secretary of the company with a statement that a share certificate to meet the transfer has been deposited at the offices of the company.

MARKET OVERT, an open market; a place recognised by law or custom as a public market for the sale of articles usually sold there. The term also includes a shop in the *City of London.* By shop is meant any part of a building to which the public have free access for the purpose of buying articles usually sold there, but not, of course, the counting house or any other room to which the public have not free access.

MARKET RATE OF DISCOUNT, the rate charged by bankers for discounting bills, and the rate charged by bill brokers when buying bills. The market rate is usually lower than the bank rate (the rate fixed at short intervals by the Bank of England.) (See under *Money Market.*)

MARKING PRICES. On the Stock Exchange, the prices at which securities have been bought and sold are supposed to be recorded on a board by one of the parties to the transaction. This is seldom done, owing to the rush and hurry of business.

MATE'S RECEIPT. When goods are brought alongside a ship to be placed on board, the mate gives a receipt for them. (See under *Shipping.*)

MATURITY. A bill is said to mature when the day has arrived on which it becomes payable.

MEMORANDUM OF ASSOCIATION. The document which sets out the objects for which a limited company is formed, the amount of capital, the shares into which it is divided, and one or two other matters. It defines the scope of the company's business, and outside that scope the company cannot undertake any other business without the leave of the Court.

METALLING CLAUSE, a clause in a policy of marine insurance stating that the underwriter is not liable for loss arising from the ordinary wear and tear to which a steamer is subjected during the course of the voyage.

MIDDLE PRICE, the price mid-way between the prices at which a dealer or a jobber offers to buy or sell; e.g. a dealer on the Stock Exchange when asked the price of a certain security may state $3\frac{1}{2}$—$3\frac{3}{4}$, meaning that he will buy the security at $3\frac{1}{2}$ and sell at $3\frac{3}{4}$. The middle price will in that case be $3\frac{5}{8}$, and after a little haggling the bargain may be arranged on those terms.

MINUTE BOOK, the book containing a summary of the transactions taking place at a meeting of any society.

MIXED POLICY, a policy under which a ship is insured for a fixed period of time in its voyages from a certain place to a certain place. (See under *Marine Insurance.*)

MONEY MARKET. All dealings in money, such as the rate of discount, the business of bankers, bill-brokers, money changers, and the like, are included under this term. (See *Money Market,* p. 655.)

MONOMETALLISM, the system prevailing in the United Kingdom and in other countries of having a single metal as the standard of value, and as the medium of exchange in making bargains, and in fulfilling obligations. (See *Bi-Metallism.*)

MONTH. In mercantile transactions, the term month means calendar month, unless otherwise stated. In regard to bills of exchange, half a month is reckoned as fifteen days.

MORTGAGE, a means of raising a loan on the security of land or of interests in land.

MORTGAGEE, the person who lends money on the security of land.

MORTGAGOR, the person who borrows money on the security of land.

MORTMAIN, a contraction for *in mortua manu,* "in the dead hand." When land was given to a monastery or other corporation, it was said to come into the dead hand, because, as a corporation is perpetual, the King lost his rights of escheat, wardship, marriage, and the other rights incident to land owned by an ordinary person.

MUSTER, a pattern or sample serving as a specimen of the whole bulk. It is used in this sense in the phrase "to pass muster" (to pass inspection).

MUSTER ROLL. A register containing full particulars of the members of a ship's company.

MUTUAL LIFE INSURANCE SOCIETY. An insurance company in which there are no shareholders to annex the profits, which are divided amongst the persons insured. (See under *Life Insurance.*)

NAME DAY or **TICKET DAY,** the second day of the settlement on the Stock Exchange.

NATIONAL DEBT, the money owing by a government. During a war, a State often finds it inconvenient to meet the expenses out of the current taxes. It therefore resorts to borrowing for the purpose of carrying on the war, pledging the revenue as security for the due repayment of the loan. In England, the National Debt, in 1906, amounted to 743 millions. It is composed of the *funded debt,* amounting to 634 millions, which is not bound to be repaid at any fixed time; *terminable annuities,* amounting to over 43 millions; and the *unfunded debt,* which consists of loans for short periods to meet temporary deficiencies, and is raised by means of Exchequer Bills and Treasury Bills. The unfunded debt, in 1906, reached nearly 66 millions.

NAVY BILLS, bills of exchange drawn on by officers in the navy against pay due to them. Formerly, navy bills were drawn by the Admiralty for the payment of contractors who had supplied stores and provisions for the navy. This latter kind of navy bill is now no longer used.

NEGOTIABLE INSTRUMENTS AND NEGOTIABLE PAPER. The commonest examples of these instruments are bills of exchange, cheques, promissory notes, dividend warrants, exchequer bonds, and other documents which by the usage of trade are regarded as negotiable. The peculiarity of these documents is that they are in one great respect exactly on the same footing as coined money, viz. that whoever takes them in good faith and gives value for them, becomes their absolute owner, provided that they are in such a condition that the true owner could, by simple delivery of them, transfer the ownership of them. (Refer to "Negotiable Instruments" in *Index.*)

NET, the clear amount of anything after making all allowances or deductions.

NET WEIGHT, the actual weight of anything without reckoning the weight of the packing or the wrapper in which it is enclosed; or the actual weight after allowing a deduction for waste and the like.

NEXT FRIEND. When an infant is sued in a court of law, or when he brings an action, he must have a person who will sue and be sued in his name. This person is called the next friend. The father of an infant is usually the next friend.

NISI PRIUS, a name given to civil cases tried in the King's Bench Division of the High Court. In former days, all civil cases, in all parts of the country, had to be tried at Westminster, unless before (*nisi prius*) the date of the trial the judge went down to the assizes in the locality to try the case.

NO FUNDS. In connection with cheques, the phrase means that the drawer of the cheque has no funds at his bank to meet it.

NOMINAL PRICE. A term employed on the Stock Exchange with reference to securities in which business is seldom done. In regard to such securities, it is difficult to state what is the actual market price, but an estimate may be given at which business might or might not be done in the security in question.

NON-SUIT. Strictly speaking, there is now-a-days no such thing as non-suiting a plaintiff in a law-suit. But the term is sometimes used when the judge withdraws a case from the jury and directs judgment for the defendant.

NOTARY PUBLIC. In England, the chief duties of a notary public consists in the noting, presenting, and protesting of dishonoured bills of exchange, certifying acts of honour in regard to such bills, and in authenticating copies of documents going abroad.

NOTE OF HAND, a promissory note (which see).

NOTING A BILL. Where a bill of exchange has been dishonoured by non-acceptance or by non-payment, such facts are recorded on the face of the bill. In these circumstances the holder requests a notary public to present the bill a second time, and if it is then dishonoured, the notary notes the facts upon the bill; then if the bill be a foreign bill, the notary protests it. In the case of an inland bill, protest is not necessary. It may, however, be noted for the purpose of obtaining acceptance or payment for honour. (See under *Bills of Exchange.*)

NOT NEGOTIABLE. These words written across the face of a cheque or a bill or other negotiable instrument seriously affect the position of a holder for value. They imply that the holder can have no better right to the instrument than the person from whom he took it had. Thus, suppose a cheque bearing these words has been obtained by fraud, and the wrong-doer transfers it to a person who takes it in good faith and for value, such person has no better right to the cheque than the wrong-doer had. In other words, he cannot compel the drawer of the cheque to meet it. (Refer to "Cheques" in *Index.*)

NOVATION, the substitution of a new debtor in place of the old. Though a man may assign his rights to another, he cannot assign his liabilities without the consent

of all the parties to the original contract. A good example of novation is where a Life Insurance Society transfers its business to, or becomes merged in, another Life Insurance Company.

NUDUM PACTUM, an agreement or a promise made without any consideration being given for it. Such an agreement or promise is not enforceable in English law, unless it is made by deed.

NURSE AN ACCOUNT. A banker sometimes keeps a customer's account going when the customer has overdrawn it. For the banker realises that were the account to be closed, the customer might never be in a position to meet his liabilities. Whereas by giving him an extension of credit, and allowing him further to overdraw, he may be able to tide over his difficulties and to pay his debts to the banker with interest.

OBSCURATION, the difference between the actual and the apparent strength of spirits.

OFFICIAL ASSIGNEE OF THE STOCK EXCHANGE, a member of the House, appointed by the Committee of the Stock Exchange, to wind up the business of a defaulter.

OFFICIAL BROKER, a broker nominated by the Committee of the Stock Exchange to effect the buying in and the selling out of securities. (See *Buying in* and *Selling out.*)

OFFICIAL LIST OF PRICES, the list of prices of securities and of business done on the Stock Exchange, issued daily under the authority of the Committee of the Stock Exchange.

OFFICIAL RECEIVER. He is appointed by the Board of Trade to take charge of an insolvent debtor's estate from the time a receiving order has been made against the debtor until the trustee in bankruptcy is appointed. An official receiver is also appointed in the preliminary stages of the winding-up of a limited company. (See under *Bankruptcy.*)

OFFICIAL REFEREE, an official of the High Court whose duty it is, among other things, to hear and to decide actions in regard to accounts, the amount of which or the items in which are disputed.

OMNIUM STOCK, a stock which can at a certain time be divided into proportional parts of two or more other stocks. Thus where a loan has been raised by a Company on the security of certain stock issued by the Company, it may have been raised on the condition that when the stock is fully paid up, the holders of the stock may divide their holding into proportionate parts of Preference Stock and Ordinary Stock. The stock thus capable of division is called omnium stock.

ON APPRO, on approbation; a term used in the jewelry and other trades with reference to goods left on approval. The whole or any part can be returned, if so desired.

ON CALL or **AT CALL.** Money lent "on call," or at short notice, is repayable on demand, or at a few days' notice. Such money is lent by the banks to bill-brokers who deposit as security for such loans, first class trade bills, or "floaters," i.e. Consol certificates, bonds of the Corporation of London, bonds of the London County Council, and the like. (See *Floaters.*)

ON DEMAND. These words written on a bill of exchange imply that the bill will be paid on presentation. A bill drawn in this way requires no acceptance.

ONE MAN COMPANY. A limited company in which all or the bulk of the shares are held by one man, save the one necessary share held by each of the other six members of the company.

ONE MAN MARKET. Where the shares or stock of a business is held by a group outside the Stock Exchange, and this group transacts dealings in the shares through one jobber to the exclusion of all other jobbers.

OPEN ACCOUNT, an account which is not settled or closed. Sometimes used in the sense of a running account.

OPEN CREDIT. See *Letter of Credit.*

OPEN POLICY. In marine insurance, an open policy is one in which the value of the thing, or the amount at which it is insured, is not definitely stated. In case of loss, such value has subsequently to be determined. It is a policy in which the insured may insert the amount as soon as he learns that property of the kind insured is in transit, whether such property is at the time lost or not. Of course, he must not be aware that it is actually lost.

OPTION. An option is the right which a person has of either buying or selling a certain amount of stock or of shares at a fixed price on a certain day. For this option the person has to pay a price. Options are of three kinds. A "put" option is the right to sell; a "call" option is the right to buy the stock or shares; a "put and call" option or a "double" option, is the right to buy or to sell so much stock or shares at a fixed price on a certain day. (Refer to "Options" in *Index.*)

ORDINARY STOCK OR SHARES, stock or shares on which is paid the residue of the profits after interest has been paid on the debentures and preference shares, and after providing for the amount to be set aside towards the reserve fund.

ORIGINAL BILL. Foreign Bills are usually drawn in duplicate or in a set of three, to ensure that one at least, if not all, will reach its destination. The first one drawn is called the original bill, but if, as sometimes happens, it does not reach its destination, then whichever does arrive first, and is, of course, negotiable, is called the original bill.

OUTSIDE BROKERS. Stock Brokers who are not members of the Stock Exchange.

OVER-CAPITALISED. In the case of a limited company, it is said to be over-capitalised when the company has paid for the business which it undertakes more than the real value of such business. Many genuine businesses which, if bought for their real value, would yield fair dividends to the shareholders, are in this way over-capitalised, with the result that the earnings of the business yield no appreciable dividends to the shareholder.

OVERDUE BILL, a bill of exchange remaining unpaid after it becomes due.

OVERHEAD PRICE, a price including all items usually charged as trade extras. It is sometimes called *All Round Price.*

OVERTRADING, purchasing goods that cannot be advantageously disposed of, or beyond a trader's power of paying.

PAID-UP CAPITAL, the actual cash paid on the shares or stock of a limited company. Frequently when a company is floated, the terms are that so much of the nominal value of the shares shall be paid on allotment, the balance to be paid at stated intervals if called up. Very often in prosperous undertakings this unpaid balance is never called up, except perhaps to extend the business of the company.

PAID-UP SHARES, the shares of a company upon which the full nominal value has been paid.

PANIC, A COMMERCIAL, is said to occur when traders and the public lose confidence in the banks, and hasten to withdraw their money therefrom.

PAPER CREDIT, credit given on the strength of written acknowledgments of indebtedness, where such acknowledgments answer the purpose of money; for instance, where goods are sold and payment is made by bills of exchange, or promissory notes and the like.

PAPER CURRENCY, legal tender paper, i.e. paper which can be used in full payment of debts, and in final discharge of obligations. It is not quite identical with paper money, for many kinds of paper, e.g. cheques, bills of exchange, notes of Scotch and Irish banks, fulfil the purposes of coined money without being legal tender. Where a paper currency is convertible, that is where coin can be obtained for it on demand, its face value always is the same as its purchasing power. Bank of England notes are an example of this kind of currency. But where the paper currency is inconvertible, there is always a tendency for its purchasing power, or its power to discharge obligations, to fall considerably below its face value.

PAR, the market price of shares or stocks when it is equal to the nominal value.

PAR OF EXCHANGE, equality of exchange. The amount of currency of one country which is equal in value to a certain amount of the currency of another country, reckoning the currencies of both countries to be of the same fineness of the precious metal. Thus an English sovereign is of the same value as 25·22 francs.

PAROL EVIDENCE, evidence given by word of mouth as opposed to documentary evidence.

PARTICULAR AVERAGE. See *Average, Particular.*

PASS BOOK. In banking, the pass-book shows on the left-hand side the amount paid into the bank by the customer. The right-hand shows the amounts paid out by the bank on behalf of the customer, who has drawn cheques against the money which he has placed in the hands of his banker.

PASSING A NAME. When stocks or shares are sold, then for the purpose of the transfer at the settlement the name of the purchaser must be given by his broker to the various other people in the transaction. (See under *Stock Exchange.*)

PASSIVE BONDS, bonds which do not entitle the owner to any interest.

PASSPORT, a document issued under the authority of the Foreign Office, requesting foreign governments to afford aid and protection to its holder. Passports are granted to all persons known to the Foreign Secretary, or recommended by some person known to him; or upon the application of any banking firm in the United Kingdom; or upon the production of a certificate of identity signed by a mayor, magistrate, justice of the peace, minister of religion, physician, surgeon, solicitor, or notary resident in the United Kingdom. In the case of naturalized British subjects, the certificate of naturalization must accompany the letter of recommendation.

Applications for passports must be made in writing to the Passport Department, Foreign Office, London. The charge is 2s., however few or many the persons named in it. If the applicant does not reside in London, the passport may be sent by post, but in that case a postal order for two shillings must accompany the application.

The passport should be signed by its holder as soon as he receives it. British subjects entering most of the European countries do not require a passport, but it is always well to have one, as a ready means of identification. Persons wishing to enter Russia, Turkey, or Roumania must have a passport, and before leaving London are required to have their pass-

ports endorsed at the Russian Consulate General, 17 Great Winchester Street, London, E.C.; the Consulate General of the Sublime Porte, 29 Mincing Lane, London, E.C.; the Roumanian Consulate General, 65 London Wall, E.C.; or at the various consulates throughout the kingdom respectively.

Passports for Venezuela, Persia, and Hayti must be endorsed at the Venezuelan Consulate, Finsbury House, Finsbury Pavement, London, E.C.; the Persian Consulate General, 120 Victoria Street, London, S.W.; the Haytian Consulate, 32 Fenchurch Street, London, E.C., respectively; or at any of the various consulates throughout the kingdom.

PAWN or PLEDGE. This name is applied to goods or chattels delivered by one person to another as a security that the transferor will repay a debt to the transferee, or fulfil some obligation to him. The person transferring the goods is called the pawner or pledger; the person to whom the goods are delivered is called the pawnee or pledgee. The property is retained by the pledgee until the debt is discharged, or the engagement is fulfilled.

PAWNBROKER. A pawnbroker is a person who is licensed to lend money on goods pledged with him. (Refer to "Pawnbrokers" in *Index.*)

PAY DAY. Account Day or Settling Day. The last day of the settlement on the Stock Exchange, when stocks and shares bargained for must be delivered and paid for, or the differences paid. Instead of doing this, the stocks and shares may be "carried over." (See *Carrying Over.*)

PAYEE, the person to whom a cheque or a bill of exchange is payable.

PAYING DIFFERENCES. Contracts to pay "differences" are purely gambling contracts unenforceable by law. (See *Differences.*)

PAYING-IN SLIP, the document which contains particulars of the amount of money in cash, notes, and cheques which a customer pays into his account at a bank. These slips are usually contained in a book, each page of which is perforated with a dotted line from top to bottom. The particulars are entered on each half—one part being torn off and handed to the cashier, the other half being initialled by the cashier and retained by the customer.

PEDLAR, a petty dealer that carries his wares with him. He is required to obtain a certificate costing 5s., from the chief police officer of the district in which he has resided during one month previous to application; and this he is required, on demand, to show to any officer of police or to any person to whom he offers goods for sale.

PEPPERCORN RENT, a rent of no money value; a merely nominal rent.

PER CONTRA. On the other side. The term is used in book-keeping.

PERMIT, a permission given by a revenue officer to remove goods on which the duty has been paid, or to remove dutiable goods from one specified place to another specified place.

PER PROCURATION. A person having a power of attorney from a firm signs on behalf of the firm, writing per pro. or p.p. before the name of the firm, and then signing his own name and position; thus, per pro. The Patent Leather Co. James Smith, Cashier.

PERSONAL ACCOUNTS, in book-keeping, the accounts headed by the names of the persons or firms with whom a merchant has dealings, and which show their financial position towards him.

PERSONAL PROPERTY or PERSONALTY. Under this term are included goods and chattels, and movable property of every kind, choses in action such as bills of exchange, debts, and the like; leases of land or houses are regarded as personalty, though they can hardly be said to be movable property.

PERSONAL SECURITY, a term employed to denote that a person becomes security for the payment to another of a certain sum of money. The payment of the money is not secured on property, but merely on the personal undertaking of the individual guaranteeing the payment. Where money is lent on a person's note of hand, the security is merely personal, and does not give the lender any rights over the borrower's property.

PETITIONING CREDITOR. The creditor who petitions the Court of Bankruptcy to make his debtor a bankrupt. (See under *Bankruptcy.*)

PETTY CASH BOOK, a book containing an account of small payments, the totals of which are afterwards entered in the cash book.

PIECE GOODS, textile fabrics, which are sold by the piece.

PLACING SHARES. Where a broker employed by a company to get its shares quoted in the official list of the Stock Exchange procures persons to take shares in the company so about to be formed, the shares so taken are said to be placed by him.

PLANT, a name given to the machinery, tools, and other appliances in a manufactory for the carrying on of its business.

POLICY, the document containing the terms of a contract of insurance between the insurer and the insured. The term policy is derived from an Italian word signifying a *promise.* The policy holder is the person possessing the policy, and he may be the person who effects the insurance, or a person to whom he has assigned the policy.

POLICY PROOF OF INTEREST. In marine insurance the insured must possess an insurable interest in the thing insured, not only at the time the insurance is effected, but also at the time that the insurance is claimed, but where this clause is inserted, the production of the policy will be recognised by the underwriters as sufficient proof of the interest, without calling for the production of any further proof.

POOL. Sometimes several persons combine to deal in a large number of shares, on the understanding that the profits or the losses will be divided in proportion to the amount they subscribe; forming such a combination is termed making a pool.

POST DATE. to insert in a document a date subsequent to the time on which the document was drawn up. Cheques are frequently post-dated, as a protection against loss in transmission through the post, or because the drawer of the cheque hopes to have sufficient funds in the bank to his credit when the cheque is duly presented. To negotiate a post-date cheque before the proper time may render the drawer liable to a penalty for evading the stamp duty; for such a cheque is not a bill of exchange payable on demand, and if, therefore, the amount of the cheque exceeds £5, the duty is more than one penny, which is the duty on a bill payable on demand.

POST ENTRY. Where an importer of goods has wrongly entered them at the Custom House, by misdescribing them, or erroneously stating their quantities, a post entry must be made for the necessary corrections.

POST NOTE, a bank note made payable not to bearer but to order. Such notes must, therefore, be endorsed by the persons to whom they are payable. They are intended for transmission to a distance.

POST OBIT BOND, a money bond by which a person binds himself to pay a certain sum on the death, or at a fixed period after the death, of a person from whom he has expectations. Improvident and reckless persons who have expectations often borrow money in this way, and, of course, the amount of the bond covers the loan with a high, if not extortionate, rate of interest. Sometimes the Court will, if there has been unconscionable over-reaching, set aside the bond, and allow the lender only the actual amount of the loan with a reasonable rate of interest.

POSTE RESTANTE. When letters or packages bearing these words are sent through the post, they remain at the post office of the town to which they are sent until the persons to whom they are addressed calls for them.

POSTING, transferring entries from the journal into the ledger.

POUNDAGE, a charge or an allowance of so much in the £.

POWER OF ATTORNEY. See *Attorney, Power of.*

PRATIQUE, a licence to the master of a ship to traffic in certain ports upon a certificate that the place he came from is not suffering from infectious disease.

PRE'CIS, a summary of the contents of a document or a series of documents. It should contain all that is important in the documents or letters, and nothing that is unimportant, and should be in the form of a brief but complete *narrative.*

PREFERENCE BONDS. See *Preference Shares.*

PREFERENCE STOCK AND PREFERENCE SHARES, stock or shares which receive a fixed dividend before any dividend is paid on the ordinary shares. Sometimes these shares give a preferential right to the assets of the company in the event of its being wound up. (See *Cumulative Preference Shares.*)

PREFERENTIAL PAYMENTS IN BANKRUPTCY. In the bankruptcy of a person, or in the winding-up of a limited company, certain creditors must be paid before the ordinary creditors can receive a penny. (See under *Bankruptcy.*)

PREJUDICE, WITHOUT. Sometimes when parties are in dispute, in the course of negotiations to settle the dispute, one party makes to the other statements "without prejudice," relating to the matter in dispute. Then if the matter is not settled amicably, and the parties have to resort to litigation, such statements cannot be put in evidence against the person making them.

PREMIUM, an additional rise above par value, e.g. if shares of the nominal value of £5 are bought and sold for £6, they are said to be at a premium of £1.

PRESENTMENT, the formal act of bringing a bill of exchange to the notice of the drawee for the purpose of getting him to accept it, or having been accepted by him, to obtain payment from him. (See under *Bills of Exchange.*)

PRICE, CURRENT, lists of goods and merchandise with their prices.

PRICKING NOTE, a document obtained from the Custom House by the shipper of goods and delivered by him to the chief officer of a ship authorising him to receive the goods on board. It was so called from the practice of pricking holes in the paper corresponding with the number of packages received on board. (See *Dandy Note.*)

PRIMAGE, a small payment formerly paid to the master of a ship by those who shipped goods on board. By arrangement with the master, the ship owner now receives this payment, which is in addition to the freight.

PRIMAGE AND AVERAGE ACCUSTOMED. In bills of lading this phrase means, that in addition to the freight, a charge will be made for primage (which see). The fee for average is not now separately assessed, but included in the charge for primage.

PRIVATE ARRANGEMENT, an agreement between an insolvent debtor and his creditors, by which they agree to accept a composition from him, or to allow him to carry on his business under certain conditions. The debtor is thus spared the publicity, and the creditors are saved the expense of bankruptcy proceedings. The agreement must be by deed and must be registered. (See "Deeds of Arrangement," under *Bankruptcy*.)

PRIVATE COMPANY, a limited company composed of a small number of persons, who subscribe the necessary capital among themselves, without inviting the public to take shares in the enterprise.

PROBATE, the proof of a deceased person's will.

PROBATE DUTY. Refer to "Death Duties" in *Index*.

PROCURATION, allowing one person to act on behalf of another, and to sign documents in his name. The person who thus signs prefixes the words "per pro." or "p.p."

PROCURATION FEE, a commission usually paid to solicitors for effecting or procuring loans for others.

PROFIT AND LOSS ACCOUNT, an account which shows on the debit side all moneys, charges, and expenses paid out, and all losses incurred through bad debts, depreciation of property, and the like. The credit side shows all moneys received. If the amount on the credit side exceeds that on the debit side, there is a net gain; but if the debit exceeds the credit there is a loss. Thus a business man is able to see how his affairs stand.

PRO FORMA, for form's sake.

PROHIBITED GOODS, goods which by law must not be imported into, or exported from, a country.

PROMISSORY NOTE, an unconditional written promise made and signed by a person, to pay at a certain time a sum certain in money to, or to the order of a specified person, or to bearer. (Refer to "Promissory Notes" in *Index*.)

PROMOTER, the person who does all the preliminary work necessary to form a limited company. He engineers the flotation of the company.

PROMPT, a limit of time given for payment of merchandise purchased. The time given for payment is fixed by a prompt-note, and the length of credit varies, of course, in different trades.

PROOF OF DEBTS IN BANKRUPTCY. In bankruptcy proceedings, every creditor must bring sufficient evidence of the debt which he alleges that the bankrupt owes him.

PROPERTY ACCOUNT. See *Impersonal Account*.

PROPRIETARY COMPANY. Where a company owns mining lands which it does not work itself, or of which it works only a part, it frequently leases or sells the part not worked to other companies. There are numerous examples of these proprietary companies in the South African Gold Fields.

PRO RATA. At a certain rate; according to scale.

PROSPECTUS. The document issued to the public by those who are interested in the formation of a limited company, inviting the public to take shares in the company.

PROTECTION, that commercial system by which a country seeks to foster its home industries either by prohibiting the importation of the products of similar industries, or by levying very high duties upon them so that the home manufacturer may be able to undersell his foreign competitor (cf. *Free Trade*).

PROTEST. Where a foreign bill of exchange has been dishonoured by non-acceptance or by being unpaid, a notary public, on being requested by the holder, makes a formal attestation of the fact of dishonour. (See under *Bills of Exchange*.)

PROXIMO. The next; with reference to dates it means the next month.

PROXY, one who acts for another. The document by which a person is appointed to act for another, where the proxy authorises a person to do one act, must bear a penny stamp: if to act generally, a ten shilling stamp.

PUBLIC COMPANY, a limited company, the shares of which can be sold by their owners without the consent of the other shareholders.

PUT. On the Stock Exchange, a put option is the right to sell at a fixed price so much stock on a certain day. The person having the option must pay to the person who has agreed to buy from him a certain premium. (See *Option* and *Calls*.)

PUT AND CALL, the same as double option. (See *Options*.)

PUT OF MORE, a single option which gives a person the right to sell a given amount of stock at a fixed price at a fixed date, with the further privilege of selling double that quantity. (See *Options*).

PYX, a box in which specimen coins of the Mint are deposited. These coins are annually tested by a jury of goldsmiths, in order to see if they are of the requisite weight and fineness. This is known as the "trial of the pyx."

QUALIFIED ACCEPTANCE. See *Acceptance, Qualified*.

QUANTUM MERUIT, so much as he has earned. The term is employed to signify what a plaintiff recovers as the worth of his work, when he brings an action on an express contract to pay him a specific sum, and fails to obtain that specific sum.

QUARANTINE, the period of forty days or less during which the crew, passengers, and cargo of a ship coming from a place suffering from an infectious disease are required to remain on board after their arrival, before they can be permitted to land. Quarantine is derived from a Latin word signifying forty, because originally that was the period of isolation; but the period now-a-days is regulated by the Board of Trade, whose orders are carried out by the various medical officers at the ports.

QUARTER DAYS. The English Quarter Days are—Lady Day (March 25th); Midsummer Day (June 24th); Michaelmas (September 29th); Christmas Day (December 25th).

The Scotch Quarter Days are—Candlemas (February 2nd); Whitsun (May 15th); Lammas (August 1st); Martinmas (November 11th).

QUIT RENT, a rent paid by a tenant to a lord of the manor, in substitution for all other services.

QUORUM, the number of members of an administrative body whose presence is necessary at any meeting for the purpose of transacting business.

QUOTATION, a list of prices at which dealings in goods or in stocks and shares can be effected.

RACK RENT, the utmost rent attainable.

RAILWAY ADVICE, a document sent by a railway company to a consignee, stating that goods consigned to him are in the company's warehouse, and are awaiting his disposal. If the goods are not taken away within a given time, a charge for demurrage is made.

RAILWAY CLEARING HOUSE. Refer to *Index*.

RATEABLE VALUE. The value at which property is assessed for the levying of rates. It is the supposed ordinary yearly rent of property less the cost of repairs, insurance, and the like, necessary to keep the premises in a fit condition to command the rent.

RATE OF EXCHANGE or **COURSE OF EXCHANGE.** The price at which a bill of exchange drawn in one country upon another may be sold in the former country. The amount of the currency of one country which on any given date is required to obtain a certain amount of the money of another country.

RE, in the matter or the affair of.

REAL ESTATE or **REALTY,** land and freehold property generally. Leases of land or houses are, however, regarded as personal property.

REAL SECURITIES. Mortgages of real property.

REBATE, an allowance or discount made in consideration of prompt payment, or because the goods sold are deficient in quantity or quality.

RECEIPT, a written acknowledgment of having received a sum of money. A receipt is *prima facie* evidence of payment, but it is not conclusive evidence. The mere fact that a person has signed a receipt for money which, as a matter of fact, he has not received, will not prevent his suing for the money in a court of law. So if a man has received payment by cheque, he need not insert on the receipt the words "received by cheque," for if the cheque be dishonoured, he can legally recover the amount, notwithstanding he has signed the receipt without the words "received by cheque." Again, a receipt which has been given in mistake, or has been obtained by fraud or by misrepresentation, will not debar the person giving the receipt from suing for the money for which he has given the receipt.

Where the sum paid is £2 or more, it must bear a penny stamp, which must be cancelled at the date of the receipt. If a receipt for £2 or more is not duly stamped, the person giving the receipt is liable to a penalty of £10. It is, moreover, of no legal value, i.e. the person to whom it is given, if afterwards sued for the amount cannot put in evidence the unstamped receipt to prove that he actually did pay the money. But where money is paid to a person otherwise than in payment of a debt, e.g. where it is paid as a voluntary contribution, the receipt need not be stamped.

An unstamped receipt may be stamped with an *impressed* stamp—(1) within fourteen days after it was given, on paying a penalty of £5. (2) After fourteen days and within a month, on paying a penalty of £10. It cannot in any other case be stamped with an impressed stamp.

If any person, where the sum paid is £2 or more, gives a receipt for less, or divides the amount so as to evade the duty, he is liable to a penalty of £10. Where a receipt would be liable to duty, and the payee refuses to give a receipt duly stamped, he is liable to a penalty of £10. It will, therefore, be borne in mind that apart from this provision of the law, no one can be compelled to give a receipt, and in the case of a payment of less than £2, there is no power to compel a payee to give a receipt.

RECEIVER, a person appointed to take care of property and to control it pending litigation in regard to the property.

RECEIVING NOTES, written requests from a shipper to the officer in charge of a ship, desiring him to take on board goods specified in the notes.

RECEIVING ORDER. When a creditor petitions the Court to make his debtor a bankrupt, the Court, if satisfied with the petition and the other matters necessary, will make a receiving order against the debtor whose property is then taken care of by the Official Receiver. (See under *Bankruptcy.*)

RECOGNISANCE, an acknowledgment of a debt due to the Crown, with a condition that the debt shall be cancelled if the person acknowledging the debt (entering into the recognisance) shall do some particular act, as, e.g. appear for judgment when called upon.

REDEMPTION OF A MORTGAGE, paying off the loan for which the mortgage was created.

RE-DRAFT. Where a bill has been protested, the holder may draw a new bill on the person liable for the amount of the bill and costs incurred on protesting it. (See *Re-Exchange.*)

RE-EXCHANGE, the loss arising from the dishonour of a bill in a country other than the country in which it was drawn or indorsed.

REDUCING INTO POSSESSION, taking the necessary steps to convert a chose in action into a chose in possession. For instance, a promissory note is a chose in action, but when the holder has obtained the money due on the note or has taken the necessary steps to recover the money, he is said to have reduced the chose into possession (see *Chose in Action* and *Chose in Possession*). Similarly, when the holder of a bill of sale enforces his security, he is said to have reduced it into possession. (See under *Bills of Sale.*)

REGISTERED BOND, a bond on which is written that it belongs to a particular person, and which is registered in that person's name at the head office of the company, or at the seat of the government issuing the bond. As the bond is thus rendered not-negotiable, the holder of the bond is protected against loss or theft.

REGISTERED STOCK, stock of which the name of the holder is entered in a register at the head office of the company issuing the stock. Such stock can be transferred only by the holder entering in the register the name of the person to whom he has assigned the stock.

RE-INSURE. When an insurer finds that the thing insured is likely to be a total loss, he tries to insure himself against that loss, by insuring with other persons, who in consideration of a greatly enhanced premium, consent to bear the whole risk or to share it with him. In this way the original insurer minimises the loss on the risk which he has undertaken. But he is still liable to the person originally insured for the whole amount of the insurance. (See under *Marine Insurance.*)

REMEDY, the greatest variation in weight of a coin from the fixed standard that is allowed at the mint without the coin being condemned as unfit for circulation.

RENEWAL OF A BILL. When an acceptor is unable to meet a bill when it falls due, he may accept a new bill in favour of the holder, and thus obtain a further extension of time in which to meet his obligation. Unless all the parties—drawer, and indorsers—liable on the bill in case of the acceptor's default, assent to the renewal of the bill, they will be freed from all liability on the previous bill. (See under *Bills of Exchange.*)

RENTES, the French Government Funds, corresponding to English Consols. A *rentier* is a person who is a fund-holder, or who has an income from personal property.

REPLEVIN, an action taken to recover possession of goods wrongfully seized under a distraint for arrears of rent. The owner of the goods may have the goods re-delivered to him by the Registrar of the local County Court, on his giving security that he will bring an action to try the validity of the distress. Although this action is usually confined to goods seized under a distress, it may be brought for all goods unlawfully taken.

REPUTED OWNERSHIP. When a person is made bankrupt, all property of which he is at the commencement of the bankruptcy proceedings the real owner, and of which he is the reputed owner, will go to his creditors. He is the reputed owner of all goods which are in his possession, order, or disposition in his trade or business by the consent and permission of the true owner under such circumstances as lead others to believe that he is the owner thereof. (See under *Bankruptcy.*)

REQUEST NOTE. Where an importer wishes to remove dutiable goods from one place to another, he fills up a "request note," giving particulars of the goods, the name of the place to which the goods are to be removed, and such other information as the customs authorities require.

REQUISITIONS ON TITLE, questions and inquiries made by an intending purchaser of land regarding the title of the vendor.

RESERVE CAPITAL, unpaid capital of a limited company which cannot be called in except in the event and for the purposes of the winding up. A limited company may by special resolution declare any portion of its capital, which has not been already called up, to be reserve capital.

RESERVE FUND. That portion of the profits of a business not divided amongst the partners or shareholders, but set aside to meet contingencies.

RESPONDENTIA, a means of borrowing money on the security of the cargo of a ship, for the purpose of enabling the ship to reach its destination. If the ship fails to arrive safely, the money is not repaid. (See under *Shipping.*)

REST. In the weekly returns of the Bank of England, the rest signifies the balance of assets over liabilities.

RESTRAINT OF TRADE. When a person sells his business to another, and the buyer insists that the seller shall covenant not to carry on a similar business within a certain radius or for a specified time. The restraint must be reasonable and just, sufficient to protect the interests of the purchaser; otherwise it will be wholly void, and the seller will be allowed to trade as he pleases.

RESTRICTIVE INDORSEMENT. An indorsement which renders a bill of exchange not-negotiable either by prohibiting its transfer or by authorising the indorsee to deal with it in a particular way only. (See under *Bills of Exchange.*)

RETAINER, the fee given to counsel by solicitor, in order to retain his services in a particular action. Also the right of an executor to retain out of the property of a deceased person a debt due to him from the deceased.

RETIRING A BILL. When an acceptor meets a bill when it falls due, he is said to retire it, in other words, to pay it, and no one is any longer liable on the bill. But when any party to the bill—drawer or indorser—other than the acceptor, meets the bill at maturity, though the bill is said to be retired (withdrawn from circulation), such person can sue all parties prior to him on the bill, for the amount of such bill.

REVENUE ACCOUNT, the account of a business which shows on one side the total income for a given period, and on the other side the expenditure which is properly chargeable against that income, what is left after meeting this expenditure being nett profit. Such expenditure covers wages, expenses of management, maintenance, and repair of the buildings and plant of the business, rates, and other expenses.

REVERSION, the residue of an estate left in a man after he has granted a certain interest out of that estate, e.g. where the owner of land grants a lease of it for a term of years, what is left in him is called his reversion. At the expiration of the term of years, the possession of the land reverts to the person granting the lease.

REVERSIONARY INTEREST, an interest that does not come into possession until after a certain period, or till the decease of a person, or some other future event. The term is usually but not necessarily, applied to interests in money or other personal property, e.g. reversionary or deferred annuities.

RIDER, a clause added to a resolution or a verdict.

RIGGING THE MARKET. This is a phrase used to indicate a process by which an artificial rise in the price of any commodity, or of stocks and shares, is effected. On the Stock Exchange, those wishing to rig the market buy the securities secretly, thus causing the demand to exceed the supply, thereby forcing up prices. The public thus imagine that these securities are worth buying, and accordingly buy the securities from those who have rigged the market, and who thereby realise a profit. The term denotes that the rise in prices is not caused by a genuine public demand.

RING, a combination of speculators for the purpose of obtaining the control of any given commodity. Having got the available supply in their own hands, they hope to exact what price they please; for by withholding a part of the supply from the market they are able to force up prices.

ROYALTY, the price paid to the owner of a patent by a person who uses the patent, the payment being at a rate of so much for each article manufactured. The word is also used to denote a payment on sales, as where a publisher pays an author a payment at a certain rate on each copy sold.

ROLLING STOCK, the engines, carriages, waggons, trucks, and the like belonging to railway and tramway companies.

RUMMAGING A SHIP, searching a vessel to see whether it contains prohibited goods or goods liable to duty.

RUNNER, a person who brings clients to a stock-broker's office. He receives a share of the profits on the business he introduces, and has to bear a share of whatever losses may be incurred.

RUNNING DAYS, days counted in succession without any allowance for holidays. The phrase is used in bills of lading and charter-parties in reckoning the demurrage.

RUN ON A BANK, an unusual rush by people on a bank to withdraw their deposits, or to have gold in return for the notes of the bank. This rush is caused by the fear that the bank is likely to suspend payment.

RUN WITH THE LAND. In a lease, a covenant is said to "run with the land," when the lessee or his assigns are bound to perform it, or can take advantage of it. A covenant is said "to run with the reversion" when the lessor or his assigns are bound to perform it, or can take advantage of it. Both classes of covenants

are covenants affecting the land itself, or something in existence on the land.

RUPEE PAPER. Notes issued by the Indian Government payable in rupees. (See *Enfaced Rupee Paper.*)

SAGGING MARKET, a market in which the prices keep dropping or falling.

SALE. Refer to *Index.*

SALE FOR THE COMING OUT, dealings in the shares of a company which is being floated, the sale not being effected for the purpose of obtaining a quotation on the Stock Exchange, but for the time when the share certificates shall be issued.

SALE OR RETURN, goods sold on this principle can be returned to the seller in case the purchaser himself does not re-sell them. It is on this principle that most newspapers and periodicals are ordered by the news-agent from the publisher.

SALES DAY BOOK. In book-keeping it is the book in which sales on credit are entered from day to day, as they occur.

SALVAGE, the reward paid for saving a ship or its cargo from shipwreck, capture, or other similar danger. The salvor must not have been under any duty to save the ship, but must have acted voluntarily; he must have shown skill, and but for his services the ship would have been lost. There is no salvage for saving life. (Refer to "Salvage" in *Index.*)

SALVAGE LOSS. Where insured goods have been saved from total destruction, the value which they are estimated to be worth is deducted from the amount of the insurance money, the difference representing the amount of the loss which the underwriters will have to bear.

SAMPLING ORDERS, orders given by a merchant to a warehouse keeper authorizing him to give samples of the merchant's goods stored at the warehouse.

SANS RECOURS. Without recourse. When an indorser affixes these words to his indorsement on a bill of exchange, he cannot be sued on the bill.

SCRIP, a provisional certificate issued by a government, or a company or corporation, to those who have lent money to such government or company. It entitles the holder to the bonds or the shares when they are issued. The term also applies to any Certificate of Shares.

SEA LETTER or **SEA BRIEF,** a passport granted by a State in time of war, declaring that a ship sails under the flag of such State.

SEARCHER, a customs officer whose business it is to search ships, baggage, and goods for the purpose of discovering prohibited goods, or goods liable to duty.

SEARCH WARRANT, a written authority issued by a magistrate to a police officer permitting him to search a house for stolen property, or for property unlawfully concealed by a bankrupt.

SEAWORTHY, the fitness of a vessel to proceed on her voyage. "She must be fit in design, structure, condition, and equipment to encounter the ordinary perils of the voyage, and have a competent master, and a sufficient and complete crew." In contracts for the carriage of goods by sea there is, on the part of the ship owner, an implied and absolute warranty that the ship is seaworthy; this warranty only refers to the condition of the ship at the time of loading and the time the ship sails. In contracts of marine insurance there is also an implied warranty that at the time the ship starts on her voyage she is seaworthy.

SECOND CLASS PAPER. Bills of Exchange and the like documents, where the parties to such documents and who are liable on them are not of the highest credit in financial matters.

SECURED CREDITOR, a creditor who holds a security sufficient to cover the amount of the debt due to him, e.g. mortgagees, grantees of bills of sale, persons with whom stocks and shares have been deposited in return for a loan.

SECURITIES, a term employed in business to signify written documents which entitle the holder to money or goods, e.g. stocks, shares, dock warrants, bills of exchange, and the like.

SEIGNIORAGE, the charge made for coining bullion into money.

SELLERS OVER, a term meaning that in a market there are more sellers than buyers, or that there are no buyers.

SELLING OUT. Where at the "settlement" on the Stock Exchange a purchaser does not take up the securities which he agreed to buy, the seller may instruct the "official broker" to sell such securities. Any loss or expense which may result will have to be borne by the defaulting purchaser (cf. *Buying In*).

SEQUESTRATION, the taking possession of goods and chattels, of the rents and profits of lands of a person who has been guilty of contempt by disobeying an order or a judgment of the Court.

The estate of a bankrupt is sequestered for the benefit of his creditors, i.e. his entire property is taken over by the trustee in bankruptcy and realised, and the proceeds divided amongst the creditors.

SETTLEMENT. On the Stock Exchange the term means the last three days of the "account." In the mining market the settlement extends over four days.

SETTLING DAY. See *Pay Day.*

SHARES, the equal portions into which the capital of a limited company is divided. The shares held by a shareholder represent the proportion of the company's assets to which he is entitled, and of the company's liabilities which he may have to bear.

SHARE CERTIFICATE, a document, usually under seal, issued by a public company to a shareholder, stating that the person named therein is the registered owner of so many shares. The numbers of the shares, and the fact that they are fully paid up, and if not fully paid up, the amount that has been so paid are set forth. The following is a common form of a share certificate:—

The X Company, Limited.

This is to certify that William Jones, of 589 Cheapside, is the holder of fifty shares of £5 each, numbered 100 to 149 inclusive, and that upon each of the said shares the full amount of £5 has been paid up. Given under the common seal of the said company, this 24th day of January, 1905.

SHARE WARRANT, a document under seal issued by a limited company, stating that the bearer is entitled to the shares mentioned therein. Such a document can be issued only when the *shares are fully paid up.* The holder of a share warrant can transfer his rights by simple delivery of the warrant, that is, a share warrant is a negotiable instrument. The stamp duty on a share warrant is 30s. per £100; but no further duty is payable on a transfer of shares specified in a share warrant.

When a share warrant is issued to a shareholder, his name is struck off the list of shareholders, because the person (whoever he may be) who holds the warrant is entitled to the dividends, and the company has no means of knowing who that person is. Accordingly, when a share warrant is issued, "coupons" are attached to it. These coupons bear the dates on which the dividends are payable during a given number of years subsequent to the issue of the warrant. The dividend for a given date is payable to the person presenting the coupon bearing that date. When all the coupons on the sheet have been presented, a fresh sheet of coupons is issued to the person holding the share warrant.

The holder of a share warrant is usually entitled to attend and vote at meetings of the company, but before doing so, he must produce his share warrant to the company. He is not, however, a member of the company, for his name is not on the register of shareholders.

SHIP BROKER. The person who transacts business between the owners of vessels and the merchants who send cargoes.

SHIP CHANDLER, a merchant who deals in ropes, cordage, and other articles necessary for the furnishing of ships.

SHIPPING. Refer to *Index.*

SHIPPING ARTICLES. An agreement in writing between the master of a ship and the seamen, setting out the wages, the scale of provisions, the duration of the voyage, and various other things.

SHIPPING BILLS. Invoices or manifests of goods put on board ship.

SHIPPING NOTE. A delivery note or a receipt note of particulars of goods forwarded to a wharf for shipment.

SHIP'S CLEARANCE INWARDS. When a ship is unloaded after the performance of the necessary customs formalities, a certificate of clearance inwards is given by the customs authorities.

SHIP'S CLEARANCE OUTWARDS, a certificate issued by the customs, showing that the vessel in it has complied with the customs requirements, and is authorised to proceed to sea. This permission is given only when all dues and charges have been paid.

SHIP'S MANIFEST, the document containing full particulars of the cargo and the destination of the ship. It is one of the ship's papers.

SHIP'S PAPERS, the papers which a ship is bound to carry, and which show her nationality, and the nature and the destination of her cargo. They consist of (1) The Ship's Certificate of Registry, (2) the Agreement with the Seamen, (3) the Charter Party or the Bills of Lading, (4) the Manifest, (5) the Official Log, (6) the Bill of Health.

SHIP'S PASSPORT. See *Sea Letter.*

SHIP'S PROTEST, a sworn declaration made before a notary, giving particulars of injuries to the ship or the cargo.

SHIP'S STORES BOND, a bond given by the owner of a ship, where dutiable goods like wine and spirits are placed on board ship for consumption thereon, that the goods will not be used in any other way.

SHIP'S STORES, articles used on board ship, which if used on land would be liable to duty, e.g. wines, tobacco, spirits, and the like. In a wider sense it means the entire provisioning of a ship, and the goods necessary to make repairs.

SHORT BILLS, Bills of Exchange which have but a short time (ten days) before they mature. They include bills at sight or payable on demand, bills drawn for less than ten days, and bills drawn for any length of time when within ten days of becoming payable. Such bills will not, as a rule, go to the banker's creditors in case he is adjudged bankrupt, but will remain the property of the person who has deposited them with the banker, for the banker to collect the proceeds of the bills from the parties liable on them. Much, however, depends upon the circumstances of the case.

SHORT EXCHANGE, the rates of exchange quoted in the Money Market for cheques, and for bills on sight or within ten days.

SHORT LOANS, loans for short periods.

SHORT OF STOCK. Dealers on the Stock Exchange when they sell for a fall, often sell what they do not possess. In such a case they are said to be "short of stock." (See *Bear.*)

SHORT SHIPMENT, a phrase signifying that goods have been shut out of a ship, i.e. have not been received on board either through accident or want of room.

SHUNTING, same as *Arbitrage* (which see).

SHUT FOR DIVIDEND. This phrase indicates that the transfer books of limited companies are closed, during which period transfers of shares or of stock in the company cannot be registered. This closing of the transfer books is for the purpose of issuing the dividend warrants.

SIGHT BILLS, bills payable on presentation to the drawee. No days of grace are allowed on sight bills.

SINE DIE. "Without a day," i.e. postponed indefinitely.

SIMPLE AVERAGE, same as Particular Average. (See *Average, Particular.*)

SINKING FUND, a fund collected by setting aside a certain portion of the revenue of a government, corporation or business for the purpose of paying certain debts already incurred.

SLANDER OF TITLE OR OF GOODS, defamatory words which deny a man's title to certain property, or which disparage the goods that he makes or sells, without casting any slur on his moral character. But in certain cases slander of goods may amount to a slur on a man's character, e.g. to say of a fish-monger that he is in the habit of selling decomposed fish. A slander of this character is actionable without its being necessary for the plaintiff to prove that he has sustained actual damage through the defamation.

SLEEPING PARTNER, one who invests his money in a partnership firm, but has nothing to do with the working of the business.

SLIDING SCALE, a method of fixing the wages of workmen according to the rise or fall in the price of the commodities which they produce. For instance, suppose a miner agrees to receive 5s. for every ton of coal he extracts when the price of coal is 16s. per ton, then if the price of coal were to rise to 20s. per ton, his wages would be increased to 6s. 3d. per ton. If the price fell to 14s. per ton, his wages would be reduced to 4s. 4½d. per ton.

SLIP. When a ship owner wishes to insure his ship, he employs a broker, who writes on a printed form short particulars of the ship and the nature of her voyage. He then brings the slip to an underwriter, who, if he agrees to accept the risk, initials the slip. (See under *Marine Insurance.*)

SOFT GOODS, textile fabrics, such as woollen goods, flannels, silks, cotton, and the like.

SOLA. When this word appears on a bill of exchange, it denotes that there is only one copy in existence, as distinguished from a bill drawn in a set.

SPECIAL ACCEPTANCE, same as Qualified Acceptance (which see).

SPECIAL DAMAGE, a particular loss arising from the commission of a wrongful act for which a jury will award extra damages apart from the general damages given to remedy the wrongful act itself.

SPECIAL INDORSEMENT, an indorsement on a bill of exchange stating the name of the person to whom the indorser has transferred the bill (see under *Bills of Exchange*).

SPECIFIC PERFORMANCE. As applied to contracts, the phrase means the literal carrying out of the terms of a contract. Generally speaking, the Courts will not enforce a specific performance of a contract, except in cases where, owing to the nature of the contract, damages would not be an adequate remedy for its breach, e.g. contracts relating to the sale of land or of interests in land, contracts for the sale of shares in private but not in public companies, and contracts relating to rare and curious articles. As a rule, the Courts will not specifically enforce commercial contracts, or contracts for personal services, because in these cases damages is the only possible remedy, or is an adequate remedy. But in the case of contracts for personal services, where a person enters the employment of another and expressly agrees that for a certain period he will not work for any one else, the Courts will prevent him from working for any one else during that period.

SPECIAL SETTLEMENT. When it is desired to place the shares and securities of a limited company on the official list of the Stock Exchange, the Committee appoint a day by which all previous dealings or bargains in its shares are to be completed.

SPECIE PAYMENTS, payments made in bullion or in coin, and not by means of paper money.

SPECIE POINT, THE, is the point above which the price of first-class foreign bills of exchange cannot rise or the price below which they cannot fall. For if the price rose above this, the person who wished to make payments abroad would not buy such bills, he would prefer to send bullion, and pay the cost of transmission and the cost of insuring it. On the other hand, if the price fell below this point, the person who had to receive money from abroad would not sell his bills payable in a foreign country, he would prefer to wait for the gold to be sent to him. The cost of transmitting gold and insuring it in transit determines the specie point.

SPOT GOODS. Goods available for delivery. "For spot," for immediate delivery.

SPREAD EAGLE. See *Straddle.*

SQUEEZING THE BEARS. When "bears" are unable to deliver stock which they have agreed to deliver at a certain price, because the buyers have themselves got hold of the stock, the buyers will compel the bears to deliver, which they can do, only by buying the stock from the persons to whom they had agreed to sell it. They are, of course, compelled to buy at an enhanced price. This operation is known as "squeezing the bears."

STAG, a person who applies for shares in a new company which is being floated, not for the purpose of investment, but with the sole object that after allotment the shares should go to a premium, and then he will be able to sell out at a profit This explains that when a government loan is raised, the price of the loan, though it may be at a premium when it was issued, steadily falls in price during the few months following. The fall is caused by the selling of the Stags.

STALE CHEQUE, a cheque that has remained unpaid for a considerable time. Most banks will refuse to cash a cheque that is six months old. If a holder of a cheque does not present it for payment within a reasonable time, and the banker in the meantime becomes bankrupt, the drawer of the cheque is no longer liable; for instance, if he had paid a debt by means of the cheque, he could not in that case be sued for the debt. The holder, however, can prove in bankruptcy for the amount of the cheque against the banker's estate.

STAMP DUTIES. Refer to *Index.*

STANDARD GOLD. English gold coins are made from an alloy consisting of 22 parts of pure gold and 2 parts of copper.

STANDARD SILVER. English silver coins are made from an alloy consisting of 37 parts of pure silver and 3 parts of copper.

STAPLE TRADE, the chief articles manufactured in a given district, or the chief articles which form the subject of the trade of a district.

STATUTE BARRED, a term applied to debts when, after a certain period, payment of them cannot be recovered in a Court of Law. In the case of a simple contract debt, such as an ordinary trade debt, if no payment has been made for six years, or no written acknowledgment containing a promise to repay has been made during that period, the creditor cannot bring an action for payment. The creditor does not lose his right to receive payment, but he does lose his remedy for enforcing payment. In the case of a debt due under a bond or other deed, the period is twenty years. A judgment debt is statute-barred after twelve years. Statute-barred debts may be revived by the debtor's giving a written acknowledgment of the debt, coupled with an *unconditional* promise to repay. Hence a written promise to pay "if and when I can," would not be sufficient to revive a statute-barred debt. Part payment will also revive a debt which is statute-barred.

STATUTE OF LIMITATIONS. Acts of Parliament which have been passed by the Legislature in its desire to put an end to litigation, so that a person shall not be under continual fear of being threatened with a lawsuit in regard to disputed rights or liabilities, or of having a criminal prosecution hanging over his head.

Actions for debt or the recovery of money for arrears of rent, trespass, and libel, must be brought within six years from the time the cause of action arose, or from the time of the last payment of any portion of the debt, or a written acknowledgment was given. Actions of slander must be brought within two years. Actions to recover compensation for assault must be brought within four years. Where the money is due under a bond or other document under seal, the time limit is twenty years.

Actions for the recovery of land must be brought within twelve years. If a person enters into possession of land, say under a lease, and remains in possession for twelve years without acknowledging his landlord's right, or without paying him any rent, he (the tenant) will become the absolute owner of the property.

It should be remembered that in the case of debts, the right to receive payment is not destroyed by lapse of time, it is merely the remedy for recovering the debt is taken away. Thus a creditor whose debt has become statute-barred, if at any time any money belonging to the debtor should come into his hands, may pay himself out of that money. But in the case of land, not merely does lapse of time destroy the remedy, it destroys the right itself. For example, in the case of the tenant mentioned above, the tenant becomes the absolute owner of the property, and should his former landlord be allowed to take possession as tenant, he will not become the owner of the property once more.

STATUTORY MEETING, a general meeting of the shareholders of a limited company which *must* be held within not less than one month and not more than three months from the date at which the company is entitled to commence business. A report enabling the shareholders to ascertain the exact position of the company must be sent to all the shareholders seven days before this meeting. If the proper notices are not sent out before the

statutory meeting, the company is liable to be wound up.

STAY OF EXECUTION, a period during which a judgment of the Court will not be executed. As a rule, when judgment in an action is given to a plaintiff, he can immediately carry it into effect by seizing the property of the defendant and keeping it until the judgment of the Court has been satisfied. But in cases where the defendant is desirous of appealing, or for other sufficient cause, the execution of the judgment may be stayed.

STERLING, a name applied to standard English money.

STERLING BONDS. Bonds which are payable, both interest and principal, in English currency only.

STET. Let it stand. When a writing has been crossed out in mistake, the word "stet" denotes that the writing should be read as originally written.

STEVEDORE, one who is experienced in the loading or unloading of ships. The stowage of cargo requires skilful handling lest there should be a shifting of the cargo during the voyage, thus endangering the safety of the ship. Hence stevedores are employed to superintend the loading of vessels.

STIFFENING ORDER, an order made by the customs authorities permitting ballast or heavy cargo to be taken on board ship before the whole of the inward cargo is discharged. This is to prevent the ship being too light.

STOCK. There are certain differences between stock and shares of a company. Stock is always fully paid up, shares need not be. Stock can be divided into fractional parts, a share cannot be.

STOCK-BROKER, a broker who negotiates for the purchase or the sale of securities on the Stock Exchange. When any person wishes to buy or to sell shares or stock, he employs a broker, who in turn sells the shares to, or buys the shares from a stock-jobber.

STOCK EXCHANGE, the place where stock and shares are bought and sold. (Refer to "Stock Exchange" in *Index*.)

STOCK JOBBER. A member of the Stock Exchange who deals in securities on the Stock Exchange.

STOCK-TAKING, a valuation of all the goods and stock-in-trade and the machinery and plant of a business, so that the owner's assets may be correctly ascertained for the purpose of preparing the periodical balance sheet.

STOPPING A CHEQUE OR NOTE. This is done by giving an order to the banker not to pay a cheque, note or other instrument in cases where such instrument has been lost or stolen. The stopping of a bank note may be of little use save for the purpose of tracing the persons through whose hands the instrument has passed, for a banker cannot refuse payment of one of his own bank notes to a *bona fide* holder for value. Should a lost cheque fall into the hands of such a holder, stopping payment would be of no avail unless the lost cheque had been marked "Not Negotiable." The Bank of England charges a fee of 2s. 6d. for recording the numbers of lost notes.

STOP ORDER. A stop order authorises a broker to sell out stocks or shares when they reach a certain price, but the price must be made by a third person, and the broker himself cannot offer that price for them. If, however, when the stock reaches that price, the broker is unable to find a buyer, he may, by the custom of the American markets, sell at the next figure below that price. A stop order may also direct a broker to buy certain stock when it reaches a certain price.

STOPPAGE IN TRANSITU. This is the right of an unpaid seller of goods on hearing of the insolvency of the buyer, to stop the goods on their way to the buyer, before they reach the buyer or his agent (see under *Sale*).

STRADDLE or **SPREAD EAGLE,** a "put and call" option, i.e. an option which gives its holder the right either to buy or to sell a given quantity of stock at a fixed price on a given date.

SUBPŒNA, "under a penalty." A writ ordering a person to attend a Court on pain of paying a penalty for non-attendance.

SUBSCRIBED CAPITAL, that part of the authorised capital for which shares have been taken up, that is, the amount for which the shareholders are responsible, though not called upon, at present, to pay up in full.

SUCCESSION DUTY. Refer to *Index*.

SUFFERANCE WHARF, a wharf on which goods may be landed before any duty on them is paid. Such wharf is licensed by the customs authorities.

SUPERCARGO, an official in a merchant ship whose business it is to superintend all the commercial concerns of the voyage, such as the sale of the cargo, and the bringing back of a fresh cargo. Supercargoes are seldom employed now-a-days.

SURRENDER VALUE. When a person has effected an insurance on his life, it may happen that after a few years he may be unable to continue paying the premiums. In that case, most Life Offices will pay him a lump sum down, in return for his giving up the policy and having no further claim upon them. This lump sum is known as the surrender value of the policy. The longer the policy has been in force the greater will be its surrender value. Insurance Companies will not, as a rule, give any surrender value for a policy that has not been three years in force. A number of offices publish a surrender value of their policies.

SUSPENSE ACCOUNT. See *Account. Suspense.*

SUSPENSION OF PAYMENT. When traders and others engaged in business find that they are unable to pay their debts as they become due, they cease to pay *any* of their debts, or, as it is called, "suspend payment" as a preliminary to having their business wound up in bankruptcy.

SWEATING COINS, the practice of shaking gold coins in a bag until some portion of the metal is worn off. In this way a considerable amount of gold dust can be collected.

TAKE IN, to receive backwardation.

TAKING IN SHARES. When a speculator for a rise has bought more shares than he is able to take up at the settlement, he endeavours to get some one who, for a price, will take up the shares for him, paying for them and holding them until a subsequent settlement.

TAKING UP A BILL. A person is said to take up a bill of exchange or to retire it when he meets the bill. Should it be the acceptor who takes up the bill, the bill is discharged, and no one has any further liability on it; but should it be taken up by an indorser, he can sue any party prior to himself on the bill for the amount of the bill.

TALE QUALE, a term in the grain trade, signifying that the goods as sold are of the same quality as the sample, but that the risk of damage to them during the voyage is to be borne by the buyer.

TALLY TRADE, a system of selling goods on credit, the customers agreeing to pay weekly or monthly.

TALON, a document attached to the coupon sheet of a bearer bond, entitling the holder, when the last coupon has been presented and paid, to a fresh sheet of coupons. (See *Share Warrants.*)

TAPE PRICES, the prices of stocks and shares received through the medium of the Exchange Telegraph Company, by permission of the Committee of the Stock Exchange.

TARE. A deduction on the gross weight of goods sold in boxes, barrels, bags, or packages for the weight of the box or other material enclosing the goods. Tare is said to be *real* when the true weight of box or wrapper is known and deducted. *Average* tare is when the deduction is estimated from similar instances. *Customary* tare is reckoned at a uniform rate.

TARIFF, a list of fixed charges. A list of dutiable articles issued by the customs authorities, with the scale of duties charged upon them.

TASTING ORDER. When an intending buyer of wines or spirits wishes to see what the goods are like, he receives an order from the owner of the wines, requesting the warehouse keeper to permit the bearer of the order to taste the wines or spirits mentioned therein.

TELEGRAPHIC MONEY ORDERS. Refer to "Post Office" in *Index*.

TELEGRAPHIC TRANSFER. By means of T.T's, as they are called, a person in London is able to pay a house say in Bombay, a certain amount in rupees *on any particular day;* for on his paying to his Banker an equivalent in gold, at the transfer rate of the day, the Bank would cable to their branch in Bombay to pay the nominee the sum specified.

TELLER, the cashier in a bank who receives and pays out money over the counter.

TENANT'S FIXTURES, fixtures attached to property by a tenant. If these fixtures are put up solely for ornament or convenience, the tenant may at the expiration of his tenancy remove them, provided that the removal does not injure the landlord's property.

TERMINAL CHARGES, charges which a trader has to pay a Railway Company on whose lines goods belonging to or consigned to the trader have been carried. These charges are quite distinct from the charges made for carrying the goods, and are made in respect of loading, unloading, covering and uncovering, the merchandise. They include the cost of labour, machinery, plant, stores and sheets. Where the trader is not permitted by the Company to perform for himself these services, and a dispute arises as to the amount charged, the matter is referred to the Board of Trade.

TENDER. In the sense in which it is used here, tender is an offer by a debtor to pay the debt, such payment being refused by the creditor. When tender has been refused, the debtor must still remain ready and willing to pay the debt, for the debt is not extinguished. After tender the creditor cannot claim any interest from that time; and if he sues for the debt, and the debtor pays the money into court and proves that he had previously tendered the money, the creditor will have to pay all the costs of bringing the action.

A tender, in order to be valid, must fulfil all the following conditions:—

(1) It must be in the current coin of the realm or in notes of the Bank of England, and the money must be actually produced and shown to the creditor, unless the creditor dispenses with production.

(2) It ought to be the exact amount due, for an offer to pay a smaller sum is not a valid tender. Tender of a larger

amount is valid, provided that no change is demanded; suppose, for instance, a person who wishes to buy postal orders to the value of, say £4 17s. 6d., tenders to the post office clerk a £5 Bank of England note, the clerk may demur to receive the note, or may ask the purchaser to write his name on the note. The customer may, however, refuse to write his name, and he can compel the clerk to receive the note in exchange, because the note is legal tender, but he cannot insist on getting his change.

(3) It must be unconditional. Thus, if a debtor offers to pay a certain sum provided that the creditor admits that no more is due, and will give him a receipt in full, the offer is not a valid tender.

(4) The tender must be made before the creditor brings an action for the debt, for if not made before action, the debtor will have to pay the costs of the suit.

(5) The tender must be made to the creditor himself, or to his agent duly authorised to receive payment. Where a bailiff distrains for rent, a tender of the rent and the costs is valid if made either to the landlord or the bailiff, for the bailiff, the distress warrant being addressed to him, is duly authorised to receive payment. But tender to a man left in possession by the bailiff is not a valid tender, unless such man in possession has been expressly authorised to receive payment. (Refer to "Legal Tender" in *Index.*)

TERM OF A BILL, the length of time for which a bill is drawn, as sixty days after date.

TERMINABLE ANNUITIES, annuities given by a government or by a life insurance office in return for a lump sum down. These annuities may be for life, or for a period of years.

THIRD CLASS PAPER. Bills of Exchange the parties to which are of an inferior financial standing.

TICKETS, the document prepared by the purchaser's broker, setting forth the number of the shares, the price, and the name and address of the purchaser. On the ticket is written the name of the paying broker and the name of the jobber to whom he gives it. The jobber endorses on the ticket the name of the person to whom he delivers it, and the name of every person through whose hands it passes is indorsed until it reaches the seller's broker. In this way persons who own shares and desire to sell them are brought into touch with people who wish to buy them. (See under *Stock Exchange.*)

TICKET DAY or **NAME DAY,** the second day of the settlement on the Stock Exchange. The day on which the name of the purchaser of shares is passed to the seller by means of a "ticket," in order that the purchaser's name may be inserted in the deed of transfer.

TIDE WAITER or **TIDESMAN,** an officer of the customs who boards ships on their arrival, and remains on board until the cargo is discharged and the duties have been paid.

TIME BARGAIN, a contract to buy and to sell a given quantity of stocks or merchandise at a fixed price at some future date. Usually the contract really means to pay the difference between the price of the thing when the bargain is made, and the price at the time fixed for delivery. (See *Differences.*)

Such a contract to pay differences is really a wagering contract, and is therefore void. It sometimes means, however, a contract to sell something, the amount or value of which cannot at the time be ascertained, to be delivered at a future date. Such a contract is not a wagering contract, and is, therefore, not void.

TIME POLICY, in marine insurance, a policy in which property in transit is insured for a certain period of time.

TOKEN MONEY, coins of which the value marked on them is greater than the real value of the metal composing them, but which can legally be exchanged at their nominal value for standard money.

TONNAGE. The "register tonnage" of a ship is that on which dock, harbour, light, and other dues are based. A "gross register ton" is 100 c. ft. of internal volume. The "net register tonnage," which is that actually inscribed on the register of British Shipping, is obtained by deducting from the gross register tonnage the space for the crew's quarters, engine room, etc. This registered tonnage does not represent the carrying capacity of the ship, for of course all above the load-line must for this purpose be excluded. What is called "Freight Tonnage" is taken at two-fifths of register tonnage.

TONTINE, a term derived from the name of the Italian who invented the system of borrowing money, the lenders receiving an annuity from the borrowing State. On one annuitant dying, his annuity goes to the survivors, and so on to the last survivor, who receives until his death the whole amount of the annuities that had been payable to his fellows.

TRADE BILL, a Bill of Exchange founded on a real transaction, the drawer of the bill having previously sent goods or given credit to the person on whom he has drawn the bill.

TRADE FIXTURES, fixtures attached to property by a tenant for the purposes of his trade or business. These may be removed at the expiration of the tenancy, under the same conditions as tenant's fixtures.

TRADE MARK. A device, symbol, word, label, picture, or the like affixed or attached to manufactured goods by a trader or a manufacturer, so as to distinguish them from goods of a similar nature dealt in or manufactured by other persons. (Refer to "Trade Marks" in *Index.*)

TRADE PRICE, the price at which goods are sold by the wholesale trader or the manufacturer to the retailer.

TRADES UNION. A combination of workmen for regulating the relations between masters and workmen, or between workmen and workmen. (Refer to "Trade Union" in *Index.*)

TRAFFIC RETURNS, the weekly or monthly statements issued by railway and other carrying companies.

TRANSFER, the document prepared by the seller's broker transferring to the purchaser the shares or stock in consideration of the money paid for such shares. On transfers of stock, the Bank of England charges a fee of 9s. where the transfer is less than £25 stock, and 12s. if the value of the stock exceeds £25.

TRANSFER DAY, the days on which the Bank of England enters transfers of stock in their books.

TRANSIRE, a warrant from the Custom House to let goods pass. A permission given to a ship to proceed on her voyage, given by the customs authorities on their requirements being complied with.

TREASURE-TROVE, money, gold and silver plate or bullion found hidden in the earth or other private place, the owner thereof being unknown or unfound. Treasure-trove belongs to the Crown, and any person concealing it commits a crime. In order to constitute treasure-trove, the valuables must originally have been hidden by their owner. If they had been merely abandoned by him or had been lost, they would become the property of the finder.

TREASURY BILLS. When the Government wants money to meet a temporary deficiency, it borrows money for short periods, giving the lenders treasury bills, payable in three, six, or twelve months. These bills are negotiable instruments. The following is the form of such a bill:—

B. 0901. Due April 25th, 1905. B. 0901.

£

By virtue of an Act, 49 Vic., c. 2.

London, *January* 25th, 1905.

This Treasury Bill entitles* or order, to payment of pounds at the Bank of England out of the Consolidated Fund, on the 25th of April, 1905.

Signed, A. B.,

Comptroller and Auditor General.

*If this blank is not filled up, the bill will be paid to bearer.

TREASURY BOND. See *Exchequer Bond.*

TRET. An allowance formerly made to purchasers of certain kinds of goods on account of their being obliged to transport their purchases. It is now never allowed.

TRINITY HOUSE. This is a corporation whose duties are the licensing and appointing of pilots, the erection and regulation of lighthouses, buoys, and beacons around the coast, for which they are empowered to levy dues on merchant ships. Any surplus of revenue is distributed in pensions to old and decayed merchant seamen and those dependent upon them. They also act as nautical advisers to the High Court of Admiralty.

The Corporation of the Elder Brethren of the Holy and Undivided Trinity consists of thirteen elder brethren elected by the younger brethren. Of the elder brethren, two are taken from the Royal Navy and eleven from the Merchant Service, and consist of men who have had a great experience in the naval and merchant service, and it is they alone who discharge the duties of the corporation. There are also honorary elder brethren admitted on account of their eminence in the State. The address of the Corporation is Trinity House, Tower Hill, E.C.

TRUCK SYSTEM, the system of paying workmen their wages not in money but in goods. It is now illegal.

TRUST. In a commercial sense, a trust is formed when a number of firms or trading corporations in the same kind of business combine for the purpose of doing away with competition amongst themselves, and of getting control of the market so that they may dictate what prices they will for their wares. The method of combining is for the various firms to be valued, and then their property and goodwill transferred to trustees who control the combination. In return, each firm that joins has a right to a share of the earnings of the combine, in proportion to the value of the business which it brought.

Where the trust is strong enough, it speedily wipes out its rivals. For owing to underselling, their rivals have to retire from business. Then the trust advances its prices and so levies an exorbitant tax on the community. The United States affords many examples of this iniquitous method of carrying on trade.

TRUSTEE IN BANKRUPTCY, the person appointed by the creditors of a debtor who has been adjudged bankrupt. The trustee takes over the property of the bankrupt and realises it for the benefit of his creditors. (See under *Bankruptcy.*)

TURN OF THE MARKET, the difference between the selling price and the buying

price of stocks and shares at the same time. When a jobber is asked to name a price, he mentions two—one the price at which he will buy, the other the price at which he will sell. The difference between the two prices is called the "turn of the market," and represents the jobber's profit. For instance, if the jobber names a price for Canadian Pacifics of 135, 135½. The difference between the two prices is half a sovereign on each share, and is the "turn of the market."

TURN OVER, the value of the trade done by any firm or business during a given period.

UBERRIMAE FIDEI. A name given to contracts like that of insurance, in which both parties must exercise the utmost good faith toward each other. (See under *Insurance.*)

ULLAGE, leakage, waste.

ULTRA VIRES, a phrase applied to corporations, trading or otherwise, when they exceed the powers conferred on them by law. Anything done "ultra vires" is absolutely void.

UNDER PROTEST. Money may be paid under protest when it is illegally demanded or more is demanded than is lawfully due, for the purpose of avoiding some penalty that is threatened.

UNDERWRITER. The name in marine insurance of the person who subscribes or writes his name at the foot of a policy, thereby guaranteeing that in return for a share of the premium he will be answerable for a proportionate share of any loss that may occur to the property insured. (See under *Marine Insurance.*)

The term is also applied to a person who, in return for a certain commission, undertakes that if the public do not take up shares in a company that is being floated, he himself will take up and pay for a certain number of the shares. (See under *Limited Liability Companies.*)

UNCLAIMED DIVIDENDS. Government Stock on which no dividend has been claimed for ten years is transferred, together with the dividends, to the National Debt Commissioners.

UNFUNDED DEBT or **FLOATING DEBT,** loans contracted by Government for short periods. In 1905, for example, these loans exceeded 70 millions. They are raised by means of Exchequer Bills, Exchequer Bonds, and Treasury Bills, which have to be paid off at a given date.

UNIFIED STOCK. Where a company has raised loans at varying rates of interest and has issued stock representing such loans, when these different kinds of stock are united into one bearing a uniform rate of interest, the amalgamated stocks are described as "unified stock."

UNMERCHANTABLE QUALITY, a term applied to goods which are not up to the usual standard, or which on account of inferiority cannot be sold except at a sacrifice.

UNSEAWORTHY, the condition of a ship which it is unsafe to load with a cargo and send on a voyage. This condition may arise from various causes, such as insufficiency or incompetency of the crew, incompetency of the master, or the unsatisfactory state of repair of the ship.

UPSET PRICE, the lowest price at which property can be started at a sale by auction. If the bidding cannot be made to start at this figure, the property is withdrawn. If the bidding starts at this figure, and no higher bid can be obtained, the property must be sold to the person making the bid. Upset price is a reserve price disclosed before the bidding begins.

USANCE, the time allowed by custom in certain countries for the payment of a bill of exchange. It applies to foreign bills. When the time is a month, half usance is reckoned as fifteen days. But the term is hardly ever employed at the present day.

USURY, an excessive and unconscionable rate of interest charged by money-lenders on loans. After the abolition of the Usury Laws in 1854, which punished severely money-lenders and others who exacted exorbitant rates of interest, many poor and ignorant borrowers were harshly dealt with and robbed by money-lenders. Accordingly, in 1900, the Money-Lenders Act was passed, and came into operation in the November of that year. (Refer to "Money Lenders" in *Index.*)

VALUE, a term used in transactions relating to bills of exchange, e.g. "we have valued upon you at three months," meaning that they had drawn a bill for three months on the person to whom the letter is addressed.

VALUE RECEIVED, a term written on bills of exchange implying that the drawee has received from the drawer either money or money's worth. It is not really necessary to write these words, as the law presumes that value has been given for the bill.

VALUED POLICY, a policy of marine insurance, in which the amount for which the property is insured is stated.

VENDOR'S SHARES are shares in a company allotted to a person who sells his business to that company.

VENTURE, goods sent at the consignor's risk to be sold for what they will fetch at the place of destination.

VICTUALLING BILL, a customs document authorising the master of a ship to take on board bonded goods as stores for the outward bound voyage.

VOUCHER, a document stating the fact that a money payment has been made.

VOYAGE POLICY, a policy insuring a ship during its voyage from a specified place to a specified place.

WAGES, the weekly payment made to a workman. In the case of the bankruptcy of an employer or of the winding-up of a company, the labourers and workmen must be paid before any other creditors of the bankrupt can be paid. The amount so paid must not exceed two months' wages up to £25. Further, the wages earned by the personal labour of a bankrupt will not go to his creditors. Wages must be paid only in money.

WALL STREET, the name given to the New York Stock Exchange, from the street in which it is situated.

WAREHOUSE KEEPER or **WAREHOUSEMAN,** one whose business it is to receive goods for the purpose of storage, and for which he charges a rate. He is bound to use reasonable diligence in preserving the goods, and has a lien on the goods until his charges are paid, i.e. he can keep the goods until he receives payment for warehousing them.

WAREHOUSING SYSTEM, the system by which goods liable to duty may be stored in bonded warehouses, and are not made to pay the duty until they are taken out of the warehouse for home consumption. If taken out for exportation no duty is paid. Such goods, when in the warehouse, are said to be in "bond."

WARRANT, a written authority issued by a magistrate to a police officer commanding him to arrest an offender. In commerce, a warrant is a document entitling its holder to certain rights or to money or other property, e.g. dock warrants, share warrants, and the like.

WARRANT OF ATTORNEY, an instrument in writing given by a client to an attorney, empowering him to appear on behalf of the client in an action, or to suffer judgment to be given against the person giving him the authority.

WARRANTY, a promise that in case there is a failure to perform any of the terms of a contract, the party injured by such failure shall be entitled to compensation. The breach of warranty does not entitle the party injured to repudiate the contract; damages are all that he is entitled to. (Refer in *Index* to "Caveat Emptor" and "Warranty.")

WASTE BOOK. In book-keeping, this is a book in which all business transactions are entered as they occur. Thence they are transferred to the Journal, and from that they are entered into their proper accounts in the Ledger.

WATERING STOCK, the practice of increasing the nominal capital of a company, for the purpose, among others, of keeping down the apparent rate of interest on the stock and shares of the company.

WATER-LOGGED, a term applied to a ship when through a leak or a collision she receives so much water in her hold as to become unmanageable, though still keeping afloat.

WAY-BILL, a list of the passengers who are carried in a public conveyance, or the description of goods sent with a common carrier by land.

WET GOODS, liquids such as wines, oils, paints, and the like.

WHARFAGE, the charge for accommodating goods at a wharf.

WHARFINGER, the person who owns or keeps a wharf for the purpose of receiving and shipping merchandise. His position is analogous to that of *a warehouseman* (which see).

WHARFINGER'S RECEIPT, a receipt given by a wharfinger for goods received at his wharf for shipment.

WINDING UP, the process by which the business of a limited company is brought to an end. The winding up may be voluntary, in which case the company may not be insolvent, or winding up under the supervision of the Court, or compulsory winding up by the Court.

WITHOUT ENGAGEMENT, without binding force.

WITHOUT PREJUDICE. See *Prejudice, Without.*

WITHOUT RECOURSE (The same as *Sans Recours*, which see).

WITHOUT RESERVE. When property is to be sold without reserve, it means that the property will be knocked down to the highest bidder, and that neither the seller nor any person in his behalf shall bid at the auction.

WORKING PARTNER, a partner who takes an active part in the business of the firm.

WRIT, a written order issued by the authority and in the name of the sovereign of a State, for the purpose of compelling the person named therein to attend at a certain place, or to do some act named therein.

YEAR'S PURCHASE, a term denoting that property is worth so many times its annual rent.

ZOLLVEREIN, a customs union of the German States, of which Prussia was the head, founded in 1819. By this union the different States were regarded as one for the purpose of levying customs dues, instead of dutiable goods paying these dues at the borders of each State through which the goods had to be transported. This union was superseded on the establishment of the German Empire, the Federal Council of which has taken the place of the Zollverein.

COMMERCIAL TERMS IN FOUR LANGUAGES.

English.	French.	German.	Spanish.
Abandonment (Marine Insurance)	Abandon, délaissement	Abtretung	Abandono.
Above Par	Audessus du pair	Ueber Pari	Arriba la par.
Acceptance (of Bill of Exchange)	Acceptation	Annahme	Aceptacion.
Acceptor	Accepteur	Acceptant	Aceptante.
Accommodation Bill	Billet de Complaisance	Gefälligkeitswechsel	Letra de acomodación.
Account	Compte	Conto	Cuenta.
Account, Capital	Compte de Capital	Kapital Conto	Cuenta de capital.
Account, Current	Compte courant	Conto-Corrent	Cuenta corriente.
Account, Profit and Loss	Compte des Profits et Pertes	Gewinn-und Verlustconto	Cuenta de ganancias y pérdida
Account Sales	Comptes des ventes	Kommissions Abrechnung	Cuenta de ventas.
Account Stated	Relevé	Vereinbarte Abrechnung	Cuenta cerrada.
Account, Stock Exchange	Compte Liquidation	Börsendifferenzabrechnung	Liquidación.
Account, Suspense	Compte en suspens	Interimsconto	Cuenta en suspenso.
Accountant	Comptable	Bücherrevisor	Contador.
Act of Bankruptcy	Acte de Faillite	Konkürs-Vergehen	Acto de quiebra.
Act of God	Force Majeure	Naturereigniss	Fuerza mayor.
Active Partner	Associé gérant	Aktiver Theilhaber	Socio industrial.
Adjustment (Marine Insurance)	Dispache	Aufmachung einer Havarie	Ajuste.
Advance	Avance, hausse	Vorschuss	Anticipo.
Advance Note	Bordereau d'avance	Vorschussquittung	Vale de adelanto.
Adventure, Bill of	Compte de spéculation	Spekulations-Conto	Recibo provisorio.
Advice	Avis	Aviso	Aviso.
Affreightment	Affrètement	Befrachtungscontract	Fletamento.
After Date	A (3 mois) d'échéance	Von einem Datum ab	Después de la fecha.
After Sight	„ de vue	Nach Sicht	A' vista.
Agent	Agent, commissionnaire	Agent, Kommissionär, Vertreter	Agente.
Allonge	Allonge (appendice d'un chèque)	Allonge	Allonge.
Allotment	Répartition	Antheil	Decreto.
Allotment Note	Avis ou lettre de répartition	Antheil Vormerkung	Distribución.
Allottee	Souscripteur	Antheil Besitzer	Suscriptor.
All Rights Reserved	Tous droits réservés	Alle Rechte vorbehalten	Derechos de propiedad.
Annuity	Annuité, rente viagère	Jahresrente	Anualidad.
Arbitrage	Arbitrage	Arbitrage	Arbitraje.
As per Advice	Suivant avis	Laut Bericht	Según aviso.
Assets	Actif	Aktiva (Guthaben)	Activo, Fondos testamentarios.
Assignment	Cession, abandon	Uebertragung	Asignación.
At sight	A vue	Nach Sicht	A la vista.
Attorney, Power of	Procuration, Pouvoir	Vollmacht	Poder.
Auction	Vente aux Enchères	Versteigerung	Subasta.
Audit	Vérification des comptes	Untersuchung	Ajuste de cuentas.
Auditor	Vérificateur des compte	Auditor (Rechnungsrevisor)	Contador Público.
Average (in Marine Insurance)	Avarie	Havarie	Avería.
Average Bond „	Garantie d'avarie	Havarie Verschreibung	Obligación de avería.
Average Clause „	Clause d'avarie	Havarie Klausel	Claúsula de avería.
Average, General „	Avarie moyenne	Allgemeine Havarie	Avería general.
Average, Particular „	Avarie particulière	Havarie des Einzeln	Avería parcial.
Average Stater or Adjuster	Dispacheur	Dispache (Dispacheur)	Comisionado de averías.
Award	Jugement arbitral	Schadenersatz	Decisión.
Balance of Trade	Balance Commerciale	Import und Export Saldo	Balance de Importación.
Balance Sheet	Bilan	Bilanzbogen	Balance.
Bank Bill	Effet de banque	Bankwechsel	Letra de cambio.
Bank Credit	Crédit en Banque	Bankkredit	Crédito bancario.
Bank of Deposit	Banque de dépôts	Depositenbank	Banco de Depósito.
Bank of Issue	Banque d'émission	Zettelbank	Banco de Emisión.
Bank, Joint Stock	Banque par actions	Vereinsbank	Banco Anónimo.
Bank Notes	Billets de Banque	Banknoten	Billetes de Banco.

Hypothec	Créancier hypothécaire	Hypotheke	Hipoteca.
Impersonal Accounts	Comptes impersonnels	Sachen Conto	Cuentas ficticias.
Inconvertible Paper Currency.	Papier-monnaie inconvertible.	Nichtverwerthbare Papier Valuta	Papel Moneda inconvertible.
Indorsee	Porteur (bénéficiaire par endos)	Der Indossat	Portador.
Indorsement	Endos	Das Giro	Endoso.
Indorser	Endosseur	Der Girant	Endosante.
Inscribed or Registered Stock.	Actions ou valeurs nominatives	Eingeschriebene or registrirte Effekten	Valores inscritos.
Insurable Interest	Intérêt assurable	Versicherbare Zinsen	Intéres asegurable.
Interest Warrant	Bordereau d'intérêt	Zinscoupon	Warrants de interés.
Interim Dividend	Dividende intérimaire	Interimsdividende	Dividendos provisorios.
Jettison	Jet à la mer (du cargo)	Seewurf von Deckladung	Echado á la mar.
Jobber	Agioteur	Jobber	Corredor de Bolsa.
Joint Account	Compte commun	Gemeinschaftliches Conto	Cuenta de Sociedad.
Joint Stock Bank	Banque par actions en commandite	Aktienbank (Bank auf Aktien)	Banco Anónimo.
Joint Stock Company	Société anonyme	Aktiengesellschaft	Compañía Anónima.
Journal	Journal	Journal	Libro del Diario.
Lay Days	Jours de planche	Liege Tage	Días de plancha.
Leakage	Coulage	Abgänge	Merma.

English.	French.	German.	Spanish.
Ledger	Grand Livre	Hauptbuch	Libro Mayor.
Legal Tender	Monnaie légale, cours légal	Gesetzmässige Valuta	Moneda Legal.
Letter of Allotment	Lettre de répartition.	Antheilsbrief	Carta de repartición.
Letter of Credit	Lettre de Crédit	Kreditbrief	Carta de crédito.
Letter of Renunciation	Lettre de renonciation	Verzichtschreiben	Carta de renunciación.
Letters Patent	Brevet d'invention	Patent (Erfindungspatent)	Patentes, Ejecutoria.
Life Insurance	Assurance sur la vie	Lebensversicherung	Seguros sobre la vida.
Light Dues	Droits de phare	Leuchtthurm Abgaben	Derechos de Faro.
Limited and Reduced	Limité et réduit	Limitirt und reduzirt	Limitado.
Locomotive Charges	Frais de locomotion	Lokomotive Abgaben	Gastos de locomoción.
Log-Book	Livre du lock	Logbuch (Schiffsjournal)	Diario de navegación.
Making-up Day	Jour des compensations.	Schluss-Tag	Día de arreglo.
Making-up Price	Cours de compensation	Schluss-Preis	Curso de la liquidación.
Manifest	Manifeste	Ladungsverzeichniss	Manifiesto.
Margin	Marge, agiotage	Margin	Margen.
Marked Cheque	Chèque certifié	Attestirter cheque	Cheques visados.
Market Rate of Discount	Taux du marché d'escompte	Markt Disconto Zinsfuss	Tipo de descuento.
Maturity	L'Echéance	Fälligkeit	Vencimiento.
Minute Book	Registre des Procès verbaux	Kladde	Libro de minutas.
Mixed Policy	Police mixte	Gemischte Police	Póliza de doble fin.
Money Market	Marché monétaire.	Geldmarkt	Bolsa.
National Debt	Dette publique.	Nationalschuld	Deuda Pública.
Negotiable Instruments or Paper	Documents ou papiers négociables	Negozierbare Dokumente (Werthpapiere)	Instrumento ó papel negociable
No Funds	Sans fonds	Ohne Fonds	No tiene fondos.
Notary Public	Notaire	Notar	Notario público.
Not Negotiable	Non-négociable	Nicht veräusserlich	No negociable.
Note of Hand	Billet à ordre	Schuldschein	Pagaré.
Official Broker	Courtier officiel.	Angestellter Börsenmakler	Corredor oficial.
On Demand	A présentation.	Auf Begehr	A presentación.
Open Account	Compte ouvert.	Offenes Conto	Cuenta en descubierto.
Open Credit	Crédit à decouvert	Offener Kredit	Crédito abierto.
Open Policy	Police Courante	Offene Police	Poliza abierta.
Option	Option, prime	Option	Privilegios.
Ordinary Stock or Shares	Actions ordinaires.	Gewöhnliche Effekten (Aktien)	Acciones comunes.
Original Bill	Première de change	Originalwechsel	Letra original.
Over Capitalise	Sur-capitaliser	Uebermässig Kapitalisirt	Demasiado capitalizada.
Overdue Bill	Traite en souffrance	Ueberfälliger Wechsel	Pagaré vencido.
Paid-up Capital	Capital versé	Volleingezahltes Kapital	Capital pagado.
Paid-up Shares	Actions libérées	Volleingezahlte Aktien	Acciones libradas.
Panic, Commercial	Panique	Handelspanik	Pánico comercial.
Paper Credit	Crédit en papier	Offener (Wechselkredit)	Efectos de crédito.
Paper Currency	Papier-monnaie	Papier Valuta	Papel Moneda.
Par	Au pair	Alpari or Pari	A la par.
Par of Exchange	Parité.	Gleicher Gegenwerth	Par de cambio.
Pass Book	Livre de Banque	Contobuch	Libro bancario.
Passing a Name	Enrégistrement	Einen Namen verbuchen	Mencionar los nombres.
Passport	Passeport	Pass (Geleitsbrief)	Pasaporte.
Pawn or Pledge	Gage	Pfand	Préstamo.
Pawnbroker	Mont de Piété	Pfandleiher	Prestamista.
Pay Day	Jour de règlement	Zahltag	Tercer día de liquidación.
Payee	Porteur	Inhaber	Portador.
Payer	Payeur	Bezahler	Pagador.
Perils of the Sea	Perils de la mer	Die Gefahren auf hoher See	Riesgos de fuerza mayor.
Permit	Permis	Permit	Vales personales.
Personal Account	Compte personnel.	Persönliches Conto	Gastos personales.
Personal Property	Propriété mobilière	Persönliches Eigenthum.	Seguridades personales.
Petty Cash Book	Livre de petite caisse	Kassenbuch für kleine Ausgaben	Libro de gastos menores.
Piece Goods	Marchandises en pièces	Stückgüter	Géneros vendidos por pieza.
Placing Shares	Placements d'actions.	Aktien placieren	Colocar acciones.
Policy	Police	Police	Poliza.
Pool	Syndicat de spéculants	Ring (mehrerer Spekulanten)	Colocar fondos en común.
Post Date	Post-date	Späteres Datum	Posdata.
Poste Note	Déclaration supplémentaire	Anweisung auf Sicht	Letra de Banco.
Poste Restante	Poste Restante.	Postlagernd	Poste Restante.
Preference Bonds	Obligations privilégiées	Preferenz-Obligationen	Bonos de preferencia.
Preference Stock or Shares	Actions privilegiées	Preferenz-Effekten	Acciones privilegiadas.
Prejudice, Without	Sans préjudice	Ohne Prejudiz	Sin perjuicio.
Premium	Prime	Prämie	Premio.
Presentment	Présentation	Präsentieren	Presentación.
Pressure on the Money Market	Pression sur le marché monétaire	Pression auf dem Geldmarkt	Presión en el mercado financiero.
Price, Current	Prix courant	Laufender Preis	Precio corriente.
Primage	Chapeau	Primage	Prima ó Capa.
Procuration	Procuration	Procura	Procuración.
Profit and Loss Account	Compte des Profits et Pertes	Gewinn und Verlust Conto	Cuenta de ganancias y pérdidas.
Prohibited Goods	Marchandises prohibées.	Vebrotene Waaren	Géneros prohibidos.
Promissory Note	Billet	Schuldschein, Solawechsel	Pagaré.
Promoter	Promoteur	Unternehmer, Gründer	Promotor.
Prompt	Prompt, immédiat	Prompt	Tiempo de pago.
Prospectus	Prospectus	Prospektus	Prospectos.
Protection	Protection	Schutz, Schutzzoll	Protección.
Protest	Ptotêt ou protestation	Protest, Einspruch	Protesto.
Proxy	Procuration, Fondé de pouvoir	Stellvertreter, Vollmacht	Poder, Apoderado.
Qualified Acceptance	Acceptation sous réserve	Bedingte Annahme	Aceptación especificada.
Quarantine	Quarantaine	Quarantäne	Cuarentena.
Quarter Days	Terme	Quartalstag	Trimestrales.

English.	French.	German.	Spanish.
Quotation	Côte	Geldkurszettel	Cotización.
Railway Clearing House	Bureau central de chemins de fer	Eisenbahn Abrechnungsstelle	Inspección de liquidación.
Rate of Exchange	Le Cours.	Wechselkurs	Tipo de cambio.
Real Estate	Fortune immobilière	Grundeigenthum	Bienes inmuebles.
Real Securities	Garantie en Immeubles	Garantie durch Grundbesitz	Fianza electiva.
Receipt	Reçu, Récépissé	Empfangsschein	Recibo.
Re-Draft	Traite de retraite	Rücktratte	Giro renovado.
Registered Bond	Obligation nominative	Eingetragene Obligation	Obligaciones certificadas.
Registered Stock	Action Nominative, capital nominatif.	Eingetragene Effekten	Valores certificados.
Re-insure	Réassurer	Rückversicherung	Asegurar nuevamente.
Renewal of a Bill	Renouvellement d'une traite	Wechsel-Erneuerung	Prolongación de una Letra.
Reserve Capital	Capital de réserve.	Reserve Kapital	Capital de reserva.
Reserve Fund	Fonds de réserve	Reserve Fonds	Fondos de reserva.
Restraint of Trade	Restriction en commerce	Handelsbeschränkung	Contratos leoninos.
Restrictive Indorsement	Endos limité	Eingeschränktes Giro	Endoso restringido.
Retiring a Bill	Retirement d'un effet	Eine Tratte einlösen	Retirar una Letra.
Revenue Account	Compte des revenus	Einnahme Conto	Renta Pública.
Rigging the Market	Agitation des cours à la bourse	Kurstreiberei	Jugar al alzar y baja.
Ring	Groupe d'opérateurs	Ring	Liga.
Rolling Stock	Matériel de roulement	Wagenpark	Material de explotación.
Royalty	Prime	Abgabe (Lizens)	Derechos de autor ó inventor.
Running Days	Jours de Cours.	Laufende Tage	Días de trabajo y de fiesta.
Run on a Bank	Panique	Bestürmung der Bank	Retiro de fondos en caso de pánico.
Rupee Paper	Papier-roupie	Rupien Papiergeld	Pagarés de India.
Sale or Return	En dépôt, vente à condition	Verkauf	Consignación.
Salvage	Le sauvetage	Bergegeld	Salvamento.
Salvage Loss	Perte de sauvetage	Bergeverlust	Pérdida neta.
Sans Recours	Sans recours	Ohne weitere Verpflichtung	Sin recursos.
Scrip	Certificats provisoires	Interimsaktie	Certificado provisorio.
Sea Letter	Lettre maritime	Schiffspass	Permiso de navegación.
Seaworthy	Capable de prendre la mer	Seetüchtig	Navegable.
Second Class Paper	Devise de second ordre	Effekten zweiter Güte	Valores de segunda clase.
Secured Creditor	Créditeur couvert	Sichergestellter Gläubiger	Acreedor garantizado.
Seignorage	Seigneuriage	Das Regal	Señoreaje.
Selling Out	Vente à tout prix	Zwangsverkauf	Deshacerse.
Settling Day	Dernier jour de la liquidation	Schlusstag	Diá de liquidación.
Shares	Actions	Aktien	Acciones.
Share Certificate	Certificat d'actions	Aktien-Bescheinigung	Certificado de títulos.
Share Warrant	Coupons d'actions	Aktien-Coupon	Acción garantida.
Ship Broker	Courtier Maritime.	Schiffsmakler	Corredor marítimo.
Ship Master	Capitaine	Schiffskapitain	Capitán.
Shipping Bills	Frais de chargement	Verzeichniss der ausgeladenen Waaren	Manifiesto de embarque.
Shipping Note	Note d'expedition.	Note über die verschifften Waaren	Vales de buque.
Ship's Papers	Les papiers d'embarquement	Schiffspapiere	Documentación de buque.
Ship's Protest	Protestation	Schiffsprotest	Protesta.
Ship's Stores	Provisions de marine.	Schiffsvorrath	Víveres sujetos á impuesto.
Short Bills	Devises à courte échéance	Wechsel auf kurze Sicht	Letras á plazo corto.
Short Loans	Emprunts ou prêts à courte échéance	Darlehen auf kurze Zeit	Préstamos á plazo corto.
Sight Bill	Traite à vue	Sichtwechsel	Letra á la vista.
Sinking Fund	Fonds d'amortissement	Schuldentilgungfonds	Caja de amortización.
Sleeping Partner	Commanditaire	Stiller Theilhaber	Socio comanditario.
Special Acceptance	Accéptation spéciale	Bedingte Annahme eines Wechsels	Aceptación especial.
Specie Payments	Paiements en espèces	Zahlungen in klingender Münze	Pagos en Especias.
Stale Cheque	Chèque sans valeur	Werthloser Cheque	Cheque caducado.
Stock	Fonds publics, Rente.	Effekten	Capital.
Stock Broker	Agent de change	Makler der Effektenbörse	Bolsista.
Stock Exchange	Bourse	Effektenbörse	Bolsa.
Stock Jobber	Agioteur	Effektenjobber	Negociante de acciones.
Stock-taking	Inventaire	Inventur (Inventur-Aufnahme)	Inventario.
Stopping a Cheque	Arrêter un chèque	Einen Cheque sperren	Suspender el pago de un cheque.
Subscribed Capital	Capital souscrit	Gezeichnetes Kapital	Capital suscrito.
Surrender Value	La valeur d'abandon	Rückkaufs-Werth einer Versicherungs Police	Valor de renuncio.
Taking in Shares	Prendre en Report	Spekulations-Zeichnung von Aktien	Tomar acciones.
Taking up a Bill	Honorer une traite	Einen Wechsel honorieren	Satisfacer una Letra.
Tally Trade	Commerce à temperaments	Abzahlungsgeschäft	Comercio temporario.
Tape Prices	Cours télégraphiques.	Telegraphischgemeldete Preise	Precios telegráficos.
Tariff	Tarif	Tarif	Tarifa.
Teller	Caissier	Zahlmeister (Kassirer)	Cajero.
Terminal Charges	Bilan final	Schlussforderung	Gastos convenidos.
Tender	Soumission	Angebot	Apuesta.
Term of a Bill	Echéance d'un effet	Fälligkeits-Termin (eines Wechsels).	Duración de una Letra.
Terminable Annuity	Annuité a termes	Annuität auf bestimmte Zeit	Anualidades terminables.
Time Bargain	Une opération à terme	Zeitgeschäft	Mercado de término.
Time Policy	Police à termes.	Zeitpolice	Póliza de término.
	Marques monétaires	Verkehrsmünzen	
Tonnage Dues	Droits de tonnage.	Schiffstonnagenzoll	Tonelaje registrado.
Trade Bill	Traite de fabrique.	Tratte	Letra comercial.

English.	French.	German.	Spanish.
Trade Mark	Marque de fabrique	Handelsmarke, Waarenzeichen	Marca de fábrica.
Trade Price	Prix de fabrique	Engros Preis	Precio arreglado.
Trades Union	Syndicat ouvrier	Gewerkverein	Unión Obrera.
Traffic Returns	Rapport périodique des recettes pour transports.	Betriebsbericht	Estadísticas de tráfico.
Transfer	Transfert	Uebertragung	Transferencia.
Transfer Day	Jour des transferts	Uebertragungstag	Días de registro de transferencias.
Treasury Bill	Bon de Trésor	Schatzbon	Cédulas de Tesorería.
Treasury Bond	Obligation du Trésor.	Schatzamtsschein	Bonos de Tesorería.
Truck System	Système du Truck	Trucksystem	Pago de mercancías.
Trustee in Bankruptcy	Syndic	Konkursverwalter	Síndico de la quiebra.
Turn of the Market	Revirement du marché	Kauf und Verkaufs-Preise	Diferencia.
Turn Over	Chiffre d'affaires faites	Umsatz	Total.
Under Protest	Sous protêt	Unter Protest	Bajo protesta.
Underwriter	Assureur	Versicherer	Asegurador.
Unclaimed Dividends	Dividendes non réclamés	Nicht behobene Dividende	Dividendos no reclamados.
Unfunded or Floating Debt	Dette flottante.	Schwebende Schuld	Deuda flotante.
Unified Stock	Rente unifiée	Einheitliche Effekten	Deuda Unificada.
Unmerchantable Quality	Qualité non-vendable	Nichtmarktfähige-Qualität	Mercaderías de mala calidad [Invendibles.
Unseaworthy	Incapable de prendre la mer	Seeuntüchtig	En mal estado.
Usance	Usance	Usance	Usanza.
Usury	Usure	Wucher	Usura.
Value Received	Valeur reçue	Valuta erhalten	Valor recibido.
Valued Policy	Police évaluée	Abgeschätzte Police	Póliza fija.
Vendor's Shares	Part de fondateur.	Verkäufer Aktien	Acciones del vendedor.
Venture	Entreprise, Spéculation	Spekulations-Verkauf	Consignación.
Victualling Bill	Le compte de ravitaillement d'un navire	Zolldeklaration für Schiffsproviant	Lista de provisiones sujetas á impuesto.
Voucher	Preuve, Pièce justificative	Quittung	Comprobante.
Voyage Policy	Police de voyage	Schiffsversicherungspolizze	Póliza de viaje.
Warehouse Keeper	Gardien de magasin	Lagerhaus-Aufseher	Guarda Almacén.
Warranty	Cautionnement.	Garantie	Garantía.
Waste Book	Brouillon	Kladde	Libro Borrador.
Wharfinger	Gardien du quai	Werftbesitzer	Encargado del muelle.
Winding-up	Dissolution, Liquidation	Gesellschafts-Auflösung	Liquidación.
Without Engagement	Sans engagement	Ohne Verpflichtung	Desocupado.
Without Prejudice	Sans préjudice	Ohne Verbindlichkeit	Sin perjuicio.
Without Recourse	Sans recours	Ohne Rekurs	Sin recursos.
Without Reserve	Sans réserve	Ohne Reserve	Sin reserva.
Working Partner	Associé gérant d'une entreprise	Aktiver Theilhaber	Socio activo.

ABBREVIATIONS OF COMMERCIAL TERMS.

A 1—A mark indicating a first-class vessel (see p. 629 under "Lloyd's Register").
@—At.
a.a.r.—Against all risks (insurance).
A/C—Account current.
a/c—Account.
a/d—After date.
a.m.—Ante-meridiem (before mid-day).
a/o—Account of.
A/S—Account sales.
B/E—Bill of Exchange.
B/L—Bill of Lading.
B/P—Bills of Exchange which have to be met.
B/R—Bills of Exchange of which payment has to be received.
B/S—Bill of Sale.
C/A—Capital Account.
C/P—Charter party.
c. & f.—Cost and freight.
c.i.f.—Cost, insurance, and freight (all these charges are included in the price quoted).
C.P.—Charter Party.
C.O.D.—Cash on delivery.
c/o—Care of.
cp. or cf.—Compare.
cr.—Creditor.
c/s—Cases.
cum div.—With dividend.
current—The present year or month.
d/d—Days after date.
dft.—Draft (Bill of Exchange).
div.—Dividend.
do.—Ditto.
dr.—Debtor.
d/s—Days after sight.
d/y—Delivery.
E. E.—Errors excepted.
E. & O. E.—Errors and omissions excepted.
e.g.—For example.
ex—Out of or without.
ex div.—Without dividend.
f.a.a.—Free of all average (insurance).
f.a.q.—Fair average quality.
f.g.a.—Free of general average (see Insurance and Shipping).
f.o.b.—Free on board (the price quoted to include all the expenses of putting goods on board ship).
f.o.r.—Free on rail.
f.o.—Folio.
f.o.w.—First open water (Baltic Trade).
f.p.a.—Free of particular average.
ib.—In the same place.
id.—The same.
i.e.—That is.
inst.—The present month.
inv.—Invoice.
I.O.U.—I owe you.
J/A—Joint Account.
£E.—Pounds Egyptian.
£T.—Pounds Turkish.
Ltd.—Limited.
M C—Metalling Clause (in policy Marine Insurance).
m d—Months after date.
m s—Months after sight.
MS—Manuscript.
N/A—No advice.
n/a—Non-acceptance.
N.B.—Take note.
N.E.—No effects (banking).
N.F.—No funds (do.).
No.—Number.
N.S.—Not sufficient (banking).
N.S.—New Style (calendar).
O/a—On account.
O/d—On demand.
%—per cent.
O.S.—Old Style (Calendar as used in Russia).
p.m.—Post-meridiem (after mid-day).
P N—Promissory Note.
P.O.—Postal Order.
P.O.O.—Post Office Order.
P.p. / P. pro. / per pro.—Per Procuration (which see in *Commercial Dictionary*).
Pro tem.—Pro tempore—for the time being.
prox.—Proximo (next month).
P.S.—Postscript to a letter.
q.v.—Which see.
R.—Rupee: plural Rs.
R.D.—Referred to drawer (of a cheque).
R.M.S.—Royal Mail Steamer.
Ry.—Railway.
$—Dollars.
S.N.—Shipping note.
S.P.—Supra protest.
S.S.—Steamship.
T.L.O.—Total loss only (insurance).
T.T.—Telegraphic transfer.
U.K.—United Kingdom.
ult.—Ultimo (last month).
U.S.A.—United States of America.
U-w—Underwriter.
v.—versus—against.
via.—by way of, through.
viz.—Namely.
X.c—Ex coupon.
X.d—Ex dividend.
X. int.—Ex interest.
X. new—Ex new.

THE STOCK EXCHANGE.

The Stock Exchange is "the market for stocks and shares." Most commercial cities of importance have now their stock exchange, and in the main their features are alike. The principal of these, the London Stock Exchange, is situated in Throgmorton Street, near the Bank of England. Here are bought and sold stocks and shares in public companies, such as railway, mining, and the great industrial undertakings, debentures, consols, and all the securities for the repayment of loans issued by governments, municipal corporations, and trading corporations. To show the extent and variety of the business done in the "House," as the institution is familiarly called in which it is carried on, it may be mentioned that there are about four thousand different kinds of stocks, shares, and money securities of the nominal value of about nine thousand millions sterling generally quoted in the Official Price List of the Stock Exchange. The dealers in these securities, i.e. those whose business it is to buy from and sell them to the public through the medium of brokers, confine their operations to a small section or group of these securities, and do not deal in any others. Each section constitutes "a market," and it is to the market for any particular class of securities that a broker who deals on behalf of a client who wishes to purchase or to dispose of any shares or securities of this class resorts. Among the principal markets may be mentioned the Consol Market, for the sale of securities issued by the government, the American Railroad Market, the Foreign Market, which concerns itself with foreign securities, the "Kaffir Circus," for the transaction of business relating to the South African mines, the "Jungle," where the dealers in West African securities do business, and the Industrial Market for the sale of shares and stocks in industrial undertakings.

THE HOUSE.

1. THE PROPRIETORS. The building in which these various operations are carried on belongs to the shareholders or proprietors, who are not necessarily members, but as time goes on the proprietors and the members will become one and the same body, for after the 23rd November, 1904, every new member must become a proprietor by acquiring a certain number of shares; and, except in the case of a few proprietors who acquired their shares before 1875, the shares must be in the hands of members, for where shares come into the hands of persons who are not members, or when they are in the hands of a person who has ceased to be a member, they must within twelve months be transferred to a member.

2. TRUSTEES OR MANAGERS. The proprietors draw their income from the entrance fees and annual subscriptions of the members and their clerks, and from the rent of offices in the building. Their interests are looked after by a body of nine Trustees or Managers, each of whom must have been a proprietor for at least five years before his appointment, and must hold at least ten shares. Their duty is to provide accommodation for the members, to look after everything that relates to the building, and to fix the rates of admission and subscriptions of members and their clerks.

3. THE COMMITTEE FOR GENERAL PURPOSES. The committee looks after the interests of the members, and in general regulates and deals with the professional conduct of the members. It decides disputes between members, fixes the days of settlement, i.e. the days on which the various market transactions must be completed, and declares what securities shall appear in the Official Price List. Its powers are practically absolute, for it can inquire into the conduct and the books of every member, and suspend or expel any member guilty of unprofessional dealings.

The committee consists of thirty members elected annually, seven of whom may form a quorum; and in order to be elected to the committee, a person must have been a member for five years. Its principal officers, besides the secretaries, are the Official Assignee, the Manager of the Settlement Department or Clearing House, and the Manager of the Buying-in and Selling-out Department.

(1) **The official assignee** deals with the assets of defaulters and with the estates of insolvent members in so far as their relations with the other members are concerned. He administers the assets, calls in what may be due to the defaulter, and after realising the estate, pays the creditors.

(2) **The settlement department** or clearing house renders the operation of passing tickets from the buyer to the seller much simpler than it otherwise would be.

(3) **The buying-in and selling-out department** deals with those cases where the seller is unable to deliver the stock which he agreed to sell, and assists the buyer to buy the stock from other people. The seller who has made default has to pay the expenses incurred in the buying-in, and if the buyer has had to pay a higher price, the seller must make good the difference. Similarly, where a buyer has not taken up the stock which he agreed to buy, the department will help the seller to sell the stock, the delinquent buyer being made to pay all expenses and loss that may be incurred.

4. ADMISSION OF MEMBERS. Every applicant for admission to the House must have served at least two years as authorised clerk, unauthorised clerk, or settling room clerk. If a foreigner, he must have resided in the United Kingdom for at least seven years, and have been naturalised at least two years. An applicant who has more than once been a bankrupt, or an insolvent, or compounded with his creditors, is not eligible, and in case he has not been so more than once, he must have paid 20s. in the £. With the exception of applicants who have for four years or more been clerks in the House or the Settling Room, every applicant must be nominated by a member willing to retire in his favour, or be nominated by a former member, or by the legal personal representative of a deceased member.

An applicant must be recommended by three members of not less than four years' standing who have fulfilled all their engagements. Each recommender must have a personal knowledge of the applicant and of his past and present circumstances, and each must engage to pay £500 to the creditors of the applicant, should he at any time within four years of his admission be declared a defaulter. Each recommender must not be indemnified by the defaulter, or expect to be indemnified. An applicant who has been a clerk for four years must have two recommenders, each of whom will pay £300 to his creditors should he become a defaulter within four years of his admission. No member can be surety for more than two new members. Every member elected after November 23rd, 1904, must, within six months of his admission, become a proprietor in the Stock Exchange to the extent of three shares, or cease to be a member. In the case of a clerk elected as member, he must acquire one share.

The entrance fee for members is 500 guineas, and the annual subscription 40 guineas for those elected since 1899. Members elected since 1879 pay an annual subscription of 30 guineas. For those elected before 1879 the annual subscription is 20 guineas.

5. RE-ELECTION OF MEMBERS. Members are elected for a year only, and in the month of March must apply for re-election. In the case of a former member, who is not a defaulter, bankrupt, or insolvent, having discontinued his subscription for more than a year, he must have two recommenders should he apply for re-election, but security is not required. Should he have discontinued his subscription for two years, he is in the same position as an applicant for admission.

6. RE-ADMISSION. A defaulter may be re-admitted who has paid to his creditors out of his own resources, independently of what may have been paid by his sureties, 6s. 8d. in the £. Where a defaulter knew at the time of his passing or retaining a ticket that he was insolvent, then if loss was incurred by his so passing or retaining the ticket, and he was declared a defaulter on that account, he shall not be eligible for re-admission for at least one year from the date of such default. His re-admission in any case depends upon the report of the Committee, and if his conduct has not been satisfactory, or if he has not done all in his power

to assist the official assignees, he will not be re-admitted. Although a defaulter may be re-admitted if he has discharged one-third of his liabilities, he is not, therefore, freed from those liabilities. He is expected to pay the remaining two-thirds as soon as he can; and every year the committee inquires into the state of his affairs until he has paid his creditors 20s. in the £.

7. CLERKS. Every member on his application for admission or re-election must state the names of the clerks, not exceeding five in number, whom he intends to employ. This does not refer to the clerks whom he may employ in his office, but to the clerks who have admission to the House. There are three kinds of clerks:—

(1) **An authorised clerk,** so called because he can transact business and make the same bargains just in the same way as his employer, who is bound by the contracts made by the clerk on his behalf. Each member is allowed one such authorised clerk, who cannot deal in any securities except those in which his employer deals.

(2) **Unauthorised clerks,** of whom a member may employ two. These have no authority to deal in securities, and are employed for running messages and the like services.

(3) **Settling Room clerks,** who check bargains and do the clerical work in connection with the settlement of bargains. Of these, a member may employ two. A firm consisting of two or more members may have nine clerks—two authorised, three unauthorised, and four Settling Room clerks. As members now have to be clerks for two years before they can be admitted as members, it is in the capacity of one of these clerks they must serve their time. No one can be a clerk until he is seventeen years of age, nor can he be authorised to transact business until he is twenty years of age.

The entrance fee for an authorised clerk is 50 guineas, and the annual subscription 30 guineas; for an unauthorised clerk the entrance fee is 10 guineas and the annual subscription 12 guineas. Settling room clerks pay an annual subscription of 8 guineas.

8. BROKERS AND JOBBERS. The members of the Stock Exchange must not carry on any business outside the Stock Exchange. They fall into two groups—brokers and jobbers, or dealers, a division which is peculiar to the London Stock Exchange. The broker acts as agent on behalf of any person who wishes to employ him, either to buy shares on his account or to sell shares, in return for which the broker receives a commission varying in amount, according to the nature of the securities bought or sold. The jobber is always ready either to buy shares from or to sell shares to the outside public, the broker acting as the go-between. The outsider buys from or sells to the jobber through the medium of the broker (see below). A member cannot act as broker and jobber at the same time, but there is nothing to prevent his changing from one class to the other.

9. PARTNERSHIP. A broker may not have a jobber as partner, nor can a member of the Stock Exchange be a partner with an outsider; but there is no partnership existing when a broker agrees with an outsider who introduces business to him to give such outsider, who is called a "runner," a share of the commission earned on the business introduced, on the understanding that the runner shall bear a corresponding proportion of any losses that may ensue. Accordingly, such agreements are very frequent. A "runner" is more usually described as a "half-com. man," or as having "a seat in the broker's office."

10. FAILURES ON THE STOCK EXCHANGE. When a member of the Stock Exchange is unable to fulfil his engagements to his fellow-members, he is "hammered," or declared a defaulter, and ceases to be a member. If he becomes a bankrupt, or is proved to be insolvent, even though he may not be a defaulter on the Stock Exchange, he ceases to be a member. As, however, a member is not allowed to carry on any other business, it is seldom that he is made bankrupt, because, generally speaking, the bulk of his debts is due to his fellow-members, who, of course, are forbidden by the rules of the Stock Exchange to take bankruptcy proceedings against him. Nor are his fellow-members allowed to tide him over his difficulties. It is the duty of his creditors (to whom he cannot fulfil his Stock Exchange engagements) to inform the Committee at once, and the insolvent member is thereupon declared a defaulter.

The member who is declared a defaulter has his Stock Exchange assets taken over by the Official Assignees. All his bargains which have not been completed are reversed at the prices current before the member was declared as a defaulter, the price being known as the "hammer-price" and is fixed by the Official Assignees. Thus, suppose the defaulter had agreed to deliver £1,000 of stock to A at £82 per £100 of stock, and the hammer price was £85, A would have to sell the stock back at 82, and would claim as a creditor for the difference of £30 against the estate of the defaulter. If, on the other hand, the defaulter had bought from A £1,000 stock at 82 and the hammer price is 85, A must buy back the stock at 82 and hand over the difference of £30 to the Official amount of the claims. Should the defaulter's estate realise a good dividend, he may be re-admitted to the Stock Exchange (see above).

A Jobber in default. Where a jobber is in default, his liabilities to an outsider are usually met by the outsider's broker. Thus, suppose a jobber had agreed to buy from a member of the public £100 stock at 85. The transaction, of course, must be done through a broker. At the time the jobber is declared a defaulter the price is 79. Here the jobber owes the outsider the difference of £6, and this debt will probably be discharged by the outsider's broker with whom the jobber has made the bargain, for though the broker is in no way liable, he may prefer to discharge the debt rather than lose a good client. The outsider thus loses nothing, and in any case all that he does miss is the loss of his bargain, for he still keeps the stock for which the defaulter was unable to pay.

A Broker in default. Where a broker becomes a defaulter, the bargains between the jobber and the broker's client are completed, unless the client is himself in default to the defaulting broker. The client may himself personally complete the bargain, or another broker may be employed to do so.

CONDUCT OF STOCK EXCHANGE BUSINESS.

1. OFFICIAL LIST OF PRICES. This is the record of the prices of securities ruling on the Stock Exchange. It is issued twice a day under the authority of the Committee, and no member is allowed to publish a list himself. The list contains the names of over 4,000 securities. The first edition appears at one o'clock, and the second at three o'clock; but much business is transacted after the latter hour, and, therefore, the official list is not to be depended upon to give the actual market price of a particular security at a given moment. At best it gives the public a rough idea (sometimes accurate) of the market prices, and enables an outsider to check bargains done for him with other bargains in the same security done for others on the same day. From the official list one may see whether the security is at a premium or at a discount, or at par. One pound shares quoted at 1⅞-1⅞ are at a premium of from 12s. 6d. to 17s. 6d.—£1 12s. 6d. being the jobber's buying price and £1 17s. 6d. his selling price. Where the quotation is the same as the nominal value of the shares, the price is at par; when it is below the nominal value, the shares are at a discount.

Sometimes the letters *x.d.* appear in the quotation. In that case the dealings in the shares or securities are "ex dividend," that is, the price does not entitle the buyer to the dividend that has just been declared or is about to be paid on the securities. Where these letters do not appear the security is sold "cum dividend," that is, the price paid for the stock enables the buyer to claim any dividend which is about to be paid on them.

Similarly the shares may be quoted "ex new," "ex rights," "ex all." In that case the seller retains whatever rights or privileges are included under these terms—"new" generally means the right of a shareholder to subscribe on favourable terms for new shares in his company, when the capital is being increased. "Rights" may mean the privilege of a shareholder of subscribing for shares in a new company, of which his own company is the parent. "All" includes these rights, and the right to an accruing dividend.

2. HOW TO OBTAIN A QUOTATION. In order that the stocks and shares of a company, or that any other security should obtain a quotation on the official list, it must possess certain features, and the persons who wish the security to obtain the quotation must observe certain rules. If it is the shares of a company, the company must be *bona fide* and of sufficient magnitude, usually £50,000 is the minimum capital required for an official quotation. Two-thirds of the nominal capital must have been unconditionally allotted to the public, that is, the public must get two-thirds of the shares, while the vendor and others cannot get more than one-third. The following documents amongst others must be deposited with the committee—the prospectus, the articles of association, the allotment book, certified copies of contracts and agreements, the banker's pass-book, and a certificate from the bankers stating the amount of deposits received. It will be seen that companies which do not issue a prospectus may not be able to obtain a quotation on the official list, and, as owing to the stringency of the Companies Act of 1900, many companies do not issue a prospectus, they might find a difficulty in getting the public to take up shares but for the process known as "making a market."

3. MAKING A MARKET. This operation is carried out before the shares have been allotted to the public. The promoters of the company instruct brokers to buy the shares on the market, bidding a price a little above their nominal value, in return for which he receives his commission. The promoters who hold the shares arrange with a jobber to sell them, and the jobber, knowing that he can get from the promoters any number of the shares at a fixed price, carries out the deal, because any price which he can get for them above the fixed price is so much profit to him. Other brokers are then instructed to buy from and to sell to the jobber or jobbers, and the price is artificially stimulated, so that the shares are soon at a premium. Then the outside public, thinking that the deal is good, apply for shares to be allotted them, thinking that after allotment they will be able to sell them at a premium. Of course, if they rush to sell, a slump in the price ensues, and their loss may be heavy, but the promoters have gained a large amount at their expense.

4. SPECIAL SETTLEMENT. With the object of getting a quotation on the official list the Committee appoints a special settlement with regard to the dealings in the stocks and shares of a new company. Bargains made concerning the securities and shares of a new company are not enforced by the Stock Exchange until a special settlement has been made. Until that time members who have agreed to sell and to buy such securities cannot so far as the Stock Exchange is concerned be compelled to pay for the securities or to deliver such securities. To meet this state of affairs, the Committee appoints a special settling day, but before fixing this day, the Committee have to be satisfied that certain conditions have been complied with. These conditions are practically the same as for obtaining a quotation on the official list.

5. BUSINESS OF A BROKER. Members of the London Stock Exchange are divided into brokers and jobbers. By this arrangement an outsider can employ the skill and experience of a broker, who is trained in all the ways of Stock Exchange transactions, to assist him in carrying out his dealings with the jobber. He is thus enabled to get better terms from the jobber than he otherwise would. Further, the broker has to do many other things besides the mere negotiation of sales and purchases. He gives advice as to the best investments, informs his clients when they can buy or sell to the best advantage, sees to the transfers of stocks, obtains share certificates for his clients who have bought shares, and where the client is unable to take up stock or shares which he has agreed to buy and to pay for them at the settlement, arranges for the "carrying over" of the shares to the next settlement. The commission which he receives covers the payment for all these services. The amount of this commission varies, and frequently on the same class of business different clients are charged different rates:—

In the case of consols or other government securities the rate is 2s. 6d. per cent.; Bank of England Stock 5s. per cent.; for Corporation and Colonial securities 5s. per cent. In the case of British Railway stocks, and other registered stocks, the rate is 10s. per cent., but in large transactions the commission may be 5s. per cent. In the case of shares the rate is 3d. per share where the share is under £1. For shares from £1 to £5, the rate varies from 3d. to 6d., and for £5 to £10 shares the charge is one shilling per share, while for shares between £10 and £25 the rate increases up to 2s. 6d. per share. Shares exceeding in value £25 the rate is 10s. per cent. It should be remembered that these are the maximum rates, but they are not official, and are such as are charged by brokers who carry on investment business only. But in the case of brokers who act for clients who do not embark their capital in investments but employ it for speculative purposes, the broker has to vary these rates, else perhaps he might get a reminder from his clients that their business could be transacted more cheaply elsewhere.

A broker occasionally makes commission by "placing shares." When a company is being floated, or a government or a corporation is raising a loan, the broker is sometimes asked to circulate prospectuses of such transactions amongst his clients. If his clients apply for shares, the broker stamps his name on the application forms, and if as a result of the applications allotments are made to broker's clients, he receives from the company or corporation a commission on the allotments.

6. BUSINESS OF THE JOBBER. The jobber, or dealer, transacts business in the small group of securities which constitute what is called a "market." He makes a special business of dealing in this limited number of securities, and is thus able to gauge accurately the price which a given security should command in the market. The profit which he makes is the difference in the price at which he can buy and sell the same security. This difference is known as "the turn of the market." A jobber can deal in one market only at a time, though, of course, he may transfer himself from one market to another, and his authorised clerk can deal only in the same securities in which the jobber himself deals. Where several jobbers are in partnership, each of them may deal in a separate market. A member cannot be both a broker and a jobber at the same time. There is nothing, however, to prevent a broker from becoming a jobber, or *vice versa*.

7. OUTSIDE BROKERS. An outside broker is one who is not a member of the Stock Exchange. As members are forbidden to advertise, whenever one sees the advertisement of a broker one may be sure he is an outside broker, and therefore in no way amenable to the discipline and control of the House. This is an important consideration in favour of dealing with an inside broker. The Stock Exchange is under the management and control of a committee, who is entrusted with the power of investigating complaints, not only between members but also between members and their clients outside. Any departure from the established practice of the House may be visited with the penalty of suspension or expulsion. It is, therefore, as a rule, wiser for a person who wishes to deal in stock or shares to do so through a member of the Stock Exchange. We do not, however, mean to imply that all outside brokers are to be avoided. There are many who do a most reputable business, and who serve a most useful purpose as a connecting link between the inside broker and clients dealing only occasionally in shares, and also as a medium for the transference of unquoted shares, which the regular broker knows little or nothing about, and in which he takes little or no interest. This is especially so in the provinces, where the outside broker deals largely in local shares, and may practically be the only medium for dealings in them. A client should be most careful in selecting his man of business, whether he employs an inside or an outside broker, but especially so in the latter case, as the calling has become the happy hunting ground of many men of unscrupulous character.

8. BROKER AND CLIENT. A broker usually requires from a client a reference as to the client's ability to meet his engagements. In other cases the client must deposit money or securities as "cover" in order that the broker may not suffer in case there is a loss on the transaction

which the client might not be able to meet. A broker is not permitted to transact business for an employee without the knowledge of the employer, nor is he permitted to "carry over" for such a client, where the client is unable to take up stock which he has agreed to buy, or to deliver stock which he has agreed to sell.

The broker must obtain the best bargain that he can for his client, and must not sell at a lower rate to, or buy at a higher rate from, a jobber than could be obtained from other dealers in the same market. He is only an agent, and, therefore, cannot act as principal, and, therefore, if a client instructs him to purchase securities in the market, the broker must not sell his own securities to the client. Wherever, however, a broker receives instructions from a client to sell a security, and at the same time receives an order from another client to buy the same security, he may transact what is called a "cross bargain," i.e. transfer the security directly from the seller to the buyer, receiving a commission from each. In such a case he is supposed, before making such a bargain, to inform his principals, i.e. the seller and the buyer.

As the broker is bound to meet his engagements with the jobber with whom he deals, on pain of being declared a defaulter, he has to look to his client to be reimbursed, and to be indemnified for all liabilities arising out of the business which he transacts for his client. The Stock Exchange, however, does not recognise the outsider, and looks to the broker to meet all his engagements. Hence, where brokers transact speculative business for clients, they have to be very careful as to the character and the financial standing of their clients.

STOCK EXCHANGE TRANSACTIONS.

1. A TYPICAL CASE EXPLAINED. In order to make an ordinary deal for buying and selling securities easily intelligible, a very simple example will be given. A, the holder of stock, instructs his broker to sell out, and B instructs his broker to buy a similar quantity of the same stock.

(*a*) B's broker, acting on instructions, goes to the jobber with whom he usually deals in that class of business, and asks him to name a price for that stock without stating whether he wishes to buy from the jobber or to sell to him. Had the broker stated that he wished to buy, the jobber might be tempted to name a slightly higher price, in the hope of securing an extra profit; on the other hand, if the broker stated that he wished to sell to the jobber, the jobber would have named a lower price. Accordingly, the jobber names two prices, say 78½-78¾, the lower price being the amount the jobber will give for £100 of the stock, the higher price being the one at which he will sell the same quantity. Of course, it must be understood that, unless expressly stated, the jobber does not undertake to buy or to sell any quantity of the stock at the prices named. It is only a limited amount (settled by the rules) to which he binds himself. B's broker, being satisfied with the price named, buys from the jobber the amount which his client has instructed him to buy. The jobber and the broker each make a note of the bargain, which is the next morning checked by their clerks to see if the entries made by each are identical.

(*b*) B's broker next makes out a contract note and sends it to B, to inform him that his instructions have been carried out. The note contains the date of the transaction, the name of the broker, the name of the buyer for whom he has bought the stock, and the amount and the price of the stock, to which is added the brokerage (broker's commission), the amount of the stamp duties, and the fee for registering the buyer's name in the books of the company whose stocks or shares are being dealt in.

(*c*) Some time, however, has to elapse before the shares are actually transferred to B, the purchaser. The time for settlement on the Stock Exchange occurs, in the majority of cases, twice a month. The settlement time lasts three days in the case of ordinary securities, and four days in that of mining securities. On the second day, called *Ticket Day*, B's broker will pass to the jobber from whom he agreed to buy the stock a ticket bearing the name of his client who has bought the stock, and to whom it is to be transferred, and the name of the broker himself who is responsible for the payment. The jobber, meanwhile, has procured the stock, which he has agreed to deliver. This stock he has obtained from some broker who has been instructed by a client to sell it, it may be from A's broker who, as has been said, was instructed to sell.

It may be, however, that the ticket will pass through many hands, and have a corresponding number of names on it before it reaches the broker of the ultimate seller of the stock, who in the example given is A. By means of the ticket, A and B are brought together.

(*d*) The seller or his broker now prepares the transfer deed, signed and sealed by the seller, in which the seller A agrees to transfer the stock to the buyer B, in consideration of the price which is stated in the transfer form, and the buyer agrees to take the stock subject to the same conditions under which the seller held them. This transfer form, together with the seller's stock certificate, is sent on to B's broker, who obtains B's seal and signature to the deed, and on the last day of the settlement, which is called *Settling Day*, the buyer hands over the purchase-money.

(*e*) The broker for B then sends the transfer deed and the stock certificate to the company whose stock or shares have been bought and sold. The company then registers the buyer's name in their books as the holder of such stock or shares, and in due course sends a stock or share certificate, as the case may be, to the buyer's broker, intimating that the buyer's name has been registered as that of the owner of the stock or shares. The broker then sends the certificate to the buyer.

The seller of the stock may observe that the price stated in the transfer form, which the buyer has to pay, is not the same as he (the seller) receives. This is accounted for by the fact that the seller sold his stock at the price which his broker could obtain from the jobber who bought the stock, and as the stock may have been sold several times over before it reaches the ultimate buyer's broker, there will naturally be a difference between the price which the ultimate seller receives and which the ultimate buyer has to pay.

2. THE SETTLEMENT. Mention has been made of the "Settlement" as the time at which stock exchange transactions are arranged and settled. Generally speaking, the larger portion of business is done, not for ready cash but for the account. The length of an account is about a fortnight, such account ending on the first of the three days of the settlement. In the case of consols and other English and Indian Government securities, the account is for a month.

3. CONTANGO DAY. The first day of the settlement is *Contango* or *Making-up Day*, on which those who for one reason or another wish to postpone settlement of their accounts carry them over to the next fortnightly account, and for so doing they may or may not have to pay a price. The carrying over postpones payment of the purchase-money for the stock, and, of course, delivery of the stock. If the security is abundant, and the seller will have no difficulty in delivering the stock, he will make the purchaser pay a certain rate of interest if the purchaser is unable to take up the stock and to pay for it until the next settlement. If, however, the seller finds a difficulty in delivering the stock, owing to its scarcity or some other cause, he will pay to the purchaser as an allowance for postponing delivery, a sum of money. This payment is called "backwardation." But suppose the sellers have a difficulty in procuring the stock, and the purchasers are themselves at the same time anxious to postpone settlement, neither party has to pay anything for the carry over. When this is the state of affairs, the rate is said to be even. In the mining market there are two contango days, making the period over which the settlement extends four days.

4. TICKET DAY. The second day of the settlement is *Ticket Day* or *Name Day*. On that day a member (broker) who has bought securities for the account, hands to the member (jobber) from whom he purchased the securities, a ticket bearing the amount and the description of the

security. The ticket also bears the name of the member to whom the ticket is issued, i.e. to the selling member (jobber), and the name of the person to whom the security is to be transferred, and who, of course, is the ultimate purchaser of the security. He is the person on whose behalf the buying member has acted. As usually happens, the member (jobber) to whom the ticket is given has himself not got the security, but has during the account agreed to buy them from another. Accordingly, he passes the ticket on to that other member, and endorses that member's name on it. He, in turn, may hand it to another, and in the case of securities that are the subject of much speculative business, there may be a score of names endorsed on it. Thus the ticket is passed from hand to hand until it reaches the broker of the ultimate seller who has actually got the security. In this way the ultimate buyer and the ultimate seller are brought together, and the sale and transfer of the security completed.

5. SETTLING DAY. The last day of the settlement is called Settling Day or Pay Day. On this day payment must be made for securities agreed to be bought, and the securities, if payable to bearer or order, must then be handed over. In the case of registered securities, a further period of ten days is allowed in which to complete the delivery. If the bargain has been one not for the actual sale and delivery of securities, but merely one to pay "differences," then the difference must be paid on the settling day. (See "Differences" in *Commercial Dictionary*.)

6. BULLS AND BEARS. These two classes of operators on the Stock Exchange assist in making business lively.

A BULL is one who agrees to buy stock at a fixed price which he does not want, in the hope that when the settlement arrives the price will have gone up, and that by selling the stock which he agreed to buy he will be able to realise a profit. That profit being the difference between the price at which he agreed to buy and the price to which the stock has risen. Practically the profit is represented by the difference between the buying price and the "making-up price." This price is, in the case of government securities and corporation stocks, the average price of such securities between 11 o'clock and 12.45 o'clock on the settling day; in the case of other securities, it is the average during the two days preceding the settlement.

A BEAR is, on the other hand, a person who has agreed to sell at a fixed price stock which he does not possess, in the hope that before the settlement arrives the price will have fallen, and then he can buy the stock at the lower price and deliver it at the agreed price, which is higher, thereby securing a profit. His profit will be the difference between the selling price and the making-up price.

Naturally the interests of the bulls and the bears are antagonistic—the one anxious that prices should go up, the other desirous that prices should fall. Hence each class employs every means in their power, either to elevate or to depress prices according to their interests. Should the bears succeed, they very often depress prices much lower than they ordinarily would fall, but the decreased price tends to stimulate buying, and so prices tend to rise. If the bears then are called upon to deliver the stock which they had agreed to deliver, they may find themselves in a tight corner, because they may not be able to secure the stock except at greatly enchanced prices; in fact, they may be forced to procure the stock from the very operators to whom they had agreed to sell. Needless to say, a stiff price is exacted from them by this process, known as "squeezing the bears." On the other hand, if the bulls have succeeded in forcing up prices, they may find that this will lessen the demand for the stock, and when they come to re-sell they may have great difficulty in disposing of their stock, except at greatly diminished prices.

7. OPTIONS, DEALING IN. An option is the right to buy from a certain person stock at a certain price at a given future time, in which case it is described as a "call" option; or it may be the right to sell to a certain person a given stock at a certain price at a stated future time, in which case it is described as a "put option;" or it may be a double or *straddle*, or as it is sometimes described, "a put and call option," that is one which gives its holder a right either to buy or to sell to the same person a given quantity of stock at a fixed price at a certain future time. The option may be exercised at any time within the period specified, which may be either a day or six weeks, the limit recognised by the rules of the Stock Exchange, though in practice a longer period is frequently allowed for its exercise. The price paid for the privilege of exercising an option is a percentage on the value of the stock.

Suppose A gives B 1 per cent. for the call of some stock at 90. If then the stock should rise, say to 92, A will exercise his option, for in that case he will make a profit of 1 per cent., because after paying for the stock and the option, he will be able to sell the stock at 92. If, however, the stock does not rise sufficiently to give him a profit, or if it falls in value, he will abandon the option. His loss in that case being merely the price paid for the option. It will thus be seen that a "call" option is bought by a person who is in the same position as a "bull." Conversely, a person who has a "put" option hopes that the security will fall in price, and thus he resembles a "bear." The gambling element, though it comes in in the exercising of the single option, is much easier seen in the "double" option. In the single option, a person may have good reason to believe that the price of a certain stock will rise; he will then purchase a "call" option, or he may have equally good reason for thinking that the price will fall, and, accordingly, would acquire a "put" option. But in a double option, it is a matter of indifference to him whether the stock rises or falls, provided it rises sufficiently high or falls sufficiently low to make it worth his while to exercise the option. It is, therefore, with him a pure matter of chance.

BANKS AND BANKING.

KINDS OF BANKS. According to their functions banks are either banks of deposit or banks of issue. A bank of deposit has merely the right to receive money from depositors, but has no power to issue notes. A bank of issue has, as its name implies, the right to receive deposits and the power to issue bank notes. In England and Wales very few banks are banks of issue, the right to issue notes being confined chiefly to the Bank of England, which cannot issue notes of a less face value than £5. But in Ireland and in Scotland, most of the banks have power to issue notes, and they are not restricted to the issue of five pound notes, but may issue notes for any number of pounds, from one pound and upwards.

According as the banks are owned by a private individual or a number of individuals (not being incorporated), or by a corporate body, banks are said to be private banks or joint-stock banks. Of these a brief description will be given presently, but before doing so, an account will be furnished of the Bank of England, as it occupies a position somewhat different from that of all other banks

THE BANK OF ENGLAND.

The Bank of England is not a State Bank, but it is the bank in which the revenue collected by the Government from all parts of the country is deposited, and it is the agent for the government in transacting all such financial business as relates to the raising of government loans, whether for permanent or for temporary purposes. On account of its peculiar business, other banks have found it convenient to deposit a certain amount of their cash with it, and every bank which is a member of the Clearing House (q.v.) must keep an account at the Bank of England. Apart from these circumstances, the Bank of England is in the same position as all other banks, and conducts its business like other banks with a view of earning dividends for its proprietors, or holders of Bank of England stock as they are called.

The original capital of the Bank was £1,200,000, but

from time to time it was increased, till in 1816 it amounted to £14,553,000, at which figure it has remained ever since.

1. THE BANK CHARTER ACT. Owing to the frequency and the gravity of commercial crises due to the great number of banks that suspended payment during the early part of the 19th century, the Bank Charter Act was passed in 1844, for the purpose of placing the Bank of England on a sounder basis, and of regulating the issue of bank notes by the various banks throughout England and Wales. By this Act the Issue Department and the Banking Department of the Bank of England were completely separated. The Bank was prohibited by this Act from issuing notes exceeding £14,000,000 in value unless it had an equivalent in gold coin or bullion for the amount of such excess. But where a bank having the power of issuing notes should relinquish the right to issue, the Act empowered the Issue Department of the Bank of England to increase its issue to the extent of two-thirds of the issue relinquished. In consequence of this provision the total "fiduciary issue" of the Bank's notes has gradually grown, and on February 8th, 1905, amounted to £18,450,000. For every note issued in excess of this amount an equal amount of gold coin or bullion must be kept in reserve in its coffers. Moreover, the Bank is bound to publish every week a statement showing the position of the Banking and the Issue Departments. This report is known as the "Bank Return" (see below).

By the Bank Charter Act it was enacted that if any bank ceased issuing notes it could not afterwards claim the right to issue, and any bank not having the right to issue notes at the time the Act was passed could not in the future acquire the right to issue notes. Since the passing of the Act so many country banks that previously issued notes have ceased to do so that at the present time the issue of notes by English Banks, other than the Bank of England, is practically unimportant. There are still thirty-eight provincial English banks that issue notes, but the average amount of such notes in circulation does not exceed £750,000. So seldom, indeed, do these "country" notes come into the hands of most men, that the term "Bank Note" is with most people synonymous with "Bank of England Note."

How far the Act of 1844 has prevented losses to the public through the banks suspending payment is a moot point. The fact remains that on three occasions, 1847, 1857, and 1866, the Act has had to be suspended, and the Bank of England empowered to issue notes to any amount. Further, it must not be forgotten that the issue of notes is only one form of a banker's indebtedness to the public, and if he is forbidden to issue credit or loans in that shape, there is nothing to prevent him from making his loans or issuing his credit in another. This is precisely what has been done. Since the growth of the system of making payments by cheque, payments by means of notes are not made to anything like the extent of earlier days. In fact, notes of the Bank of England can hardly be said to circulate at all. They are issued by the Bank, and in a very short time find their way back again, and it is a rule of the Bank not to re-issue such notes. Accordingly, when an ordinary banker makes an advance to a customer, he does not lend the customer notes and gold, what he does is to place the amount so lent to the customer's credit, and the customer, in order to make payments or to discharge his obligations, can draw cheques against that amount. Of course the customer may draw all the amount in notes or gold, but in practice this is not done to any great extent. Now the law places no restriction on the amount which the banker so lends, and there is, therefore, no real need for placing any restriction on his power of lending in the shape of bank notes. The only safe rule to guide a banker in such matters is one derived from experience, viz., not to make advances out of the money of his depositors unless the advances are on good security and the security is one which can be quickly realised and turned into cash; and not to discount bills, unless they are first-class trade bills which have not too long a time to run. The length of time in such cases should be governed by the length of credit which it is customary in the locality in which the bank is situated, or the length of credit which it is customary to give in the trades or industries to which the bills relate.

For example, if in a particular trade or a particular locality it is customary for manufacturers to give three months' credit to the wholesale or the retail people whom they supply with goods, then a bank should be reluctant to discount a bill which had four or six months to run, even though the names on the bill were first-class. And in any case the bank ought to see that the bulk of the bills which it discounted had a shorter period than three months to run.

2. THE BANK RETURN. Every week the Bank of England issues a report as to its financial position. This report is in times of financial pressure read by all those who are interested in money matters. In order to explain its meaning, the report for the week ending Wednesday, February 8th, 1905, will serve as an illustration.

ISSUE DEPARTMENT.

Dr.	£	Cr.	£
Notes issued	52,454,885	Government debt	11,015,100
		Other securities	7,434,900
		Gold coin and bullion	34,004,885
	£52,454,885		£52,454,885

BANKING DEPARTMENT.

Proprietors' capital	14,553,000	Government securities	15,603,585
Rest	3,495,839	Other securities	24,427,700
Public deposits	9,459,079	Notes	25,143,145
Other deposits	39,448,004	Gold and silver coin	1,901,893
Seven-day and other bills	120,401		
	£67,076,323		£67,076,323

From the report of the *Issue Department* it can be ascertained that the Bank issued notes to the value of £52,454,885, which are secured by the Government debt of £11,015,100, and other securities worth £7,434,900, together with gold coin and bullion worth £34,004,885. The Government debt is the amount actually owing to the Bank from the Government. The items on the credit side thus show what provision the Bank has made to secure the stability of its note issue. It must not be supposed that the whole of these notes are in "active circulation." As a matter of fact, the report shows that the Banking Department holds £25,143,145, leaving, therefore, £27,311,740 worth of notes in active circulation. This is an illustration of the fact that, except for special purposes, notes are not now used in England, most payments being made by cheques. Indeed, the notes in active circulation are really for the most part in the cash tills of the various banks throughout the country, and are used by the banks as coin.

(1) **"The Rest."** The first item in the return of the Banking Department explains itself. The *Rest* corresponds to the reserve fund of other banks, and is the result of accumulating profits which would otherwise have gone to the proprietors or shareholders. It is not so much a fund to eke out profits in bad years, but a fund which can be drawn upon to assist the Bank to meet its liabilities in times of financial stress. Taking the proprietors' capital and the "rest" together, the Bank has a working capital of over £18,000,000. In this respect the Bank is far ahead of all other banks, not only as to its actual amount but as to the ratio which this capital bears to the liabilities of the Bank.

(2) **"Public Deposits"** consist of the moneys lodged in the Bank by the Government Departments, and include the taxes paid to the account of His Majesty's Exchequer, and deposits made by the Savings Bank Department of the Post Office. This item fluctuates, being at its greatest amount towards the end of March, when the financial year for the collection of taxes comes to an end.

(3) **"Other Deposits"** refer to the deposits made by the ordinary customers of the Bank, and to the balances kept by other bankers with the Bank of England. It is these bankers' balances which constitute their reserve on

which they may fall back in times of panic. No information is given as to the amount of these balances, but doubtless they form a good proportion of "other deposits." In ordinary times these deposits are an indication of the state of the Money Market, for if they rise above the average, money must be abundant and therefore the rate for loans will be low. If they fall below the average, it indicates that money is scarce, and therefore the rate charged for loans will rise.

(4) **"Seven-day Bills"** are Bank Post Bills, and are bills of exchange payable by the Bank of England. They were used first in 1738, in consequence of the mails being so frequently robbed, and were payable seven days after sight.

The credit side of the *Banking Department* shows how the funds of the Bank are invested. Over £15,000,000 are invested in government securities. More than £24,000,000 are invested in other securities, e.g. debentures, mortgages, bills discounted, loans to bill-brokers, etc. The notes, coin, and bullion constitute the "Reserve" of the Bank, not for the purpose of securing the convertibility of its notes, but a reserve which can be called upon for loans to the Money Market.

The Reserve. It is this "reserve" which is so anxiously watched in financial circles. If gold is coming into the country, the "reserve" will improve, money will be abundant, and accordingly banks will lend money at cheaper rates. On the other hand, if gold is going out, the "reserve" will fall, and in order to keep the gold from being drained away, the Bank will increase the rate for loans, and, of course, other banks will follow suit, for it is to their interest that the "reserve" should be maintained.

3. THE BANK RATE. This is the advertised minimum rate per cent. of discount charged by the Bank of England. It is usually higher than the rate known as the market rate, charged by other banks for short loans. At present (February, 1905) the Bank rate is 3 per cent., and has remained unchanged since April 21st, 1904. For the connection between the Bank rate and the Foreign Exchanges, see under *Money Market.*

JOINT STOCK BANKS. The legislation of 1826 prohibited the issue of notes for less than £5 in England and Wales; but it expressly permitted, outside a radius of 65 miles from London, the establishment of Joint Stock Banks with the right to issue notes; and withheld this right from all Banks within the radius, excepting the Bank of England. An Act was passed in 1833 definitely permitting Joint Stock Banks to carry on a Deposit business in London. Since the passing of the Acts of 1826 and 1833, the business of Deposit Banks in England and Wales has gradually increased until it has reached its present gigantic proportions. This progress has no doubt been greatly facilitated by the Companies Acts of 1858 and 1862, which Acts allowed the limitation of the liability of shareholders.

PRIVATE BANKS. Little need be said about private banks. Their number is diminishing year by year. It may be stated, however, that a private bank cannot consist of more than ten partners, whose liability is, of course, unlimited.

THE CLEARING HOUSE. Were it not for the existence of the Clearing House, a banker who received cheques from his customers to place to their credit, would have to send clerks to every one of the banks on which the cheques had been drawn, and receive cash or notes for them. To avoid this inconvenience, a number of the London private bankers arranged, in 1775, a scheme by which the representatives of each bank met daily, and exchanged the cheques which each held on the other. The accounts so exchanged were added up, and the differences in the amounts only were handed over in cash. Thus, if bank A held cheques and bills to the amount of £1,100 on bank B, and bank B held cheques and notes on bank A to the amount of £1,200, then the representative of bank A would hand £100 in cash to the representative of bank B. A great saving in the actual use of cash was effected, and it is obvious that by means of this arrangement each bank would not be required to keep so large an amount of cash on hand to meet cheques and bills which had been drawn on them.

For many years the private banks had a monopoly of the Clearing House, but in 1854 the joint-stock banks in London were allowed to join. There are still, however, only seventeen banks entitled to send representatives to the Clearing House. All other banks must, to their dissatisfaction, do all their clearing business through the agency of a bank which is a member of the Clearing House.

A further development of the system avoids the actual transfer in cash of any balance due on the day's transactions from one bank to another. For all the clearing banks must keep an account at the Bank of England, and where a bank has to pay a balance, its account is debited with the amount. Where it has to receive a balance, its account is credited with the amount. Accordingly, the balance need not be paid every day, but at the end of a given period, when it will be found that the actual amount to be transferred from one bank to another is very small indeed.

By the system of "Country Clearing," cheques held by country banks on other banks are sent to the Clearing House, and from thence are passed on to the London agents of the banks on which the cheques are drawn. The London agent then sends every night these cheques to his principals in the provinces. In this way each country bank ascertains what amount may be due by it to all other banks and what it may be entitled to receive. The difference, if any, is then sent on to its London agent. Thus each bank has but one remittance to deal with each day, instead of having to make remittances to or to receive remittances from banks in all parts of the kingdom.

NATURE OF A BANKER'S BUSINESS.

1. MONEY AT A BANKER'S DISPOSAL. A bank is an institution into which people deposit money on the understanding that the money shall be repaid on demand, or after an agreed length of notice shall have been given. As the money which may be from time to time withdrawn by depositors is usually very much less in amount than the sums paid in (except in times of commercial panic or when there is a run on the bank), it will be seen that in addition to his own capital, a banker will have a considerable amount at his disposal. He, therefore, seeks a means of investing this large amount, and as the interest which he pays to depositors is generally much less than that which he receives from his investments, his profits are considerable. He must, however, always keep a certain amount of cash in his till, in order to meet the ordinary demands or withdrawals made upon him. The amount of these ordinary demands can be determined to a nicety, and, therefore, it is easy to make provision for them. But the banker must also be prepared for contingencies, he must be ready to meet all demands made upon him, and he, therefore, keeps a further supply of ready cash either in his own strong room, or as it usually happens in this country, to his credit at the Bank of England.

2. A BANKER'S INVESTMENTS. All the rest of the money he invests so as to earn profits, but he must take care that his investments are of such a nature that they can be quickly realised and turned into cash, in case there is an unexpected run on the bank.

(1) First and foremost of these investments is money lent on call or on short notice. This money is lent to bill brokers and discount houses, and though the rate charged is not very high, it exceeds the rate which the banker pays to his depositors, so that he makes a profit. Further, as this money is lent on the condition that it must be repaid when demanded, or at very short notice, the banker has this to fall back upon, in case large and unexpected demands are made upon himself.

(2) Of investments in securities, a great proportion is represented by Consols, which at all times can be easily converted into cash, though it may be at a loss, and in any case the Bank of England, which holds the only large stock of gold in the country, would advance gold on these securities to any bank which stood in great need of ready cash.

(3) Other securities in which the banks invest their

surplus funds are securities guaranteed by Government, debentures of sound and prosperous railway companies, mortgages, and the like.

It should be remembered, however, that these securities might be quite unrealisable in times of panic, and therefore a banker should not have too much of his money locked up in these investments. This remark applies, however, with varying degrees of force to the whole of a banker's investments. After providing for cash in till, balances at the Bank of England, call money, investments in recognised and high-class securities, a banker has still a surplus to work with. This surplus he employs in discounting bills, buying bills, and in making advances to his customers.

3. A BANKER'S CHIEF MEANS OF PROFIT. It is in discounting and buying bills and in making advances to his customers that the greater part of a banker's profits are made. For in discounting bills or in making advances he not only earns the market rate of interest, but he reaps a large additional profit from the fact that when making these advances or discounting bills he does not as a rule part with gold. What he does lend is not gold but *credit*, and this credit costs him nothing, and yet he earns the same rate for lending it as for lending gold. Suppose he discounts a bill for a customer. He does not give the customer gold, though of course he could do so, if required. What the banker does is to place the amount to the customer's credit, against which the customer can draw cheques in order to meet his obligations. Then, through the medium of the Clearing House, these cheques on the customer's bank are set off by cheques held by this bank against other banks, and so very little or no actual gold need be transferred.

The process is even easier to understand where the bank has power to issue notes of any amount, no matter how small. A manufacturer draws a bill on the tradesmen to whom he supplies goods on credit. His bank discounts the bills and lets him draw notes and coin to the amount of the bills *less* discount. With the notes and coin he pays his work-people and his creditors. The workpeople and the creditors spend the money in buying goods from the tradesmen. Thus the notes and the coin find their way to the tradesmen on whom the bills had been drawn, and who are bound to meet the bills. These, when the bills mature, go to the bank which holds the bills, and there meet the bills with the notes and coin which the bank had issued in discounting the bills.

It is obvious that the more his own notes are used and the less coin is used the greater will be the profit of the banker, because notes cost little to produce, and yet the banker gets the same rate of profit in lending them as he would in lending gold, which is costly. The above is actually what takes place in viewing commercial transactions as a whole.

4. PART PLAYED BY "CREDIT" IN BANKING. Banking companies earn their enormous dividends of 15 to 20 per cent. not so much by lending *money*, as by lending *credit*. This credit is, however, based on gold, for a banker must always be prepared to discharge his liabilities by gold payments, though it is evident were all the banks be called on at one and the same time to meet their liabilities in gold, there would not be sufficient gold to discharge them, and the whole country would be involved in financial ruin. It is not, therefore, scientifically true to say that the credit of the banks is based on their reserves of gold, it is based on the fact and on the belief that the mercantile community will discharge its obligations. In other words, that trade is on a sound basis, and that loans made or bills discounted are based on real commercial transactions for which value is given and received. Hence, when there is a collapse of credit due to rash and hazardous speculation, or to over trading, what is wanted to restore equilibrium is not merely gold, but confidence; in other words, credit.

5. BANKER'S LIABILITIES AND ASSETS. From the foregoing it will be seen that a banker's liabilities are to those who have deposited money with him, either on current accounts, from which the money can be withdrawn at any moment, or on deposit, properly so called, in which case the money cannot be withdrawn without notice, and in the case where a bank has power to issue notes, he is under liability to pay coin on demand for those notes. In other words, he incurs liabilities to specific individuals, and where he issues notes he incurs liabilities to all those who come into possession of his notes. To meet these liabilities, he possesses cash in his till and keeps in addition a balance to his credit at the Bank of England. Of the other moneys which he receives from the public he lends a part on short loans or on loans which can be called in at once, a part is invested in government or other safe securities, the remainder is employed in discounting bills and in making advances to his customers. These loans and investments can be more or less quickly realised and turned into cash in case there is a heavy and unexpected demand for gold made upon the bank. The more easily a bank can call in its loans, or realise its investments, the stronger and the safer is the position of that bank.

Cash in the till and money lodged at the Bank of England, money lent at call or for very short periods, investments in securities, constitute a banker's "liquid assets," because they are either available at once to meet the banker's liabilities, or may easily be converted into cash and so made available. The other assets not being so readily available are known as "non-liquid assets."

It should be noted that where a bank lends money on "short loans" to members of the Stock Exchange, such loans are really renewed from settlement to settlement, and are, therefore, not "short loans," but loans for lengthened periods. Were the banks to call in these so-called short loans, the members of the Stock Exchange would be unable to pay them. The banks would then be forced to realise the securities which such borrowers had deposited with them as guarantees for repayment. Needless to say that in such circumstances the securities would become sadly depreciated, and the banks would obtain only a fraction of the nominal value of such securities. This, of course, would mean not only ruin to the members concerned but would entail a very heavy loss upon the banks themselves, which would thus be crippled, if not compelled to suspend payment.

6. DANGER OF THE PRESENT BANKING SYSTEM. The weakness of the present system of banking is that the banks have not a sufficiently high proportion of "liquid assets." Of these assets gold is the essential one, and when it is considered the amount of gold which a bank possesses in proportion to the amount of its liabilities, the comparison is indeed striking. The ratio of cash in hand and balances at the Bank of England to the amount of the liabilities to the public is in the case of the London banks about 15 per cent. That is, for every £100 due to the public, the banks have got only about £15 in ready cash to meet it. Moreover, a certain part of this cash is not kept in the banker's own till or strong room, but at the Bank of England, where, much of it does not actually exist in the shape of gold, but of credit; so that if a crisis were to overtake the Bank of England, the so-called balances held there by other banks might easily disappear, and with their disappearance, many banks probably would collapse.

This smallness of the gold reserve, coupled with the fact that the bulk of it is held by the Bank of England, is the great weakness of our financial system, and is a potential danger to the commercial interests of the country. It explains, too, the sensitiveness of the Money Market. Some banks, anticipating the danger, are increasing their stock of gold held by themselves. And what prevents other banks from following their example is merely the desire to earn big dividends.

For it must be remembered that if a banker keeps a large reserve of gold, it is not earning any interest. The more he employs in lending, the greater is his dividend. His own capital is small compared with the large amounts entrusted to him, and the more he employs the money deposited with him, the greater is the actual dividend on his own capital.

It is a surprising fact that the banks as a whole do not earn two per cent. net interest on the moneys employed by them; and yet they pay dividends of 15 to 20 per cent. to their shareholders. The explanation is that where the capital of a bank is, say, £1,000,000, and its liabilities to the public, say, £7,000,000, this means that it

can trade safely with over £7,000,000, earning, say, 2 per cent., which would be equal to £140,000. A profit of £140,000 on a capital of £1,000,000 would be equivalent to a dividend of 14 per cent.

7. HOW TO CHOOSE YOUR BANKER. In selecting a bank in which to open a current account, or in which to deposit money, care should be taken in ascertaining the real financial position of the bank. An intending customer should look at the amount of working capital, which can be easily ascertained by adding together the paid-up capital and the reserve. The proportion which this working capital bears to the total liabilities of the bank should be determined, and if the ratio be very small, then the intending customer should be on his guard. Above all, the nature of the bank's investments should be closely criticised, and if it is seen that the investments are such as cannot easily be realised, in other words, if the assets are "non-liquid," the bank should be avoided. As a general rule, the "liquid assets" should never be less than two-fifths of the bank's liabilities to the public. In particular, an intending customer should be guided by that portion of the "liquid assets" which consists of ready cash or bullion, and where the ready cash does not amount to at least 15 per cent. of the bank's liabilities to the public, an intending customer should take his money elsewhere.

BANKER AND CUSTOMER.

1. RELATION OF BANKER AND CUSTOMER. The relation of banker and customer is that of debtor and creditor. The customer lends money to or deposits money with the banker, who thereby becomes the owner of it, but undertakes to repay the loan in a particular way, either by honouring the customer's cheques or by repaying the whole or the part after receiving due notice. That the banker becomes the owner of his customer's money is shown by the fact that the banker trades with it and keeps any profit arising out of it. Again, were the bank to stop payment, the moment that a customer had placed his money on the bank counter in such a way that the bank cashier had control of it, the customer could not demand his money back. All he could do would be to rank as an ordinary creditor of the banker, entitled, like the other creditors, to receive a dividend out of the banker's assets when realised in the bankruptcy. Lastly, if a customer has not operated on his account for six years or more, the banker, as he is merely the debtor of his customer, would be under no legal obligation to refund him any money which stood to his credit, though, of course, no banker would refuse payment in such circumstances. But in the case of unclaimed balances of deceased or of missing persons, the banker makes a nice little profit by using such balances in the course of his business.

Should a banker refuse to honour the cheque of a customer who has sufficient funds to his credit in the bank, such customer is entitled to damages, and can bring an action for damages against his banker for breach of contract. But the person to whom the cheque is payable has no such right of action against the banker.

In the case of valuables deposited with a banker for safe custody, the banker does not receive them as banker, but as warehouseman, and, therefore, unlike money which is banked with him, such valuables do not become his property, and, therefore, would not pass to the banker's creditors in the event of his bankruptcy. Moreover, as in this case the relation of the banker to his customer is not that of debtor and creditor, the customer could reclaim the valuables after the lapse of any length of time. Should the valuables be lost or damaged, or be given to a wrong person, the banker will be liable to the customer. Further, if the banker pledges such valuables, or otherwise misappropriate them, he would be guilty of a criminal offence.

A banker's authority to pay cheques drawn by a customer may be revoked by the customer's own order, or may be put an end to by the death of the customer, or by notice of his bankruptcy, or by the banker having a garnishee order served upon him, in which case the customer will not be allowed to operate on any money which he may have in the bank.

2. BANKER'S LIEN. Where a customer deposits securities with his banker, not for safe custody, but as a guarantee for the repayment of a loan made by the banker to the customer, the banker has a lien on the securities, that is, a right to retain them until the loan has been repaid. And, indeed, in some cases the banker, when the lien has once arisen, has a right to sell such securities and pay himself out of the proceeds. The securities which the banker can thus sell are those in which the property passes by simple delivery to a *bona-fide* holder for value, e.g. bills of exchange, shares and bonds payable to bearer, and the like (see "Negotiability" under *Bills of Exchange*).

Where a customer has deposited securities as a guarantee for a particular loan, the banker must return them when the loan is repaid, and has no further lien on them, even though the banker may have made other advances to him which have not been repaid. Of course, where the securities have been deposited to cover advances made by the banker generally, the banker has a lien on them until the whole amount has been repaid.

3. PARTNERSHIP ACCOUNT. Where partners have an account at a bank, each partner may in the firm-name draw cheques upon that account, and endorse them, and may accept or endorse bills of exchange against or in favour of that account. The firm may, however, give instructions not to honour cheques or bills unless signed by all the partners. Usually, however, where a partnership consists of several members, say Brown, Jones, and Robinson, trading as Brown & Co., then, if each of them is to draw cheques or to accept bills, each of them will sign a printed slip thus:—

James Brown will sign Brown & Co.
Robert Jones will sign Brown & Co.
Henry Robinson will sign Brown & Co.

Thus the banker will recognise each partner's signature when signing the firm-name.

4. JOINT ACCOUNT. When two or more persons, not being partners, open an account in their joint names, then, on the death of one or more of them, the money standing in the joint names will belong to the survivors, unless at the time of opening the account a written agreement is lodged with the banker that the money shall not go to the survivors. This also applies where a husband and wife bank in their joint names. In the case of a joint account, unless express instructions have been given to the banker he will not honour cheques unless signed by all the persons in whose names the account stands. Usually, however, it is agreed between the parties, and instructions to the banker accordingly given as to which of them is to sign cheques.

5. GARNISHEE ORDER. Where a person has obtained judgment in a court of law against another (who is then called a judgment debtor) he may get the Court to serve what is called a garnishee order on persons who have money belonging to or who owe money to the judgment debtor, forbidding such persons to hand over the money to the judgment debtor. Should the judgment debtor keep a banking account, then the banker upon being served with a garnishee order by the judgment creditor must not part with any of his customer's money, and must not, therefore, honour his cheques, even though the judgment debtor had an amount standing to his credit greatly in excess of the judgment debt.

6. ADVANCES TO CUSTOMERS. In making loans to customers, sometimes banks in London adopt a different method from that of most banks in the provinces. Where a bank in London advances money to a customer, it opens a loan account in his name. Suppose the customer had bargained for an overdraft for £1,000, the Bank would debit a loan account in his name with that amount, and lodge it to the credit of his current account, against which he draws to make his ordinary payments. Now it is evident that he may not use all the money with which he is credited in his current account. There may be a balance on any given day of £300, and, therefore,

on that day he has employed only £700 of the loan, but he has to pay interest on the full amount to which he is entitled to overdraw. In the country, however, it is managed somewhat differently. There the customer has to pay interest, each day, on the actual amount overdrawn, but he has in addition to pay a certain sum to the Bank as commission for its services.

Another method is sometimes adopted by bankers to secure remuneration for their services. A customer wants to be allowed to overdraw to the extent of £1,000. The banker then debits a loan account in his name with £1,100, and places that amount to the credit of his current account. He must agree to keep not less than £100 to his credit in the current account, that is, he is not allowed to draw out altogether more than £1,000. He has, therefore, to pay interest on the full amount borrowed—that is, in the case we have supposed, £1,100—whilst employing only £1,000.

As regards the rate of interest charged for advances, the customer must make the best bargain he can. The usual practice is to charge 1 per cent. more than the "Bank rate," with a minimum rate to be agreed upon. It must be remembered that a bank will not as a rule allow a customer to overdraw unless he deposits ample securities with the bank. Whenever a customer thinks that his banker is not treating him fairly in the way of charges or regards the amount of interest allowed him on his deposits to be too small, he need have no hesitation in transferring his account to another banker who will allow him better terms. The fact that a customer changes his banker does not as formerly prejudice him in the opinion of his fellows.

7. DEPOSITS AND UNCLAIMED BALANCES. On current accounts interest is not usually given. On deposit accounts the interest allowed depends, to a certain extent, on the length of notice required for withdrawal. The shorter the notice the lower the rate of interest must necessarily be; for in the event of a panic, the bank might find itself in difficulties if obliged to repay all its deposits at call. When the money on deposit is payable at short notice, say seven or fourteen days, banks usually allow interest at a rate 1½ per cent. below the rate of interest charged by the Bank of England for loans on marketable securities, or for discounting bills of exchange. Where the interest is payable half-yearly, or at any other interval, the customer should draw his interest, or else add it to his deposit, so that he may earn interest on the interest. If he neglects to do either of these things, he may possibly find that at the end of two or three years, when he comes to claim the interest, that his banker, instead of giving him compound interest, will give him simple interest only on his deposit.

A deposit receipt being merely a slip of paper is liable to be lost. Hence, in the case of deceased or missing persons who are known to have a banking account, inquiries should be made from the banks as to whether such persons had money on deposit there. A banker is bound to answer such questions, but he is not bound to volunteer information, and, as a matter of fact, "unclaimed balances" often amount to a considerable sum. Nevertheless, bankers, as a rule, are always ready to facilitate the transfer of the money left by the deceased in their hands to the persons legally entitled to it. It should be remembered, however, that where money has been left in a banker's hands unclaimed, or not drawn upon, for six years, actions for its recovery are statute-barred.

THE MONEY MARKET.

WHAT THE MONEY MARKET IS. The expression "Money Market" is merely a name; for the dealers by whom money is bought and sold—or rather borrowed and lent—have no local habitation, such as is possessed by the members of the Stock Exchange or by the members of Lloyds. And, further, it is not money that is borrowed and lent so much as credit; credit based on gold. The money dealers who thus buy and sell credit, are the bankers, bill-brokers, and discount houses. These two classes, those who borrow and those who lend, are not divided by a hard and fast line, for both are ready to buy the use of money at one price and to sell the use of money at another. Take the banks which are the chief lenders. They are in one sense borrowers, for their capital is but a small fraction of the total amount which they lend, the greater part of the funds which they employ in lending being obtained from those who deposit money with them, or who keep current accounts with them. Thus the greater part of the capital which the banks employ for making advances is borrowed capital.

It is evident that the rate charged for the use of money will depend to a large extent upon the demand for and supply of money. What has got to be ascertained is the conditions which determine the demand for money, and which regulate the supply of it. In short, who are the chief lenders, and from what do they derive their resources, and who are the chief borrowers, and what are the conditions governing their needs.

THE LENDERS. The banks are the chief agents in collecting the funds to be utilised for loans, and are, of course, the principal lenders. All the capital of the country, all the money for which the owners are seeking a profitable investment, is in the hands of the bankers. All this capital, amounting to nearly £900,000,000, except the portion in actual cash kept by each bank to meet its current liabilities, together with a balance kept at the Bank of England, is either invested in securities or is used in lending to those who require capital for the extension or the needs of their business. Some of the money so lent is advanced to the customers of the bank either in the shape of direct loans, or by allowing them to overdraw their accounts, or in discounting bills of exchange held by the customers. The remainder is used in the Money Market, or, as it is frequently called, the Short Loan Market. From other sources, too, the Money Market is supplied with money. Frequently the Government of India has large sums of money lying idle, and these sums are utilised in lending money to those who want large amounts (not less than £50,000) for short periods of a fortnight or a month. Of course, those who borrow the money must, as a guarantee of repayment, deposit securities with the agents of the lending government, such securities being of the first rank, e.g. Consols, and the debentures of a few Indian Railways. The foreign and colonial banks, which have branches in London, frequently supply funds for the money market, as do also the great insurance companies, when they cannot find a more profitable method of investing their money. Wealthy trading companies, when business is slack, allow a portion of their capital to find its way to the Money Market.

THE BORROWERS.

The people who want loans on undoubted security for short periods are bill-brokers and discount houses for the purpose of buying bills of exchange, bills that actually represent value, that represent one trader's indebtedness to another for goods or other commodities with which that other has supplied him on credit.

1. BUSINESS MEN AS BORROWERS. In trade and commerce conducted on a large scale, the business is seldom carried on on a cash basis. The manufacturer sells his products to the trader on credit for a month, two months, three months, or a longer period, according to the custom of the particular trade. Now the manufacturer cannot wait so long for payment. He has to pay his workpeople, and obtain many things for which hard cash must be paid. He therefore, in order to pay himself, draws a bill on the tradesman to whom he supplied the goods, for the amount in value of these goods. The tradesman accepts the bill, engaging himself to pay the amount at the end of the period for which credit was given him. The manufacturer, having got this bill with the tradesman's acceptance written on it, goes to a banker or to a

bill discounter, who, if satisfied as to the financial standing of the parties whose names are on the bill, will give him cash for it, or if the manufacturer who gets the bill discounted is a customer of the bank, the amount will be placed to his credit, and, of course, he can then draw out whatever cash is required for the immediate needs of his business. The banker or the bill-broker will not give the manufacturer the full amount of the bill, but will deduct a certain amount by way of discount, which constitutes his profit on the transaction. This amount depends on the market rate of interest, and how that market rate is affected will be afterwards discussed.

2. **THE BILL-BROKER AS BORROWER.** It may be a matter of surprise that a trader will prefer to have a bill discounted by a bill-broker rather than go to his own banker, and that a banker, who in this respect has the bill-broker for his rival, lends money to that rival to enable him to carry on his business. The trader prefers the bill-broker because the bill-broker charges him less for discounting his bill, and because the bill-broker is more ready to discount good bills. The banks, too, find it to their advantage to finance the bill-broker, who is to some extent their rival. Owing to his special training, they find it safer to buy bills from the bill-broker rather than discount the bills themselves. This is because the bill-broker has better means of knowing what bills are first-class and which will be met when they fall due; further, bills bought by a banker from a bill-broker are additionally secured by the broker's guarantee that they will be met at maturity. Lastly, from the bill-brokers the banks know that they can obtain bills to any desired amount, and bills of any required length of time to run —thirty days, sixty days, and so on. The banker then having bought bills in this way is able to utilise his loanable capital in the best way, because he is not inundated with bills when he does not want too many of them on his hands, and if he wants a greater number he knows where to obtain them.

> It must be remembered that this drawing, accepting, and discounting of bills is based on trade, is based on the fact that goods, services, and the like have been supplied by the drawers of the bills to the acceptors. When trade is in a sound condition, when there is no rash or hazardous speculation, the bill business proceeds automatically. Those who supply goods draw bills on those who have bought them. The buyers of the goods sell them in turn to the community, and with the proceeds of the sales are able to meet the bills as they fall due, and also to net a profit for themselves. In a sense it is almost like barter, and very little actual gold is needed to carry out the multitudinous mercantile transactions of a trading people.

3. **THE GOVERNMENT AS BORROWER.** As has been explained, the chief borrowers in the short loan market or money market are bill-brokers and discount houses. But the Government, when it wants to raise a temporary loan by means of Treasury Bills, payable in three, six, nine, or twelve months, has recourse to this market for its supplies.

4. **THE STOCK EXCHANGE AS BORROWER.** Another borrower is the Stock Exchange, or rather those who transact Stock Exchange business. Loans raised by members of the House are for the purpose of "carrying over" bargains from one settlement to the next—a period of a fortnight. But as these loans, although made for a fortnight, are frequently renewed from settlement to settlement, they can hardly be called short loans. Indeed, were the banks to "call in" these so-called short loans, the brokers would fail, and the securities which they had deposited with the banks as guarantee for repayment of the loans would fall in value.

THE BILL-BROKER. The bill-broker carries on his business largely with borrowed capital, as his own would be quite inadequate to carry on the transactions which he is called upon to perform; for he must always be prepared to buy good bills to any amount, lest his rivals should supplant him. Every morning the bill-broker, or his representative, calls on the banks with which he does business, and ascertains whether they wish to lend money or to call in what they have already lent, or if they want to buy bills from him. If the banks are willing to lend money to him, they charge a smaller rate for loans which can be called up at a moment's notice than the bill-broker himself charges for discounting bills. Thus, when the rate charged for loans on call is 2 per cent., the rate which the broker charges for good sight bills (i.e. bills payable on sight or on demand) may be $2\frac{1}{8}$ per cent. Hence the bill-broker will make a profit of $\frac{1}{8}$ per cent. on the money lent to him.

Should the bank wish to buy bills from him they will buy them from him at a price a little more than he gave for them. Thus, suppose the rate for a good trade bill, payable in three months, is $2\frac{3}{8}$ per cent., the broker will in that case give £97 12s. 6d. for a bill for £100, and if he sells the bill to the bank, the bank will probably charge him a rate of $2\frac{1}{8}$ per cent.; that is, they will give him £97 17s. 6d. for his £100 bill, so that the broker makes a profit of five shillings on the transaction.

Should the bank wish to call in the money which had been lent to the broker, he withdraws from the bank the securities which he had deposited there, and arranges for a fresh loan from another bank, with which to pay off the loan which the former bank had called in. When, as it sometimes happens, the banks have themselves to make heavy payments, all their short loans are called in, and the bill-brokers and discount houses must then have recourse to the Bank of England to supply their needs.

BANK RATE. As the Bank of England charges a higher rate for short loans than do other banks, the bill-brokers resort to it only in case of absolute necessity, and as soon as possible try to redeem their liabilities to the Bank. Of course this is done when there is a scarcity of ready money. If the scarcity should continue, the bank rate rises. Other banks raise their rates too, because their reserves are placed in the Bank of England, and because they have to allow a higher rate of interest on Deposit Accounts. This increased rate of discount, however, attracts foreign bankers who have branch establishments in London to invest their gold in buying bills, and accordingly an inflow of gold takes place into London. Money once more becomes plentiful, and the Bank rate, and with it the market rate, tends to fall.

CAUSES OF TIGHTNESS IN THE MARKET. At certain periods of the year the banks, having to make heavy payments, must call in their short loans, or when a large government loan is floated, a great amount of money is drawn from the short loan market, and tends to make money dearer there. Again, too, the India Government has at stated times to withdraw from the money market the loans made to it, for the India Government has to make payments of its own. So, also, if the members of the Stock Exchange borrow largely from the banks in order to carry over from one settlement to the next, there is less loanable capital available for the short loan market. Lastly, if heavy foreign payments have to be made, there is a great outflow of gold. This outflow of gold diminishes the amount available for the money market. Bill-brokers have, therefore, a difficulty in finding the money necessary to be sent to them for carrying on their business. There is said to be a "pressure on the money market," and borrowers must resort to the Bank of England, which has the only reserve of gold in the country. To check the outflow of gold the Bank, as has been said, raises the rate of discount, the market rate follows suit; foreign capitalists are tempted to buy good bills in London because of the increased rate, and the outflow of gold is checked, and the money market once more breathes freely. This will be more clearly seen in discussing the Foreign Exchanges, which is the next topic to be dealt with

THE FOREIGN EXCHANGES.

1. **HOW FOREIGN CREDITORS ARE PAID.** In international trade it is seldom that the traders of a country have to transmit gold in payment of their debts to their foreign creditors. Gold costs something in the shape of

freight; there is a risk that the ship carrying it may founder, so that insurance charges have to be paid, and in former times there was a considerable risk from pirates and privateers. These considerations led traders to adopt a simple expedient for avoiding the risk, trouble, and cost of transmitting gold in payment of their debts and obligations due to their creditors abroad.

> Let us suppose that A, a merchant in London, owes £100 to a trader, B, in Paris. A does not actually send £100 in gold across the channel. He tries to find some one, say C, in England, to whom £100 is due from a person, D, in Paris. A then buys from C the right to receive that money, and transmits that right to B, in Paris, who can then go and collect the money from D. In this way A discharges his debt to B, and D discharges his debt to C, without the necessity of a single coin having to be sent from one country to the other.

The way in which these rights of the creditors are transferred from one country to the other is by means of bills of exchange. C, having the right to receive money from D, draws a bill of exchange on D, which D agrees to pay at the time agreed upon. C, having got this bill, sells it to A, who wishes to pay his creditor B, A then sends the bill of exchange to his creditor B, who thereupon presents it to D for payment, and in the ordinary course of things D fulfils his obligations.

It is not to be supposed that transactions can be carried through in this simple manner. A, in ordinary business, would have a difficulty in finding C were it not for the existence of the bill-broker. C and other persons who have to receive payments from abroad, and have drawn bills on their foreign debtors, sell those bills to the bill-brokers. When A and others who have to make foreign payments desire to discharge their obligations, they resort to the bill-brokers and buy from them the bills which those brokers had previously purchased from C and the other people who were entitled to receive money from abroad. The prices which C and his fellows obtain for their bills, and the prices which A and his kind have to pay for them, in other words, the selling price and the buying price of such bills, depend upon a variety of causes which will now be explained.

2. PRICE OF FOREIGN BILLS OF EXCHANGE. The price given or obtained for a foreign bill of exchange is hardly ever the same as the nominal value of the bill. This is due to the fact that sometimes we owe more to foreign countries than they owe to us, and sometimes we have to receive from foreign countries payments in excess of what we have to make to them. In the former case persons wishing to transmit gold abroad will have a difficulty in buying bills payable abroad—the demand will exceed the supply, and, therefore, such persons will have to pay more for such bills. In fact, in that case, the price paid for such a bill will exceed the amount expressed on the face of the bill. On the other hand, if other nations are indebted to us to a greater amount than is owing by us to them, there will be an abundance of bills drawn on foreign traders, and, of course, the persons wishing to transmit gold will be able to buy such bills cheaply; in fact, the price of a bill payable in a foreign country will be less than its face value.

3. THE "SPECIE POINT." The price of a foreign bill of exchange cannot, as a rule, rise above a certain point or fall below a certain point. This point is known as the "specie point." The reason of this is plain. If the price of a bill rose beyond this point, persons wishing to transmit gold would prefer to incur the risk and expense of sending the gold itself; and on the other hand, if the price of a bill fell below this point, persons who have got to receive money from abroad would not sell their bills. They would prefer to wait for the gold. An example will make this clear. An English sovereign contains as much gold as there is in 25.22 francs (that is, 25 francs 22 centimes). Therefore, a person in England who has to pay £100 to a French creditor could discharge his debt by a payment of 2,522 francs when the exchange is at par. Suppose, then, that the cost of sending gold to France, including expenses of freight and insurance, is at the rate of 10 francs for every £100, then it would cost the debtor in England the equivalent of 10 francs more than £100 to discharge his debt (£100) by sending gold, that is, it would cost him £100 7s. 11½d. Beyond this amount the price of a bill for £100 payable in France could not in the supposed circumstances rise, for it would be cheaper to send the actual gold than to pay a higher price for the bill. This maximum price is known as the "Export Specie Point," or the "Export Gold Point."

Similarly, the price of a bill for £100 payable in France cannot fall (as a rule) below £100, less the cost of sending the gold (7s. 11½d.), that is, below £99 12s. 0½d., or else the gold would be imported. This point is known as the "Import Specie Point," or the "Import Gold Point."

To put it shortly, an English sovereign, which is worth 25 francs 22 centimes, cannot, as a rule, exchange for less than 25 francs 12 centimes, or for more than 25 francs 32 centimes. When the exchange is between 25 francs 22 centimes and 25 francs 12 centimes, it is because there is, as has been said, a tendency for gold to leave this country, and, therefore, the exchanges are said to be "unfavourable" or "against" us.

The use of this latter phrase is a survival from the times when the precious metals were looked upon as the only form of wealth, and that, therefore, it was a bad thing that these should leave the country. When a sovereign exchanges at a figure between 25 francs 22 centimes and 25 francs 32 centimes, the exchanges are said to be in "our favour," because, as has been pointed out, the tendency is for gold to be imported, which in former times was regarded as eminently favourable to the commercial prosperity of the nation.

4. HOW THE FOREIGN EXCHANGES AFFECT THE BANK RATE. When the rate of discount for bills is higher in London than it is, say, in Paris or Berlin, it indicates that there is a scarcity of money in the market, probably because heavy foreign payments have to be made. In other words, there is likely to be an outflow of gold from England. That, again, indicates that the exchanges are "against us"; in other words, English gold exchanges for less quantity of francs or of marks, as the case may be. The scarcity of gold and the consequent increase in the bank rate and the market rate, tempt foreign bankers to invest their money in London by buying up first-class English bills. They do so, not only because of the higher rate of interest prevailing in London, but because of the fact that a turn of the exchanges in our favour may occur before the bills which they have bought reach maturity. In other words, not only will they reap the benefit of the higher rate of interest, but there is also the chance that before the bills mature the exchanges will rise, and the bills which they have bought will exchange for a greater quantity of French or German currency when the foreign bankers come to receive payment for them, than the bills would have done at the time they came into the foreign bankers' hands. In this way the foreign investor reaps a two-fold profit. Thus the increase of the Bank rate and the market rate at a time when money is scarce, and the exchanges are against us, and when money is thus likely to be drained from the country, attracts an influx of foreign gold. The money market is made easier, the outflow of gold is checked, and the exchanges once more rise in our favour.

SENSITIVENESS OF THE MONEY MARKET. The reason why the money market is so easily influenced by every turn of the exchanges is because there is so little gold in this country, compared with the volume of trade done and the amount of liabilities incurred. In fact, the whole machinery of trade is worked on a *credit basis*. What gold is held in reserve is kept at the Bank of England. Ordinary banks also keep their reserves of gold there with the exception of the actual coin which they need for every day transactions. The Bank of England, therefore, possesses the only large stock of gold in the United Kingdom. Accordingly, when gold threatens to leave the country, the Bank of England must increase the rate it charges for

short loans, and the rate at which it will discount bills. This, of course, tempts foreign capitalists to send gold here, and checks the outflow of gold, as has been previously explained. Other banks, too, must follow the lead of the Bank of England and increase their rate (the market rate) for the same transactions. For having their gold reserves in the Bank of England they must support that institution in checking the outflow of gold. Otherwise they might find themselves unable to meet the demands for gold, and were a "run for gold" to set in on the banks, it is needless to say that every one would collapse, and the entire trade of the country would be paralysed. This branch of the subject is fully discussed in the article on "Banking."

THE MONEY ARTICLE OF THE NEWSPAPERS.

To the reader who desires information as to the financial and trading position of the country, the money article in his daily paper gives him all the necessary details. In the Friday issues he will see the Bank Return, with the remarks of the city editor, and on that day, too, there also appears a report of the operations of the Bankers' Clearing House. On the 8th day of every month the Board of Trade Returns appear, giving the volume and the values of the import and export trade. During the middle of each week the various railways publish their traffic receipts. From these various returns the student of statistics should be able to arrive at some conclusion as to the state of the trade and the finances of the country.

1. CONDITION OF THE MONEY MARKET. The article usually begins with a report of the condition of the "money market." The rates charged by the Bank of England for discounting bills and for short loans, together with the rate given by banks and discount houses for deposits made with them either on call or on short notice, are given in a tabular form. In this table the rates charged in the "open market" for discounting bank bills and first-class trade bills are stated. By the "open market" is meant the bill-brokers, discount houses, and banks other than the Bank of England. The city editor also supplies information as to the conditions affecting the supply of and the demand for money in the market.

> Thus, when certain people have at certain periods of the year to pay their taxes, large amounts have to be drawn from the banks. Hence the amount available for loans is reduced, and consequently bankers call in the short loans which they have already made, and charge higher rates to would-be borrowers. Again, when the Treasury wishes to borrow money for short periods, by issuing Treasury Bills, this again will reduce the amount available for other borrowers, and therefore, banks will again raise their rates. On the other hand, when the time comes for repaying these Treasury Bills, the market will be flooded with ready cash, and therefore borrowers will be able to secure loans on easier terms. Similarly, when the India Council has money to lend, or wishes to call in money already lent, the market will be affected.

Whenever from any cause the market has a less supply of money than is usual or than is needed, borrowers must have recourse to the Bank of England, and consequently there is then a tendency for the Bank to raise its rate, particularly if the state of the Foreign Exchanges points to a drain of gold from the country. All this information the city editor supplies in a few brief sentences.

Having dealt with the "money market" proper, the article then treats of the movements of bullion, stating how much the Bank may have bought, or may have had to export. It then usually deals with whatever official report may have been issued, e.g. the Bank Return, the Traffic Receipts, and the like, and comparison is made with previous returns.

2. BANK RETURN. In dealing with the Bank Return, if there is a serious reduction in "Other Deposits," a comment will appear to the effect that money is scarce or becoming scarce, and that, therefore, the rate charged for loans will tend to rise. On the other hand, if there is an increase in these deposits, it indicates that money is abundant, and that borrowers will be able to secure loans on easier terms. How the reduction or the increase in the "Other Deposits" has been caused is also briefly indicated. The "Reserve" is also specially noticed, because the state of the "Reserve" shows whether gold is leaving the country or coming into it. If there is a heavy foreign demand for gold, the Bank rate is almost certain to rise, and the increase of this rate seriously affects the position of borrowers in the money market.

3. THE FOREIGN MARKET. Some papers publish a table relating to the rates of interest charged on loans in Paris, Berlin, and the other continental centres, and a table relating to the rates of exchange prevailing in those centres for bills and cheques on London. The first table indicates whether the rate in London is higher or lower than in the foreign centres, and, therefore, the likelihood of foreign banks investing their money in buying English bills, or withdrawing the money already invested. In other words, it indicates the likelihood of an influx of gold into London, or of a drain of gold from the country. In either case the Bank Rate is likely to be affected.

The second table affects those who have to receive payments from or make remittances to foreign countries. Where the exchanges are favourable, a given quantity of English gold will command more of foreign currency, and, therefore, those who have to make payments abroad can do so on favourable terms; while those who have to receive remittances abroad will get less of English gold in return for their claims. When the exchanges are "unfavourable," the reverse takes place. (See "Exchange Rates" below.)

4. BUSINESS OF THE STOCK EXCHANGE. The money article then deals with the position of the various markets on the Stock Exchange, e.g. Consols, Foreign Government Bonds, Home Railways, American Railways, Banks, Industrials, and Miscellaneous, and ends with a list of "closing prices" and "business done" for the day. These "closing prices" are not official, but are merely based on the opinions and estimates furnished by experts in the various markets. In countries where paper money or silver is not readily convertible, at its nominal value, into gold, the exchange rate varies considerably.

EXCHANGE RATES.

Singapore	2s. 4d. = 28 pence per dollar.
Yokohama	2s. $0\frac{7}{8}$d. = $24\frac{7}{8}$ pence per yen.
Rio de Janeiro	1s. $3\frac{3}{8}$d. = $15\frac{3}{8}$ pence per (paper) milreis
Valparaiso	1s. $2\frac{5}{16}$d. = $14\frac{7}{8}$ pence per (paper) peso
Buenos Ayres Gold prem.	127.27½, p.c., that is, 100 pesos (gold) = 227.27½ pesos (paper).

As to abbreviations in the above table of Exchange Rates:—
"Sight"=at sight, or on demand.
"3 m."=payable 3 months after sight.
"T.T"=Telegraphic Transfer. (See *Commercial Dictionary*.)
"90 days' sight"=payable in 90 days after "sighted" or received and accepted.
"90 days' com."=Commercial bills payable in London 90 days after "sighted."
(Refer to "Foreign Coinage" in *Index*).

INSURANCE.

Insurance may be defined as "a contract by which a person (called the insurer or assurer) in consideration of a lump sum of money, or of a periodical payment, undertakes to pay to another (called the insured or assured) a larger sum on the happening of a particular event." The instrument in which the contract of insurance is contained is called the "policy of insurance," the term policy being derived from an Italian word signifying a *promise*.

Nearly every risk to which a man is liable may be insured against. Unusual or extraordinary risks are not as a rule undertaken by the ordinary insurance offices, but by members of Lloyds or by those companies which transact the same kind of business as is done by members of Lloyds. In return for the payment of a premium, a man may be insured against loss in case debts due to him are not paid, or in case bills of exchange of which he is the holder or the payee are not met. Again, the risk of taking an epidemic disease like small-pox can be insured against. Football and cricket clubs frequently insure against loss in the receipts from the season's play. Organisers of bazaars and other entertainments do the like. And merchants and others in a large way of business insure themselves against loss, when they apprehend that there is likely to be an increase in the duties or taxes levied on the goods in which they traffic. These people, of course, do not as a rule go direct to the underwriters. They employ a broker, whose business it is to know the underwriters or insurers likely to undertake this kind of insurance, and through the broker the insurance is effected with the underwriter.

The more common forms of Insurance are Life, Fire, and Marine, to which may be added Accident and Burglary Insurance and Fidelity Guarantee. Each of these will be dealt with in some detail.

The contract of insurance is somewhat like a wagering contract, only for certain good reasons, the one is permitted by law, and the other is not. In order, however, that a contract of insurance may be valid, the insured must have what is called an "insurable interest" in the thing insured, otherwise the contract will be void. It is therefore necessary to understand clearly the meaning of the phrase "insurable interest."

INSURABLE INTEREST. In order to constitute an insurable interest, the person insured must have some pecuniary interest in the thing insured, or must be liable or accountable for any loss arising in regard to the thing which is insured. A few examples will make this plain:—

1. Thus, a man has an insurable interest in his own life, and as the contract of life insurance, unlike some of the other forms of insurance, is not a contract of indemnity, but an agreement to pay a certain sum on the happening of a given event, there is legally no limit to the amount for which a man may insure his own life, but practically there is, for no insurance office would accept a sum unreasonably large considering the station of life of the applicant.

2. A person may insure the life of another provided he has an insurable interest in that other's life; but such person cannot recover more than the value of the interest which he possessed in the life of the insured, at the time of effecting the insurance. But as life insurance is not a contract of indemnity, the insurable interest need not be a continuing one, it is sufficient if it existed at the time of effecting the policy. For example, a creditor may insure his debtor's life for the amount of the debt, and on the debtor's death he can recover the amount of the debt, even though the debt has been paid off.

3. As has been said, the interest in another's life must be *pecuniary*. Mere relationship is not by itself sufficient. Thus a wife has an insurable interest in the life of her husband, being dependent on him for support; so, too, children depending upon their father. But a husband has no such interest in the life of his wife, unless he has an income or other monetary advantage depending on her life.

4. Employers are often liable to their workmen in cases where the workmen have sustained injury, or have been killed in the course of their employer's business. Hence such employers have an insurable interest in the persons whom they employ.

5. As regards property, a person in order to have an insurable interest in it need not necessarily be the owner thereof. It is sufficient if he is responsible for loss of or injury to the property insured. For example, a trustee may insure the trust property, because he is liable if it is lost or injured; of course, if he receives the insurance money he will hold it, not for his own benefit, but for the benefit of the persons for whom he is trustee. A tenant may insure his house, but the landlord can insist that if the house is burned the insurance money will be employed in rebuilding the house. The same applies to common carriers in regard to goods intrusted to them for carriage, and to all those to whom goods are intrusted either by way of pledge or for safe custody, or for the purpose of having work done upon such goods.

6. It must be remembered that an interest, in order to be an insurable interest, must not be a mere expectancy or hope that the thing insured will one day belong to the person insuring that thing. The interest must be a right actually subsisting at the time of effecting the insurance. For example, the heir-apparent has no such interest in the property which he hopes at some future time to inherit, because such hope is not a right, for at any time the interest of the heir-apparent may be destroyed, by the owner making a will.

Besides having an insurable interest in the subject matter of the insurance, the person who wishes to insure against a risk must have capacity to make a valid contract. A married woman can now effect a policy upon her own life, or on the life of her husband, for her own separate benefit. Possibly also an infant could enter into a valid contract of life insurance, where the contract is in all respects for his benefit.

UBERRIMÆ FIDEI. Contracts of insurance belong to that class of contracts known as contracts *uberrimæ fidei* (i.e. of the utmost good faith) because the utmost good faith must be shown on either side. The person desiring to effect an insurance must not misrepresent or omit a material fact. If he knowingly or unwittingly misrepresent a material fact, the contract will be void, and he will be unable to recover the insurance money. In addition, the insurer must be informed of every material circumstance within the knowledge of the insured. Both the insurer and the insured must stand on an equal footing, otherwise the insurer would not be able to form an accurate estimate of the risk which he undertakes. It is a condition of the contract "that there is no concealment or misrepresentation either by the insured or by any one who ought as a matter of business and fair dealing to have disclosed the facts to him, or to the insurer for him."

To show how important it is that the proposal form should be filled up accurately, and that the proposer should not leave the filling up to a third person, the case of Beggar *v.* Rock Life Assurance Company provides a useful lesson.

In that case an accident insurance policy was effected with the company through their local agent. The local agent filled up the proposal form, making many false statements with regard to material matters, though these false answers were filled in without the knowledge or the authority of the applicant, who signed the proposal form without reading it. The proposal form contained a declaration in which the applicant agreed that the statements made in the proposal should form the basis of the policy, and the policy expressly stipulated that it was granted on the condition of the truthfulness of the answers in the proposal. Shortly after the policy had been granted, the insured was accidentally injured, and brought an action to recover the amount for which he was insured. It was held (1) that it was the duty of the applicant to read the answers in the proposal before signing it, and that he must be taken to have read them and adopted them; (2) that in filling in the false answers, the agent was acting not as agent of the company, but as agent of the applicant, who was bound by these false answers, and that therefore the policy was void, and the insured could not recover the insurance money.

LIFE INSURANCE.

"Life insurance is a contract by which the insurer in return for a lump sum, or a periodical payment, undertakes to pay to the person for whose benefit the insurance is effected, or to his executors, administrators or assigns, a certain sum of money or an annuity on the happening of a given event, or on the death of the person whose life is insured."

The contract of life insurance is not like that of fire or of marine insurance, a contract of indemnity. It is merely a contract to pay a certain sum on death. Hence there is no legal limit to which a man may insure his own life. If one person insures the life of another, he must, of course, have an insurable interest in that other's life, but the interest need not be a lasting one, all that is necessary is that he should have an insurable interest at the time of effecting the insurance. Accordingly, if a creditor insures his debtor's life for the amount of the debt, and the debtor afterwards dies, the creditor can recover the insurance money even though the debt has been paid off, long before the debtor died, provided that the debt was due when the policy was effected.

VARIETIES OF POLICY. The contract is set out in an instrument called the "policy of insurance," of which there is a great variety, the most common form being the whole life policy, where the sum assured is payable at death, either with or without profits. It is a mistake to use the word "profits" in this connection. What is paid beyond the sum insured is a portion of the accumulated profits on the investments of the company's funds.

1. In the "ENDOWMENT POLICY" the amount insured is payable at the end of a certain number of years, or at death, if death should take place before the period of years has expired. Should he survive to the end of the period, the person insured (1) may take the amount in cash, or (2) he may let the cash remain with the company to accumulate with interest, the whole to be paid on his death, or (3) he may take an annuity on the basis of the value of the policy. These endowment policies may either be with or without profits, according to the terms agreed upon. In some cases double the amount insured is paid to the insured, if he survives the stipulated age; in others, the policy states that only half the amount insured will be paid if the person insured dies before the term of years has expired.

2. Insurance may be effected for a term of years, during which, if the person insured dies, the sum insured will be payable on his death: for instance, a man may insure his life for one year, or for a longer period. The longer the period the higher is the premium. Similarly, insurance may be effected where the amount insured is payable only in the event of the policy-holder dying before a stipulated age.

3. A form of policy which has been introduced within recent years is the "NON-FORFEITABLE POLICY," which protects the insured against loss, in case he is unable or unwilling to keep up his premiums. Originally it was known as the "ten years' forfeiture plan." The premiums were payable during ten years only. If during that time the policy-holder discontinued paying his premiums, he was entitled to a free "paid-up policy," for as many tenths of the sum insured as he had paid yearly premiums. Most offices now-a-days, when a policy has been in force for a number of years, grant to the policy-holder a paid-up policy, in case he is unable to continue his premiums, so that a person who has unfortunately fallen on evil days does not lose the benefit of the premiums he has paid. He is not required to pay any further premiums, and in the event of his death his heirs get the benefit of the new policy, which usually, of course, represents a smaller sum than the amount orginally insured, but in some cases (in which profits have been allowed to accumulate) a larger, according to the age of the policy-holder and the length of time the old policy had been in force. This method might be adopted when the necessity for insurance had ceased.

4. When it is desired to keep the policy in force for the full amount, but the insured is unable for a period to continue the premiums, the companies are always prepared to advance on loan at 4 or 5 per cent. the premium due from year to year so long as 95 per cent. of the surrender value is not exceeded.

5. Again, a person may wish to insure in such a way that a provision may be obtained for his children or others depending on him, during the years in which they are unable to provide for themselves. If so, many life offices will meet his wishes. The sum insured is not paid on the death of the insured, but interest on it is allowed to the children for a period (usually twenty years), and at the end of that period the sum originally insured is paid over to the person or persons for whose benefit the policy was taken out. In this example, it would be paid to the children or their representatives.

6. A TONTINE POLICY is where several persons insure their lives, each for a separate amount. The amount is not paid on the death of each, but the total amount is paid when all the persons but one have died, and is paid to the survivor. This kind of policy is not often met with in this country, and it is doubtful whether such policy would be enforced by our Courts, inasmuch as it might be prohibited by the Lottery Acts. In America it is common enough, and the Courts there have decided that such a policy is not a wagering policy, and is therefore enforceable.

7. There are other varieties of policies, but description of them is unnecessary. It is sufficient to say, that many life offices, in their eagerness to increase their business, will do all in their power to grant such kind of policy as will meet the wishes of intending policy-holders. Some offices, indeed, now grant policies without requiring the person whose life is insured to undergo a medical examination. The premiums to be paid in this case are, of course, higher, or the terms, in other respects, less favourable.

8. A word may be said here in regard to what is known as "INDUSTRIAL INSURANCE." Its object is to provide money for funeral expenses, and it is the form of insurance adopted by working people, who in return for the payment of a penny, or of a few pence per week, receive a lump sum on the death of the person insured. Needless to say, these working people pay a very high price for insurance, for the expenses of management amount to nearly a half of the total incomes derived from premiums, which means that the offices which undertake this class of business cannot afford to give a large amount on the policy in return for the premiums paid. The expenses of management are due to the enormous number of canvassers and collectors that have to be employed. Contrast this with ordinary life insurance, where the expenses of management in well-conducted offices vary roughly from one-sixth to one-eighth of the annual income derived from premiums.

WHERE TO INSURE. In selecting an office in which to insure, a person should bear several things in mind:—

1. An office should be economically managed, the expenses of management bearing a just proportion to the annual income derived from premiums. The expenses should not as a rule exceed one-sixth of the annual pre-

mium income. In comparing expenses it is necessary to consider the cost separately of renewal business and new business. An office doing a large new business would have heavier expenses than one living chiefly on old policies, and yet might be in a better financial position.

2. Attention should be paid as to the manner in which the funds of the company are invested, for if the funds are invested in hazardous securities, there may come a time when the company will sustain serious losses on such investments, and if these losses are very heavy, it is needless to say that the policy holders will suffer.

3. Attention should also be given to the rate of interest assumed at the last valuation of the company's assets, and the amount actually earned. The rate assumed should be well under what might be fairly anticipated. The best offices value their funds at about 3 and actually earn about 4 per cent.

4. Further, the person who is about to effect an insurance should very carefully consider the way in which the company deals with those who are unable to keep up their premiums. Formerly, it was the usual practice to allow a policy to lapse on failure to pay a single premium, no matter how long the policy was in force, or how many and how large the premiums paid. Now-a-days, most life offices either grant a fully paid up policy in lieu of the old policy, or grant the surrender value of the old policy. Some life offices even quote the amount of the surrender value which they are prepared to give. The terms, therefore, of these matters should be carefully gone into. It may be mentioned that in order to obtain a surrender value, the policy must have been in force for at least three years, otherwise the insured will get no return if he discontinues payment of the premiums. Of course, the longer the premiums have been kept up the greater will be the surrender value of the policy.

5. Lastly, it is well not to insure in a foreign life office, for the simple reason that policy holders in this country are not able to exert any control over a foreign office, and in some cases may find it extremely difficult to obtain payment of the insurance money, for unless the foreign office has funds or assets here, our Courts would have no power to compel it to pay up. It should also be remembered that the Inland Revenue authorities allow a rebate of income tax on the premiums paid to British and Colonial offices, but not on premiums paid to foreign offices.

HOW TO INSURE. A person who wishes to insure his life will first apply to a Life Office, which will send him a proposal form for him to fill up. In this proposal form he is required to give accurate answers to the questions therein set out, concerning his health, his habits of life, and details of his family history, and he will generally have to pass a medical examination conducted by a medical man named by the company.

The greatest care should be taken in truthfully answering these questions in the proposal or declaration. For this proposal is the basis of the contract, and it is on the faith of the answers contained in it that the policy is granted, Accordingly, if the answers are untrue, however innocently they may be made, the policy falls to the ground, and the insurance money cannot be recovered, though the premiums paid may be returned, unless the untruthful answers have been wilfully or fraudulently made. In addition to the declaration, the life office usually requires a reference to one or two intimate friends of the person about to be insured. Their replies are treated as confidential. When all these requirements have been satisfactorily met, the life office grants the policy on payment of the first premium.

THE PREMIUM. The rates of premium differ in the various offices, some requiring a higher rate than others; but it by no means follows that the office which charges the lowest rate is the best in which to insure. Greater security, higher profits, or certain special advantages may more than compensate for the higher rates of premium. The rates also vary according to the kind of policy which is taken out. As a rule, the premiums are paid periodically, but in some cases the whole amount may be paid down at once, particularly in the case where the sum insured is payable at the end of a fixed term of years.

CONDITIONS ON WHICH THE POLICY IS GRANTED. These conditions are printed on the back of the policy. Among other things they provide that if there is any untrue statement in the proposal, or if any material information be withheld, the policy shall be void, and all moneys paid thereon shall be forfeited. Many offices, however, now agree that a policy that has been in force for a certain period shall be good, even though there may be a material error or non-disclosure in the proposal. Other conditions restrict the insured from travelling in certain parts of the world, or engaging in military or naval service; but what are called world-wide policies are now frequently granted. Again, if the insured is killed in a duel, or die by his own hand, or by the hand of justice, the policy usually becomes void. In regard to suicide, some companies agree that it will not affect the policy should the insured die by his own hand, after the policy has been in force for a certain time. Other offices will in that case return the premiums, or allow the surrender value of the policy. Two or three details may here be added:—

(1) The policy will not become void if the premium is paid within one month after it has become due.

(2) Printed receipts for the payment of the premiums, signed by a director or by an agent of the company must be given, otherwise payment is not considered to have been made to the company.

(3) Payment of the insurance money is made on proof of death. Life offices usually admit the age of the deceased, on satisfactory evidence being given at the time the insurance is effected. Such admission should, however, be endorsed on the policy.

ASSIGNMENT OF POLICY. A policy may be assigned either by an instrument in writing, or by indorsing the policy, that is by stating on the back of the policy that the policy-holder transfers it to the person to whom it is to be assigned, mentioning that person's name. The assignee can then recover the insurance money on the death of the person insured, even if he have no insurable interest in that person's life. The indorsement on the policy would require to be duly stamped and executed, and on this account a solicitor should be engaged.

A life policy belonging to a bankrupt will pass to his creditors. But if a married man insures his own life, for the express benefit of his wife or children, the creditors cannot touch the policy. They may, however, receive out of the money payable under the policy the premiums that have been paid, where such premiums were paid with intent to defraud the creditors.

DIFFERENT KINDS OF LIFE OFFICES. There are two kinds of life offices, viz., Proprietary and Mutual. The PROPRIETARY OFFICE is a Joint Stock Company, the shareholders of which are entitled to all the profits arising from the company's investments. Usually they are content with ten per cent of the profits, leaving the surplus to be divided amongst the policy holders. The share capital is usually very small compared with the total funds of the company. The MUTUAL OFFICE is in all respects similar, except that it has no shareholders and no subscribed capital. The whole of its profits are therefore divisible among the policy holders. Its assets entirely consist of ts invested funds.

CONTROL EXERCISED OVER LIFE OFFICES. Every life insurance company established since 1870 in the United Kingdom must deposit £20,000 in the High Court, and no certificate of incorporation can be issued until the deposit has been made. As soon as the insurance fund accumulated out of premiums amounts to £40,000, the deposit is returned. If the company carries on other business besides that of life insurance, the receipts in respect of the life insurance must be kept in a separate account, and be placed in a separate fund called the life insurance fund of the company. This fund must exist solely for the security of holders of life policies, as though the company carried on no other business than that of life insurance.

Every life office doing business in this country must

render annual accounts and reports to the Board of Trade. Copies of these must be furnished to the policy-holders when required. It must be remembered, however, that the Board of Trade has no control over the conduct of a life office when once it has been started. There is therefore no guarantee that the business of any company is being properly carried on.

STAMPS. Policies of life insurance must be stamped as follows :—

	s.	d.
Where the sum insured does not exceed £10 ..	0	1
Exceeds £10 but does not exceed £25	0	3
Exceeds £25 but does not exceed £500, for every £50 or part of £50	0	6
Exceeds £500 but does not exceed £1,000, for every £100 or part of £100	1	0
Exceeds £1,000, for every £1,000 or part of £1,000	10	0

On policies of insurance against accident or sickness, the stamp duty is one penny. Policies of insurance against Employer's Liability are chargeable as agreements—that is, if under hand, 6d. ; if under seal, 10s.

Notices in newspapers purporting to insure against accident or death do not require a stamp. The duty is compounded for in accordance with the Stamp Act of 1891 and the Finance Act of 1896.

FIRE INSURANCE.

Fire insurance is a contract of indemnity by which the insurer, in return for the payment of a sum of money called the premium, agrees to compensate the insured for any loss or damage (not exceeding a specified amount) to his property, caused by fire during a given period. The maximum amount of compensation which can be claimed is stated in the policy, but of course the insured will not necessarily receive this amount should his property suffer from fire. He will receive such compensation only as will cover the amount of damage done by the fire, which amount can only be ascertained after the fire has occurred. There is therefore no advantage in over-insuring property, or in insuring the property for its full value in each of several different offices. For in that case, the various offices will bear the loss in proportion to the amount insured with them. For example, the owner of a house worth £1,000 insures it in one office for £1,000, in a second for £1,200, and in a third say for £1,400. The house is afterwards totally destroyed by fire. The first office will pay to the insured something less than £280, the second will contribute £333 6s. 8d., and the third a trifle less than £390. It is clear, therefore, that the insured will not be allowed to make a profit out of a fire, that is if the fire offices can help it.

Further, as the contract is a personal one between the insurer and the insured, if the property is sold the purchaser has no right to demand the benefit of the vendor's insurance, should the property be destroyed or damaged by fire. The vendor is bound to get paid in any case by the purchaser, and therefore, as the contract of fire insurance is only one of indemnity, the vendor cannot recover from the insurance office for the simple reason that he has not sustained any loss. In one case a vendor had entered into a contract for the sale of a house at a given date. The vendor had insured the house, but no mention of this was made in the contract. Between the date of the contract and the time fixed for transferring the house and the paying over the purchase money, the house was burned. The insurance company, not knowing of the sale, paid the insurance money to the insured (the seller of the house), who had sustained no loss, because whatever loss resulted from the fire fell on the purchaser, since he was the real owner of the house from the moment that the contract to sell the house had been made. It was held that the company could recover the money from the insured, as money paid in mistake. It should also be remembered that if the insurance company pays the amount of the loss, and the insured receives in addition compensation from any other source, the company is entitled to recover from the insured the amount of such compensation, because the contract of fire insurance is a *contract of indemnity.*

In the case mentioned above, in order to protect the purchaser and to give him the benefit of the policy, the safest course is for the vendor to indorse the policy to the purchaser, and if the company approves of this by initialling the policy, and entering the transaction in their register, the purchaser will be protected in case of fire, for he has really entered into a contract of insurance with the company.

The person wishing to effect a fire insurance must have capacity to contract, and must have an insurable interest in the property insured, i.e., he must have some pecuniary interest in it, or be liable for loss or damage that may happen to the property. And as the contract is one of indemnity, the insurable interest must be continuing, that is, he must have the interest both at the time of insuring and at the time of the happening of the fire. In this respect fire insurance differs from life insurance.

HOW TO INSURE. A person wishing to insure against fire obtains a proposal form from a fire office. This he fills up, but in most cases the agent of the company fills in the particulars. In doing this, the agent of the company is acting as agent of the proposer, and therefore the proposer should see that the answers to the questions are correct. There should be no concealment, or misrepresentation, or the omission of anything likely to affect the company's estimate of the risk which it is asked to undertake : otherwise the policy will be absolutely void.

THE PREMIUM. The rate of premium varies according to the nature of the property insured. On ordinary risks, e.g., dwelling houses, the rate is usually 2s. per cent. and seldom less than 1s. 6d. per cent. In the case of factories, shops, etc., that entail more than ordinary risks, and in the case of theatres, distilleries, chemical works, and the like, which are exposed to peculiar danger, rates are fixed by special arrangement, the premium in extreme cases being £2 or even £3 per cent.

Fire insurances are usually effected for a year, the policy being renewable on the payment of another premium. Fifteen days, called "days of grace," are allowed at the end of the year in which to renew the policy, and during that time the company is liable, provided that it is intended by both parties to renew the policy. When those fifteen days have expired, the mere fact that a local agent of the company has accepted the premium is not in itself sufficient to make the company liable, but it would be liable if it had received the money from the agent.

THE CONDITIONS UNDER WHICH THE POLICY IS GRANTED. These conditions forbid the removal of the property insured, or the transfer of the property to another without the assent of the company. The risk must not be increased without the assent of the company. If the claim is fraudulent, or if no claim for the insurance money is made within three months after the fire, or if the fire is caused by the wilful act or connivance of the insured, the insurance money will not be paid.

Persons about to insure should be very careful in scrutinising what is known as the "Average Clause" in a policy, otherwise in case of a fire they may receive very much less than they expected. The clause deals with property which is under-insured, i.e. not insured to its full value, and it states that in case of a *partial* loss, the insured will receive a sum bearing the same ratio to his loss, as the amount for which he insured bears to the value of the property insured. For example, property worth £6,000 is insured for £4,000. Loss is caused by fire to the extent of £1,200. Here the insured will obtain not £1,200 but £800. Because as he insured his property for two-thirds of its value, he can recover only two-thirds of the loss. Of course the average clause deals only with *partial* loss, for where the loss is *total* the whole of the insurance money is recoverable.

A FEW ADDITIONAL DETAILS of some importance are here given .—

(1) When a loss occurs, notice should be given in writing to the company within fifteen days, accompanied by full particulars of the goods destroyed, with an estimate of their value. The company will only pay the actual value of the property at the time of the fire.

(2) It may be mentioned, that when a building is burned

down, the landlord, or the insurance company, or any other person interested in it, may insist on the insurance money being expended in re-building or replacing the structure.

(3) In the Metropolitan District, damage done by the Fire Brigade in the execution of their duty is to be deemed damage caused by fire; and the insurance company is liable for such damage.

(4) A policy of fire insurance can be assigned by indorsing on it the company's assent to the assignment.

(5) Every policy of fire insurance must bear a penny stamp.

MARINE INSURANCE.

The contract of marine insurance "is a contract of indemnity in which the insurer, in consideration of the payment of a premium, agrees to make good to the insurer all losses not exceeding a certain amount, that may happen to the thing insured, from the risks enumerated in the policy, during a certain voyage or period of time." The person effecting the insurance must have an insurable interest in the thing insured; and this interest must be a continuing one, that is, the insured person must have an interest in the subject matter of the insurance, not only at the time of effecting the policy, but also at the time when the loss occurred. A contract of marine insurance is one in which the utmost good faith must be shown. Any misrepresentation, or concealment, or non-disclosure of a material fact renders the policy void. Everything likely to influence the insurer in estimating the risk which he is asked to undertake must be made known to him.

In effecting a policy of marine insurance with the underwriters (who are the insurers), it is usual to employ a broker, who is remunerated by a commission on the amount of the premium paid to the insurers. The insurers are called underwriters, because they subscribe their names to the policy of insurance. The broker writes on a printed form called the *slip* the particulars of the matter to be insured, and brings it to the underwriter, who accepts the risk by signing his name or his initials on the slip, together with the amount for which he offers to become responsible. The same can be done by the underwriter giving to the broker, on behalf of the insured, a document signed by himself and containing similar particulars as are contained in a slip. This document is called a *covering note* or an *insurance note*. The slip or note is not the contract itself, but each merely provides the particulars on which the contract is founded, which contract is afterwards set out in the policy. It is the policy which binds the insurer, because that is the contract between the parties. The slip is not the contract, and the underwriter is not bound in law by it, but no underwriter would dream of disputing his liability on the slip or note to which he had appended his signature or initials.

VARIETIES OF POLICY. There are several varieties of policies, of which the following may be mentioned:—

A VOYAGE policy is one in which the property is insured while in transit from one place to another. A TIME policy is one in which the property is insured for a certain period of time. A MIXED policy is one in which a ship is insured in her voyages from one certain place to another certain place during a fixed period of time, e.g., "At and from Dover to Ostend for six months." A VALUED policy is one in which the precise value of the thing insured is inserted in the policy. In an OPEN policy, the value of the thing insured is not mentioned in the policy, so that in case of loss or damage, the value of the thing must be ascertained and proved. In a NAMED policy the name of the vessel on which the thing insured is carried is inserted in the policy; while in a FLOATING policy the vessel is not named, the thing insured being protected, no matter in what ship it may be carried. INTEREST policies are those in which the policy holder has a real interest in the property insured. In a WAGER policy the insured has not an insurable interest in the property insured; it is a mere gambling transaction, and unenforceable in law.

INTEREST OR NO INTEREST. We have seen that no contract of insurance is legally enforceable unless the assured has an insurable interest. Underwriters do not trouble themselves much with this fact, and in practice they are in the habit of inserting in their policies the terms "Interest or no Interest," "Full interest admitted," or "Without further proof of interest than the policy." A statute of George II. makes assurances on *British* ships, containing these terms in the policy, absolutely void; but in practice underwriters always pay on such policies. The statute does not apply to foreign ships.

ASSIGNMENT OF POLICY. A policy of marine insurance is assignable, but the person to whom it is assigned must also have the insurable interest transferred to him. The assignee of a policy takes it subject to the equities, that is, whatever defence the insurer would have against the original policy-holder he can set up the same defence against the assignee. For example, if the insured had made a fraudulent misrepresentation to the insurer, he could not recover the insurance money, and had the policy been assigned to another, neither could such assignee recover the insurance money.

RE-INSURANCE. When an underwriter, after subscribing his name to a policy, finds the risk is greater than he anticipated, he tries to secure himself by re-insuring with another underwriter. The second underwriter will, of course, charge a very high premium, and will in return consent to bear the risk or a part of it. The re-insurance is upon the same risks and under the same conditions as are contained in the original policy, and in no way affects the liability of the original insurer to the person insured. As an illustration, take the case of a vessel which is over-due; the underwriters fear that the ship is lost, and accordingly they insure themselves against the loss by inviting other underwriters to bear either the whole or a part of it. Of course, as the risk is very great, a very high premium will be charged, and the longer the vessel is overdue, the more likely she is to be lost, so that the premium on the re-insurance will rise higher and higher, until sometimes it may be eighty or ninety guineas per cent.

STAMP DUTIES. Policies of sea-insurance must be stamped as follows:—

	s.	d.
(1) Where the premium or consideration does not exceed the rate of 2s. 6d. per cent. of the sum insured	0	1
(2) In any other case		
(*a*) for or upon any voyage—		
In respect of every full sum of £100, and also for any fractional part of £100	0	3
(*b*) for time—		
In respect of every full sum of £100, and also any fractional part of £100, where the time does not exceed six months	0	3
Where the time exceeds six months, and does not exceed twelve months	0	6

MARINE POLICIES. The common form of marine policy is Lloyd's, all other policies being based on it, and differing from it only in shape and in grammatical accuracy. The text of the policy runs:—

LLOYD'S FORM OF MARINE INSURANCE POLICY.

S. G.

£

Delivered the

day of

19...

Be it known that A.B. as well in his own name, as for and in the name and names of all and every other person or persons to whom the same doth, may or shall appertain, in part or in all, doth make assurance and cause himself and them and every of them to be insured, lost or not lost at and from upon any kind of goods and merchandise, and also upon the body, tackle, apparel, ordnance, munition, artillery, boat and other furniture, of and in the good ship or vessel called the whereof is master, under God, for this present voyage or whosoever else shall go for master in the said ship, or the master thereof, is or shall be named or called, beginning the adventure upon the said goods or merchandise from the loading thereof aboard the said ship, *as above* upon the said ship, &c., *as above* and shall so continue and endure during her abode there, upon the said ship, &c.; and further, until the said ship, with all her ordnance, tackle, apparel, &c., and goods and merchandise whatsoever, shall be arrived at upon the said ship,

&c., until she hath moored at anchor, twenty-four hours in good safety, and upon the goods and merchandise until the same be there discharged and safely landed: and it shall be lawful for the said ship, &c., in this voyage to proceed and sail to and touch and stay at any ports or places whatsoever without prejudice to this insurance. The said ship, &c., goods and merchandise, &c., for so much as concerns the assured, by agreement between the assured and the assurers in this policy, and shall be valued at

Touching the adventures and perils which we the assurers are contented to bear and do take upon us in this voyage, they are of the seas, men-of-war, fires, enemies, pirates, rovers, thieves, jettisons, letters of mart and counter-mart, surprisals, takings at sea, arrests, restraints and detainments of all kings, princes and people, of what nation, condition, or quality soever, barratry of the master mariners, and of all other perils, losses, and misfortunes that have or shall come to the hurt, detriment, or damage of the said goods and merchandise, and ship, &c., or any part thereof: and in case of any loss or misfortune it shall be lawful to the assured, their factors, servants, and assigns, to sue, labour, and travel for, in, and about the defence, safeguard, and recovery of the said goods, merchandise and ship, etc., or any part thereof, without prejudice to this insurance: to the charges whereof we, the assurers, will contribute each one according to the rate and quantity of his sum herein assured. And it is expressly declared and agreed that no acts of the insurer or insured in recovering, saving, or preserving the property insured, shall be considered as a waiver or acceptance of abandonment. And it is agreed by us, the insurers, that this writing or policy of assurance shall be of as much force and effect as the surest writing or policy of assurance heretofore made in Lombard Street, or in the Royal Exchange, or elsewhere in London. And so we, the assurers, are contented, and do hereby promise and bind ourselves, each one for his own part, our heirs, executors and goods, to the assured, their executors, administrators and assigns, for the true performance of the premises, confessing ourselves paid the consideration due unto us for this assurance by the assured at and after the rate of

IN WITNESS whereof, we, the assurers, have subscribed our names and sums assured in London.

N.B.—Corn, fish, salt, fruit, flour, and seed are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides and skins are warranted free from average, under five pounds per cent.; and all other goods, also the ship and freight free from average under three per cent., unless general, or the ship be stranded, sunk, burnt, or on fire.

It may be well to explain some of the phrases in this form of policy, as their meaning is not obvious at first sight.

1. The letters "S. G." probably stand for Ship, Goods, though this is somewhat doubtful.

2. The words "DOTH, MAY, OR SHALL APPERTAIN" signify that the person effecting the insurance insures not merely for himself, but for the benefit of all those who shall afterwards have the same interest in the thing insured as he himself originally had. But this benefit will not extend to alien enemies who may have acquired that interest.

3. "LOST OR NOT LOST." These words imply that both the insurer and the insured stand on the same footing as regards their knowledge of the safety of the thing insured. If the insured knows that the thing insured has perished, and conceals this fact from the insurer, he will not be able to recover the insurance money, and in addition, he will forfeit the premiums which he may have paid. If, on the other hand, the underwriter knows that the property insured is quite safe, having reached its destination, and conceals this fact from the insured, who is under the impression that the ship or the goods have not yet arrived, the premiums will have to be returned to the insured.

4. "AT AND FROM." These words are intended to cover not merely the risks to which a ship is exposed while voyaging from a given place, but also while she remains at that place.

5. "WHEREOF IS MASTER UNDER GOD IN THIS PRESENT VOYAGE." The name of the skipper need not necessarily be inserted in the policy.

6. "AND IT SHALL BE LAWFUL FOR THE SAID SHIP, ETC., IN THIS VOYAGE TO PROCEED AND SAIL TO AND TOUCH AND STAY AT ANY PORT WHATSOEVER. . . . WITHOUT PREJUDICE TO THIS INSURANCE." These words do not mean what they seem to convey. What is meant is, that the ship may touch at such places only as are in *the course of the voyage usually taken by* ships travelling from and to the places mentioned in the policy. For instance, a ship insured from London to Lisbon would not be permitted to touch say at Hull, unless driven out of her course by stress of weather or some other peril, such as to escape an alien enemy. If she did so, the policy would be void, for by deviating from the course usually taken by ships voyaging from London to Lisbon, risks would be incurred that the underwriter had not contemplated when he subscribed his name to the policy. A ship will be allowed to deviate from her course for the purpose of saving life, but not to save property.

7. "PERILS OF THE SEA." These words do not cover every loss which may occur upon the sea, but only such losses as arise from some casualty, or some accident which could not be foreseen as one of the necessary incidents of the adventure. For example, they do not include natural wear and tear by the action of the sea, or loss to the cargo, when it deteriorates from some fault inherent in itself.

8. "JETTISON" is where the cargo or a portion of it is thrown overboard in order to save the ship, or the remaining portion of the cargo. The jettison must be honestly done with this intention, for if done wrongfully, the insurance money cannot be recovered. Further, it usually refers to cargo stowed under deck. If deck cargo is jettisoned, the underwriters will not be liable, unless this is expressly stipulated in the policy.

9. "BARRATRY" includes every species of wrongdoing committed by the master or the crew with the intention of benefiting themselves at the expense of the owners, and also every wilful wrongful act, by which the owners are put to a loss, e.g., scuttling or setting fire to the ship, abandoning the voyage without just cause, stealing the cargo or any part of it, and the like.

In the space following the phrase "in witness whereof," the underwriters subscribe their names, the portion of the premium paid to each and the amount of the loss for which each undertakes to become responsible.

"N. B." The clause beginning with these letters is known as the Memorandum.

10. "WARRANTED FREE FROM AVERAGE UNLESS GENERAL," means that in the case of the articles enumerated the underwriters will not be liable for any loss or damage resulting to them, unless the ship is stranded, or except the loss is a total one.

In regard to the second and third exceptions in the memorandum, the underwriters will not be liable for any loss not amounting to five per cent. and three per cent. of their value respectively, unless general, or the ship be stranded, sunk or burnt. For example, suppose the cargo is tobacco worth, say, £10,000. Through the perils of the sea the tobacco is damaged to the extent of £450. In this case the underwriters cannot be compelled to make good the loss, as the loss does not amount to five per cent. of the value of the tobacco. Had the damage amounted to £500 or upwards, the underwriters would have to make good the loss. For further information on the subject of average, see under *Shipping*.

ACCIDENT INSURANCE.

Accident insurance is a contract by which the insurer, in return for the payment of a premium, undertakes to provide against loss if the insured sustains injury or disablement, either partial or temporary, or to pay to the personal representatives of the insured if he meets with death in a particular way. In accident insurance the person effecting the insurance must have an insurable interest in the life insured, and as the contract is one in which the utmost good faith must be shown, the greatest care should be taken to guard against mis-statements. There must not be any concealment or omission of material facts. Every circumstance known to the insured which would be likely to cause the insurer to charge a higher premium, or to decline the risk altogether, must be disclosed.

As the contract of accident insurance is not one of indemnity but merely to pay a certain sum on the happening of a given event, there is no limit to the amount for which a life may be insured against accident. The insurable interest need not be a continuing one, it is sufficient if the interest exists at the time of effecting the insurance.

RATES OF PREMIUM. The rate of premium is determined chiefly by the occupation; but "every circumstance touching the profession, business, occupation, or habits of life," which may render the person whose life is to be insured peculiarly liable to accident, will be inquired into, so as to enable the insurer to fix the rate of premium.

According to the occupation, the risks are divided into three classes—ordinary, medium, and hazardous. To insure for £100 in case of death, with full benefits for disablement, the rates are in some offices 8s. 6d. a year for the ordinary, 12s. for the medium, and 14s. for the hazardous risks. The corresponding rates for £1,000 are £4 a year, £5, and £6 a year. These rates only apply to accidents happening in Europe: but some offices issue world-wide policies at considerably higher rates.

CONDITIONS OF COMPENSATION. No compensation will be given unless the death or injury result from some external and material cause. In case of death, such death must take place within three months of the accident. Disablement must take place within one month of the accident. If death or injury results from a breach of the law, or by suicide, or while the insured is intoxicated, or because he rashly rushed into danger, no payment can be recovered. The amount which can be recovered if the insured meets with more than one accident in the year is limited. If compensation has been given for disablement, and the insured afterwards dies, the amount of compensation will be deducted from the amount payable on death. Unless the policy is a world-wide one, it will be void if the insured goes out of Europe. The insured ought not to undertake a more hazardous occupation, otherwise the policy will be void, because he is increasing the risk. Claims for compensation should be made in writing usually within fifteen days, together with full particulars of the accident.

ADDITIONAL DETAILS. It may be useful to state that—

(1) Every policy of accident insurance must bear a penny stamp.

(2) A period of fifteen days, called days of grace, is allowed after the premium becomes due unless either side has determined not to renew the insurance.

(3) The various accident offices will not accept or even renew a risk, where the person whose life is to be insured is over sixty-five years of age, and in some offices the limit is sixty years of age.

FIDELITY GUARANTEE.

Fidelity guarantee ought hardly to be classed under insurance. It is a contract to make good the default of another, and therefore is akin to the contract of suretyship. Mere non-disclosure of facts will not vitiate the policy, unless the concealment be fraudulent. The premium may be paid in a lump sum or by instalments. The rates vary according to the responsibility of the persons whose fidelity is guaranteed. The appended list will give an idea of the rates usually charged.

Secretaries and Managers	from 10s. per cent.
Clerks and Cashiers	,, 10s. ,, ,,
Branch Managers and Collectors ..	,, 20s. ,, ,,
Travellers (on salary and expenses)	,, 25s. ,, ,,

Special quotations may be made for guaranteeing an entire staff. When an entire staff is guaranteed, the policy may be either a *collective* or a *floating* policy.

A COLLECTIVE POLICY is one under which a particular amount to be agreed upon as the limit of the insurance company's liability is placed against the name of each individual member of the staff, in a schedule indorsed on the policy. In case there is a change in the staff, the necessary alterations may be made on the back of the policy.

A FLOATING POLICY is one under which an employer is secured against any loss up to the full amount mentioned in the policy, whether the defalcations be committed by *any one* of the members of the staff, or by *any number* of the members of the staff.

STAMPS. Where the sum guaranteed does not exceed £300 the duty is 2s. 6d. per cent. In any other case the policy must bear a 10s. stamp.

BURGLARY INSURANCE.

Burglary insurance is a recent development in the business of insurance. Generally speaking, the law in regard to fire insurance applies to burglary insurance, so that nothing further need be said on this part of the subject. The rate charged in regard to loss by burglary or housebreaking is usually 1s. 6d. in every £100's worth of goods insured. If the insured wishes to insure against theft either by strangers or by workmen or servants employed in his house, the rate is 2s. per cent. Against burglary, housebreaking, theft, and fire, the rate is in some offices 3s. 6d. per cent. Thus, if a house-holder effected such a combined policy on goods worth £2.000, the annual premium would be 3s. 6d. for every £100's worth of goods insured, that is, £3 10s. altogether. Every such policy must bear a penny stamp.

SHIPPING.

WHAT CONSTITUTES A BRITISH SHIP. In order to constitute a British ship, it must be registered as such, and must be wholly owned by British subjects, i.e. natural-born British subjects, or naturalized aliens, or corporations established under and subject to the laws of some part of the British Empire, and having its principal place of business in some part of the British Dominions. An alien cannot own a British ship, or any share or interest therein; but a limited company composed entirely of foreigners can own a British ship provided the company is registered in England, and its business is managed or carried on in England.

REGISTRATION. The owner or his agent may register a ship at any port of the British Empire. This port is the port to which the ship belongs, and is called the port of registry. Prior to registration, certain details regarding the name of the ship, the port of registry, the tonnage, and the draught must be painted or marked on the vessel. A certificate of survey, and on the first registration a builder's certificate, giving the tonnage and build of the vessel must be furnished. The owner must state his qualification to hold a British ship, the name of the master, and that no unqualified person has any interest or share in the vessel.

When the ownership of the vessel changes hands, this fact must be endorsed on the certificate of registry. If the ship is lost or ceases to be a British ship, the certificate must be given up.

OWNERSHIP OF A BRITISH SHIP. Formerly the property in a British ship was always divided into sixty-four shares, and not more than sixty-four persons could be registered as owners of one ship, although any number of persons not exceeding five could be registered as one person owning a single share. To avoid the unlimited liability thus incurred it is now usual for all shipping to be registered as the property of a limited liability company, under the Companies' Acts.

DUTIES OF OWNERS. The owners must see that the ship is sea-worthy, and must repair any damage which might render the vessel unsafe after the voyage has begun. They must appoint a proper master and crew, and must pay for all "necessaries," a term which includes "all that is fit and proper for the service in which the vessel is engaged, and that the owner, as a prudent man, would have ordered if present."

CO-OWNERS. Where a ship is owned by several persons, they are not partners, unless they have agreed to become so. If they are partners, each can bind the others by any contracts into which he may have entered on behalf of the ship.

In fact, their rights and liabilities are determined by the law of partnership. Where the owners constitute a Limited Company, their rights and liabilities are determined by the law relating to public companies. But where the owners are neither partners nor members of a limited company, their position is akin to that of tenants in common. Each may transfer his share when he pleases, and he cannot make the others liable on his contracts: e.g., if he orders work to be done on the ship, he is personally liable for the debt incurred, though he may be entitled to contribution from the others.

POWERS OF MANAGING OWNER. It is usual, however, when a ship is owned by several persons, to appoint an individual to manage the ship. He is called the "ship's husband," or if he is himself one of the owners he is termed the "managing owner." The ship's husband or managing owner is the agent of the owners for doing all the ordinary business of the ship: e.g., he may enter into contracts for carrying goods in the ship, or for chartering her. He must see that necessaries are provided, and he must do whatever is required "to enable the ship to prosecute her voyage and to earn freight." Generally speaking, he can within the scope of his authority bind the owners by contracts made by him on behalf of the ship. He cannot, however, engage her for an unusually long period in advance, for this would be taking her out of the control of the owners. Each part-owner must pay his share of all the expenses properly incurred by the ship's husband.

RIGHTS OF PART-OWNER. A part-owner may object to a voyage on which the other owners may intend to send the ship. In such a case the Admiralty Court may arrest the ship until the majority have given security for the value of the shares held by those who object. If, then, the ship is lost on the voyage, the persons who objected obtain the value of their shares, and are not liable for any expenses, but they cannot claim any of the profits earned on the voyage.

> Sometimes a minority of the owners may insist on a sale of the ship, but the Court will not in such a case decree a sale, unless all the parties concerned will benefit by the transaction.

Part-owners are entitled to have accurate accounts rendered to them, either at the end of the voyage, if it is a long one, or if the ship is employed in short voyages, then within a reasonable time. The managing owner, or the ship's husband, renders these accounts. Part-owners are entitled to inspect books, vouchers, &c. They may enforce these rights, either by arresting the ship or by bringing an action against the ship's husband or those owners who are managing the ship.

SALE OF A BRITISH SHIP. The sale of a British ship, or of any share in it, must be by a Bill of Sale in accordance with the form given by the Merchant Shipping Act of 1894, and must be attested by two witnesses. The transferee must make a declaration that he is qualified to hold a British ship, and that no unqualified person has any interest in her. The Bill of Sale and the declaration are registered, and the fact of the registration is indorsed on the Bill of Sale itself.

Where the transfer takes place through the death of the owner, his executor or administrator may be registered in his place. If the owner becomes bankrupt, his trustee may be registered. But in such cases the transferee must be qualified to hold a British ship, otherwise he must, within four weeks of the transmission, apply to the Court for an order for the sale of the share or the ship. If this application is not made within the prescribed time, the ship or the share is liable to be forfeited. In certain cases this time may be extended to a year.

MORTGAGE OF A BRITISH SHIP. A mortgage must be in the prescribed form, and must be registered. Mortgages take priority according to the order in which they are registered. The mortgagee does not become the owner of the ship, but if he is the first mortgagee he may sell it in default of payment, or seize the ship if his security is being impaired. Subsequent mortgagees cannot take possession, but they may have a receiver appointed.

A mortgagee has no right to any earnings before he takes possession. He is, however, entitled to freight, if he takes possession after it becomes due, but before it is actually paid. A mortgagee ought to sell the ship as soon as possible after he takes possession, but where this cannot be done, he may employ the ship and earn freight. When the mortgage is paid off, or is transferred, the transaction must be registered.

BOTTOMRY BOND. When it is a matter of vital importance to raise money for the proper completion of the voyage, and there is no time to communicate with the owners, and the master has exhausted every other means for raising money, he may hypothecate the vessel, and in some cases the cargo also, i.e. he may give a bond or written instrument for the loan of money advanced on the security of the ship and freight. This bond binds the owners to repay the loan within a limited time after the safe arrival of the ship, but if the ship does not arrive safely, the money is not repaid. Indeed, a bond making the loan payable, whether the ship arrived or not, would be void. The cargo cannot be hypothecated for the benefit of the vessel unless in cases of urgent necessity, and unless the cargo will receive some benefit out of the transaction. The master ought to communicate if possible with the owners of the cargo before hypothecating their property; and if the cargo is seized by the lenders of the money under the bond, the owners of the cargo are entitled to adequate compensation from the ship-owner. The holder of a bottomry bond has a right to be paid before a mortgagee, but will not be paid until claims for wages or for salvage have been satisfied. Where several bottomry bonds have been given on the security of a ship, the last bond-holder takes priority over the others, because the last loan furnished the means of saving the ship, and without it the prior lenders would have entirely lost their security.

RESPONDENTIA BOND is where the cargo alone is hypothecated. These bonds are not often met with nowadays, owing to the ease with which the masters can communicate with their owners. Sometimes, however, the owners themselves may hypothecate their property by means of these bonds.

THE MASTER. The master must be a properly qualified person certified by the Board of Trade. He must navigate the ship in a proper manner, and keep an official log. He is liable for *barratry*, i.e., any fraudulent or illegal act by which the owner's interests are in any way injured. He has a maritime lien for his wages, and for all expenses properly incurred by him on behalf of the ship. The master (or ship's agent) must sign bills of lading for all goods taken on board, and must deliver the cargo to the persons entitled, on being paid the freight. He may sell the ship, or hypothecate the ship or the cargo, where it is impossible to communicate with the owners in time, and where it is in their interests to sell or hypothecate. He may jettison, or throw the cargo overboard, where it is necessary for the safety of the ship.

SEAMEN. Every precaution is taken to safeguard the interests of merchant seamen, not only as against their employers, but as against those on shore who would be likely to prey upon them. These provisions are set out in the various Merchant Shipping Acts, 1854-1894, and deal with the engagement, treatment, discharge and the payment of wages of the seamen. It is not necessary to deal with these matters in detail, but a word or two may be said as to the rights and duties of seamen.

(*a*) **Seamen's Rights.** As regards the rights of merchant seamen, the ship-owner is bound to see that the vessel is sea-worthy. If the seaman is improperly discharged he is entitled to not more than a month's wages, in addition to the wages actually earned. He has a right to be properly fed, and to have compensation for bad or insufficient food. If he falls ill, or sustains injury in the service of the ship, he must have medical attendance free of charge. He must be paid his wages. He is, however, liable to forfeit all or part of his wages in the following cases:—

(1) If he deserts, or neglects to join his ship, or absents himself without leave; (2) if he is guilty of wilful disobedience or continued neglect of duty; (3) if he embezzles or wilfully damages the owner's property, and (4) if he is guilty of smuggling whereby his owners are involved in loss.

(*b*) **Seamen's Duties.** A seaman must obey the orders of his superior officers, and must do his best to bring the voyage to a successful conclusion. Hence, any agreement to pay him extra for performing his *ordinary* duties is void; an example will make this clear. During a voyage two of the crew deserted. The master promised the rest of the crew that the wages of the deserters would be divided amongst them if they consented to work the ship home. It was held that the crew could not compel the owners to observe the promise made by the master. If, however, the number deserting had been so great as to make it dangerous to navigate the ship, the promise could have been enforced.

(*c*) **Seamen's Remedies.** A seaman can sue for wages due to him, or he may enforce his lien for wages by arresting the ship and bringing an action in the High Court. This lien or claim for wages takes priority over the claims of a mortgagee, over the lien of the master, and in some cases over the claim of the holder of a bottomry bond. Where the amount of his wages is under £150, the seaman may sue in the County Court, if under £50 he may sue in the Police Court, or other Court of summary jurisdiction.

SHIP'S PAPERS. These papers must be carefully and accurately kept, particularly in time of war, so as to show the nationality of the ship and the nature of her cargo. This is of great importance to neutral ships in time of war, for it shows to the belligerents whether the ship is engaged in lawful trade, and not carrying contraband of war. Any omission in regard to these papers may render a neutral ship liable to capture. The ship's papers usually consist of (1) the Certificate of Registry, (2) the Agreement with the Seamen, (3) the Charter Party (if there is one), and the Bills of Lading, (4) the Manifest, or the invoices of the goods on board, (5) the Official Log, (6) the Bill of Health. The Bills of Lading and the Charter Party will be dealt with subsequently, but a word may be said on the Bill of Health and the Manifest.

(1) **The Bill of Health** is a document given to the master by the authorities of the port from which the ship is cleared. It describes the health and sanitary state of the port. Where there is no infectious or contagious disease, a clean bill is given. Where it is feared that such diseases exist, the bill is known as suspected. Where these diseases have actually broken out at the time of the ship's departure, the bill of health is said to be foul. A suspected or a foul bill will subject the ship to quarantine.

(2) **The Manifest** is an account of all the goods shipped on board for exportation. Its place may be taken by invoices of the goods.

RIGHTS AND LIABILITIES OF SHIP-OWNERS TO THIRD PARTIES.

1. LIABILITY OF THE SHIP-OWNER AS CARRIER. A sea-carrier is in the position of a "common carrier," except in cases where Act of Parliament has limited his liability, or where he has himself expressly limited his liability by a contract with the parties whose goods he carries. Like a common carrier he is bound to make good all loss or damage happening to the goods while they are in his hands, unless the loss is caused by the act of God, or the King's enemies, or arises through some inherent vice in the goods themselves, or is caused by faulty packing, or has arisen from some sacrifice for the general safety, as when goods are jettisoned or thrown overboard to save the ship or the rest of cargo.

But even in these cases a ship-owner will be liable—

(1) If he has not been reasonably careful to avoid the danger which has caused the loss or damage.

(2) If he has met with it after a deviation from the proper course of the voyage.

(3) If the loss is due to the fact that the ship was unfitted to receive the goods or was unseaworthy at the beginning of the voyage.

This general liability of the ship-owner may be limited by contract or by law.

2. SHIP-OWNER'S LIABILITY LIMITED BY LAW. The ship-owner's liability is expressly limited by law in the following cases, in which the ship-owner will not be liable for any loss unless it is due to his own fault:—

(1) Where goods are lost or damaged by fire on board the ship.

(2) Where gold, silver, diamonds, watches, jewels, or precious stones are lost or damaged by robbery, embezzlement or the like, unless the ship-owner or the master had at the time of shipment received a written declaration of their true nature and value.

Further, even in cases where the ship-owner is liable his total liability never exceeds £15 per ton of the ship's tonnage, provided that the loss is not due to his fault. When, therefore, an accident occurs, the owner asks the Court to limit his liability to the amount fixed by law. This amount is then distributed amongst those who have sustained loss, in proportion to the value of the lives or property lost.

3. RAILWAY COMPANIES' STEAMERS. The above provisions apply to railway companies which contract to carry persons, animals, or goods by sea, and procure them to be carried in vessels not belonging to the company. In the case of a railway company which employs its own steamers, the amount of damages to be recovered for injury to, or loss of animals, is limited, in the case of horses to £50 each, cattle £15 per head, sheep or pigs £2 each, unless the person sending them declares them to be of higher value. In such a case, the company can demand, as compensation for the increased risk, higher rates than the ordinary; but the contract must be in writing and signed by the person consigning the animals.

SUING FOR DAMAGES. The consignee is the person entitled to sue for damages for loss, as the contract though made with the consignor is really made with the consignee, the consignor being regarded as merely his agent to employ the company to carry his goods. Of course, if the ownership of the goods still belongs to the consignor, as where goods are sent on approval, the consignor is the proper party to sue the company for damages sustained by the goods in course of transit. The same is the case where the contract is of such a nature that it is not necessary to show ownership in order to bring the action, as e.g. where the consignor hands over the goods to the company for delivery to a particular person at a particular place. (For mode of suing refer to "Procedure in the Courts" in *Index*.)

It should be remembered that a ship-owner is not liable for damage to goods when the damage is wholly due to the fault of a pilot whom he was by law compelled to employ.

FREIGHT. The price for carrying goods by sea is called the "freight," a term which is sometimes used to denote the cargo itself. Freight is not usually paid before the goods have been actually delivered, unless the non-delivery is caused by the perils excepted in the Charter Party or the Bill of Lading. But whether payable in advance or not is a matter of agreement. In some cases, such as perishable goods or deck cargo, prepayment is generally exacted.

(*a*) **Advance Freight** is due as soon as the goods are shipped, and cannot be recovered should the goods be destroyed by fire, or the ship lost and the goods, consequently, not delivered.

(*b*) **Dead Freight.** Where by the terms of a charter party the charterer undertakes to load a full cargo and fails to do so, he will be charged for the empty space. The sum thus charged is called dead freight.

Contracts for carrying goods in vessels, or contracts of affreightment as they are called, may be embodied in a Bill of Lading, or in a Charter Party. When a ship or a part of it is hired by a person for the purpose of carrying goods, the contract is known as a charter party; in other cases, contracts for carrying goods are embodied in bills of lading. Each of these documents will now be dealt with in some detail.

BILL OF LADING.

When the shipper of goods delivers them to the person in charge of the ship, he receives what is called a *mate's receipt*. This document states the condition in which the

goods have been received, and is afterwards exchanged for a bill of lading signed by the master or the ship's agent. The bill of lading states the fact that the goods have been received on board, and the terms upon which they are to be carried and delivered. The following example gives the points which are common to all bills of lading :—

Shipped in good order and condition by
upon the good ship called the whereof
is master for this present voyage,
now in the port of and bound for
[here is inserted the description of
the goods], marked and numbered as in the margin, and
are to be delivered in the like good order and condition at
aforesaid (the act of God, the King's
enemies, fire, and all and every other dangers and accidents
of the seas, rivers, and navigation, of whatever kind and
nature soever excepted) unto the order of
or to his assigns, he or they paying freight for the said
goods at the rate of with primage
and average accustomed. In witness whereof the master
or agent hath affirmed to bills of lading
all of this tenor and date, the one of which bills being accomplished the others to stand void.
Dated in London the day of
(Signed).

1. EXPLANATION OF TERMS IN BILL OF LADING. It may be well to explain here some of the words and phrases contained in the bill :—

(*a*) **Act of God.** An act of God is some natural event which occurs independently of human action, and which could not have been avoided or guarded against by human foresight, e.g. tempest, lightning, sudden and severe frost, and the like.

(*b*) **Primage** was originally a small payment made to the master for taking care of the cargo. The master now usually agrees that it shall belong to the ship-owner.

(*c*) **Average** denotes certain expenses now usually included under primage.

(*d*) **The clause,** "one of the bills of lading being accomplished, the others to stand void," means that if upon one of them the ship-owner acts in good faith, and delivers the goods to the person in possession of the bill of lading, he will have "accomplished" his contract, and cannot be made liable upon any of the other bills.

2. LIMITING CLAUSES IN BILL OF LADING. Many additional clauses are inserted for the purpose of limiting the ship-owner's liability, e.g. "weight, contents, and value of goods unknown." The effect of this is that where the goods are not really shipped in good order and condition, the ship-owner is not bound to deliver them in good order ; whereas, if the modifying words are not used, the ship-owner is bound by the statement shipped in good order, even though that statement is untrue, and will, therefore, be liable if the goods are not delivered in good condition. But in no case will the ship-owner be liable if the goods deteriorate through some inherent defect.

3. CLEAN BILL OF LADING is a bill without qualifying words, such as, "Cases in weak condition," or "Two packages in dispute as to whether put on board." Such a bill denotes that the goods are received in good condition, the ship-owner in that case being bound to deliver the same in like good condition.

4. DELIVERY OF BILL OF LADING. The bill of lading is filled in by the consignor of the goods, stating the kind and quantities of the goods and the marks upon the cases containing them. These are checked by the master or the ship's agent, and the bill is then delivered to the consignor in exchange for the "mate's receipt." A bill of lading is usually drawn in duplicate. Both of these bills are delivered to the consignor of the goods, who transmits one or both to the consignee, thereby enabling the consignee to obtain possession of the goods when they reach their destination. It will thus be seen that a bill of lading serves not only as a receipt that the goods have been taken on board, but also as a document of title, enabling the person who becomes lawfully possessed of the bill to claim possession of the goods.

5. ASSIGNMENT OF A BILL OF LADING. A bill of lading is assigned by the person to whom the goods are consigned indorsing it, and delivering it to the party to whom he wishes to transfer it. The person to whom the bill is thus assigned becomes the owner of the goods. But a bill of lading is not negotiable ; consequently the transferee of a bill of lading has no better title to the goods mentioned in it than the transferor had : e.g. a clerk steals a bill of lading for goods consigned to his employer ; he transfers the bill for value to a person who takes the bill in good faith ; such purchaser has no right to the goods mentioned in the bill. Where, however, the consignee transfers a bill in good faith and for value, the right of the consignor of the goods to stop them in transit is destroyed. If a bill is drawn in favour of a particular person, without the addition of the words "or order or assigns," the bill cannot be assigned. It sometimes happens that copies of the same bill are assigned to two different purchasers. This is one of the disadvantages of drawing a bill of lading in a set of three. Where this occurs, the person who acquired the bill first is the owner of the goods. Still, if the master delivers the goods to any person who presents the other copy of the bill, he is not liable, provided he acts in good faith, and that he had no notice of the claims of the first transferee.

Stamp. Every bill of lading made in the United Kingdom must be stamped with a sixpenny stamp before signature, under a penalty of £50. It cannot be stamped after signature. The stamp may be adhesive.

CHARTER PARTY. "A charter party is an agreement by which a ship-owner agrees to place an entire ship, or a part of it, at the disposal of a merchant for the conveyance of goods. The agreement binds the ship-owner to transport the goods to a particular place for a sum of money which the merchant undertakes to pay as freight for their carriage. The person whose goods are to be taken is called the charterer." Sometimes the charter puts the vessel under the sole control of the charterer, making the master and the crew his servants, and not the servants of the ship-owner. It is then not a contract for freight but a contract for the hire of a vessel, and, therefore, will not be discussed here. The same remarks apply to charters for passenger service, or for towage or salvage.

The following will serve as an example of a charter party :—

LONDON, *Sept.* 6th, 1904.

It is this day mutually agreed between of
the good ship called the of the measurement
of tons register, or thereabouts, now at
and of merchant,
that the said ship being warranted at British
Lloyds, and being tight, staunch, and strong, and in every
way fitted for the voyage, shall with all convenient speed
sail and proceed to or so near thereto
as she may safely get, and there load from the factors of the
said merchant a full and complete cargo of
not exceeding what she can reasonably stow and carry over
and above her tackle, apparel, provisions, and furniture,
and being so loaded shall therewith proceed to
or so near thereunto as she may safely get, and deliver the
same on being paid freight as follows.

in full of all port charges and pilotage as customary (the act of God, &c., and all and every other dangers of the seas, rivers, and navigation, of what nature and kind soever during the said voyage mutually excepted). Freight to be paid on delivery of cargo. The ship to receive the cargo from the charterer with all possible despatch, and any delay incurred by not doing so, not to count as part of the lay days. The said charterer to be allowed working days for loading and unloading the said ship, and
days on demurrage over and above the said lay days at
per ton per day. Portions of days to count as portions of days.

CHARTERER AND SHIP-OWNER. The statements in the charter party concerning the ship must be true, otherwise the charterer may repudiate the contract, and refuse to load unless the charter party has been so far acted upon that the ship-owner cannot be restored to the same position he was in when the charter party was effected, in which case the charterer is entitled to damages only. If the ship-owner has knowingly made a false representation concerning the ship, the charterer may repudiate the con-

tract, and, in addition, may claim damages for deceit. Where the representations amount to a condition upon which the contract is based, then if they turn out to be untrue, the charterer may repudiate the contract. If, however, they are merely warranties, the charterer is entitled to damages only. There is an implied condition that the ship is in a fit condition to the time of sailing with the cargo. The clause stating where the ship is usually amounts to a condition, which, if not true, entitles the charterer to repudiate the contract. The words "mutually excepted" protect both the ship-owner and the charterer, so that in case the ship or the cargo is lost or damaged, through the perils enumerated, the ship-owner cannot claim freight, and the charterer is not entitled to claim from the ship-owner compensation for the loss he may have sustained.

Lay Days. These are the days allowed for loading and unloading. Any delay beyond this time is called "demurrage," and must be paid for.

Demurrage is also the name given to this extra payment.

SHIP-BROKER. A person wishing to charter a ship usually employs a ship-broker, who keeps the original charter, and furnishes copies to those concerned. He is paid by the ship-owner a commission on the amount of the freight, and it does not, as a rule, matter whether the freight is earned or not. Where several brokers are employed to obtain a charter party, the one who first introduces the principals personally to one another is alone entitled to the commission.

Stamp. Every charter party must bear a 6d. stamp, which may be adhesive. It may be stamped under a penalty within a month after signature, but not afterwards. If the charter has been executed by both parties abroad, it may be stamped at any time within 30 days after it has been received in England.

SALVAGE. Salvage is the reward paid for saving a ship or its cargo from shipwreck, capture, or other similar danger. This reward is paid rateably by the persons whose property has been salved, i.e. by the ship-owner, or the cargo-owners, or both. To entitle a salvor to this reward he must not have been under any obligation to do the work and must have done it voluntarily. The ship and goods must be saved, and but for his services they would probably have been lost. There must also have been shown some skill or danger in the performance of these services. The salvor has a maritime lien on the property salved, and this lien ranks before all others. Disputes as to the amount of salvage are decided in the Admiralty Division of the High Court.

AVERAGE.

In commercial matters the word average means loss or damage, or extraordinary expenses incurred through the perils of the sea.

1. GENERAL AVERAGE. Where property on board a ship is sacrificed for the benefit of the ship, and of the cargo, the loss does not fall wholly on the property sacrificed, but is borne by the ship-owner and the owners of the cargo, in proportion to the values of the different kinds of property embarked in the venture. For example, if the masts are cut away, or a portion of the cargo jettisoned in order to save the ship and the rest of the cargo, the loss must be borne by all who have an interest in the ship and the cargo, in proportion to the value of their interests. The loss is a general average loss, and the contributions made to it by those benefited are general average contributions. To put it shortly, general average loss is "all loss which arises in consequence of extraordinary sacrifices made, or expenses incurred, for the preservation of the ship and cargo, and must be borne proportionally by all who are interested." In order that general averages may arise, so as to entitle the person whose property has been sacrificed to contributions from the others, the following conditions must be fulfilled :—

(1) The whole adventure and not merely a part of it must be in imminent danger.

(2) The ship and some of the property must be ultimately saved.

(3) The danger which led to the sacrifice must not have been brought about by the fault of the person claiming contribution.

(4) The sacrifice must be voluntary, and must usually be made by the person in command of the ship, and it must be absolutely necessary to make the sacrifice in order to avoid the peril threatening all the interests involved.

The amount of the contributions is determined by a class of men called average adjusters. Their work is of a highly technical and complicated character.

Where the different interests have been insured the contributions are made, not by the persons whose interests are benefited, but by the underwriters with whom those interests have been insured.

2. PARTICULAR AVERAGE. "A particular average is a loss borne wholly by the party whose property has been injured." Such loss may arise either from some danger peculiar to the property injured, or from the perils of the sea. The loss, however, is not incurred in the interests of all, but arises through accident, e.g. where goods are damaged by sea water, or where the ship has been injured by the violence of the wind or waves. Losses arising in this way must be borne by the owners of the property injured, or by the underwriters if the property has been insured.

RAILWAYS.

The subject of railways will be discussed under the following heads. (1) The railway system in general, dealing with such matters as the Clearing House, Railway Rates, Preferential Rates, the Railway and Canal Commission and Bye-laws. (2) Liability of railway companies as carriers of goods and of passengers' luggage. (3) Liability of railway companies in regard to accidents and to want of punctuality. (4) Duties and liabilities of passengers.

RAILWAY SYSTEM.

1. CLEARING HOUSE. Owing to the great number of railway companies, and to the fact that it is almost impossible to carry goods or passengers any considerable distance, without having to traverse the lines of more than one company, some device had to be adopted in order to apportion fairly the amount which each company ought to receive in regard to passengers and goods carried on the lines of several companies. This want was met by the establishment of the Clearing House in 1842. But for the Clearing House it would be impossible to convey passengers over the lines of several companies without changing the passengers from the carriages of the one company to those of the other. In the case of merchandise the difficulty (not to speak of the increased expense) would be even greater, for the goods would have to be unloaded from one set of trucks and loaded on to another. But the Clearing House, by fixing the proportion of the fares and of the charges for goods, which shall be awarded to each of the various companies over whose lines the goods and passengers are conveyed, obviates all this expense and inconvenience. In short, through traffic over various lines is carried on practically as if all the lines belonged to one company. The companies cannot dispute the decision of the Clearing House as to the proportion which each must receive of the receipts from the through traffic; that is to say, the company which in the first instance received the fares from the passengers, or the rates for the carriage of goods, must hand over to the other companies, over whose lines the goods and passengers were conveyed, the amount which the Clearing House decides shall be paid; for, by an Act of Parliament, whatever the Clearing House declares to be due from a company is legally due, and must be paid. From this decision there is no appeal, and thus the worry of delay and the expense of litigation are avoided.

The Clearing House does not deal with business carried on the lines of one company only. It is concerned only with all business carried over lines other than those on which it originated; but the fact that half the railway

traffic of Great Britain is carried on by means of through booking, shows what amount of business must go through the Clearing House.

Incidentally among other things, the Clearing House deals with inquiries after lost luggage and looks after the recovery of such luggage.

The Clearing House is controlled by a committee to which the railway companies are each entitled to send a representative, usually the chairman or a director. Over forty companies send representatives to the committee, which meets quarterly.

2. RAILWAY RATES. The classification of merchandise and the schedule of maximum rates and charges for carrying goods must be submitted to the Board of Trade. When a railway company intends to make any increase in such rates and charges, it must advertise such intended increase, stating when the increase is to take effect, and no such increase can take effect unless and until fourteen days' notice has been given. If a trader objects to the increase, he can appeal to the Railway and Canal Commission, but in order to avoid this, the Board of Trade may try to bring about a compromise, and thus save the expense of litigation.

The basis on which railway rates and charges are levied is not determined by the cost of carrying the goods themselves. Goods which are sent in great bulk, e.g., coal, are more costly to carry than goods, such as textile fabrics, which can be put in a small compass. But if the bulky goods were to be charged on the same scale as those which are easily carried, it would be impossible, on account of the expense, for a trader to send such goods by railway. Further, where different kinds of goods are carried in the same train, it is impossible to determine what each kind shall pay. Hence the company, in fixing its scale of charges, has in view what will give a fair average profit on the whole goods carried. Thus textile fabrics are charged more for carriage than coal.

3. PREFERENTIAL RATES. Much grumbling is caused by the fact that goods coming from abroad are charged by the railway companies a less rate than goods carried from an inland station. In this way it is said that home traders and manufacturers are handicapped in favour of their foreign rivals. American flour shipped to Liverpool can then be carried from Liverpool to London at a cheaper rate than flour can be carried from an intermediate station, say Crewe to London, and thus an unfair advantage is said to be given to the American producer. But if the railway company did not give the American shipper some advantage, the flour would be sent direct by sea to London, and the railway company would be deprived of the small profit which is earned by carrying the flour from Liverpool to London. It may be said that if the company can carry the flour for a small profit, it should charge the same for carriage between intermediate stations. The answer is that the profit would in that case be so small that the company could not earn enough to meet working expenses and to pay dividends.

4. RAILWAY AND CANAL COMMISSION. This is a court composed of two commissioners and of a judge of the High Court. It possesses both executive and judicial powers, and deals with such matters as giving undue preference to some traders over others, through rates, the legality of rates, facilities for traffic and the like. Any trader or body of traders aggrieved on any of these points may resort to the Commission to have their complaints heard and decided upon.

5. BYE-LAWS. Every railway company is empowered to make bye-laws for the regulation of traffic and the conduct of its business generally. These bye-laws must receive the approval of the Board of Trade. The mere fact that these rules and regulations are approved by the Board is no guarantee of their validity. These bye-laws, in order to be valid, must not be contrary to the law of the land, or in excess of the powers conferred on the company by Act of Parliament, and they must not be unreasonable. For example, a bye-law stating that a person travelling without a ticket must pay the fare, not from the place where he started, but from the place where the train originally started, is wholly void, and such passenger ought certainly to resist payment of such extortionate demand. Again, a bye-law providing that a passenger's luggage should be carried at the passenger's own risk is also void.

LIABILITY OF RAILWAY COMPANY AS CARRIER OF GOODS.

1. LIABILITY OF THE COMPANY AS COMMON CARRIER. A railway is in the position of a "common carrier," except in cases where Act of Parliament has limited its liability, or where the company has itself expressly limited its liability by a contract with the parties whose goods it carries. The company is bound to take goods brought to it by any person unless such goods are of a nature highly dangerous to carry. It must charge reasonable rates, and must not impose unreasonable conditions. The company is bound to make good all loss or damage happening to the goods while they are in its custody as *carrier*, unless the loss is caused by the act of God or the King's enemies, or is caused by faulty packing, or arises through some inherent vice in the goods themselves. This liability of the company has been limited by law, and may in addition be limited by special contract between the company and the persons whose goods it is carrying.

2. LIABILITY LIMITED BY LAW. By the Carriers' Act no carrier is liable for loss or injury to gold or silver articles, clocks, jewellery, watches, bills, money securities, pictures, stamps, maps, writings, plated articles, glass, china, silks, furs, or hand-made lace, delivered to him to be carried or to accompany the passenger where the value exceeds £10, unless when the goods are delivered to the carrier their value is stated, and an increased charge is paid or agreed to be paid, in accordance with the scale exhibited in a conspicuous part of the carrier's office. Thus a railway company is not liable for any loss however caused where the above provisions have not been complied with, or unless the loss has been caused by the felonious acts of the company's servant, where such felonious act occurred through the company's negligence. The provisions of this Act apply not merely to goods generally, but also to passenger's luggage, whether placed in the van or in the carriage where the passenger himself is.

Further, by the Railway and Canal Traffic Act, a railway company can limit its liability to a person consigning goods by means of a contract in writing, signed by the consignor or his agent. But the conditions limiting its liability must be just and reasonable. The company will then be liable only for loss caused by the negligence or wrong doing of its servants.

In regard to the carriage of animals, a railway company is liable to the extent of £50 per head in the case of horses, £15 per head for cattle, and £2 each for sheep or pigs, unless at the time of delivery to the company a higher value is declared, and an increased rate paid or agreed to be paid.

Where a company by through booking contracts to carry goods partly by rail and partly by sea, it may exempt itself from liability for any loss caused by the perils of the sea, provided this condition is posted up in a conspicuous part of the company's office, and is legibly printed on the receipt note.

3. WHEN GOODS ARE LOST OR DAMAGED. The proper person to sue the company when this happens is the person who owns the goods, who is, in many cases, the person to whom the goods are consigned. But where the consignor has not parted with the ownership of the goods, he is the proper party to sue the company for loss or damage.

Railway companies are bound to give proper facilities for the despatch of goods, provided such goods arrive at or before the advertised time of departure of the train by which the goods are to be sent. Where the goods do not arrive at such advertised time, then the company is not

liable for any loss which may ensue, even though the goods actually arrive in time for the train, which may happen when the train itself is late.

The goods must be delivered within a reasonable time by the company to the consignee, otherwise the company will be liable for any loss which may ensue, as, for instance, where the goods being perishable do not arrive in time for the market, and, therefore, cannot be sold except at a loss, the company will be liable for such loss.

4. PASSENGER'S LUGGAGE. The fact that a railway company is a common carrier renders them liable for any loss which may happen to a passenger's luggage, whether such luggage be placed in the van, or taken into the carriage by the passenger himself. Except that in the latter case, where the loss is due to the passenger's own negligence, the company cannot be made liable; nor can a railway company get rid of this liability by refusing to take the luggage of a passenger. It cannot refuse to take his personal luggage. What then is personal luggage?

It includes "such articles as a traveller, according to his position, would require for his use, either in connection with the journey itself, or with the objects thereof." In accordance with this, articles purchased by a passenger, and which could be easily carried without encroaching on the space allotted to other people would come under the heading of personal luggage:—but not title deeds, or an artist's sketches, or a quantity of bedding which the traveller intended to use, when he found a home.

5. LIMITATION OF LIABILITY FOR LUGGAGE. A company may, however, limit its liability in regard to a passenger's luggage by a contract imposing special conditions. These conditions must be reasonable, and the contract must be signed by the passenger. A condition which is unreasonable cannot be enforced against a passenger. Thus, where a company stated that it would not be liable for loss of luggage on their own line, unless fully and properly addressed, was held to be unreasonable. Again, a condition that a passenger's luggage should be conveyed at his own risk was held to be unreasonable, and therefore could not be enforced against the passenger, although he had agreed to the condition. In that case, therefore, in spite of the condition, the company was held liable for the loss of the luggage.

6. DURATION OF LIABILITY FOR LUGGAGE. The liability of the company begins from the moment the luggage is handed to their servants for conveyance to the van or the carriage, or to be labelled. If the luggage is merely handed to a porter to look after it without any further directions, the company is not liable for any damage that may occur to it. Further, the luggage must be handed to the porter for immediate or *present* not *future* conveyance.

Thus, if a traveller arrives at a station at 11 a.m., and gives his luggage to a porter to place in a train starting at 1 p.m., the company would not be liable if through the porter's negligence or misconduct the luggage were lost. A great deal depends, however, on the circumstances of the case. Thus, where a passenger with luggage arrived at Paddington station at 4·20 p.m. on Christmas Eve, in order to travel by the 5 p.m. train, and gave a bag to the porter to put in the carriage, and asked if it would be safe to leave it with him in the meantime, he replied that it would be quite safe. The porter disappeared with the bag, and the company was held liable for its loss.

The liability of the company ends when the luggage is delivered to the passenger or placed in his cab. Of course, if the passenger carries the luggage in the carriage in which he is seated he assumes control over it himself, and the company is then liable only for loss due to the negligence or wilful misconduct by their servants; whereas, if the luggage is placed in the van the company is liable for any loss or damage, no matter how caused, except loss or damage arising through the act of God or the King's enemies, or through some inherent defect in the luggage itself (e.g. bad packing).

A passenger must claim his luggage within a reasonable time, otherwise the company will not be liable as carriers, but as warehousemen, whose liability is not so great. Warehousemen are liable only for loss arising through ordinary negligence.

7. THE CARRIAGE OF CYCLES. Cycles come under the heading of ordinary merchandise, and, as has been shown, a railway company can, in accordance with the provisions of the Railway and Canal Traffic Act, limit their liability in regard to carrying cycles. Thus a company may make it a condition of their carrying cycles that such machines are carried at their owner's risk. But these conditions must be agreed to by the owner of the cycle and signed by him. And even then the company will be responsible for any loss caused through the negligence or fault of their servants, but they will not be liable as common carriers.

8. LUGGAGE DEPOSITED IN A CLOAK-ROOM. As a company is not obliged to take charge of parcels in a cloak-room, they can impose what conditions they please. Usually the conditions run that the company will not be liable for any parcels exceeding in value a certain sum, unless the person delivering them declare their true value and pay an additional charge. Even then the company will be liable only for any loss caused by the negligence of their servants, and will not be responsible if the goods are destroyed, say by fire. The company is not then in the position of common carriers, who undertake that the goods shall be kept safe. But the conditions which the company impose must be brought to the notice of the person placing the luggage in the cloak-room, such as by placing up a notice in a conspicuous part and by printing on the cloak-room ticket either the conditions themselves or a reference to them.

DUTIES AND LIABILITIES OF THE COMPANY TOWARDS ITS PASSENGERS.

1. ACCIDENTS. A company is liable to its passengers, and to all those lawfully on its premises or in its conveyances, for all injuries arising from the negligence or misconduct of its servants when acting within the scope of their authority. But a company is in no way liable for injuries sustained by a trespasser. Among those who are lawfully present may be reckoned passengers and their friends; also persons coming to a station on business, such as to receive or to despatch parcels, make inquiries and the like. Towards these people the company must take all reasonable precautions to safeguard them from injury. In regard to people who come to a station for their own amusement, such as buying papers and refreshments, the company is not under the same liability. Still, if the company or its servants are aware of some danger of which such visitors cannot be aware, the company will be responsible if those casual callers sustain injury by reason of such concealed danger. The mere fact that a passenger is travelling without a ticket will not disentitle him to compensation in case he sustains injury through the negligence of the company's servants, unless, indeed, he has been so travelling with intent to defraud the company.

Thus a child not being supplied with a ticket but travelling with an adult companion who has a ticket, will be entitled to damages in case of injury. So, too, persons travelling on a free pass will be entitled to recover damages, unless the free pass was expressly granted on the condition that the company would not be liable for any injury sustained by such persons.

In regard to passengers, the company only undertake to employ reasonable care in carrying them to their destination. They are not, in regard to them, common carriers. They are, therefore, only liable for negligence. They must take reasonable care to see that their lines and vehicles are fit to carry passengers safely, but they are not responsible for defects which a careful examination would not bring to light, or for defects the existence of which it was impossible to find out before the occurrence of the accident which such hidden defects caused. Again, a company is not responsible for injuries caused by the acts of their servants when such acts are outside the scope of their duties, nor is a company liable for the acts of outside persons engaged in a work over which the company has no control, and which the company has no reason to suspect as dangerous to the traffic.

2. LIMITATION OF LIABILITY FOR ACCIDENTS. A company may make conditions limiting their liability to passengers for injuries sustained by them, but the passenger must have agreed to these conditions. In workmen's trains, the amount of compensation which a passenger may receive for injuries sustained is limited to £100.

3. AMOUNT OF COMPENSATION. Where a person sustains injury under circumstances which entitle him to compensation, he is entitled to the expenses caused by his injury (medical attendance, &c.), compensation for loss of time (wages, &c.), compensation for the pain and suffering, and compensation for any future or permanent ill-effects of such injury. In reckoning up the total amount of compensation to be paid by the company, the fact that he has received compensation from other sources, as where he has been insured against accident, must not be taken into account.

Should death ensue as the result of the accident, then an action can be brought for damages, if the circumstances were such that the deceased if he had not died could have brought an action. The damages which will be awarded will be the pecuniary value of the life of the deceased, the amount which his relatives have lost by reason of his death.

> For example, if a person had an annuity as long as he lived, then the loss of that annuity will be taken into account in estimating the loss to those relatives depending on him. In the same way any prospective pecuniary benefit which they might reasonably expect to enjoy had his life continued, will also be a factor in estimating the damages to be awarded.

Where the deceased has insured his life, the amount of the insurance must be taken into account. Where the deceased received compensation in his lifetime, in full satisfaction of all claims for injuries, this action cannot be brought. The only person who can benefit by this action are the wife, husband, parents (including grandparents and step-parents), and children (including grandchildren and step-children) of the deceased. The action cannot be brought on behalf of an illegitimate child of the deceased; it must be brought by the legal personal representatives of the deceased, i.e. by the executor or administrator, but if the legal personal representative does not bring the action within six months, any of the persons who may benefit by the action can bring it. No action can, however, be brought after the expiration of twelve months from the death of the deceased.
